The European mountain-zone attains a greater altitude as it proceeds eastward. About the 52nd parallel of north latitude, it begins to ascend by terraces, groups, and concentric or parallel chains, until it reaches its highest elevation in the range of the Alps and the Balkan. The immediate projections of the Alps, on the side of Cisalpine Gaul or Lombardy, are comparatively short, but rapid and abrupt. The spine of the Italian peninsula, however, the chain of the Apennines, as well as the Sicilian mountains, are really continuations of the Alps, even as the Grecian mountains through Northern Hellas as far as the Laconian highlands are continuations of Mount Haemus. The Carnic or more properly the Julian Alps connect, under the 18th meridian, the Balkan with the centre of the range of the Helvetian and Italian Alps. The river-system of Italy has no features in common with those of Spain. In the latter peninsula the valleys inclosed by the sierras were, in some remote era, the basins of lakes, of which the Spanish rivers are the residuaries: whereas the watershed of the Apennines is generally brief and rapid; and the Arno, the Tiber, the Liris, &c. have in all ages been subject to sudden overflow of their waters, and to as sudden subsidence. In Cisalpine Gaul, indeed, a network of streams, combining into central reservoirs, — the Po, the Athesis, &c., — furnishes, with little aid from man, a natural irrigation to the rich alluvial plains. The whole region was probably at one period a vast lake, of which the banks were the Alpine projections and the windings of the Apennines, and which gradually rose with the constant deposition of soil from those mountains. The rivers S. of the Po which flow into the Adriatic sea are generally inconsiderable in their length or volume of water; but those which discharge themselves into the Lower Sea, the Mare Etruscum, descend more gradually, and in the centre of the peninsula at least more equally subserve the purposes of tillage and inland navigation. Calcareous rocks constitute the principal range of the Apennines, and fill the greater part of Sicily. But at least half of that island is covered with the newer Pleiocene strata; while zones of the older Pleiocene period, filled with organic remains, cover each flank of the Apennines.

The principal projections of the zone north of Italy are the Hyrcanian mountains, the Sudetes, and the Carpathian mountains. The former stretch in three parallel ridges from the right bank of the Rhine, about lat. 51° or 52° N., to the centre of Germany. Eastward of this group the Sudetes begin, and terminate at the plain of the Upper Oder. At this point they are connected with the Carpathians, which, however, differ in configuration from the other limbs of the range. For they are not a single chain, but groups, connected by elevated plains, and attaining at certain points — as at Mount Tatra, under the 20th meridian — a considerable altitude. The breadth of the Alpine chain is greatest between the 15th and 16th meridians, and least at its junction with the Balkan, under the 18th, where it does not exceed 80 miles.

The Balkan, in respect of its elevated table-lands, is a connecting link between the mountain-systems of Europe and Asia. With the exception of the Jura, this tabular form does not occur in the central Alps. On the other hand, the great lakes which are so frequently met with in European mountains, are rarely found, except in the Altaian range, in those of Asia. Mount Haemus, the third of the mountain-bases of ancient Europe, begins near the town of Sophia, whence it runs along an elevated terrace for 600 miles to the Black sea. Longitudinal valleys of great fertility separate its parallel ridges; but its chains are rent and torn in all directions by profound and precipitous chasms, by which alone the range is permeable. Granite forms the bases of the mountain-system of Eastern Europe; but it rarely pierces the crust of crystalline schist and secondary limestones. Calcareous rocks, indeed,

compose principally the highlands of Bosnia, Macedonia, and Albania. Transverse fractures, like those of the Balkan, occur generally in the Greek mountains. The intervening valleys are mostly caldron-shaped hollows, both in Northern Greece and in Peloponnesus. Volcanic convulsions in some districts, and in Boeotia especially, have broken down the mural barriers of these hollows, and allowed their waters to escape: but in the Morea, where there have been no such outlets, they percolate through the soil. The rivers of Southern Greece are, for the most part, fordable in summer and torrents in winter and spring.

A glance at the map of Europe will suffice to show that, from its general configuration, the NW. division of the old continent is much more favourable to uniform civilisation and the physical well-being and development of its inhabitants, than that of either Africa or Asia. On the one hand, the extent of its coast-line, its numerous promontories and bays, act as causes of severance between the members of its family, and, by preventing their accumulation in masses like those of the Asiatic empires, preserve and stimulate the separate activity of the whole: on the other, the obstacles to national and federal union are not, as in many regions of the African continent, insurmountable, but, on the contrary, the central position of its sea, — the Mediterranean and its branches, — and the course of its rivers, running deep into the interior, afford natural paths of communication for all its races. No barren deserts divide its cities from one another: its table-lands are not, as in Asia, lifted into the region of snow, nor its plains condemned to sterility by the hot pestilential blasts, such as sweep over the great Sahara. Europe, indeed, is not the cradle of civilisation, — *that* had attained at least a high formal maturity on the banks of the Tigris, the Euphrates, and the Nile, ages before Agamemnon ruled in Mycenae, or Theseus drew the demi of Attica within the precincts of a common wall. Neither to Europe do we owe the fontal precepts of religion and ethics, nor the germs of the arts which civilise life. In every one of these elements of social progression Asia and Aegypt took the lead. But, although neither the original parent nor the earliest nurse of civilisation, Europe has been for nearly 3000 years that portion of the world which has most actively, assiduously, and successfully cherished, advanced, and perfected these rudiments of moral, intellectual, and political cultivation. Of civil freedom it was the birthplace: neither of the sister continents, however mature may have been its peculiar civilisation, has ever possessed, without the aid of European contact and example, a community of free men, who distinguished the obedience which is due to law from the subservience which is paid to a master. And, possessing civil freedom, at least among its nobler and its governing races, Europe has carried to a higher stage of development every lesson and every art which it derived from other regions, and elevated the type and standard of humanity itself. Asia and Africa have generically receded from, and, in the majority of their races, lost sight of entirely, the paths and the conditions of progressive civilisation. In these regions man is a weed. He is ruled in masses; he thinks in masses. His institutions, histories, and modes of faith are unchanged through almost immemorial tracts of time. The opposite aspect presented by European civilisation may be ascribed, in the first place, to the physical advantages, which we have enumerated, and which render our continent the most uniformly habitable portion of the globe; (2) to the fact that our civilisation received its original impulse from the SE. corner of Europe, where the Hellenic race, in the small compass of a few degrees of latitude, rehearsed, as it were, the forms of government, federalism, and negotiation, which were destined afterwards to be the principles or postulates of European policy; (3) to the circumstance that the Roman Empire, by its conquests and colonies, stamped a general impress of resemblance upon the families of Europe; and (4) that, as the ancient civilisation declined, two new elements of life were infused into Europe, — a young and vigorous population from the North, and a purer and more comprehensive religion from the East. By the combination of these several elements our continent alone has been advancing, while the sister divisions of the globe have receded; and it is a consequence of such advance and of such recession, that Europe has repaid with large interest its original debt of civilisation to both Asia and Africa, and has become, in all the arts which elevate or refine our race, the instructor in place of the pupil. (See Ritter, *Die Vorhalle Europäischer Völkergeschichten*, &c. 1820; Ukert, *Geographie der Griechen und Römer;* Rennell, *Geography of Herodotus*, 2nd ed., 2 vols. 8vo.; Donaldson, *New Cratylus*, 2nd ed., *Varronianus*, 2nd ed.; Mrs. Somerville, *Physical Geography*, 2 vols. 12mo. 2nd ed.; Ersch and Grüber's *Encyclopädie*, art. *Europa.*) [W. B. D.]

EURO'PUS (Εὔρωπός, Strab. vii. p. 327), a town of Emathia (Ptol. iii. 13. § 39), between Idomene and the plains of Cyrrhus and Pella, probably situated on the right bank of the Axius below Idomene. Not far above the entrance of the great maritime plain, the site of Europus may perhaps hereafter be recognised by that strength of position which enabled it to resist Sitalces and the Thracians. (Thuc. ii. 100.) We have the concurring testimony of Ptolemy (iii. 13. § 24) and Pliny (iv. 10) that this town of Emathia was different from Europus of Almopia, which latter town seems from Hierocles — who names Europus as well as Almopia among the towns of the Consular Macedonia (a provincial division containing both Thessalonica and Pella) — to have been known in his time by the name of Almopia only; and hence we may infer that it was the chief town of the ancient district Almopia. (Leake, *Northern Greece*, vol. iii. p. 444.) [E. B. J.]

EURO'PUS (Εὔρωπός, Ptol. vi. 2. § 17, viii. 21. § 11.; Strab. xi. p. 524), a town in the north-eastern part of ancient Media Atropatene, according to Strabo, originally called Rhaga; it was rebuilt by Seleucus Nicator, and called by him Europus. Strabo considered it to be the same as the town called by the Parthians Arsacia. Colonel Rawlinson has identified it with the present *Verámin*, at no great distance from the ancient Rhages (*J. R. Geogr. Soc.* x. p. 119). Isidore of Charax, speaking of Dura, a city of Mesopotamia, states that it was built by Nicator and the Macedonians, and that it was called Europus. It is possible that he was confounding it with either the Median or the Syrian city of this name.

EURO'TAS. [LACONIA.]

EURYAMPUS (Εὐρύαμπος), a town of Magnesia in Thessaly, of uncertain site. (Lycophron, 900; Steph. B. *s. v.*)

EURY'MEDON (Εὐρυμέδων), a river flowing in a due southern direction through Pisidia and Pamphylia, in which latter country it was navigable; but

its entrance is now closed by bars. It empties itself into the Mediterranean, a little below Aspendus. (Respecting the famous battle on the river Eurymedon, in B. C. 466, see Thuc. i. 100; Diod. Sic. xi. 61; comp. Xenoph. *Hell.* iv. 8; Dionys. Perieg. 852; Strab. xiv. p. 667; Arrian, *Anab.* i. 27; Liv. xxxvii. 23; Plin. v. 26, and numerous other passages.) Its modern name is *Capri-Su*, and near its sources *Sav-Su*. [L. S.]

EURYME'NAE (Εὐρυμεναί, Apoll. Rhod., Steph. B. *s. v.*; Ἔρυμναί, Strab.: *Eth.* Εὐρυμένιος). 1. A town of Magnesia in Thessaly, situated upon the coast at the foot of Mt. Ossa, between Rhizus and Myrae. (Scylax, p. 25; Strab. ix. p. 443; Liv. xxxix. 25.) Pliny relates that crowns thrown into a fountain at Eurymenae became stones. (Plin. xxxi. 2. s. 20.) Leake supposes the site of Eurymenae to be represented by some ancient remains between *Thanátu* and *Karítza*. (Leake, *Northern Greece*, vol. iv. p. 415.)

2. A town of Molossis in Epirus, is placed by Leake in the vale of the Upper Acheron, towards *Latriá*, *Variádhes*, or *Tervitzianá*. (Diod. xix. 88; Leake, *Northern Greece*, vol. i. p. 253.)

EURYTA'NES. [Aetolia, p. 64, a.]

EUSE'NE (Εὐσήνη), a town not far from the coast of Pontus, a little to the north-west of Amisus. (Arrian, *Peripl. P. Eux.*; Ptol. v. 4. § 6.) In the Tab. Peuting. it is called *Ezene*, and in the Geogr. Ravennas, *Aezene* and *Ecene*. (Comp. Hamilton, *Researches*, &c. vol. i. p. 293.) [L. S.]

EUTAEA (Εὔταια: *Eth.* Εὐταιεύς), a town in the S. of Arcadia, in the district Maenalia, probably between Asea and Pallantium, though not on the road between these towns. Leake places it at *Barbitsa*. (Paus. viii. 27. § 3; Xen. *Hell.* vi. 5. § 12; Steph. B. *s. v.*; Leake, *Morea*, vol. iii. p. 31.)

EUTHE'NAE (Εὐθηναί: *Eth.* Εὐθηναῖος and Εὐθηνεύς), a town of Caria, on the Ceramicus Sinus. (Plin. v. 29; Steph. B. *s. v.*) [L. S.]

EUTRE'SIA, EUTRE'SII. [Arcadia, p. 193, a.]

EUTRE'SIS (Εὔτρησις: *Eth.* Εὐτρησίτης), an ancient town of Boeotia, mentioned by Homer, and said to have been the residence of Zethus and Amphion before they ruled over Thebes. (Hom. *Il.* ii. 502; Eustath. *ad loc.*; Strab. ix. p. 411.) In the time of Strabo it was a village in the territory of Thespiae. Stephanus B. (*s. v.*) places it on the road from Thespiae to Plataea; but Leake conjectures that there is an error in the text, and that for Θεσπιῶν we ought to read Θισβῶν, since there is only one spot in the ten miles between Plataea and Thespiae where any town is likely to have stood, and that was occupied by Leuctra. We learn from Stephanus that Eutresis possessed a celebrated temple and oracle of Apollo, who was hence surnamed Eutresites.

Scylax, in his description of the coast of Boeotia, speaks of ὁ λιμὴν Εὔτρητος καὶ τεῖχος τῶν Βοιωτῶν, and Leake is disposed to identify these places with Eutresia, which would thus be represented by the ruins at *Aliki*; but we should rather conclude, from the words of both Strabo and Stephanus, that Eutresia was not so far from Thespiae. (Leake, *Northern Greece*, vol. ii. p. 521.)

EUTRE'TUS. [Eutresis.]

EUXI'NUS PONTUS (Πόντος Εὔξεινος: *the Black Sea*), the sea which washes the shores of Asia Minor, Sarmatia, and Colchis, and which was considered (as indeed physical and geological views require) by the ancients (Strab. ii. p. 126), to form together with the Maeotis, part of the common basin of the great "Interior Sea."

1. *The Name.*—The Euxine bore in earlier ages the epithet of *Axenus*, or "inhospitable." (Πόντος Ἄξενος, Scymn. 734; Strab. vii. p. 298; Schol. *ad Apollon. Rhod.* ii. 550; Pomp. Mela, i. 19. § 6; Plin. iv. 12, vi. 1.)

> "Frigida me cohibent Euxini littora Ponti,
> Dictus ab antiquis Axenus ille fuit."
> (Ovid, *Trist.* iv. 4. 55.)

It owed this name probably to the weather so frequently described by the ancient writers to the discredit of this sea, as well as the reported cannibalism of its northern Scythian hordes. The more friendly title, no doubt, came into vogue when its waters were thrown open to Grecian navigation and commerce. It is questionable whether its existence was known to Homer, but it appears under both names in Pindar (Πόντος Ἄξεινος, *Pyth.* iv. 362; Εὔξεινον Πέλαγος, *Nem.* iv. 79.)

Other appellations are Πέλαγος τὸ Ποντικόν (Strab. i. p. 21, xii. p. 547); Mare Euxinum (Pomp. Mela, ii. 1. § 3; Ovid, *Trist.* iv. 10. 97); Mare Sarmaticum (Ovid, *ex Pont.* iv. 3. 38; Val. Flac. viii. 207); Pontus Tauricus (Avien. *Or. Mar.* 2). The Black Sea is called by the Turks *Karadenghez*, by the Greeks *Maurethalassa*, and by the Russians *Czarne-More*.

2. *Historical Geography.*—The principal epoch which brought the shores of the Euxine into contact with other land, unless we accept the account of the expedition of Ramses-Sesostris to Colchis and the banks of the Phasis (Herod. ii. 103), was that national desire to open the inhospitable Euxine, which, clothed in mythical garb, is called the "Expedition of the Argonauts to Colchis."

"The legend of Prometheus and the unbinding the chains of the fire-bringing Titan on the Caucasus by Hercules in journeying eastward — the ascent of Io from the valley of the Hybrites towards the Caucasus — and the mythus of Phryxus and Helle — all point to the same path on which Phoenician navigators had earlier adventured." (Humboldt, *Cosmos*, vol. ii. p. 140, trans.)

In the historic ages the shores of the Propontis, the Black Sea, and the Palus Maeotis, were covered with Grecian settlements. Nearly all these were colonies of the city of Miletus alone, and were, without exception, the marts of a prosperous trade. Although the dates of each cannot be precisely fixed, they must have arisen between the eighth and sixth centuries before our era.

The colonies in the Black Sea were Heracleia on the S. coast of Bithynia, in the territory of the Mariandyni. In Paphlagonia was Sinope, which established a species of sovereignty over the other communities. In Pontus was Amnisus, the mother city of Trapezus. On the east coast stood the cities of Phasis, Dioscurias, and Phanagoria; this last was the principal seat of the slave trade, and during the Macedonian period, the staple for Indian commodities, imported across the Oxus and the Caspian Sea. Panticapaeum, in the Tauric Chersonese, was the capital of the little kingdom of the Bosporus, so intimately connected with the corn trade of Greece, especially of Athens. On the north coast was the city of Tanais, on the river of the same name; and Olbia, at the mouth of the Borysthenes. These two places, and Olbia in particular, were of the highest importance for the inland

trade, which, issuing from thence in a northern and easterly direction, was extended to the very centre of Asia. The settlements on the south-west coast appear never to have attained any consideration; the principal traffic of Greek ships in that sea tended to more northerly ports.

ISTRIA was near the south embouchure of the Danube; TOMI, CALLATIS, ODESSUS and APOLLONIA, more to the south. (Comp. Heeren, *Man. of Anc. Hist.* p. 162, trans; Grote, *Hist. of Greece*, vol. iii. p. 316, vol. iv. p. 337.)

The exchange of commodities led the traders beyond the Palus Maeotis, through the steppe, where the horde of the central *Kirghiz* now pasture their herds, — and through a chain of Scythian-Scolotic tribes of the Argippaeans and Issedones, to the Arimaspae, dwelling on the northern declivity of the *Altai*, and possessing much gold. This tract, the locality of which has been placed between the 53rd and 55th degrees of latitude, and which has again become famous by the Siberian gold-washings, opened up by means of the Black Sea an important source of wealth and luxury to the Greeks. While in another direction the inland traffic between the Prussian coasts and the Greek colonies, the relations of which are shown, by fine coins, struck probably before the eighty-fifth Olympiad, which have been recently found in the *Netz* district (*Abhandl. der Berl. Akad.* 1833, pp. 181—224), brought the coasts of the Northern Ocean into connection with the Euxine and Adriatic. The amber, of which this trade consisted, was conveyed to people from people, through Germany, and by the Kelts on either declivity of the Alps, to the Padus, and through Pannonia to the Borysthenes. (Humboldt, *Cosmos*, vol. ii. pp. 129, 141, trans.)

The Byzantines were masters of the commerce of the Euxine, and it was through them that the supply of articles for which it was celebrated, was brought into the markets of the Mediterranean. These are stated by Polybius (iv. 38) to be hides (some assert that *βρέμματα*, and not *δέρματα*, is the true reading), slaves of the best description, honey, wax, and salt-fish. The pickled fish of the Euxine was famous throughout antiquity (Athen. iii. p. 116), and the figure of a fish on the coins of the Greek cities on this sea, as well as of a fish-hook on those of Byzantium, shows what a value was set upon this trade.

The carrying trade of Central and Northern Asia, which even as early as the times of the Seleucidae had taken the route of the Black Sea, became for the Greeks under the Romans, and during the earlier portion of the Lower Empire, a most important branch of commerce.

The inroads of the Goths and Huns upon the provinces of the Black Sea diverted in great measure the Indian trade into other channels. When the route from Europe to India by the Red Sea was cut off in consequence of Aegypt being under the dominion of the Arabs, commerce sought and obtained an outlet in another direction, and Constantinople became the depôt of Eastern trade.

In the twelfth century Genoa owed her commercial prosperity to the overland trade with India, which she carried on by means of her mercantile establishments on the Euxine.

3. *Shape and Admeasurements.*— The ancients compared this sea to a Scythian bow; of which the north coast between the Thracian Bosporus and the Phasis constituted the bow, and the south coast the string. (Hecat. *Fr.* 163; Strab. ii. p. 186; Dionys. 146; Plin. iv. 12.)

In respect of dimensions as far as regards the circumference, and some transverse lines across it, they seem to have been sufficiently informed. But though Strabo knew its general dimensions, he has totally failed in point of form, for he imagined the west side from the Bosporus to the Borysthenes was a straight line, while at Dioscurias it formed a narrow deep gulf. (i. p. 125.) On the other hand, the form as given by Ptolemy (iii. 10) is very tolerable. He places the Phasis and Gulf of *Varna* opposite to each other, as they nearly are, and the widest part between the Bosporus and the Borysthenes. He also approaches the truth in the space between Carambis and Criumetopon, as well as their relative bearings. But his Maeotis is disproportionably large. (Rennell, *Compar. Geog.* vol. ii. p. 276.) Strabo (p. 124) places the narrowest distance between Carambis and Criumetopon. [CARAMBIS.]

The entire circuit of the Euxine, according to Rennell (*l. c.*), measured through the different points mentioned in the Periplus, and in the line that an ancient ship would have sailed to coast it, is 1,914 geog. miles, and which turned into Roman miles in the proportion of 60 to 72 are equal to 2,392 M. P. It appears an extraordinary coincidence that 2,360 M.P. should be the estimate of Agrippa, as reported by Pliny (iv. 12) for the circuit of the Euxine. Other estimates in Pliny (*l. c.*) are Varro 2,150; Mutianus 2,865; Artemidorus 2,619. Strabo (ii. p. 125) makes it out at 25,000 stadia, while Polybius (iv. 5) has 22,000 stadia. It is a remarkable fact that Polybius, quoted by Pliny (iv. 12) states that the distance between the Thracian and Cimmerian Bosporus on a straight line was 500 M. P., which agrees so well with the actual distance, that it proves the exact knowledge of the ancients on this point; and that they had a more accurate method of determining a ship's way than has been believed. The Periplus of Arrian addressed to Hadrian contains, according to Gibbon's epigrammatic expression in his 42nd chapter, "whatever the governor of Pontus had seen from Trebizond to Dioscurias; whatever he had heard, from Dioscurias to the Danube; and whatever he knew, from the Danube to Trebizond." Thus, while Arrian gives much information upon the south and east side of the Euxine, in going round the north shore his intervals become greater, and his measurements less attended to. Rennell, in the second volume of the work already quoted, has identified most of the cities, promontories, and embouchures of rivers, that appear in the Periplus.

The area of the Black Sea differs but little from that of the Caspian. The Euxine and Maeotis, taken together, are about $\frac{1}{24}$ larger than the Caspian.

4. *Physical Geography.*— Polybius (iv. 39—43) has hazarded a prediction that the Euxine was doomed to become, if not absolutely dry land, at any rate unfit for navigation. The reasoning by which he arrived at this conclusion is curious. Whenever, he says, an infinite cause operates upon a finite object, however small may be the action of the cause, it must at last prevail. Now, the basin of the Euxine is finite, while the time during which the rivers flow into it, either directly or through the Palus Maeotis, bringing with them their alluvial deposit, is infinite, and should it, therefore, be only a little that they bring, the result described must

ultimately come to pass. But when we consider how great the accumulation is from the numerous streams that empty themselves into this basin,—that is, how powerful and active is the operation of the cause—then it is manifest that not only at some indefinite time, but speedily, what has been said will come to pass.

He then strengthens his position thus assumed, by stating that, according to all tradition, the Palus Maeotis, having been formerly a salt sea conjoined, as it were, in the same basin (*σύῤῥους*) with the Euxine, had then become a fresh-water lake of no greater depth of water than from five to seven fathoms, and no longer therefore navigable for large ships, without the assistance of a pilot; and he further instances, as an evidence of the progress of his cause, the great bank (*ταινία*) 1,000 stadia long, which appears in his time to have existed one day's sail off the mouths of the Danube, and upon which the sailors, while they thought themselves still out at sea, very often ran aground by night, and which was familiarly called by them *στήθη*, or the breast, as in Latin the word "dorsum" was applied to the same formation. (Comp. Strab. i. p. 50; Amm. Marc. xxvi. 8. § 46.) Arrian makes no mention of this bank, nor can any traces of it be found now. Either, therefore, the weight of water has been sufficient, at some time or other, to disperse this accumulation which it had before assisted to form, or the land at the mouth of the river has so increased since the time when Polybius and Strabo wrote, that what was then a bank at a distance of thirty-five or forty miles (a moderate computation for a day's sail), has now become an integral part of the main-land.

This opinion of Polybius was not altogether new. Straton of Lampsacus (Strab. i. pp. 49, 50) held the same view; indeed, he said more. According to him the Euxine is very shallow,—was then filling up with mud from the deposit of the rivers (*ἴλους πληροῦσθαι*), its water was perfectly fresh, and would shortly be choked up; and its west side was already nearly in that state.

However plausible the theory of Polybius may be, there seems no probability of his anticipation being realised. The depth of the Euxine itself, and the constant and vigorous rush of water through the comparatively straight, narrow, and deep passage of Constantinople, will always be sufficient to contain, or rather to carry off, any deposit, however large, which the Danube, the drainage of so large a portion of Europe, or the Phasis, the Halys and other Asiatic streams, or the mighty rivers of the North can bring down from the countries through which they flow. (*Journ. Geog. Soc.* vol. i. pp. 101—122; Lyell, *Princ. of Geology*, vol. i. p. 24.)

It has been thought that, at an epoch long anterior to the historical ages, the Caspian and the Euxine were united (comp. Humboldt, *Asie Centrale*, vol. ii. p. 146). The physical traces of this may easily have given rise to the fancies of the ancients connecting the Caspian with the Euxine by means of the river Phasis (Hecat. p. 92, Ed. Klausen), or through the Palus Maeotis (Strab. xi. p. 509), as well as their traditions about the overpourings of the swollen higher seas into those that were lower. [E. B. J.]

EVA. [CYNURIA.]

EVAN. [MESSENIA.]

EVARCHUS (*Εὔαρχος*), a river in Asia Minor, which, according to Steph. B. (*s. v.* *Καππαδοκία*), formed the boundary between Paphlagonia and Cappadocia. (Comp. Plin. vi. 2; Menippus, p. 176, fol. ed. Hoffmann.) [L. S.]

EVAS. [LACONIA.]

EVE'NUS (*Εὔηνος*, less frequently, *Εὐηνός*: *Fidhari* or *Fidharo*), originally called LYCORMAS (*Λυκόρμας*), an important river of Aetolia, rising in the highest summit of Mt. Oeta in the territory of the Bomienses, a subdivision of the Aetolian tribe of the Ophienses. (Strab. p. 451.) Dicaearchus (61) was mistaken in saying that the Evenus rises in Pindus: Ptolemy (iii. 16. § 6) more correctly places its source in Callidromus, which is a part of Oeta. Strabo relates that the Evenus does not flow at first through the territory of the Curetes, which is the same as Pleuronia, but more to the E. by Chalcis and Calydon, that it afterwards turns to the W. towards the plains in which Old Pleuron was situated, and that it finally flows in a southerly direction into the sea, at the distance of 120 stadia from the promontory of Antirrhium. (Strab. pp. 451, 460; comp. Thuc. ii. 83; Mel. ii. 3; Plin. iv. 3.) Its real direction however is first westerly, and afterwards south-west. It receives numerous torrents from the mountains through which it flows, and in winter it becomes a considerable river, flowing with great rapidity, and difficult to cross on account of the great stones which are carried down by its stream. ("Eveni rapidae undae," Ov. *Met.* ix. 104; *Ποταμὸν πολλῷ κυμαίνοντα καὶ ὑπὲρ τὰς ὄχθας αἰρόμενον*, Philostr. Jun. *Imag.* 16.) The Evenus is celebrated in mythology on account of the death of the centaur Nessus, who was slain by Hercules because he offered violence to Deïnaeira, as he carried her across this river. (Soph. *Trach.* 557.) This tale is, perhaps, only a figure of the impetuosity of the river, and of the danger to which unwary travellers are exposed in crossing its channel from the rise of the waters when swollen by sudden showers. (Mure, *Tour in Greece*, vol. i. p. 170.) The river is said to have derived its name from Evenus, the son of Ares, and the father of Marpessa. When his daughter was carried off by Idas, the son of Aphareus, he pursued the ravisher; but being unable to overtake him he threw himself into the Lycormas, which was henceforward called after him. (Apollod. i. 7. § 8; Ov. *Ibis*, 515; Prop. i. 2. 18.) Its modern name of *Fidharo* or *Fidhari* is derived from *Φίδι*, the Romaic form of *Ὄφις*, and is therefore supposed by Leake to be a vestige of *Ὀφιεῖς*, the ancient people in whose territory the river rose. (Leake, *Northern Greece*, vol. ii. p. 625; comp. p. 599.) From Evenus is formed the adjective *Eveninus*. ("Matres Calydonides Eveninae," Ov. *Met.* viii. 527.)

EVE'NUS (*Εὔηνος*), a small river of Mysia, flowing in a southern direction from Mount Temnus into the Elaeus Sinus, near Pitane. An aqueduct from it supplied the town of Adramyttium with water. (Strab. xiii. p. 614; Plin. v. 32.) [L. S.]

EVORAS. [TAYGETUS.]

EX, EXITANI. [HEXI].

EXAMPAEUS (*Ἐξαμπαῖος*, Herod. iv. 52, 81), a district of W. Scythia, between the Borysthenes and the Hypanis. Among the Greeks it was called the "Sacred Way" (*Ἱεραὶ ὁδοί*, some read *Ἐννέα Ὁδοί*). The Greek is probably not a translation of the Scythian word, which may be connected with the Indo-European *pani peni* = "water." (Schafarik, *Slav. Alt.* vol. i. pp. 284. 505.) Potocki (*Voyage dans les Steps D'Astrakhan et du Caucase*,

vol. i. pp. 158. 186) places this district between the *Bog* and the *Dnieper*, and identifies the spring of bitter water, of which Herodotus (iv. 81) speaks with the *Sinaja-woda*, which falls into the *Bog*, at the village of *Bogopol*. Ritter (*Vorhalle*, p. 345) connects the bowl seen by Herodotus (*l. c.*) with the worship of Buddha, in accordance with his theory of deriving the religion of Scythia from that of India. The name of the king Ariantes he refers to Aria, the country of the worshippers of Buddha in Aria-Bactria, and considers the vessel to have been among the offerings to that deity. [E. B. J.]

EXCISUM, a place in Gallia, appears in the Antonine Itin. as the next place after Aginnum (*Agen*) on a road from *Bordeaux* to Argentomagus (*Argenton*). The distance is 13 Gallic leagues from Aginnum to Excisum. The Table gives the same distance. D'Anville (*Notice*, &c.) says that the site of Excisum is *Ville Neuve*, which has succeeded to another and an older place, the monastery of which was named Exsciense in the titles of the abbey of *Moissac*. [G. L.]

EZION GEBER (Γεσιὼν Γάβερ, LXX.). [BERENICE; AELANA; ELATH.]

F.

FA'BARIS, a river of the Sabines, mentioned under that name by Virgil (*Aen.* vii. 715), who is copied by Vibius Sequester (p. 10), and Sidonius Apollinaris (*Ep.* i. 5), but which, according to Servius, is the same as the FARFARUS of Ovid (*Met.* xiv. 330). This last is unquestionably the stream now called *Farfa*, which flows into the Tiber, a few miles above the *Correse*, and about 35 miles from Rome. It gives name to the celebrated Abbey of *Farfa*, which was founded in A. D. 681, and during the middle ages was one of the most famous monasteries in Italy. (Gell, *Top. of Rome*, p. 232.) [E. H. B.]

FA'BIA, a town of Latium on the Alban Hills, known to us only from the mention, by Pliny, of the "Fabienses in Monte Albano" (iii. 5. s. 9). It is at least a plausible conjecture, that they occupied the site of the modern village of *Rocca di Papa*, high up on the Alban Mount, and on the road which led from the lake to the temple of Jupiter, on the highest summit. (Gell, *Top. of Rome*, p. 373; Nibby, *Dintorni*, vol. iii. p. 20.) [E. H. B.]

FABRATE'RIA (Φαβρατερία, Strab. v. p. 237: *Eth.* Fabraternus: *S. Giovanni in Carico*), a city of Latium, situated on the Via Latina, between Frusino and Aquinum, and near the confluence of the Liris with the Trerus or *Sacco*. (Strab. *l. c.*; *Itin. Ant.* pp. 303, 305.) It was originally a Volscian city, but in B. C. 329 it is mentioned as sending deputies to Rome, to place itself under the protection of the republic against the Samnites, who were at that time pressing on in the valley of the Liris. (Liv. viii. 19.) We hear no more of it till B.C. 124, when it was one of the places at which a Roman colony was established by C. Gracchus. (Vell. Pat. i. 15.) From this circumstance probably arose the distinction, recognised both by Pliny and by inscriptions, between the "Fabraterni novi" and "Fabraterni veteres" (Plin. iii. 5. s. 9; Orell. *Inscr.* 101, 102), the latter being the original inhabitants of the municipium. It is uncertain whether the colony referred to by the Liber de Coloniis is the same with that of Gracchus, or one of later date. (*Lib. Colon.* p. 234.) But though the colonists and the old inhabitants appear to have formed two separate municipal bodies, it is not certain whether they occupied different sites. It is clear that the Fabrateria of Strabo and the Itineraries, which they place *on* the Via Latina, could not have occupied the site of the modern *Falvaterra*, a village on a hill some distance to the S. of the line of that road: and there seems little doubt from the inscriptions found there that the ruins still visible on the right bank of the Liris, just below its junction with the *Tolero* or *Sacco*, are those of Fabrateria Nova. These ruins, which have been regarded by many writers as those of Fregellae [FREGELLAE], are situated in the territory of *S. Giovanni in Carico*, about three miles from *Falvaterra* and four from *Ceprano:* they indicate a town of considerable importance, of which portions of the city walls are still extant, as well as the remains of a temple, and fragments of other buildings of reticulated masonry. Numerous portions of pavements, mosaics, and other ancient remains have been also found on the spot. (Romanelli, vol. iii. p. 380; Chaupy, *Maison d'Horace*, vol. iii. p. 476; Mommsen, *Inscr. Regn. Neap.* p. 234.) The site of Fabrateria Vetus is uncertain: it may have occupied the same position as the modern *Falvaterra;* but the discovery of inscriptions relating to it at *Ceccano*, more than 12 miles higher up the valley of the *Tolero*, renders it probable that its site must be transferred thither. (Mommsen, *l. c.*)

Cicero incidentally notices Fabrateria as a town on the Via Latina, where Antony and his friends had concocted plots against him (Cic. *ad Fam.* ix. 24): and Juvenal mentions it as a quiet and cheap country town, like the neighbouring Sora, where a good house could be obtained at a moderate price (Juv. iii. 224). Both these notices probably relate to the *new* town of the name. [E. H. B.]

FAESULAE (Φαισοῦλαι, Ptol., App.; Φαισόλα, Pol.; *Eth.* Faesulanus: *Fiesole*), an ancient and important city of Etruria, situated on a hill rising above the valley of the Arnus, about 3 miles from the modern city of *Florence*. The existing remains sufficiently prove that it must have been a place of consideration as an Etruscan city, and Silius Italicus alludes to it as eminent for skill in divination (viii. 477), a character which could never have attached to a place not of remote antiquity, but no mention of it is found in history previous to the Roman dominion, nor do we know at what time or on what terms it submitted to the Roman yoke. The first mention of its name occurs in B. C. 225, during the great Gaulish War, when the invaders were attacked by the Roman army on their march from Clusium towards Faesulae. (Pol. ii. 25.) It again appears in the Second Punic War as the place in the neighbourhood of which Hannibal encamped after he had crossed the Apennines and forced his way through the marshes in the lower valley of the Arnus, and from whence he advanced to meet Flaminius (who was then encamped at Arretium), before the battle of Trasymene. (Id. iii. 80, 82; Liv. xxii. 3.) Faesulae is described as at that time immediately adjoining the marshes in question, and it is probable that the basin of the Arno just below Florence was then still marshy and subject to inundations. [ARNUS]. According to Florus (iii. 18. § 11), Faesulae was taken and ravaged with fire and sword during the Social War (B. C. 90—89): but it seems more probable that this did not take place till the great devastation of Etruria by Sulla, a few years later. It is certain that after that event Faesulae was one of the places selected by the dictator for the establishment of a

numerous military colony (Cic. *pro Muren.* 24, *in Cat.* iii. 6. § 14), and, near 20 years after, we find these colonists of Sulla, a factious and discontented body of men, giving the chief support to the revolutionary movements of Catiline. It was on this account that that leader made Faesulae the headquarters of his military preparations under Manlius, and thither he betook himself when driven from Rome by Cicero. (Sall. *Cat.* 24, 27, 30, 32; Appian, *B. C.* ii. 3; Cic. *pro Muren.* 24, *in Cat.* ii. 6. § 14.) Here he organised a force of two legions, and continued to maintain his ground in the mountains near Faesulae, till, hemmed in by the armies of Metellus and Antonius, he was compelled to give battle to the latter near Pistoria. (Sall. *l.c.* 56, 57.) The curious legends concerning Catiline, which have passed into the early chronicles of Florence, where he figures almost as a national hero (Malespini, *Istor. Fiorent.* cc. 13—21), prove the deep impression left in this part of Etruria by the events connected with his fall. From this time we hear little more of Faesulae: it appears to have sunk into the condition of an ordinary municipal town under the Roman empire (Plin. iii. 5. s. 8, vii. 13. s. 11; Ptol. iii. 1. § 47), and the growth of the neighbouring Florentia was probably unfavourable to its prosperity. But in the Gothic wars, after the fall of the Western Empire, Faesulae again appears as a strong fortress, which was not reduced by Belisarius until after a long siege. (Procop. *B. G.* ii. 23, 24, 27.)

In the middle ages Faesulae was reduced to insignificance by the growing power of the Florentines, and gradually fell into decay. According to the ordinary histories of Florence (Machiavelli, Villani, &c.), it was taken and destroyed by the Florentines in A. D. 1010, but much doubt has been thrown on this statement by modern historians. *Fiesole* is now a mere village, though retaining its episcopal rank and ancient cathedral.

The ruins of Faesulae, especially the remains of its ancient walls, confirm the accounts of its having been an important Etruscan city. Large portions of these walls, constructed in the same style with those of Volaterrae and Cortona, though of somewhat less massive masonry, were preserved till within a few years, and some parts of them are still visible. The whole circuit however was less than two miles in extent, forming a somewhat quadrangular enclosure, which occupied the whole summit of the hill, an advanced post or buttress of the Apennines, rising to the height of more than 1000 feet above the valley of the Arnus. The highest point, now occupied by the convent of *S. Francesco*, formed the Arx of the ancient city, and appears to have been fortified by successive tiers of walls, in the same style as those which encircled the city itself. Within the circuit of the walls are the remains of the ancient theatre, which have been as yet but imperfectly excavated; but there appears no doubt that they are of Roman date and construction, though this theatre is repeatedly referred to by Niebuhr as a monument of Etruscan greatness. (Niebuhr, vol. i. pp. 130, 135; Micali, *Ant. Pop. Ital.* vol. i. p. 152; Dennis, *Etruria*, vol. ii. p. 127.) Near it was discovered a curious cistern or reservoir for water, probably of Etruscan date, roofed in by converging layers of stone, so arranged as to form a rude kind of vaulting. Of the numerous minor objects of antiquity that have been found on the site of Faesulae, the most interesting is a bas-relief of a warrior of very ancient style, and one of the most curious specimens of *early* Etruscan art. It is figured by Micali (pl. li. fig. 3). All the remains of antiquity at Faesulae are fully described by Dennis (*l.c.* pp. 119—130). [E.H.B.]

FALACRI'NUM (Phalacrine, Suet.), a village and station on the Via Salaria, in the Sabine territory, and in the heart of the Apennines, 16 M. P north of Interocrea. (*Itin. Ant.* p. 307; *Tab. Peut.*) It is noticed as the birthplace of the emperor Vespasian, but was a mere village ("vicus modicus," Suet. *Vesp.* 2). Its site is fixed by the distance given from *Antrodoco*, at a spot just below the modern town of *Civita Reale*, where there exists an ancient church mentioned in documents of the middle ages as *S. Silvestro in Falacrino*. The name of *Falacrine* is still found in the 14th century, as one of the villages from which the town of *Civita Reale* was peopled. (Holsten. *Not. ad Cluv.* p. 118; D'Anville *Analyse Géogr. de l'Italie*, p. 167.) [E. H. B.]

FALE'RIA or FALE'RIO (*Eth.* Faleriensis or Falerionensis: *Fallerona*), a town of Picenum on the left bank of the river Tinna, about 20 miles from the sea. We learn very little about it from ancient authors, but the Falerienses (written in our MSS. Falarienses) are mentioned by Pliny among the municipal towns of the interior of Picenum: and the "Falerionensis ager" is noticed among the "civitates Piceni" in the Liber Coloniarum. (Plin. iii. 13. s. 18; *Lib. Colon.* p. 256.) But its existence as a considerable municipal town, with its local senate and magistrates, is attested by inscriptions of the time of Domitian, Hadrian, and the Antonines: as well as by the ruins still visible on the left bank of the *Tenna*, about a mile below the modern village of *Fallerona*, among which those of a theatre and amphitheatre are the most conspicuous. The former has been recently cleared out, and the excavations have brought to light many statues and other ancient fragments, as well as the architectural features of the building itself, in good preservation. (De Minicis, in the *Ann. dell' Inst.* 1839, pp. 5—61.) From one of the inscriptions discovered here we learn that the territory of Faleria bordered on that of Firmum, and that it had received a colony of veterans under Augustus. (Orell. *Inscr.* 3118.) Another mentions its forum, capitolium, &c. (De Minicis, *l.c.* p. 49.) The correct designation of the citizens appears to have been "Falerienses *ex Piceno*," but another inscription gives the form Falerio or Falerione for the name of the town, which is preserved in the modern *Fallerone*. [E. H. B.]

FALE'RIA or FALE'SIA, a port on the coast of Etruria, nearly opposite to the island of Ilva, and a little to the eastward of the promontory of Populonium. It is mentioned by Rutilius, in his voyage along this coast (*Itin.* i. 371—380), under the name of Faleria: but in the Maritime Itinerary (p. 501) the name is written *Falesia*, which appears to have been the prevalent form, as the Portus Falesiae, or *Porto Falese*, is repeatedly mentioned in the middle ages until it became so choked with sand as to render it useless. (Targioni-Tozzetti, *Viaggi nella Toscana*, vol. iv.) It was situated at the entrance of an extensive lagoon or padule, which, in the time of Rutilius, was converted into a fishpond. [E. H. B.]

FALE'RII (Φαλέριοι, Strab.; Φαλέριον, Dionys., Steph. B., Ptol.: *Eth.* Φαλίσκος, Faliscus: *Sta. Maria di Falleri*), an ancient and powerful city of Etruria, situated in the interior of that country, a few miles W. of the Tiber, and N. of Mount Soracte. It appears in historical times, and when it first came into collision with the Roman power, as a purely

Etruscan city; and there is even much reason to believe that it was at that time one of the twelve cities which composed the Etruscan confederation. [ETRURIA, p. 864.] But there is much difficulty with regard to its origin; many ancient writers concurring in representing the population as one different from the rest of the Etruscan nation. A tradition, adopted by Dionysius and Cato, ascribed to them an Argive or Pelasgic origin; and the former author expressly tells us that even in his day they retained some traces of this descent, and especially that the worship of Juno at Falerii was in many points similar to that of the famous Argive Juno. (Dionys. i. 21; Cato, *ap. Plin.* iii. 5 s. 8; Steph. B. *s. v.* Φαλίσκος.) The poets and mythographers went a step further, and ascribed the direct foundation of Falerii to a certain Halesus or Haliscus, a son of Agamemnon, whose name they connected with Faliscus, the ethnic appellation of the inhabitants of Falerii. (Serv. *ad Aen.* vii. 695; Ovid, *Fast.* iv. 73, *Amor.* iii. 13, 31; Solin. 2. § 7.) Strabo speaks of the Faliscans (whom he represents as inhabiting two towns, Falerium and Faliscum) as, according to some authors, a peculiar people distinct from the Etruscans, and with a language of their own (v. p. 266); but this was certainly not the case in his day, when all this part of Etruria was completely Romanised. If any dependence can be placed on these statements they seem to indicate that Falerii, like Caere, was essentially Pelasgic in its origin; and that, though it had fallen, in common with the other cities of Southern Etruria, into the hands of the Etruscans properly so called, it still retained in an unusual degree its Pelasgic rites and customs, and even a Pelasgic dialect. But it is strange to find, on the other hand, that some points seem to connect the Faliscans more closely with the neighbouring Sabines: thus, the very same Juno who is identified with the Argive Hera, was worshipped, we are told, under the name of Juno Curitis or Quiritis, and represented as armed with a spear. (Tertull. *Apol.* 24; Gruter, *Inscr.* p. 308. 1.) The four-faced Janus also (Janus Quadrifrons), who was transferred from Falerii to Rome (Serv. *ad Aen.* vii. 607.), would seem to point to a Sabine connection: there is, at least, no other evidence of the worship of this deity in Etruria previous to the Roman conquest.

Be this as it may, it is certain that during the historical period Falerii appears as a purely Etruscan city. It is first mentioned in Roman history in B. C. 437, when the Falisci and Veientes lent their support to the Fidenates in their revolt against Rome, and their combined forces were defeated by Cornelius Cossus. (Liv. iv. 17, 18.) From this period till the fall of Veii we find the Faliscans repeatedly supporting the Veientes against Rome; and when the siege of Veii was at length regularly formed, they did their utmost to induce the other cities of Etruria to make a general effort for its relief. Failing in this, as well as in their own attempts to raise the siege, they found themselves after the capture of Veii exposed single-handed to the vengeance of the Romans, and their capital was besieged by Camillus. The story of the schoolmaster and the generous conduct of the Roman general is well known: it is probable that this tale was meant to conceal the fact that Falerii was not in reality taken, but the war terminated by a treaty, which is represented by the Roman historians as a "deditio" or surrender of their city. (Liv. v. 8, 13, 19; Plut. *Camill.* 9, 10; Dionys. *Fr. Mai*, xiii. 1, 2; Diod. xiv. 96; Flor. i. 12.) From this time the Faliscans continued on friendly terms with Rome till B. C. 356, when they joined their arms to the Tarquinians, but their allied forces were defeated by the dictator C. Marcius Rutilus; and the Faliscans appear to have obtained a fresh treaty, and renewed their friendly relations with Rome, which continued unbroken for more than 60 years from this time. But in B. C. 293 we find them once more joining in the general war of the Etruscans against Rome. They were, however, quickly reduced by the consul Carvilius, and though they obtained at the time only a truce for a year, this appears to have led to a permanent peace. (Liv. vii. 16, 17, x. 46, 47; Diod. xvi. 31; Frontin. *Strat.* ii. 4.) We have no account of the terms on which this was granted, or of the relation in which they stood to Rome, and we are wholly at a loss to understand the circumstance, that, after the close of the First Punic War, in B. C. 241, long after the submission of the rest of Etruria, and when the Roman power was established without dispute throughout the Italian peninsula, the Faliscans ventured single-handed to defy the arms of the Republic. The contest, as might be expected, was brief: notwithstanding the strength of their city, it was taken in six days; and, at once to punish them for this rebellion, and to render all such attempts hopeless for the future, they were compelled to abandon their ancient city, which was in a very strong position, and establish a new one on a site easy of access. (Liv. *Epit.* xix.; Pol. i. 65; Zonar. viii. 18; Oros. iv. 11; Eutrop. ii. 28.)

This circumstance, which is mentioned only by Zonaras, is important as showing that the existing ruins at *Sta. Maria di Falleri* cannot occupy the site of the ancient Etruscan city, the position of which must be sought elsewhere. The few subsequent notices in history must also refer to this second or Roman Falerii; and it was here that a colony was established by the triumvirs which assumed the title of "Colonia Junonia Faliscorum," or "Colonia Falisca." (Plin. iii. 5. s. 8; *Lib. Colon.* p. 217; Gruter, *Inscr.* p. 288. 1.) It does not, however, appear to have ever risen into a place of importance; and, notwithstanding its cognomen of Junonia, it is evident that the ancient temple of Juno on the site of the abandoned city was that which continued to attract the votaries of religion. (Ovid, *Amor.* iii. 13. 6.) The period of its complete decay is unknown. The Tabula still notices "Faleros" (by which the Roman town is certainly meant) as situated 5 miles from Nepe, on the road to Ameria; and it retained its episcopal see as late as the 11th century. But in the middle ages the advantages of strength and security again attracted the population to the original site; and thus a fresh city grew up on the ruins of the Etruscan Falerii, which ultimately obtained the name of *Civita Castellana*. (Nibby, *Dintorni di Roma*, vol. ii. pp. 23—26.) The site of the Roman Falerii (which was about 4 miles distant from *Civita Castellana*, and 5 from *Nepi*) is now wholly deserted, with the exception of a single farm-house, and an ancient ruined church, still called *Sta. Maria di Falleri*. But a large portion of the ancient walls, with their gates and towers, still remains; and though obviously not of very early date, they have contributed to the mistake of several modern writers, who have not paid sufficient attention to the distinction between the earlier and later Falerii, and have thus regarded the existing remains at *Falleri* as those of the celebrated Etruscan city. But all accounts

agree in describing the Falerii besieged by Camillus, as well as the city taken by the Romans in B. C. 241, as a place of great natural strength, a character wholly inapplicable to the site of *Falleri*, the walls of which are on one side easily exposed to attack, just as the site of the *new* city is described by Zonaras (εὐέφοδος, Zonar. *l. c.*). On the other hand, this description applies perfectly to *Civita Castellana;* and there can be little or no doubt that the opinion first put forward by Cluver, and since adopted by many antiquarians, correctly regards that place as the representative of the Etruscan or original Falerii. No other ancient remains are visible there, except a few fragments of the walls; but these are of a more ancient style of construction than those of *Falleri*, and thus confirm the view that they are vestiges of the Etruscan city. (For a full discussion of this point, see Nibby, *Dintorni di Roma*, vol. ii. pp. 15—30; and Dennis, *Etruria*, vol. i. pp. 114—147.) Gell and Müller, the two chief authorities who were misled into placing the Etruscan city at *Falleri*, were thus led to regard *Civita Castellana* as the site of Fescennium, a town of far inferior importance; though the former himself admits that that place would correspond better with the descriptions of Falerii. (Gell, *Top. of Rome*, pp. 235—240; Müller, *Etrusker*, vol. i. p. 110.)

The site of *Civita Castellana*, indeed, is not only one of great strength, from the vast and deep ravines which surround it on almost all sides, but affords space for a city of considerable extent; and the population and power of the ancient Falerii are attested by the fact that, in its last hopeless struggle against the Roman power, it is said to have lost 15,000 men in the field. (Oros. iv. 11; Eutrop. ii. 28.) The existing walls of Roman Falerii enclose a much smaller space, being only about 2300 yards in circuit, and could therefore never have belonged to a city of the first class. (Gell, p. 241.) They are, however, of interest, from their excellent preservation, and present one of the best specimens extant of Roman fortification: they are flanked at short intervals by projecting square towers, which are most numerous on the two sides where they stand completely in the plain, and much fewer on the S. side of the city, where the wall borders on a small ravine, and is protected by the nature of the ground. The gateways, of which several remain in good preservation, are regularly arched, and the masonry of the walls themselves has throughout a character of regularity wholly different from any of those of ancient Etruscan origin.

The territory of Falerii appears to have been in ancient times extensive and fertile. Ovid, whose wife was a native of the place, speaks of the "pomiferi Falisci," and of the rich pastures in which its cattle were fed. (Ovid, *Amor.* iii. 13. 1.) It was celebrated also for its sausages, which were known as "ventres Falisci," and were considered to rival those of Lucania. (Varr. *L. L.* v. 111; Martial, iv. 46. 8.)

There is no doubt that Faliscus was only the ethnic form derived from Falerii, and the Falisci usually mean the inhabitants of that city. Those writers, indeed, who speak of the Falisci as a separate people, ascribe to them the possession of two cities, Falerii and Fescennium (Dion. Hal. i. 21); but the latter appears to have been a place of inferior importance, and was probably a mere dependency of Falerii in the days of its power. There is, however, much difficulty in a passage of Strabo (v. p. 226) in which he speaks of "Falerii and Faliscum" as two separate towns; and both Solinus and Stephanus of Byzantium seem to acknowledge the same distinction. Little dependence can, indeed, be placed upon the accuracy of these two last authorities; and the Faliscum of Strabo (if it be not merely a mistake for Fescennium) may probably be the same place which he again alludes to shortly after as "Aequum Faliscum" (Αἰκουμφαλίσκον), and describes as situated on the Flaminian Way between Rome and Ocriculi. No other author mentions a *town* of this name, but the "Aequi Falisci" are mentioned both by Virgil and Silius Italicus. (Virg. *Aen.* vii. 695; Sil. Ital. viii. 491.) Ancient commentators appear to have understood the epithet of *Aequi* as a moral one, signifying "just" (Serv. *ad Aen. l. c.*); while Niebuhr supposes it to indicate a national connection with the Aequians (vol. i. p. 72): but there can be little doubt that in reality it referred to the physical position of the people, and was equivalent merely to "Faliscans of the Plain." It seems, however, impossible to understand this, as Müller has done (*Etrusker*, vol. i. p. 100), as referring to the site of the *new* city of Falerii. It is far more probable that the plain on the banks of the Tiber was meant; and this would agree with the statement of Strabo, who places his "Aequum Faliscum" on the Flaminian Way, where it is natural enough that a large village or *borgo* may have grown up, during the flourishing ages of Rome, within the Faliscan territory, but distinct both from the more ancient and later Falerii, neither of which was situated on the line of that high road. Unfortunately the passage of Strabo is obviously corrupt, and none of the emendations proposed are altogether satisfactory. (See Kramer, *ad loc.*)

The coins ascribed by earlier numismatists to Falerii belong in fact to Elis, the inscription on them being ΓΑΛΕΙΩΝ, the ancient Doric form with the digamma prefixed. [ELIS.] [E. H. B.]

FALERNUS AGER, a district or territory in the northern part of Campania, extending from the Massican hills to the N. bank of the Vulturnus. It was celebrated for its fertility, and particularly for the excellence of its wine, which is extolled by the Roman writers, especially by Horace, as surpassing all others then in repute. (Hor. *Carm.* i. 20. 10, ii. 3. 8, &c.; Virg. *G.* ii. 94; Sil. Ital. vii. 162—165; Propert. iv. 6. 73; Plin. xiv. 6. s. 8; Strab. v. pp. 234. 243; Athen. i. pp. 26, 27.) It is probable that the district in question derived its name originally from a town of the name of Faleria, but no mention of such occurs in history: and it was a part of the domain of Capua until its conquest by the Romans, who, after the great battle at the foot of Mount Vesuvius in B. C. 340, annexed the whole district N. of the Vulturnus to the Roman domains, and shortly after divided the lands thus acquired among the plebeians. (Liv. viii. 11, 12.) In B. C. 295 a colony was founded at Sinuessa, immediately adjoining the Falernian district (Liv. x. 21), but it does not appear that the latter was annexed to it: nor do we know to which of the neighbouring cities this favoured tract belonged for municipal purposes. In B. C. 217 the whole district was laid waste by the Carthaginian cavalry under Maharbal. (Liv. xxii. 13.)

On this occasion Livy distinctly tells us that the "Falernus ager" which was thus ravaged extended as far as the Aquae Sinuessanae, and almost up to the gates of Sinuessa itself: shortly afterwards (*Ib.* 15) he speaks of the Falernus ager as separated

from the "Campanus ager" by the Vulturnus. It is clear, therefore, that he used the term in the full extent given to it above. Pliny, on the contrary, appears to apply the name in a much more restricted sense: he describes the "ager Falernus" as lying "on the left hand as one proceeded from the Pons Campanus to the Colonia Urbana of Sulla" (xiv. 6. s. 8); which would exclude all the space between the Via Appia and the Vulturnus. The exact limits of the district cannot be fixed with certainty: the name was probably used in a narrower or a wider sense, sometimes with reference to the especial wine-growing district, sometimes to the whole of the fertile plain on the N. of the Vulturnus.

Pliny tells us that the Falernian wine was in his day already declining in quality, from want of care in the cultivation: the choicest kind was that called Faustianum, from a village of that name, probably so called in honour of Sulla, who had established a colony in this district. (Plin. xiv. 6.) Immediately adjoining the Falernus ager was the "Statanus ager," the wine of which is already noticed by Strabo, and this had in the time of Pliny attained even to a superiority over the true Falernian. (Plin. *l. c.*; Strab. v. pp. 234, 243; Athen. i. p. 26.) The exact situation of this district is unknown: but it appears to have bordered on the Falernian territory on the one side and that of Cales on the other.

Pliny also mentions (*l. c.*) a village called Cediae or Caediae in this district, which he places 6 miles from Sinuessa: it is evidently the same place which gave name to the "Caeditiae Tabernae" on the Via Appia, mentioned by Festus (p. 45. ed. Müller).

An inscription preserved in the neighbouring town of *Carinola* notices the "coloni Caedicianei" together with the Sinuesani. (Mommsen, *I. R. N.* 4021.) [E. H. B.]

FALISCI. [FALERII.]

FANUM FORTUNAE (Φᾶνον Φορτοῦναι, Ptol.; τὸ Ἱερὸν τῆς Τύχης, Strab.: *Eth.* Fanestris: *Fano*), a city of Umbria, situated on the coast of the Adriatic on the left bank of the river Metaurus, between Pisaurum (*Pesaro*) and Sena Gallica (*Sinigaglia*). It was here that the Via Flaminia, descending the valley of the Metaurus from Forum Sempronii, joined the line of road which led along the coast from Ancona and Picenum to Ariminum. (*Itin. Ant.* pp. 100, 126.) It is evident that the town must originally have derived its name from an ancient temple of Fortune: but of this we have no account, nor do we know whether it existed prior to the Roman conquest of this part of Italy. There must, however, have soon grown up a considerable town upon the spot, as soon as the Flaminian Way was completed; and in the Civil War of B. C. 49, we find it mentioned by Caesar as a place of importance which he hastened to occupy with one cohort, immediately after his advance to Ariminum. (Caes. *B. C.* i. 11.) For the same reason, in A.D. 69, the generals of Vespasian made it their head-quarters for some time before they ventured to attempt the passage of the Apennines, and advance upon Rome. (Tac. *Hist.* iii. 50.) These are the only occasions on which it figures in history; but we learn that it received a colony under Augustus, and appears to have become from thenceforth one of the most flourishing and considerable towns in this part of Italy. Its colonial rank is attested by inscriptions, on which it bears the title of "Colonia Julia Fanestris," or "Colonia Julia Fanum Fortunae," as well as by Mela and Pliny. (Plin. iii. 14. s. 19; Mel. ii. 4. § 5: *Lib. Colon.* p. 256; Orell. *Inscr.* 83, 1535, 3143, 3969.)

It was at the period of the establishment of this colony that the city was adorned with a basilica, of which Vitruvius, as we learn from himself, was the architect (Vitruv. v. 1. § 6), and to the same period belongs the triumphal arch of white marble, erected in honour of Augustus, which still forms one of the gates of the city on the Flaminian Way (Eustace, *Class. Tour*, vol. i. p. 287; Orell. *Inscr.* 602). Claudian, Sidonius, and the Itineraries attest the continued importance of Fanum, as it was commonly called, throughout the period, and it is probable that, like most of the cities on the Flaminian and Aemilian Ways, it retained some degree of prosperity long after the other towns of the province had fallen into decay. (Claudian, *in VI. Cons. Hon.* 500; *Itin. Ant.* pp. 126, 615; Sidon. Apoll. *Ep.* i. 5). But the city suffered severely in the Gothic wars, and its walls, which had been erected by Augustus, were destroyed by Vitiges. (Procop. *B. G.* iii. 11.) The modern city of *Fano* contains about 8000 inhabitants; it has no other relics of antiquity besides the arch above mentioned, and a few inscriptions. [E. H. B.]

FANUM FUGITIVI, a station on the Flaminian Way, between Interamna (*Terni*) and Spoletium (*Spoleto*). (*Itin. Hier.* p. 613.) It seems to have coincided with the spot now called *la Somma*, at the highest point of the pass between Interamna and Spoletium. [E. H. B.]

FANUM MARTIS, in Gallia Transalpina. 1. Mentioned in the Not. Imp., gave the name of Pagus Fanomartensis to a great part of the modern *Hainau* in the kingdom of Belgium. The Fanum Martis was in the territory of the Nervii, and in the division of Belgica Secunda. *Fammars* near *Valenciennes*, in the French department of Nord, is the site of Fanum Martis. Fanum was the residence of the praefectus of the Laeti Nervii, as we may conclude from the Notitia. The remains of a large building of the Roman period have been discovered at *Fammars*.

2. The Ant. Itin. places a Fanum Martis on the road from Alauna to Condate Redonum (*Rennes*), between Cosedia and Fines. D'Anville conjectures that Fanum Martis may be the commanding position of *Mont-martin*, which is on the line of the Roman road. Walckenaer fixes it at a place called *Tanie*; and Ukert (p. 487), at *Le Faouet*. The position we may assume to be unknown.

The Table places Fanum Martis between Reginea and Condate. If the position of Reginea were certain, perhaps that of Fanum Martis might be found. D'Anville supposes this Fanum Martis not to be the same as that mentioned in the Antonine Itin. between Alauna and Condate, and he fixes it at *Dinan*; but Walckenaer, who supposes Reginea to be Granville, fixes Fanum Martis at *Tanie*. [G. L.]

FANUM MINERVAE, in Gallia, is placed by the Anton. Itin. on the road from Durocortorum (*Reims*) to Divodurum (*Metz*), and 14 Gallic leagues from Durocortorum. The same place seems to be intended by the corrupt word Tenomia, as D'Anville has it, or Fanomia, as Walckenaer has it, in the Table, which places it 19 from *Reims*. We may either correct the distance 14 in the Itin., or suppose a station to be omitted, for the purpose of making the Itin. agree with the Table, which seems to have the true distance.

The site of the Fanum is supposed to be *Cheppe*,

on the line of the Roman road, and near the camp called the camp of Attila. [G. L.]

FANUM VACUNAE. [DIGENTIA.]

FANUM VENERIS. [PORTUS VENERIS.]

FANUM VOLTUMNAE, a place in Etruria, at which it was the custom of the Etruscans to hold the general meetings of the deputies from the different states of the confederation. (Liv. iv. 23, 61, v. 17, vi. 2.) It is evident, from its name, that it was originally a temple or sanctuary, and it is even probable that the meetings in question had at first a purely sacred character, but gradually assumed a political signification. There is no reason to suppose there was ever a *town* upon the spot, though there appears to have been a kind of fair at these annual meetings, at which traders assembled from the neighbouring parts of Italy. (Liv. vi. 2.) The situation of this national sanctuary is nowhere indicated, nor, indeed, does any mention of it occur after the fall of Etruscan independence: hence the sites which have been assigned to it are wholly conjectural. The opinion most commonly received would place it at *Viterbo:* others have fixed it at *Castel d'Asso*, in the same neighbourhood; and Dennis places it at *Monte Fiascone*, 9 miles from *Bolsena*, on the banks of the lake which derives its name from that city. There are certainly circumstances which would appear to connect the Fanum Voltumnae with Volsinii, and render it probable that it was somewhere in that neighbourhood. (Dennis, *Etruria*, vol. i. pp. 516—522.) [E. H. B.]

FARFARUS. [FABARIS.]

FAUSTINO'POLIS, a town in the south of Cappadocia, about 12 miles south of Tyana. It was named after the empress Faustina, the wife of M. Aurelius, who died there in a village, which her husband, by establishing a colony in it, raised to the rank of a town under the name of Faustinopolis. (Jul. Capitol. *M. Ant. Philos.* 26.) Hierocles (p. 700) assigns the place to Cappadocia Secunda, and it is mentioned also in the Antonine and Jerusalem Itineraries. The exact position of the town has not yet been ascertained, but it must have been close to the defiles of the Cilician gates. [L. S.]

FAVE'NTIA (*Φαουεντία*, Ptol.; *Φαβεντία*, Steph. B.: *Eth.* Faventinus: *Faenza*), a city of Gallia Cispadana, situated on the Via Aemilia, 10 miles from Forum Cornelii (*Imola*), and the same distance from Forum Livii (*Forlì*). (Plin. iii. 15. s. 20; Strab. v. p. 217; Ptol. iii. 1. § 46; *Itin. Ant.* pp. 126, 287.) It is noted in history as the place where Carbo and Norbanus were defeated with great loss by Metellus, the general of Sulla, in B. C. 82. (Appian, *B. C.* i. 91; Vell. Pat. ii. 28; Liv. *Epit.* lxxxviii.) With this exception, we find little notice of it in history; but it appears to have been, under the Roman empire, a municipal town of some consideration, and, in common with many of the other cities on the Via Aemilia, continued to retain its prosperity down to a late period. (Plin. vii. 49. s. 50; Spartian. *Hadr.* 7; Capit. *Ver.* 1; Procop. *B. G.* iii. 3; *Itin. Hier.* p. 616.) Its territory was peculiarly favourable to vines, and, according to Varro, exceeded all other districts in Italy in the quantity of wine produced. (Varr. *R. R.* i. 2. § 7; Colum. iii. 3. § 2.) Silius Italicus, on the other hand, speaks of it as crowned with pines (viii. 598). In the time of Pliny, Faventia was celebrated for its manufactures of linen, which was considered to surpass all others in whiteness. (Plin. xix. 1. s. 2.) We learn from the Itineraries that a cross road led from hence across the Apennines direct to Florentia in the valley of the Arnus, a distance of 70 miles. (*Itin. Ant.* p. 283.) The intermediate stations are unknown, but the road must evidently have ascended the valley of the *Lamone* (the Anemo of Pliny), which flows under the walls of *Faenza*. [E. H. B.]

FECYI JUGUM, on the south coast of Gallia, near Agatha (*Agde*), is mentioned by Avienus after Mons Setius [BLASCON]:—

"Fecyi jugum
Radice fusa in usque Taurum pertinet."

Taurus seems to be the *E'tang de Tau*, on one side of which there is a range of hills called "*lou Pié Feguié.*" (Ukert, *Gallien*, p. 119.) [G. L.]

FELSINA. [BONONIA.]

FELTRIA (*Feltre*), a town of Venetia, but on the confines of Rhaetia, and included within that province according to the later distribution of Italy. It is situated about 3 miles from the river *Piave* (Plavis). Inscriptions prove it to have been a municipal town of some importance under the Roman Empire, and there can be little doubt that we should read "Feltrini" for the "Fertini" who are enumerated by Pliny among the "Rhaetica oppida" which were comprised within the tenth region of Italy. (Plin. iii. 19. s. 23; Orell. *Inscr.* 993, 3084; Cassiod. v. 9.) The Itineraries give a cross road from Opitergium (*Oderzo*) to Feltria, and thence through the *Val Sugana* to Tridentum (*Trent*). (*Itin. Ant.* p. 280.) [E. H. B.]

FENNI, a population of the north and north-eastern parts of Europe, first mentioned by Tacitus (*Germania*, 46), as one different from and contrasted to those of *Germania*. In Ptolemy, the only other author who gives their name, the form is *Φίννοι*. The extent to which the Fenni coincided with the modern Laps of Lapland, rather than with the Finns of Finland (or *vice versâ*), is considered under the articles SITONES, SCYTHIA, and SARMATIA. At present the *name* alone will be noticed. It belongs to the same language with the word *Æstyi* = *Eastmen* (*q. v.*), viz. the German; and, of this, to the Scandinavian branch. *Finn* is *not* the name by which either the Finlanders or the Laplanders know themselves. It *is* the term by which they are known to the Northmen. This helps to verify the statement that the chief sources of the information of the classical writers concerning the Baltic were German. [R. G. L.]

FERE'NTINUM or FERE'NTIUM (*Φερεντῖνον*, Strab. v. p. 226; *Φερεντία*, Ptol. iii. 1. § 50: *Ferento*), a city of Etruria, situated on the N. of the Ciminian range, about 5 miles distant from the Tiber, and the same distance from the modern city of *Viterbo*. It is not mentioned in history during the period of Etruscan independence, and must probably have been then a mere dependency of Volsinii: Strabo speaks of it as one of the smaller towns in the interior of Etruria, but we learn from other authorities, as well as from existing remains, that it must have been in his time a flourishing municipal town: Vitruvius notices the excellent quality of the stone found in its neighbourhood, and the numerous statues and other monuments hewn out of this material which adorned the town itself (Vitruv. ii. 7. § 4). In common with most of the cities of Etruria, it had received a Roman colony before the end of the Republic, but did not obtain the title of a colony; and is termed, both by Vitruvius and Tacitus, a municipium. (*Lib. Colon.* p. 216; Vitruv. *l. c.*; Tac. *Hist.* ii. 50.) It

derived some distinction from being the birth-place of the Emperor Otho, who was of a noble and ancient Etruscan family (Suet. *Oth.* 1; Tac. *l. c.*): we learn also that it possessed an ancient and celebrated temple of Fortune, i. e. probably of the Etruscan goddess Nursia or Nortia (Tac. *Ann.* xv. 53). All these circumstances point to it as a place of consideration under the Roman Empire, and we find it termed in an inscription "civitas splendidissima Ferentinensium" (Orell. *Inscr.* 3507): it appears to have survived the fall of the Empire, and retained its episcopal see till the 12th century, when it was attacked and destroyed by the people of the neighbouring city of *Viterbo*, on account of some religious disputes which had arisen between the two (Alberti, *Descrizione d'Italia*, p. 62).

The site is now uninhabited, but is still known by the name of *Ferento:* and the ruins of the ancient city are considerable, the most important of them being a theatre, which is, in some respects, one of the best preserved monuments of the kind remaining in Italy. The *scena*, or stage-front, is particularly remarkable: it is 136 feet long, and built of massive rectangular blocks of volcanic masonry, on which rests a mass of Roman brickwork with arches, decidedly of Imperial times: while seven gates, with flat arches for architraves, open in the façade itself. The lower part of this construction is supposed by Mr. Dennis to be certainly an Etruscan work; but the Cav. Canina regards the whole edifice as a work of the Roman Empire. (Canina, in the *Annali dell' Inst.* 1837, pp. 62—64; Dennis, *Etruria*, vol. i. pp. 204—210.) Besides the theatre, portions of the city walls and gates, and various ruins of buildings of Roman date, are still remaining on the site of *Ferento.*

The ancient name is variously written: the MSS. of Tacitus and Suetonius fluctuate between Ferentium and Ferentinum: Ptolemy writes it Ferentia (Φερεντία); and the ethnic form used by Vitruvius, "municipium Ferentis," is in favour of the form Ferentium: on the other hand, the inscription above cited (which certainly belongs to the Etruscan and not to the Hernican town) gives the form Ferentinensis from Ferentinum, and the Liber Coloniarum also has "Colonia Ferentinensis" for the Etruscan colony. [E. H. B.]

FERENTI'NUM (Φερέντινον: *Eth.* Ferentīnās, ātis, but sometimes also Ferentinus, Sil. Ital. viii. 393; Jul. Obseq. § 87: *Ferentino*), a city of the Hernicans; but included, with the other towns of that people, in Latium, in the more extended and later sense of that term. It was situated on the Via Latina, between Anagnia and Frusino, and was distant 8 miles from the former (or, more strictly speaking, from the Compitum Anagninum), and 7 from the latter town. (Strab. v. p. 237; *Itin. Ant.* pp. 302, 305.) According to Livy, it would seem to have been at one period a Volscian city; for he describes the Volscians as taking refuge there when they were defeated by the Roman consul L. Furius in B. C. 413; but they soon after abandoned the town, which was given over, together with its territory, to the Hernicans. (Liv. iv. 51.) We subsequently find the Volscians complaining of this as a direct spoliation (Id. 56); but from the position of Ferentinum, it seems most probable that it was originally a Hernican city, and had been wrested from them by the Volscians in the first instance. It continued after this to be one of the chief cities of the Hernicans, and took a prominent part in the war of that people against Rome in B. C. 361, but was taken by assault by the Roman consuls. (Liv. vii. 9.) In the last revolt of the Hernici, on the contrary, Ferentinum was one of the three cities that refused to join in the defection from Rome, and which were rewarded for their fidelity by being allowed to retain their own laws, which they preferred to the rights of Roman citizenship. (Id. ix. 43.) At what period they afterwards obtained the civitas is uncertain: in B. C. 195 they are mentioned as possessing only the Latin franchise (Id. xxxiv. 42); and an inscription still preserved, which cannot be earlier than the second century B. C., records their possession of their own censors, a magistracy which is not found in the Roman municipia. (Zumpt, *Comment. Epigr.* p. 77.) It is therefore probable that they did not obtain the Roman franchise till after the Social War; and the contrary cannot be inferred from the title of Municipium given to them by Gellius in citing an oration of C. Gracchus, in which that orator relates an instance of flagrant oppression exercised by a Roman praetor upon two magistrates of Ferentinum. (Gell. x. 3.) At a later period Ferentinum, in common with most of the neighbouring towns, received a colony (*Lib. Colon.* p. 234); but the new settlers seem to have kept themselves distinct from the former inhabitants, as we find in inscriptions the "Ferentinates Novani" (Orell. *Inscr.* 1011). In B. C. 211 the territory of Ferentinum was traversed and ravaged by Hannibal (Liv. xxvi. 9); but with this exception we hear little of it in history, though it appears from extant remains and inscriptions to have been a considerable town. Horace, however, alludes to it as a quiet and remote country place; a character it may well have retained, notwithstanding the proximity of the Via Latina, though some commentators suppose the Ferentinum noticed in the passage in question to be the Tuscan town of the name. (Hor. *Ep.* i. 17. 8; Schol. Cruq. *ad loc.*) It was distant 48 miles from Rome, on a hill rising immediately on the left of the Via Latina, which passed close to its southern side, but did not enter the town.

The existing remains of antiquity at *Ferentino* are of considerable interest. They comprise large portions of the ancient walls, constructed in the Cyclopean style, of large irregular and polygonal blocks of limestone, but less massive and striking than those of *Alatri* and *Segni.* They are also in many places patched or surmounted with Roman masonry; and one of the gates, looking towards *Frosinone*, has the walls composing its sides of Cyclopean work, while the arch above it is evidently Roman, as well as the upper part of the wall. A kind of citadel on the highest point of the hill crowned by the modern cathedral, is remarkable as being supported on three sides by massive walls or substructions which present a marked approach to the polygonal structure, but which, as an inscription still remaining on them informs us, were built *from the ground* by two magistrates of Ferentinum at a period certainly not earlier than B. C. 150. (Bunsen, in the *Ann. d. Inst. Arch.* vol. vi. p. 144; Bunbury, in *Class. Museum*, vol. ii. p. 164.) Numerous other portions of Roman buildings are still extant at *Ferentino*, as well as inscriptions, one of which, recording the munificence of a certain A. Quinctilius Priscus to his fellow citizens, is cut in the living rock on an architectural monument facing the line of the Via Latina towards *Frosinone*, and forms a picturesque and striking object. The inscription (which is given by West-

phal) records the names of three farms or *fundi* in the territory of Ferentinum, two of which, called Rojanum and Ceponianum, still retain the appellations of *Roana* and *Cipollara*. (Westphal, *Römische Kampagne*, p. 85; Dionigi, *Viaggio ad alcune Città del Lazio*, pp. 4—18.) [E. H. B.]

FERENTINAE LUCUS, a sacred grove with a fountain and shrine of the deity of the same name, celebrated as the place where the cities composing the Latin League used to hold their general assemblies. It is mentioned by Livy on occasion of the attempt of Turnus Herdonius to overthrow the power of Tarquinius Superbus (i. 50, 52), and again on several subsequent occasions (ii. 38, vii. 25); and we learn from a remarkable passage of Cincius (*ap. Fest. s. v. Praetor.* p. 241) that these assemblies continued to be held regularly till B. C. 340. The name is indeed corrupted in the passage in question; but there is no doubt that we should read "ad caput Ferentinae," which corresponds to the expressions employed by Livy, "ad caput aquae Ferentinae" and "ad caput Ferentinum." From these modes of expression it is evident that there was both a sacred grove, and a fountain forming the head or source of the stream called Aqua Ferentina. Dionysius, on the contrary, calls the place of assembly Ferentinum (Φερεντῖνον, iv. 45, v. 50), and appears to have regarded it as a town, though we need not suppose that he confounded it with the Hernican city of the name, as has been done by some modern writers. The only clue to its position is the passage above cited from Cincius, who places it "sub monte Albano;" but even without this testimony we could hardly hesitate to seek it in the neighbourhood of Alba Longa, and there can be little doubt that its site is correctly fixed by Gell and Nibby in the deep valley or ravine near *Marino*, where there is a copious fountain (supposed by some to be a subterranean outlet of the Lacus Albanus), which gives rise to the small stream now known as the *Marrana del Pantano*. The valley in which this source is found is now called the *Parco di Colonna*, and is still shaded with deep woods, which give it a picturesque and solitary aspect. (Gell, *Top. of Rome*, pp. 90—92; Nibby, *Dintorni*, vol. ii. p. 319.) [E. H. B.]

FERENTUM or FORENTUM (Φερέντη, Diod.: *Eth.* Forentanus), a town of Apulia, about 10 miles S. of Venusia. The name is written Ferentum in most editions of Horace, though Orelli has substituted Forentum, which is the form found in Livy and Pliny; but the first form is supported by Diodorus. It is still called *Forenza*; but from the expressions of Horace ("arvum pingue humilis Ferenti," *Carm.* iii. 4, 16), to whom it was familiar from its proximity to Venusia, the ancient town appears to have been situated in a valley, while the modern one stands on the summit of a hill; and according to local writers, some remains of the ancient Ferentum may be found in a small plain 2 miles nearer *Venosa*. (Romanelli, vol. ii. p. 236.) Livy terms it a strong town, so that it was one of the few places in Apulia which offered any considerable resistance to the Roman arms, and was one of the last subdued. (Liv. ix. 16, 20, but in the former of these passages it is probable that the true reading is "Frentani," not "Forentani;" Diod. xix. 65.) The Forentani are mentioned by Pliny (iii. 11. s. 16) among the municipal towns of Apulia; but we meet with no subsequent mention of it in any ancient author. [E. H. B.]

FERESNE, in Gallia, is placed by the Table on the road from Atuaca (that is, Atuatuca, or *Tongern*) to Noviomagus (*Nymegen*), and 16 Gallic leagues from *Tongern*. The next place to Feresne on the road is Catualium [CATUALIUM], and after Catualium comes Blariacum [BLARIACUM]. Feresne may be a corrupted name. The site is uncertain. [G. L.]

FERO'NIA or LUCUS FERO'NIAE (Φερωνία, Strab.; Λοῦκος Φηρωνίας, Ptol.). 1. A town of Southern Etruria, at the foot of Mount Soracte, within the territory of Capena, with a celebrated temple or shrine of the goddess from whom it derived its name, and a sacred grove, attached to it. Strabo, indeed, is the only author who mentions a *town* of the name, which he calls Feronia (v. p. 226); other writers speaking of "Lucus Feroniae" and "Feroniae fanum": but it is natural that in process of time a town should have grown up around a site of so much sanctity, and which was annually visited by a great concourse of persons. Feronia appears to have been a Sabine goddess (Varr. *L. L.* v. 74), and hence the festivals at her shrine seem to have been attended especially by the Sabines, though the sanctuary itself was in the Etruscan territory, and dependent upon the neighbouring city of Capena (Liv. i. 30, xxvii. 4). The first mention of these annual festivals occurs as early as the reign of Tullus Hostilius, when we find them already frequented by great numbers of people, not only for religious objects, but as a kind of fair for the purposes of trade, a custom which seems to have prevailed at all similar meetings. (Liv. i. 30; Dionys. iii. 32.) Great wealth had, in the course of ages, been accumulated at the shrine of Feronia, and this tempted Hannibal to make a digression from his march during his retreat from Rome, in B. C. 211, for the purpose of plundering the temple. On this occasion he despoiled it of all its gold and silver, amounting to a large sum; besides which there was a large quantity of rude or uncoined brass, a sufficient proof of the antiquity of the sanctuary. (Liv. xxvi. 11; Sil. Ital. xiii. 83—90.) The only other notices of the spot which occur in history are some casual mentions of prodigies that occurred there (Id. xxvii. 4, xxxiii. 26); but Strabo tells that it was still much frequented in his time, and that many persons came thither to see the miracle of the priests and votaries of the goddess passing unharmed through a fire and over burning cinders (Strab. v. p. 226). This superstition is ascribed by other writers to the temple of Apollo, on the summit of Mt. Soracte (Plin. vii. 2; Virg. *Aen.* xi. 785—790): it was probably transferred from thence to the more celebrated sanctuary at its foot. [SORACTE.]

The general position of the Lucus Feroniae is sufficiently fixed by the statements that it was "in agro Capenate," and at the foot of Mt. Soracte. A fountain at the foot of the hill of *S. Oreste*, near the SE. extremity of the mountain, is still called *Felonica*; and as such fountains were generally connected with sacred groves, there is every probability that this was the site of the grove and sanctuary of the goddess. The village of *S. Oreste*, which stands on the hill above (a shoulder or off-shoot of Soracte), and bears some traces of having been an ancient site, is thought by Nibby and Dennis to occupy the position of the ancient town of Feronia. (Nibby, *Dintorni*, vol. iii. p. 108; Dennis, *Etruria*, vol. i. p. 180.)

Pliny mentions a Lucus Feroniae among the colonies of the interior of Etruria: and from the order in which he describes the towns of that province, there can be little doubt that he means the celebrated lo-

cality of the name in Southern Etruria. But it is singular that Ptolemy, who also notices a Lucus Feroniae, to which he gives the title of a colonia, places it in the NW. extremity of Etruria, between the Arnus and the Macra. (Ptol. iii. 1. § 47; Plin. iii. 5. s. 8.) No other notice occurs of any such place in this part of Etruria; and the Liber Coloniarum, though unusually copious in its description of the province of Tuscia, mentions no such colony at all. An inscription, on the other hand, in which we find the name of "Colonia Julia Felix Lucoferonensis" (Orell. 4099), refers probably to the Southern Etruscan town: and on the whole it is more probable that the name should have been altogether misplaced by Ptolemy, than that there should have existed a second *colony* of the name, of which we know nothing. (Zumpt, *de Colon.* p. 347.)

2. A place near Tarracina, on the border of the Pontine Marshes, where there existed also a shrine or sanctuary of the goddess Feronia, with a fountain and sacred grove. The latter is alluded to by Virgil ("Viridi gaudens Feronia luco," *Aen.* vii. 800) in connection with Circeii and Anxur (Tarracina), and the fountain is mentioned by Horace, on his journey to Brundusium, as adjoining the place where the travellers quitted the canal through the Pontine Marshes, and from whence they had a long ascent of three miles to Anxur. (Hor. *Sat.* i. 5. 23.) Dionysius relates (ii. 49) a legend of the temple having been founded by some Lacedaemonian exiles, who afterwards settled among the Sabines; a tale which was probably derived from the fact of Feronia being a Sabine divinity. We learn from Servius that there was a stone seat in her temple here, on which if any slaves took their seat they obtained their liberty. Feronia, indeed, appears to have been especially worshipped by freed men and women. (Serv. *ad Aen.* viii. 564; Liv. xxii. 1.) Vibius Sequester erroneously speaks of a *lake* of Feronia: whether he meant the fountain of that name, or substituted "Lacus" for "Lucus," is uncertain. (Vib. Seq. p. 23; Oberlin, *ad loc.*)

The site of this sanctuary is clearly marked at a place now called *Torre di Terracina*, where there is a beautiful and abundant source of limpid waters, breaking out just at the foot of the hills which here bound the Pontine Marshes, and some remains of the temple are still visible. The spot is just 58 miles from Rome, by the line of the Appian Way. (Chaupy, *Maison d'Horace*, vol. iii. p. 453.) [E. H. B.]

FERRA'RIA PROM. [DIANIUM.]

FERRA'TUS M. (*Jebel Jurjura*), a mountain-chain of Mauretania Sitifensis, running SW. from the neighbourhood of Tubusuptus. (Ammian. Marc. xxix. 5.) [P. S.]

FESCE'NNIUM (Φασκένιον, Dionys.: *Eth.* Fescenninus), an ancient town of Etruria, situated not very far from Falerii, with which it always appears in close connection. Dionysius, indeed, expressly tells us that the Falisci had two cities, Falerii and Fescennium; and other authors confirm this by ascribing the same Argive or Pelasgic origin to both. (Dionys. i. 21; Solin. 2. § 7.) It is very probable also that the "Faliscum" of Strabo, which he speaks of as a town distinct from Falerii (v. p. 266), was no other than Fescennium. Virgil mentions the "Fescenninae acies" among the Etruscan forces that followed Turnus to the war against Aeneas (*Aen.* vii. 695); but no independent notice of Fescennium occurs in history, and it appears certain that it was merely a dependency of Falerii, and followed the fortunes of that city, during the period of its greatness and power. Pliny, however, speaks of Fescennia (as he writes the name) as in his time an independent municipal town (iii. 5. s. 8), but this is the only notice we find of it under the Roman Empire; and we have no clue to its position beyond that of its proximity to Falerii. Hence the determination of its site has been involved in the confusion which has arisen with regard to that of the more important city; and both Gell and Müller have placed Fescennium at *Civita Castellana*. It may, however, be regarded as certain that that city occupies the site of the ancient or Etruscan Falerii [FALERII]; and we must therefore seek for Fescennium elsewhere. A local antiquarian (Antonio Massa), whose opinion has been followed by Cluver and several other writers, would place it at *Gallese*, a village about 9 miles to the N. of *Civita Castellana*, where some Etruscan remains have been found. Mr. Dennis has pointed out another site, a short distance from *Borghetto* on the Tiber, between that village and *Corchiano*, where there are unquestionable remains of an Etruscan city (part of the walls, &c. being still visible), which appear to have the best claim to be regarded as those of Fescennium. They are distant about 6 miles from *Civita Castellana*, and indicate the site of a city of considerable magnitude. The spot is marked only by a ruined church, named *S. Silvestro*. (Dennis, *Etruria*, vol. i. pp. 152—162; Cluver, *Ital.* p. 551; Nibby, *Dintorni*, vol. ii. p. 28.)

It is singular that a place which seems to have been of so little importance as Fescennium, should apparently have given name to a particular branch of literature, — the "Fescennini versus," which appear to have been originally a kind of rude dramatic entertainment, or rustic dialogue in verse: though, when these were superseded by more polished dramatic productions, the name of Fescennini was retained, principally, if not exclusively, for verses sung at nuptial festivities, when great licentiousness of language was permitted, as had been the case in the older Fescennine dialogues. (Liv. vii. 2; Hor. *Ep.* ii. 1. 145; Catull. lxi. 127; Claudian, *Fescennina*, xi.—xiv.; Senec. *Med.* 113.) The only authors who *expressly* derive these dialogues from Fescennium are Servius (*ad Aen.* vii. 695) and Festus (*v.* Fescennini, p. 85); and the former, strangely enough, calls it a town *of Campania*, probably by a confusion between the Fescennini and Atellanae [ATELLA]: but the name is in itself strong evidence in favour of their derivation from thence. And though we are unable to account for the application of such a local epithet to a class of compositions which must have been to a great extent the spontaneous effusions of rustic character, the same remark applies in a great degree to the "fabulae Atellanae," which could hardly have been confined to the one city of Campania to which they owe their name. Hence, it appears unreasonable to reject the obvious derivation from Fescennium (as Klotz and Bernhardy have done), merely because we cannot explain the origin of the appellation. (See on this subject Müller, *Etrusker*, vol. ii. pp. 284—286; Klotz, *Römische Literat. Geschichte*, vol. i. p. 293; Bernhardy, *Röm. Literatur.* note 118.) [E. H. B.]

FIBRE'NUS, a small river of Latium, in the country of the Volsci, which falls into the Liris on its left bank, about 4 miles below Sora and less than 3 from Arpinum. It is still called the *Fibreno*, though more commonly known in the country as the *Fiume della Posta* from the village of *La Posta*

beneath which it has its source. Its whole course does not exceed 7 or 8 miles in length: but, like many rivers in a limestone country, it rises all at once with a considerable volume of water, which forms, in the first instance, a deep and clear pool, or little lake, from whence its waters flow in a channel of 10 or 12 yards in breadth, but of great depth and remarkable clearness. This insignificant but beautiful stream derives a high degree of interest from the description of it by Cicero, whose paternal villa was situated on its immediate banks, or even as it would appear on an island surrounded by its waters. Great doubts have, however, been raised as to the exact locality of this villa. The opinion commonly adopted places its site in an island formed by two arms of the Fibrenus, just above its confluence with the Liris, where there now stands a convent called *S. Domenico*, and considerable remains of ancient buildings are certainly visible. Others, however, have transferred it to a smaller island, now called *La Carnella*, about a mile higher up the stream. This islet seems to agree perfectly with the description given at the beginning of the second book *De Legibus* of the spot, "insula quae est in Fibreno," where that dialogue was held; but this is clearly represented as at some distance from the villa itself, and approached by following the shady banks of the river. Hence it seems probable that the villa may have been at *S. Domenico*, while the "palaestra," or planted grove for exercise, which Cicero compares with the Amalthea of his friend Atticus, was in the little island of *Carnella*. This appears to be the same which he elsewhere (*ad Att.* xii. 12) calls "insula Arpinas." The *Fibreno* is still remarkable for its extreme coldness, a quality common to many rivers which rise under similar circumstances. (Cic. *de Leg.* ii. 1, 3, *Tusc.* v. 26, *ad Q. F.* iii. 1, *ad Att.* xiii. 16; Romanelli, vol. iii. pp. 366—371; Kelsall, *Excursion to Arpino*, pp. 89—100; Hoare, *Classical Tour*, vol. i. p. 293.)

The villa of Cicero passed, at a later period, into the hands of the poet Silius Italicus, who is the only other author besides Cicero that mentions the name of the Fibrenus. (Sil. Ital. viii. 401; Martial, xi. 48, 49.) [E. H. B.]

FICANA, an ancient city of Latium, which figures in Roman history only on the occasion of its conquest by Ancus Marcius, who is said to have removed the inhabitants to Rome, and destroyed the city itself. (Liv. i. 33; Dionys. iii. 38, where the editions have Fidenae, but there is little doubt that the event referred to is the same related by Livy.) It is certain that it was never repeopled: its name is found in Pliny's list of the extinct cities of Latium (iii. 5. s. 9), and is noticed also by Festus (*v. Puilia Saxa*) as a place no longer in existence. The latter passage, however, affords us a clue to its position; according to Antistius Labeo there cited, it was situated on the Via Ostiensis, eleven miles from Rome, and apparently immediately adjoining the Tiber, on which it had a port, at a place called by Fabius Pictor the Puilia Saxa. A rocky hill, abutting on the Tiber, to the right of the Via Ostiensis, at the required distance from Rome, now marked by a farm called *Dragoncello*, may therefore be presumed to be the site of Ficana, though no ruins remain. (Gell, *Top. of Rome*, p. 245; Nibby, *Dintorni*, vol. ii. p. 40.) [E. H. B.]

FICU'LEA or FICU'LNEA (Φικόλνεοι, Dionys.: *Eth.* Ficuleas-ātis, Varr.; Ficulensis, Cic. et Inscr.: *Cesarini*), a city of ancient Latium, situated on the Via Nomentana, between Rome and Nomentum. It is mentioned repeatedly in the early Roman history, both by Livy and Dionysius. The latter tells us that it was founded by the Aborigines, together with Antemnae and Tellenae (i. 16). Its name appears also among the cities of the Prisci Latini subdued by the elder Tarquin (Liv. i. 38): and as it is no longer found in the list of the thirty Latin cities that composed the League in B. C. 493 (Dionys. v. 61), we may probably conclude that it continued subject to, or at least dependent on, Rome. Nor does it again figure in any of the ordinary histories of Rome; but Varro has preserved to us a tradition (*de L. L.* vi. 18) which represents the Ficuleates, Fidenates, and other neighbouring "populi" as suddenly taking up arms against Rome, shortly after the departure of the Gauls, and producing for a time a panic terror in the city, the memory of which was recorded by a festival called the Poplifugia.

No subsequent notice of Ficulea itself occurs in the Roman history: and the change of name of the road which led thither from Via Ficulensis to Nomentana (Liv. iii. 52) may probably be regarded as a proof of its declining importance. But the "ager Ficulensis" is mentioned by Cicero (*ad Att.* xii. 34), as well as in the Liber Coloniarum (p. 256, where it is slightly corrupted into Ficiliensis): and Pliny notices the Ficolenses among the existing towns of Latium (iii. 5. s. 9). These indications are confirmed by inscriptions, which prove that it still subsisted as a municipal town in the reign of M. Aurelius, though there seem reasons for supposing that it fell into decay soon after, and all trace of it disappears in the middle ages. (Nibby, *Dintorni*, vol. ii. pp. 45, 46.)

The inscriptions just mentioned, one of which is interesting, as recording the institution by M. Aurelius of a college or charitable institution for boys and girls, who were called "Pueri et Puellae Alimentarii Ficolensium" (Orell. *Inscr.* 3364), were found in the neighbourhood of a farm-house called *Cesarini*, on the left of the Via Nomentana, about 9 miles from Rome. They, therefore, leave no doubt that the Ficulea of Imperial times, at least, was situated in that neighbourhood. But the epithet of "Ficulea vetus," applied by Livy to the ancient Latin city (i. 38), would seem to indicate that it was distinct from the town which bore that name in his day. Martial also speaks of "Ficelias veteres" (vi. 27), as if they were in the immediate neighbourhood of Nomentum; and it is not improbable that the words used by Dionysius,—"Ficulnea, which adjoins the Corniculan mountains" (i. 16.),—were added for the same purpose of distinction. Hence it is probable that the Roman Ficulea was situated somewhere within the confines of the *tenimento* or domain of *Cesarini*, but that the ancient Latin city occupied a site more distant from Rome, and nearer to Nomentum, either on the hill called *Monte Gentile*, or more probably on that now marked by a lofty tower called *Torre Lupara*. This site, which is 11 miles from Rome, and *on* the Via Nomentana, is described as "strewed with tiles and pottery, perhaps one of the surest indications of an ancient city." (Gell, *Top. of Rome*, p. 247.)

One of the inscriptions above mentioned (Orell. 111) gives us the names of two Pagi in the territory of Ficulea, called the Pagus Ulmanus and Transulmanus: hence we may presume that the brook which now flows by *Cesarini*, and crosses the Via Nomentana near the *Casale dei Pazzi*, bore in ancient times the name of Ulmus. [E. H. B.]

FIDE'NAE (Φιδῆναι, Strab., Ptol., but Φιδήνη in Dionysius, and the singular form FIDENA is used by Virgil, *Aen.* vi. 773, and by Tacitus, *Ann.* iv. 62: *Eth.* Fidenās, -ātis; Φιδηναῖος, Dionys.: *Castel Giubileo*), an ancient city of Latium, situated on the left bank of the Tiber, and on the Via Salaria, five miles from Rome. There appears no doubt that it was originally and properly a Latin city. Virgil mentions it among the colonies founded by the kings of Alba; and in accordance with the same view, Dionysius relates that Fidenae, Crustumerium, and Nomentum were founded by colonists from Alba led by three brothers, the eldest of whom was the founder of Fidenae. (Virg. *Aen.* vi. 773; Dionys. ii. 53; Steph. B. *s. v.*) Still more decisive is it that its name is found in Pliny in the list of the towns that were accustomed to share in the sacrifices on the Alban Mount. (Plin. iii. 5. s. 9. § 69.) On the other hand, Livy expressly tells us it was of Etruscan origin ("Nam Fidenates quoque Etrusci fuerunt," i. 15); and not only gives this as a reason for the close connection between the Veientes and Fidenates, but even notices that the people of Fidenae had only learnt the Latin language from their intercourse with the Roman colonists (i. 27). The last statement is evidently a mere touch added by the historian himself, and only serves to prove his conviction of their Etruscan descent. No other writer alludes to this extension of the Tuscan power; and though Fidenae frequently appears in alliance with Veii (for which their relative position will sufficiently account), we find no trace of its holding any relations with the other Etruscan cities.

The close proximity of Fidenae to Rome would naturally bring it early into collision with the rising city: and accordingly we find that hardly any other city plays so important a part in the earliest history of Rome. All authors agree in representing it as engaged in war with Romulus: according to Plutarch (*Rom.* 17) it took part with Caenina and Antemnae in the war which arose out of the rape of the women; but neither Livy nor Dionysius mentions it on that occasion, and both refer the first hostilities to the period after the death of Tatius. According to their obviously fabulous account the city itself was taken by Romulus, who occupied it with a garrison or colony of 300 men; a number exaggerated by Plutarch to the absurd amount of 2500 colonists, of whom he represents 2000 as shortly after cut off by the Etruscans. (Liv. i. 14, 15; Dionys. ii. 53; Plut. *Rom.* 23, 25.) As usually happens in the early history of Rome, all trace of this Romulian colony subsequently disappears. Fidenae is noticed during the reign of Numa as an independent city, maintaining friendly relations with the peaceful king, while under his successor Tullus Hostilius it again united with the neighbouring Veii against the growing power of Rome. (Dionys. ii. 72, iii. 6; Liv. i. 27.) Their combined forces were defeated under the walls of Fidenae, and according to Dionysius the city itself was soon after besieged by Tullus, and compelled to surrender. Yet after this we find Fidenae again engaging in successive wars with Ancus Marcius and Tarquinius Priscus, and, if we may believe the Roman historians, successively captured by both monarchs, the latter of whom is even represented as having again established there a Roman colony. (Dionys. iii. 39, 40, 50, 57.) It is evident that no reliance can be placed upon these facts as historical; but the inference that Fidenae was really (as described by the Roman historians) a large and powerful city, almost on a par with Veii, may fairly be admitted. It is remarkable also that it appears to have held a very independent position, and appears sometimes in league with the Latins, at others with the Sabines, but most frequently with the Veientes. After the expulsion of the Tarquins from Rome, Fidenae is represented as taking an active part in attempting their restoration, and for this purpose entered into a league first with the Sabines, and afterwards with the Latins; but both attempts proved abortive, and in B. C. 496 the Fidenates, abandoned by their allies, were compelled to surrender to the Roman arms. (Liv. ii. 19; Dionys. v. 40, 43, 52, 60.) Hence the name of Fidenae does not appear in the list given by Dionysius immediately afterwards of the confederate cities of Latium, and it is probable that it did not at this time form part of the Latin League. From this time the Fidenates appear to have continued tranquil for a considerable period, till in B. C. 438 they were again induced to unite with their old allies the Veientes, and by the murder of the Roman ambassadors produced an irremediable breach with the republic. Their combined forces were, however, again defeated by Cornelius Cossus under the very walls of Fidenae (Liv. iv. 17—19), and a few years after Fidenae itself was again taken (Id. 22). Yet in B. C. 426 we find both the Veientes and Fidenates once more in arms, and the latter city was once more captured by the dictator Quinctius Pennus. (Id. iv. 31—34.) On this occasion we are told that it was plundered, and the inhabitants sold as slaves; and though it does not appear that the city itself was destroyed, — the expression of Florus, "Cremati suo igne Fidenates" (i. 12. § 4), being evidently a mere rhetorical flourish derived from Livy's language, — its humiliation must have been complete; for, with the exception of an obscure notice in Varro (*L. L.* vi. 18) of a sudden outbreak of the people of Fidenae, Ficulea, and the neighbouring towns just after the capture of Rome by the Gauls, we hear no more of Fidenae as an independent city. (For the history of these wars, see Niebuhr, vol. ii., and Bormann, *Alt.-Latinische Chorographie*, pp. 241—245.)

Though we have no account of the destruction of Fidenae, which according to Varro was certainly in existence after the Gaulish War, B. C. 389, it seems to have rapidly sunk into a state of complete decay, and before the close of the republic had dwindled into an insignificant village. Cicero speaks of it as a very poor and decayed place; and Strabo terms it (like Collatia and Antemnae) a mere village, the exclusive property of one individual. Horace also refers to Fidenae and Gabii as almost proverbial instances of deserted villages ("Gabiis desertior atque Fidenis vicus," Hor. *Ep.* i. 11. 7); and Juvenal more than once refers to the same places as poor and rustic country towns (Cic. *de Leg. Agr.* ii. 35; Strab. v. p. 230; Juv. vi. 57, x. 100). Yet it is evident that Fidenae never lost its municipal rank: Cicero, in the passage already cited, mentions it among the "oppida" of the neighbourhood of Rome, which he contrasts with the flourishing cities of Campania; and Juvenal notices it as retaining its local magistrates ("Fidenarum — potestas," x. 100), which are mentioned also in inscriptions. It is therefore a complete error on the part of Pliny to reckon Fidenae among the "populi" of Latium, which had become utterly extinct (iii. 5. s. 9); and, by a singular inadvertency, he himself afterwards mentions the Fidenates among the Sabines in the fourth region of Augustus (iii. 12. s. 17). The Anio being taken as the limit of that region, Fidenae, as well as

Nomentum, came to be considered as belonging to the Sabine territory, though originally included in Latium.

In the reign of Tiberius Fidenae was the scene of a fearful catastrophe, arising from the fall of a temporary wooden amphitheatre during a show of gladiators, that had drawn together vast crowds from Rome and the neighbouring towns. By this accident not less than 50,000 persons, according to Tacitus, were killed or seriously hurt. (Tac. *Ann.* iv. 62, 63; Suet. *Tib.* 40.) From this time we hear no more of Fidenae; but its name is still found in the Tabula as the first station on the Salarian Way, and its continued existence may be traced by inscriptions and ecclesiastical records down to the seventh century of the Christian era, when all trace of it disappears. (Ptol. iii. 1. § 62; *Tab. Peut.*; Murat. *Inscr.* p. 316, no. 4; Nibby, *Dintorni*, vol. ii. p. 57.)

Though no ruins exist on the site of Fidenae, its position may be identified with unusual certainty. Ancient authors concur in placing it at the distance of 5 miles or 40 stadia from Rome, on the Via Salaria; and we gather from the accounts in Livy and Dionysius that it was situated on a hill with steep or precipitous banks, and immediately above the Tiber. All these conditions are fully answered by the site at *Castel Giubileo*, which is well adapted for that of an ancient city. The hill next the Tiber, on which stand the ruins of the castle, was probably the ancient arx or citadel; while the more extensive *plateau* on the E. of the Via Salaria was occupied by the city itself. The sides of the hill appear to have been in many places cut down or scarped artificially, and these perpendicular faces contain hollows which were probably in their origin sepulchral. Other excavations indicate quarries; and we know from Vitruvius that the tufo of Fidenae was one of those extensively worked in ancient times. (Vitruv. ii. 7. § 1). The hill of *Castel Giubileo* is a conspicuous object in the view of the *Campagna* from the hills above Rome; hence we find Martial noticing "the ancient Fidenae," in describing the same view. (Mart. iv. 64. 15.) A plan, as well as description of the site, is given by Gell (*Top. of Rome*, pp. 250—253; Nibby, *Dintorni*, vol. ii. pp. 51—63; Dennis, *Etruria*, vol. i. pp. 68—72; Bormann, *Alt.-Latinische Chorographie*, p. 239). [E. H. B.]

FIDENTIA (Φιδεντία: *Eth.* Fidentinus: *Borgo S. Donnino*), a town of Gallia Cispadana, situated on the Via Aemilia, between Parma and Placentia, and distant 15 miles from the former city. (Plin. iii. 15. s. 20; Ptol. iii. 1. § 46; *Itin. Ant.* p. 288.) Its name is only mentioned in history during the civil wars between Marius and Sulla, when M. Lucullus, one of the generals of Sulla, was besieged within its walls by the lieutenants of Carbo, but by a sudden sally defeated them with great loss. (Plut. *Sull.* 27; Vell. Pat. ii. 28; Liv. *Epit.* lxxxviii.) It seems to have been at this time a place of consideration: but though noticed by Pliny and Ptolemy as a municipal town, it appears to have subsequently declined, and is called in the Itineraries in more than one passage "Fidentiola vicus," while still later the Jerusalem Itinerary terms it merely a "mansio." (*Itin. Ant.* pp. 99, 127; *Itin. Hier.* p. 616.) The modern *Borgo S. Donnino* derives its name from St. Domninus, who, according to ecclesiastical traditions, suffered martyrdom at a place called Julia, in the territory of Parma. Its distance from the latter city proves that it occupied the actual site of the ancient Fidentia, which has sometimes been erroneously transferred to *Fiorenzuola* (Florentia). [E. H. B.]

FIGLINAE, in Gallia, only appears in the Table, which places it on a road from Vienna (*Vienne*) to Valentia (*Valence*), on the east side of the Rhone. Figlinae was about half-way between Vienna and Tegna (*Tein*). The site is unknown, unless it be *Félines*, as Walckenaer makes it. [G. L.]

FILOMUSIACUM, a place in Gallia, only known from the Table, which places it on the road between Vesontio (*Besançon*) and Abiolica (Ariolica, *Pontarlier*). D'Anville (*Notice, &c.*) has discussed the position of this place, which is uncertain. [G. L.]

FINES, in Gallia. D'Anville observes (*Notice, &c.*, Art. *Fines*), that there would be an infinite number of places with this name, if, in addition to those which appear in the records of the Roman period, we were to enumerate all the instances in which this name occurs, and which the Roman records do not mention. It is on the old roads between the towns that the Itineraries mark the places called Fines. D'Anville enumerates those that are so marked, proceeding in his enumeration from south to north.

1. FINES is marked by the Antonine Itin. and the Table between Cabellio (*Cavaillon*), and Apta Julia (*Apt*). Cabellio belonged to the Cavares and Apta Julia to the Vulgientes, and Fines marked the limits of the two peoples. In this and in other instances, owing to discrepancies in the Itins., and the want of any name corresponding to Fines, it is not possible to fix positions accurately; and it would be mere waste of time to give conjectures.

2. The Jerusalem Itin. places Fines between Davianum [DAVIANUM] and Vapincum (*Gap*), but it does not appear what territories this limit separated.

3. The Table places Fines on a road between Tolosa (*Toulouse*) and Narbo (*Narbonne*); and we may consider it, perhaps, as indicating the boundary between the dependencies of these two great cities. The place cannot be found with certainty; but the Table makes it 15 from Toulouse to Badera, and 19 from Badera to Fines.

4. The Table places Fines on a road from *Toulouse* to Dibona, that is, Divona (*Cahors*); and Fines is 28 from *Toulouse*. This place must have marked the limit of the territory of *Toulouse* on the road to *Cahors*. The next station to Fines and 10½ M. P. from it is Cosa (*Cos*). Thus we get pretty near to the site of Fines. Walckenaer fixes it at a place called *Le Fau*, that is, the limit.

5. The Antonine Itin. and the Table place Fines on a road from Burdigala (*Bordeaux*) to Aginnum (*Agen*). The determination of the position seems very doubtful. We must suppose that this place marked the limit of the territory of Aginnum, for it is the next place to Aginnum.

6. The Table places Fines half way between Vesunna (*Perigueux*) and Augustoritum (*Limoges*), and we may conclude that it marked the limit of the territory of these two cities. The place is not certain. Walckenaer fixes it at *Thiviers*.

7. The Table marks Fines on the road from Augustoritum (*Limoges*) to Augustonemetum (*Clermont en Auvergne*). From Acitodunum (*Ahun*), the second place after *Limoges*, to Fines is 20 Gallic leagues, a distance which, it is supposed, conducts us to the commencement of the territory of the Arverni, to which Augustonemetum belonged.

8. The Antonine Itin. and the Table place Fines

between Limonum (*Poitiers*) and Argentomagus (*Argenton en Berri*); and half way between the two towns. D'Anville supposes that Fines may be represented by *Heins*, which is situated at the boundary of the territory of the Pictones or Pictavi, to which Limonum belonged, and at the commencement of the territory of the Bituriges. He adds, what seems probable, that *Heins* may be a corrupted form of Fines.

9. The Anton. Itin. places Fines between Condate Redonum (*Rennes*) and Alauna [ALAUNA], and 28 M. P. from *Rennes*. There can be no doubt that Fines marks the limits of the territory of the Redones on the road to Alauna; and D'Anville supposes that it marks the boundary between the Redones and the Abrincatui. [ABRINCATUI.] D'Anville finds here also a place called *Wines* or *Huines* near the sea, which he supposes to represent Fines; but his argument is more ingenious than satisfactory. Walckenaer fixes Fines at *Antrain*, which is in or very near to a straight line joining *Rennes* and *Avranches*.

10. Fines occurs in the Table between Subdinnum (*Le Mans*), the capital of the Cenomani, and Caesarodunum (*Tours*), as Walckenaer has it (*Géog. des Gaules, &c.* vol. iii. p. 60). D'Anville gives a different account of the matter, which is too obscure to be worth discussing. Walckenaer identifies Fines with *Château du Loir*.

11. The Table marks Fines between Genabum (*Orléans*) and Agedincum (*Sens*). The distance of Fines from *Orléans* is 15 M. P. The place seems to be at the boundary between the dioceses of *Orléans* and *Sens*, for as a general rule the limits of the old French dioceses indicate the territory of the Gallic cities. Walckenaer places Fines in the Forest of *Orléans*. The next place to Fines is Aquae Segeste [AQUAE SEGESTE], and the next is *Sens*.

12. The Antonine Itin. places Fines between Augusta Suessionum (*Soissons*) and Durocortorum (*Reims*), 13 Gallic leagues from *Soissons*, and 12 from *Reims*. The inscription of *Tongern* places Fines halfway between the two cities, the interval between which it makes 24 Gallic leagues. There can be no doubt that a place named *Fismes* represents Fines, for the distances agree as well as we can suppose that they should, when we do not know precisely the points in the two towns from which they were measured; and *Fismes* is on the common boundary of the dioceses of *Soissons* and *Reims*.

13. The Antonine Itin. places Fines between Virodunum (*Verdun*) and Ibliodurum. The next station to Ibliodurum is Divodurum (*Metz*). The distance from *Verdun* to Fines is 9 Gallic leagues, and from Fines to Ibliodurum it is 6. Ibliodurum, as the name shows, is on a river; and it is supposed to be *Hannonville*, at the passage of the *Iron*. The numbers in the Itin. fix Fines at a place called *Marcheville*, between *Verdun* and the passage of the *Iron;* and the word *Marcheville* contains the Teutonic element *March* or *Mark*, which means a boundary or frontier. It is probable that Fines marked the limits of the Virodunenses and the Mediomatrici, whose chief place was Divodurum.

14. The Table places Ad Fines next to a place called Nasium (*Naix*), on the river *Ornez*, above *Bar-le-Duc*. Nasium is one of the towns which Ptolemy assigns to the Leuci, who were south of the Mediomatrici. Walckenaer places this Fines, according to his exposition (*Géog.* vol. iii. p. 87), between Nasium and Tullum (*Toul*), and at a place called *Foug*. D'Anville finds a place called *Feins*, on the same side of the *Ornez;* but its distance from *Naix* does not agree with the 14 Gallic leagues of the Table.

15. Both the Antonine Itin. and the Table place Fines between Vemania (*Immenstadt*) and Vindonissa (*Windisch*). The stations are in this order:—Vemania, Brigantia (*Bregenz*), Arbor Felix (*Arbon*), Fines (*Pfin*), Vitodurum (*Winterthur*), and Vindonissa. The two Itins. agree pretty nearly in the distance from Arbor to Fines. Arbor (*Arbon*) is on the west side of the Lake of *Constanz*, and *Pfyn* or *Pfin* is on the river *Thur*, in the *Thurgau*. D'Anville observes that the position of this place (Fines) indicates the boundary which the Romans had fixed between Maxima Sequanorum and Rhaetia; for it appears by the Notitia of the Empire, that a post which was established at Arbore (*Arbon*), between Fines and Brigantia, was under the orders of the general who commanded in Rhaetia. [G. L.]

FINIS BITHYNIAE, a station on the road which led from Claudiopolis to Gordium or Juliopolis, in Galatia. (*Itin. Hierosol.*) In the Peutinger Table it appears under the form of Finis Ciliciae, with which it must not be confounded. [E. B. J.]

FIRMUM (Φίρμον: *Eth.* Firmanus: *Fermo*), an important city of Picenum, situated about 6 miles from the Adriatic, and 25 from Asculum. We have no account of it previous to the Roman conquest of Picenum, but it was doubtless one of the cities of that people, and after their subjugation was selected by the Romans for the establishment of a colony, which was settled there at the beginning of the First Punic War. (Vell. Pat. i. 14.) Hence Firmum is mentioned by Livy among the thirty Latin colonies during the Second Punic War: it was one of the 18 which continued steadfast to Rome under the most trying circumstances. (Liv. xxvii. 10.) During the Social War (B. C. 90) it again appears as a strong fortress, in which Pompeius took refuge after his defeat by the Italian generals Judacilius and Afranius, and in which he was able to defy the arms of the latter, whom he eventually defeated in a second battle under the walls of Firmum. (Appian, *B. C.* i. 47.) It is again mentioned during the Civil War of Caesar and Pompey, when it was occupied by the former without resistance. (Cic. *ad Att.* viii. 12. B.) Under Augustus it received a fresh colony, and we find it in consequence bearing in inscriptions the colonial title, though Pliny does not mention it as such, but the name of Firmum appears to be accidentally omitted from his text. (Plin. iii. 13. s. 18, *Lib. Colon.* p. 226; Orell. *Inscr.* 2223, 3118, 3406; Zumpt. *de Colon.* p. 335.) After the fall of the Roman Empire Firmum again appears as a strong fortress, which was taken and retaken by Belisarius and Totila. (Procop. *B. G.* ii. 16, 20, iii. 11, 12.) It seems to have been then one of the principal towns of Picenum, as it continued under the exarchs of Ravenna, and has retained the same consideration ever since. It is still the see of an archbishop, and capital of a province called the *Marca di Fermo*. It is frequently distinguished by the epithet Picenum (Φίρμον Πικηνόν, Strab.; Firmum Picenum, Val. Max. ix. 15. 1; Orell. *Inscr.* 3406), as if for the purpose of avoiding confusion with some other town of the name, but no such is known.

About 5 miles from Firmum, at the mouth of the little river *Leta*, was the port or emporium of the city, called Castellum or Castrum Firmanum, which is confounded by Mela with Firmum itself. It is

still called *Porto di Fermo*. (Plin. *l. c.*; Mel. ii. 4. § 6; Strab. v. p. 241.) This town, which was on the line of the coast-road that united the Via Salaria with the Flaminia, is placed by the Itineraries 24 M. P. from the mouth of the Truentus, and 22 from Potentia. (*Itin. Ant.* pp. 101, 313; *Tab. Peut.*) Firmum itself, being situated in the interior on a lofty hill, could never have been on a great line of high road, but the Itineraries give a cross line passing from Septempeda (*S. Severino*) through Urbs Salvia, Firmum, and Asculum to Castrum Truentinum. (*Itin. Ant.* p. 316.) [PICENUM.] [E. H. B.]

FISCELLUS MONS, a lofty mountain forming part of the central and most elevated chain of the Apennines. Pliny tells us that it contained the sources of the river Nar; and this statement would lead us to identify it with the group now known as the *Monti della Sibilla*, one of the loftiest and most rugged portions of the central Apennines [APENNINUS], rising on the confines of the Sabines and Picenum. Silius Italicus, on the contrary, appears to connect it with the Vestini, which would indicate a situation somewhat further south. (Plin. iii. 12. s. 17; Sil. Ital. viii. 517.) The statement of Pliny would deserve the most credit, but that the passage is confused, and in all probability corrupt (see Sillig, *ad loc.*); and it would almost seem as if he confounded the Nar with the Velinus, which in fact rises in the lofty mountain group immediately on the confines of the Vestini. [NAR.] Varro speaks of the Mons Fiscellus and Tetrica (in the same neighbourhood) as abounding in wild goats; meaning probably the Ibex or Bouquetin of naturalists, an animal long since extinct in the Apennines. (Varr. *R. R.* ii. 1. § 5, 3. § 3.) [E. H. B.]

FIXTUINUM. The Table has a road from Agedincum (*Sens*) to Fixtuinum, passing through Riobe and Calagum (*Chailly*). D'Anville supposes it to be the Iatinum of Ptolemy, the chief town of the Meldi. [IATINUM.] [G. L.]

FLANATICUS SINUS (Plin. iii. 19), or FLANONICUS (Φλανωνικὸς κόλπος, Steph. B. *s. v.*), the gulf on the N. W. coast of Liburnia, which derived its name from a people called the FLANATES (Plin. iii. 21). There was a town called FLANONA (Plin. *l. c.*; Ptol. ii. 16. § 2, *Fiuona*), between Alvona and Tarsatica. It is now called *Canal del Quarnéro*, well known for its dangerous navigation. (Wilkinson, *Dalmatia and Montenegro*, vol. i. p. 48; Neigebaur, *Die Süd-Slaven*, p. 249.) [E. B. J.]

FLAVIA CAESARIENSIS, mentioned in the *Notitia* as being a division of Britain under the superintendence of a *praeses*; the notice being as follows:—

Sub dispositione viri spectabilis, vicarii Britanniarum.

Consulares
Maximae Caesariensis;
Valentiae.
Praesides
Britanniae Primae;
Britanniae Secundae;
Flaviae Caesariensis.

The other notice (for there are only two) is in Rufus Festus (*Breviarium*, c. 3): "Sunt in Gallia cum Aquitania et Britanniis decem et octo provinciae . . . in Britannia, Maxima Caesariensis, Flavia, Britannia Prima, Britannia Secunda."

In the Map of the Monumenta Britannica, the province of Flavia Caesariensis is bounded by the (*a*) Thames, (*b*) Wales, (*c*) the Mersey, Don, and Humber, (*d*) the German Ocean; so that it comprises the midland and eastern counties and Lincolnshire.

The authority for these lines of demarcation is unsatisfactory. It is only *probable*, first, that the name was taken from the conquests made by *Flavius* Vespasianus; and secondly, that the area thus named was as aforesaid. [R. G. L.]

FLAVI'NIUM or FLAVINA, a small town of Etruria, known only from Virgil, who speaks of the "Flavinia arva," and Silius Italicus, who calls the name of the town Flavina,—though Servius tells us it was Flavinium. We may probably infer, from the names with which it is associated by Virgil, that it was somewhere in the neighbourhood of the Faliscans and Soracte; and it has been placed, with some plausibility, at *Fiano*, between the foot of Soracte and the Tiber, about 25 miles from Rome. (Virg. *Aen.* vii. 696, and Serv. *ad loc.*; Sil. Ital. viii. 492; Gell, *Top. of Rome*, p. 244.) [E. H. B.]

FLAVIOBRI'GA (Φλαουιόβριγα: prob. *Portugalete*), a sea-port town on the N. coast of Hispania Tarraconensis, and on the W. side of the estuary of the Nerva (*Nervion*). From the notice of it in Pliny, we may infer that it received its name, and its rank as a colony, under Vespasian or Titus; having formerly been called Amanum portus. (Plin. iv. 20. s. 34.) Pliny assigns it to the Varduli, but Ptolemy to the Autrigones. (Florez, *Esp. S.* xxiv. p. 10; Mariana, *Hist. Hisp.* iv. 4.) [P. S.]

FLAVIOBRIGANTIUM. [BRIGANTIUM.]

FLAVIONA'VIA. [ASTURES.]

FLAVIO'POLIS (Φλαβιόπολις or Φλαουιόπολις), a town of Cilicia, to the west of Tarsus. From coins found at *Ushak*, it is manifest that this place occupies the site of the ancient Flaviopolis. Respecting its history scarcely anything is known, and it cannot be ascertained whether it owed its name to the emperor Vespasian, or to some member of the family of Constantine. In later times it was the see of a Christian bishop. (Ptol. v. 8. § 6; Arundell, *Asia Minor*, vol. i. p. 116.) [L. S.]

FLAVIO'POLIS. [CRATEIA.]

FLAVIUM SOLVENSE, a town in Noricum, probably situated in the neighbourhood of Virunum. (Plin. *H. N.* iii. 27.) In inscriptions (Orelli, n. 1376, foll.) it is called *Flavia Solva*. According to some the modern *Solfeld* has derived its name from Solvense; but comp. Linhard, *Gesch. von Krain*, i. p. 326. [L. S.]

FLENIO, a place which the Table fixes on a road from Noviomagus (*Nymegen*) to Lugdunum (*Leiden*). The next station to Lugdunum is Forum Hadriani (*Voorburg*); and the next station to Forum Hadriani is Flenio. The distance between Forum Hadriani and Flenio is 12 M. P. D'Anville fixes Flenium at *Vlaardingen* on the *Maas*. This place was probably the chief town on the river in the Roman time, as it was certainly for a long time after, and before the rise of *Rotterdam*, which is not mentioned until the 14th century. D'Anville establishes the fact of Flenio being the centre of some road by the evidence of a milestone which was dug up at a place called *Monster* near *s'Gravesande*, with the number XII. upon it, a distance which fits no place except *Vlaardingen*. The distances in this part of Gallia are in Roman miles. [G. L.]

FLETIO, is placed in the Table on the road along the Rhine from Lugdunum Batavorum (*Leiden*), to Noviomagus (*Nymegen*). The position of Albanianae (*Alphen*) between Leiden and Fletio is well

established; and the distance between Albanianae and Fletio is 19 M. P. Fletio is *Vleuten*, according to D'Anville and others who have followed his opinion. [G. L.]

FLEVO LACUS, and FLEVUM OSTIUM. Drusus, the son of Livia, and the brother of Tiberius, when he held a command on the Rhine, employed his men in making a canal to join the *Rhine* and the *Yssel*. This canal, called the Fossa Drusiana or Fossae Drusinae, commences below the separation of the *Rhine* and *Waal*, and joins the *Yssel* near *Doesburg*. (Tac. *Ann.* ii. 8; Suet. *Claud.* 1.) Germanicus, the son of Drusus, passed with his ships from the *Rhine*, through this canal, into the lakes and the ocean, and as far as the mouth of the Amisia (*Ems*). The water of the *Rhine* being thus partly diverted into the *Yssel* made a new outlet for that river, which outlet Pliny (iv. 15) calls Flevum. He says 'that Helium and Flevum are the names of the two mouths into which the Rhine is divided, on the north flowing into lakes, on the west into the river Mosa; it preserves by an outlet intermediate between the two a moderate channel for its own name." The Helium Ostium is the outlet of the *Maas*, which now receives the Vahalis (*Waal*). The outlet of the Flevum Ostium was into a lake, which Mela (iii. 2) thus describes: "The Rhine not far from the sea is distributed in various directions, but to the left the Rhenus is a river even then and until it enters the sea; on the right it is at first narrow and like unto itself, afterwards the banks recede from one another far and wide; and now, no longer a river but a large lake, it is called Flevo where it has filled the plains; and surrounding an island of the same name it becomes again more contracted, and flows out again in the form of a river." Mela here mentions only two mouths, but Ptolemy (iv. 9), besides the outlet which he calls the Mosa [MOSA], enumerates a western outlet of the Rhine, a middle outlet, and an eastern outlet; the last ought to correspond to the Flevum. The lake which Mela describes corresponds to the *Zuider Zee*. Ukert (*Gallien*, p. 151) observes that Mela does not say that the Flevum enters the sea; and he translates the last words, "iterumque fluvius emittitur," "and comes as a river out of the lake." He admits, however, that Mela assumed that the Flevum entered the sea; and nobody can doubt that, when Mela says it flows out again in the form of a river, he means to say that it enters the sea in a form like the other branch, though its course had been made different by passing through a great lake. Geographers have attempted to determine Mela's island, which is a useless attempt, for the lake has undergone great changes since Mela's time; and, besides that, his description may not be exact. It is certain that there were large lakes, or a large lake, near the outlets of the *Rhine;* for, besides the passage of Tacitus already mentioned, he says that Germanicus, on a previous occasion (*Ann.* i. 60), after sending Caecina through the country of the Bructeri to the Amisia, and appointing Pedo, who had the charge of the Frisian country, to command the cavalry, embarked four legions and took them through the lakes. Infantry, cavalry, and fleet all met at the Amisia. These lakes then were navigable in the Roman period; and it is an erroneous, though common statement, that the *Zuider Zee* did not exist then.

The enlargement that the *Zuider Zee* has received by the encroachment of the sea has probably been chiefly on the west side, where the coast is flat and the water is shallow. Along the east side there is deeper water. In 1219 the sea is said to have broken in and to have carried away the dikes; and another invasion, in 1282, which did great damage, is also recorded. It seems probable that the outlet of the *Zuider Zee* is the part that has been chiefly enlarged, the part that lies north of the channel between *Stavoren* and *Medenblik*, for it is said that old *Stavoren* was swallowed up by the sea.

It is conjectured by Walckenaer that the Nabalia of Tacitus (*Hist.* v. 26) is the *Yssel*, and that the Fossa of Drusus, from *Arnheim* to the *Yssel* at *Doesburg*, formed, with the course of the *Yssel* into the lake or lakes, the north-eastern limit of Gaul. He further conjectures that the name Flevum was given to the stream which flowed out of the lake into the North sea. Accordingly, he supposes that the Castellum Flevum (Tacit. *Ann.* iv. 72) may have been at the outlet of the Flevum, which channel completed the north-eastern limit of Gallia. He further supposes that the island of *Vlie'and*, one of the four which lie in front of the *Zuider Zee*, and form a barrier against the ocean, may represent the Flevum Castellum. (Walckenaer, *Géog. des Gaules*, vol. ii. p. 294.)

Thus the *Vlie-Stroom*, between the islands of *Vlieland* and *Schelling*, may represent the old mouth of the Flevum, as it subsisted before the great flood of the 13th century enlarged the lake Flevo, detached the islands of *Schelling* and *Ameland* from the main, and buried in its waters the numerous villages of the district of *Stavoren*. (Walckenaer, vol. ii. p. 201.) [G. L.]

FLEVUM, a fortress mentioned by Tacitus (*Ann.* iv. 72), of which the probable position is given in the preceding article. [L. S.]

FLEXUM (Φλέξον), a town of some importance in Pannonia, in the south of Carmuntum. According to Ptolemy (ii. 15. § 3) it was the head-quarters of the 14th legion, while the Notitia Imperii describes it only as the station of a division of cavalry. (Comp. *Itin. Ant.* pp. 247, 267.) [L. S.]

FLORENTIA. 1. (Φλωρεντία, Ptol.: *Eth.* Florentinus: *Florence;* in Italian, *Firenze*, but in old writers *Fiorenza*), a city of Etruria, situated on the river Arnus, about 3 miles S. of Faesulae. Though celebrated in modern times as the capital of Tuscany, and in the middle ages as an independent republic, it was not a place of much note in antiquity. No trace of its existence is found in Etruscan times; and it is probable that it derived its first origin as a town from the Roman colony. The date of the establishment of this is not quite clear. We learn from the Liber Coloniarum that a colony was settled there by the triumvirs after the death of Caesar (*Lib. Colon.* p. 213); but there seems some reason to believe that one had previously been established there by Sulla. There is indeed no direct authority for this fact, any more than for that of the new town having been peopled by emigrants who descended from the rocky heights of Faesulae to the fertile banks of the Arnus; but both circumstances are in themselves probable enough, and have a kind of traditionary authority which has been generally received by the Florentine historians. (Niebuhr, vol. i. p. 135.) A passage of Florus also (iii. 21. § 27), in which he enumerates Florentia (or, as some MSS. give the name, Fluentia) among the towns sold by auction by order of Sulla, is only intelligible on the supposition that its lands were divided among new

colonists. (Zumpt, *de Colon.* p. 253.) But he is certainly in error in reckoning Florentia at this time among the "municipia Italiae splendidissima:" it could not have been a municipal town at all; and from the absence of all notice of it during the campaign of the consul Antonius against Catiline, in the immediate neighbourhood of Faesulae, it is evident that it was not even then a place of any importance. But from the period of the colony of the triumvirs it seems to have rapidly become a considerable and flourishing town, though not retaining the title of a colony. The Florentini are mentioned by Tacitus in the reign of Tiberius among the municipia which sent deputies to Rome to remonstrate against the project of diverting the course of the Clanis from the Tiber into the Arnus; a proceeding which they apprehended, probably not without reason, would have the effect of flooding their town and territory. (Tac. *Ann.* i. 79.) We subsequently find the Florentini noticed by Pliny among the municipal towns of Etruria; and the name of Florentia is found in Ptolemy, as well as in the Itineraries. (Plin. iii. 5. s. 8; Ptol. iii. 1. § 48; *Itin. Ant.* pp. 284, 285; *Tab. Peut.*) These scanty notices are all that we hear of it previous to the fall of the Western empire; but its municipal consideration during this period is further attested by inscriptions (Orell. 686, 3711, 3713; Gori, *Inscr. Etrur.* vol. i.), as well as by the remains of an amphitheatre still visible near the church of *Sta. Croce.* It is probable that its favourable position in the centre of a beautiful and fertile plain on the banks of the Arnus, and on the line of the great high road through the N. of Tuscany, became the source of its prosperity; and it is clear that it rapidly came to surpass its more ancient neighbour of Faesulae. In the Gothic Wars Florentia already figures as a strong fortress, and one of the most important places in Tuscany. (Procop. *B. G.* iii. 5, 6.)

The remains of the amphitheatre already noticed, which are in themselves of little importance, are the only vestiges of Roman buildings remaining in the city of *Florence.*

2. A town of Cispadane Gaul, noticed only in the Itineraries, which place it on the Via Aemilia between Placentia and Parma, at the distance of 15 miles from the former city, and 10 from Fidentia (*Borgo S. Donino*). It still retains its ancient appellation, converted into the diminutive form *Fiorenzuola* for the purpose of distinction from the more celebrated city of the name. (*Itin. Ant.* p. 288; *Tab. Peut.*) [E. H. B.]

FLORENTIA'NA (Φλωρεντιανα, Florentia), a town in Moesia, of which the site is unknown. (Procop. *de Aedif.* iv. 4. p. 285; *Notit. Imp.*, where it is called *Florentia.*) [L. S.]

FLORIA'NA, a town of uncertain site, in Lower Pannonia. It was connected by a road with Aquincum, 30 miles to the east of it, and was the residence of the praefectus classis Istriae. (*Itin. Ant.* p. 265; *Notit. Imp.*) [L. S.]

FLO'RIUS, a small river of Hispania Tarraconensis, in the territory of the Astures, near the N. extremity of the W. coast of Spain: probably the *Rio de Castro.* (Plin. iv. 20. s. 34; Ukert, vol. ii. pt. 1. p. 299.) [P. S.]

FLUMEN BIBALO'RUM. [Gallaecia.]

FLUMEN OBLIVIO'NIS. [Gallaecia.]

FLUMEN SALSUM. [Salsum Flumen.]

FOENICULA'RIUS CAMPUS (τὸ Μαραθῶνος πεδιον), a large plain in the neighbourhood of Tarraco, in Spain, so called from the quantity of fennel (μάραθρον, Dor. and Att. μάραθον, Lat. foeniculum*) which grew there. The plain was traversed by the great Roman road from the Pyrenees to Tarraco. (Strab. iii. p. 160; Cic. *ad Att.* xii. 8.) [P. S.]

FONS TUNGRORUM. Pliny says (xxxi. 2) that "Tungri, a city of Gallia, has a famous fountain, sparkling with many bubbles; and it has a smack of iron, which is not perceived until after it is drunk: it purges the body, drives away tertian fevers, and disperses calculi. The same water becomes turbid if fire is applied to it, and finally grows red." Civitas is the whole territory of the Tungri, whence the modern town of *Tongern*, in Belgium; and it is generally supposed that this "famous fountain" is the springs of *Spa*, which are south-east of *Liège.* This would give to the territory of the Tungri a considerable extension; perhaps, however, not more than it had. No place suits the description of Pliny so well as the waters of *Spa.* [G. L.]

FONTES AMARI (αἱ πικραὶ λίμναι, Strab. xvii. p. 804; Diod. iii. 39; Plin. vi. 29. § 33), the Bitter Pools, the modern *Scheib*, derived their name from the saline flavour and deposition of their waters. These were strongly impregnated with alkaline salts, and with muriate of lime, washed from the rocks which separate the Delta from the Red Sea. As salt entered largely into the culinary art of the Egyptians who preserved in it fish and fowl, as well as the flesh of cattle, and as it was required also in their manufactures of earthenware and glass, and in the composition of dyes and pigments, these pools, as well as the Natron Lakes on the western side of the Nile, were of great value, and were probably, on that account, regarded as the property of the kings. The Bitter Pools began a little to the S. of Aeroöpolis, in lat. 30° 4′ N., and extended nearly as far as Arsinoë at the head of the Heroöpolite bay. Through them passed the great canal which connected the Nile with the Red Sea. The canal had been planned and begun by Pharaoh Necho II., a monarch of the 18th dynasty; was carried by Darius Hystaspis from Pithoum, or Thaim, as far as the Bitter Pools (Herod. ii. 158); and was subsequently continued by Ptolemaeus Philadelphus to Arsinoë. [W. B. D.]

FORATH (Plin. vi. 28. s. 32), a small town of Southern Babylonia, stated by Pliny to have been on the banks of the Pasitigris, and subject to the ruler of Characene. Sillig, in his new edition of Pliny, reads Fora. It is said to have been 12 miles from Charax-Spasinu. Mannert has supposed that it is represented by the present *Basrah*, and that the name has been preserved in *Ferath Maisan*, a name sometimes applied to that town: but this conjecture seems to be very doubtful. [V.]

FORENTUM. [Ferentum.]

FO'RMIAE (Φορμίαι: *Eth.* Formianus: *Mola di Gaëta*), a city of Latium on the coast of the Sinus Caiëtanus, and situated on the Via Appia, between Fundi and Minturnae, 13 miles from the former and 9 from the latter city. (*Itin. Ant.* p. 121.) Though included in Latium, in the later and more extended sense of the term, it certainly was not originally a Latin city; but whether this and the neighbouring Fundi were Volscian, or, as is perhaps more probable, Ausonian, cities we have no information: indeed, no mention occurs of either in history until they entered into municipal relations with Rome. But a legend

* There can be little doubt that the name of the far more celebrated Marathon had the same origin.

adopted by late writers ascribed the foundation of Formiae to a Greek colony, which was derived from Lacedaemon, and connected with the origin of the neighbouring Amyclae. In accordance with this tradition, its name was said to have been originally Hormiae, and was derived from the excellent anchorage or roadstead for shipping (ὅρμος) which its bay afforded (Strab. v. p. 233; Plin. iii. 5. s. 9; Fest. *s.v. Formiae;* Serv. *ad Aen.* x. 564.) Another legend, still more generally received both by Greek and Roman writers, selected Formiae as the site of the fable of the Laestrygones in the Odyssey; and the Roman family of the Lamiae, in the days of Augustus, even asserted their direct descent from Lamus, the king of the Laestrygones. (Cic. *ad Att.* ii. 13; Hor. *Carm.* iii. 17; Plin. *l. c.*; Sil. Ital. vii. 410; Solin. 2. § 23.)

The first historical mention of Formiae occurs immediately after the great Latin War, in B.C. 338. It appears that on that occasion the two cities of Fundi and Formiae had taken no part in the war, and had thus kept the passes through their territory (of the highest importance in a military point of view) always open to the Roman armies. For this service they were rewarded with the gift of the Roman citizenship, but at first without the right of suffrage, which was not granted them till B.C. 190: they were then included in the Aemilian tribe. (Liv. viii. 14, xxxviii. 36; Vell. Pat. i. 14; Cic. *ad Att.* ii. 14.) From henceforth Formiae appears to have been a flourishing Roman municipal town, to which its situation on the Appian Way doubtless contributed; but it was probably still more indebted to the extreme beauty of its situation, which rendered it a favourite place of resort with the wealthy Roman nobles in the latter days of the Republic, as well as under the Empire. The charm of its beautiful climate and tranquil bay, the

"Temperatae dulce Formiae litus,"

is celebrated by Martial in one of his most elegant epigrams; and all modern travellers concur in extolling *Mola di Gaëta* as one of the most lovely spots in all Italy. Among the villas with which Formiae thus became adorned, by far the most celebrated is that of Cicero, which appears to have become a favourite residence of the great orator, from whence many of his letters to Atticus are dated, and which afforded him a welcome retirement during the most disturbed periods of the civil wars. It was here also that, on his flight from Rome, he landed for the last time, and spent the night in his Formian villa, from whence he was attempting to escape when he was overtaken by the murderers and put to death, B.C. 43. (Cic. *ad Att.* ii. 13, 14, iv. 2, vii. 8, &c., *ad Fam.* xvi. 10, 12, &c.; Plut. *Cic.* 47, 48; Appian, *B. C.* iv. 19, 20; Val. Max. i. 4. § 5; Vict. *de Vir. Illustr.* 81.) Several ancient writers, including Plutarch, represent Caiëta as the scene of this catastrophe; but this evidently arises from a mere confusion of the two: Caiëta, indeed, at this time, appears to have been in a municipal sense a mere dependency of Formiae, of which it served as the port; and it is certainly not necessary to suppose, as Middleton has done, that Cicero had a villa at Caiëta itself as well as at Formiae. (See this point fully discussed by Chaupy, *Maison d'Horace,* vol. i. pp. 232—236.) Several other Romans had villas at Formiae in the days of the great orator, as well as in those of Horace; but the wealthy family of Mamurra, who was himself a native of Formiae, had at the latter period engrossed so great a part of the locality, that Horace calls it the "city of the Mamurrae." (Hor. *Sat.* i. 5. 37, and Schol. *ad loc.*; Plin. xxxvi. 6. s. 7.) Martial bears testimony that, at a later period, the charms of Baiae and the other places on the *Bay of Naples* had not caused Formiae to be neglected. (Mart. x. 30.) The hills at the back of it, and which bound the Sinus Caiëtanus, are also celebrated by Horace for the excellence of their wine. (Hor. *Carm.* i. 20. 12, iii. 16. 34.) We learn that Formiae received a colony under the Second Triumvirate, and it bears the title of a colonia in several inscriptions of imperial date. (*Lib. Colon.* p. 234: Orell. *Inscr.* 3782, 3884.) It appears to have continued a tolerably flourishing place till the close of the Roman Empire, and retained its episcopal see till the 9th century, when it was taken and destroyed by the Saracens, in 856. The remaining inhabitants took refuge at *Gaëta,* which succeeded to the episcopal dignity; and the modern town of *Mola,* which has grown up on the ruins of *Formiae,* is, as its appellation of *Mola di Gaëta* implies, a sort of dependency of the neighbouring city. The remains of antiquity still visible at Formiae are extensive; they appear to have all belonged to different Roman villas, of which there remain extensive substructions, with the ruins of terraces, vaulted passages, baths, grottoes, &c., lining the whole coast from *Mola di Gaëta* to the neighbouring village of *Castellone.* These ruins may be traced to have formed part of three ancient villas, of which the one next to *Mola* is commonly known as that of Cicero; but the Abbé Chaupy would assign to the great orator the more important remains in the garden of the modern *Villa Marsana,* the furthest of the three from *Mola.* The point is scarcely susceptible of precise determination; but a monument on the hill above is regarded as that of Cicero, and the discovery near it of an inscription bearing the names of some freedmen of the Tullian family, certainly affords some countenance to the attribution. Several other ancient inscriptions have been discovered at Formiae, and numerous sepulchres and ruins of ancient edifices are scattered along the coast for some miles eastward of *Mola* along the Appian Way. Among these the names of the *Torre di Scauri,* and a spot called *Mamurano,* evidently indicate the site of villas of Aemilius Scaurus, and of the wealthy Mamurra. (Chaupy, *Maison d'Horace,* vol. i. pp. 181—231; Romanelli, vol. iii. pp. 422. 423; Hoare, *Class. Tour,* vol. i. pp. 118—129.) [E. H. B.]

FO'RMIO (Φορμίων, Ptol. iii. 1. § 27), a small river, now called the *Risano,* falling into the Adriatic Sea between Tergeste (*Trieste*) and Aegida (*Capo d'Istria*), which formed the limit between Venetia and Istria, and consequently at one time the eastern limit of Italy, until Augustus included Istria also under that denomination, in consequence of which the Arsia became the boundary of Italy. (Plin. iii. 18. s. 22.) Ptolemy, however, reckons both the river Formio and the colony of Tergeste as included in Istria; but Pliny's statement is probably correct with regard to the limit as fixed in the time of Augustus, previous to the annexation of Istria to Italy. [ITALIA.] Pliny places the river Formio 6 miles S. of *Trieste,* which agrees very well with the *Risano;* and this river has accordingly been identified with the Formio both by Cluver and D'Anville. Walckenaer fixes on a smaller stream flowing into the sea near *Muja Vecchia;* but this seems too near *Trieste,* as well as too inconsiderable a stream. [E. H. B.]

FOROAUGUSTA'NA. [LIBISOSONA.]

FORTUNA'TAE INSU'LAE (*αἱ τῶν Μακάρων νῆσοι, the Islands of the Blessed*), one of those geographical names whose origin is lost in mythic darkness, but which afterwards came to have a specific application, so closely resembling the old mythical notion, as to make it almost impossible to doubt that that notion was based, in part at least, on some vague knowledge of the regions afterwards discovered. In the present case, the opinion embodied in the name will be more fitly discussed under OCEANUS: it is enough to say here that the earliest Greek poetry places the abode of the happy departed spirits far beyond the entrance of the Mediterranean, at the extremity of the earth, and upon the shores of the river Oceanus, or in islands in its midst; and that Homer's poetical description of the place may be applied almost word for word to those islands in the Atlantic, off the W. coast of Africa, to which the name was given in the historical period (*Od.* iv. 563, foll.): — "There the life of mortals is most easy; there is no snow, nor winter, nor much rain, but Ocean is ever sending up the shrilly breathing breezes of Zephyrus, to refresh men" (Comp. Pind. *Ol.* ii. 128.) Their delicious climate, and their supposed identity of situation, marked out the *Canary Islands*, the *Madeira* group, and the *Azores*, as worthy to represent the islands of the Blest. In the more specific sense, however, the name was applied to the two former groups; while, in its widest application, it may even have included the *C. de Verde* islands; its extension being, in fact, adapted to that of maritime discovery.

The Romans first became acquainted with these islands at the close of the civil wars of Marius and Sulla. Plutarch relates that, when Sertorius was at or near Gades (*Cadiz*), about B. C. 82, he found certain sailors lately returned from the Atlantic islands, which were also called the islands of the Blest; who described them as two in number, separated by a very narrow strait, and distant from Africa 10,000 stadia (1000 geographical miles, an enormous exaggeration, if the *Canaries* are meant). Watered moderately by rare showers, and refreshed by gentle and moist breezes, chiefly from the west, they not only rendered an abundant return to the cultivator, but produced spontaneously food enough for their indolent inhabitants. The climate was temperate at all seasons of the year; and, in short, such were their natural advantages, that even the barbarians identified them with that Elysian Plain and those Abodes of the Happy which had been sung by Homer, and the fame of which had reached to them. Enchanted by these accounts, Sertorius was seized with the desire of fixing his abode in the islands, and living there in peace; but, as the Cilician pirates of his fleet preferred the plunder of better known countries, he was compelled to abandon the design. (Plut. *Sertor.* 8; Flor. iii. 22.) However, the discovery must have been speedily followed up, if at least the writer Sebosus, whom Pliny quotes in his account of the islands (vi. 32. s. 37), be the same who is mentioned by Cicero (*ad Att.* ii. 14). Strabo speaks of them in a very cursory way; and the later geographers differ somewhat as to their number and names. The following table exhibits their statements, as compared with one another, and with the modern names, the order (after the first) being from E. to W.

From this table it will be seen that, besides Autolala, which he expressly distinguishes from the Fortunatae, Ptolemy only reckons six islands as belonging to the group, instead of seven, which is the actual number. Pliny also gives the number as six (iv. 21. s. 36, "Deorum sex, quas aliqui Fortunatos appellavere.") Instead of accounting for the difference, as above, by supposing him to have omitted *Palma*, some modern writers identify this island with his Ἀπρόσιτος νῆσος, and with the Junonia Minor of Juba; making the Αὐτολάλα of Ptolemy, and the Purpurariae of Juba, *Lanzarote*, with the smaller islands of *Alegranza* and *Graciosa*, and so excluding Madeira. Those who desire to pursue the subject further should compare the longitudes and latitudes of Ptolemy with the distances preserved by Pliny from Juba and Sebosus. Of those, respecting the identification of which there is no dispute, Canaria, which is still so called, is said to have obtained its name from the multitude of dogs which ran wild there; the lofty snow-clad peak of *Tenerife* shows at a glance the origin of the name of Nivaria; while *Ferro* marks the place of the chief meridian from which longitudes were reckoned before the introduction of the practice of computing them from national observatories: the old practice dates from the time of Ptolemy, whose first meridian, however, is drawn through the group, without specifying the exact island. (Ptol. i. 12. §§ 11, 12, et alib.) [P. S.]

SEBOSUS *ap.* Plin. *l. c.*	JUBA, *ap.* Plin. *l. c.*	PTOLEMAEUS, IV. 6. §§ 33, 34.	MODERN NAMES.
Junonia	Purpurariae	Ἥρας [Ἡλίου], ἡ καὶ Αὐτολάλα	*Madeira, &c.*
	Junonia Minor	Ἀπρόσιτος	*Lanzarote.*
	Junonia	Ἥρας	*Fuerteventura.*
Planaria	Canaria	Καναρία	*Gran Canaria.*
Convallis	Nivaria	Πιντουαρία, ἢ Κεντουρία	*Tenerife.*
Capraria	Capraria	Κασπειρία	*Gomera.*
			Palma.
Pluvialia	Ombrios	Πλουϊτάλα	*Ferro.*

FORULI (Φόρουλοι), a town of the Sabines, situated, as we learn from Livy (xxvi. 11), on the road from Amiternum to Interocrea. It is mentioned by Virgil among the ancient cities of the Sabines (*Aen.* vii. 714), as well as by his imitator Silius Italicus (viii. 417); but in later times it appears to have been a mere village or vicus dependent upon Amiternum. (Liv. *l. c.*; *Vicani Forulani*, Inscr. *ap.* Romanelli, vol. iii. p. 333; Orell. *Inscr.* 3794.) Strabo describes it (v. p. 228) as built on a rock, in a position better suited for a band of outlaws than for peaceable inhabitants. Its site may be fixed with certainty at *Cività Tommasa*, about 5 miles from Amiternum, where there are numerous ancient remains, and the inscriptions above cited were discovered. The distance from *Antrodoco* also agrees with that of 13 M. P. assigned by the Tab. Peut. from Interocrea to "Eruli," which name is evidently a corruption of Foruli. The precise situation of *Cività Tommasa* scarcely corresponds with the expressions of Strabo, but the general wild character of the neighbourhood is sufficient to justify them. (Romanelli, *l. c.*; Bunsen, in *Ann. dell' Inst.* vol. vi. p. 109; Chaupy, *Maison d'Horace*, vol. iii. pp. 124—126.) [E. H. B.]

FORUM ALLIENI, a city of Gallia Cisalpina, mentioned only by Tacitus (*Hist.* iii. 6) during the civil wars of Vitellius and Vespasian, A. D. 69, but

in a manner that affords little clue to its position, except that it was situated on some river, the passage of which it was important to defend. Cluver was inclined to place it at *Ferrara*, on the *Po*; others have fixed on *Legnago*, on the *Adige*, between Mantua and *Padua*, which is certainly the more probable site, and agrees better with the movements of the campaign. (Cluver, *Ital.* p. 155; Orell. *ad Tac. l. c.*) [E. H. B.]

FORUM APPII (Φόρον Ἀππίου: *Eth.* Forcoappiensis), a town on the Appian Way, distant 43 miles from Rome. We learn from Horace that it was the usual resting-place for travellers at the end of the first day's journey from Rome, though he himself and his companion thought fit to divide the distance. (*Sat.* i. 5. 3—6.) It was here, also, that it was customary for travellers on the Appian Way to embark on a canal that extended from thence parallel with the line of road to the immediate neighbourhood of Tarracina. (Hor. *l. c.*; Strab. v. p. 233.) Hence it became, as Horace describes it, a town of boatmen and innkeepers,—

"Differtum nautis cauponibus atque malignis."

It is mentioned also by Cicero (*ad Att.* ii. 10), as well as in the journey of St. Paul to Rome (*Act. Apost.* xxviii. 15), as one of the usual halting-places on the Appian Way: on both occasions in conjunction with Tres Tabernae, which was the next stage in going to Rome, ten miles nearer the city (*Itin. Ant.* p. 107; *Itin. Hier.* p. 611). Its situation, in the midst of the marshes, sufficiently accounts for the badness of the water complained of by Horace.

It is probable from its name that Forum Appii was founded by Appius Claudius Caecus, who first constructed the celebrated road which so long bore his name; and the place appears to have always continued under the patronage of his family. (Suet. *Tib.* 2.) It seems to have grown up into a considerable town, which, under the Roman empire, enjoyed municipal privileges, and is mentioned by Pliny among the municipal towns of Latium. (Plin. iii. 5. s. 9.; Orell. *Inscr.* 780.) There are now no inhabitants on the spot; but the site is clearly marked by considerable ruins on each side of the Appian Way, as well as by the 43rd milestone, which is still preserved, at a spot distant four miles from the place still called *Treponti*, the ancient Tripontium or Tripuntium. (Chaupy, *Maison d'Horace*, vol. iii. pp. 387—452; Pratilli, *Via Appia*, pp. 99, 100.) [Via Appia.] [E. H. B.]

FORUM AURELII, a town or village on the coast of Etruria, situated on the Via Aurelia, and placed by the Itinerary 24 miles from Centumcellae and 25 from Cosa. (*Itin. Ant.* p. 291.) The former number is doubtful (those in the Tab. Peut. are altogether confused); but, on the whole, it is probable that Forum Aurelii was placed at or near *Montalto*, on the river *Fiora*, at the place where that stream was crossed by the Via Aurelia. There can be little doubt from its name that the Forum Aurelii was founded at the same time with the construction of the high road of the same name; but of the date of this we have no account. [Via Aurelia.] We only know that both the road and town existed in the time of Cicero, who mentions the Forum Aurelium (sic) in connection with the proceedings of Catiline. (Cic. *in Cat.* i. 9.) It seems never to have been a place of any importance, and, after this incidental mention, its name is found only in the Itineraries. [E. H. B.]

FORUM BIBALO'RUM. [Gallaecia.]

FORUM CASSII, a town of Etruria, situated on the Via Cassia, with the formation of which, from its name, it was certainly connected. It is known to us only from the Itineraries, which place it 11 M.P. beyond Sutrium, between that place and Volsinii, and 44 miles from Rome. (*Itin. Ant.* p. 286; *Tab. Peut.*) The distinct traces of the Via Cassia enable us to place it with certainty about a mile NE. of *Vetralla*, where an ancient church still retains the name of *Sta. Maria in Forcassi*, and some portions of Roman buildings are still extant. The inhabitants migrated during the middle ages to the neighbouring village of *Vetralla*. (Dennis, *Etruria*, vol. i. p. 245.) [E. H. B.]

FORUM CIGURRORUM, EGURRORUM, or GIGURRORUM. [Astures.]

FORUM CLAUDII. Ptolemy (iii. 1) mentions two towns in the country of the Centrones [Centrones], Forum Claudii and Axima (*Aisme*). As there is a place called *Centron* in the valley of *Aisme*, it is probable that *Centron* marks the site of a place called Centrones, for under the Empire it was usual in Gallia for the name of a people to be substituted for that of their chief place. If this be so, we may assume that *Centron* represents Forum Claudii. Guichenon (cited by D'Anville) gives two inscriptions which, he says, were found at *Aisme*; and in one of them, which is in honour of Nerva, the names Forum Claudii and Centrones occur thus — FOROCL. CENTRON. This might be used as an argument, that Forum Claudii is another name for Axima. [G. L.]

FORUM CLAUDII VALLENSIUM OCTODURENSIUM. [Octodurus.]

FORUM CLODII, a town of Etruria, situated (as might be inferred from its name) upon the Via Clodia, known to us chiefly from the Itineraries, but mentioned also by Ptolemy (iii. 1. § 50) among the towns of Southern Etruria. The Antonine Itinerary reckons it 32 M.P. from Rome, and the Tab. Peut. places it between Sabate and Blera; but the distances given in the Tabula are confused or corrupt. Hence its position has not been clearly ascertained; it is commonly placed at *Oriuolo*, about five miles N. of *Bracciano* (Sabate); but, according to Mr. Dennis, there are no ancient remains at that place, and the point is still doubtful. (*Itin. Ant.* p. 286; *Tab. Peut.*; Dennis, *Etruria*, vol. i. p. 273.) [E. H. B.]

FORUM CORNELII (Φόρον Κορνήλιον, Strab.; Φόρου Κορνηλίου, Ptol.; Κορνηλίου ἀγορά, Dion Cass.: *Eth.* Forocorneliensis: *Imola*), a considerable town of Gallia Cispadana, situated on the Via Aemilia, and distant 23 miles from Bononia and 10 from Faventia. It stood on the W. bank of the river Vatrenus, now called the *Santerno*. (Strab. v. p. 216; Plin. iii. 15. s. 20; Ptol. iii. 1. § 46; *Itin. Ant.* pp. 100, 127, 287; *Itin. Hier.* p. 616.) It is said to have derived its name from its foundation by the dictator Sulla (Prudent. *Peristeph.* 9, init.), and appears to have been already a place of some importance at the death of Caesar; as, in the civil war which followed, it was occupied by Octavian, who established his winter-quarters there. (Cic. *ad Fam.* xii. 5; Dion Cass. xlvi. 35.) It is afterwards noticed by Martial, who appears to have composed the third book of his epigrams during a residence in this town (iii. 1. 4), and continued under the Roman empire to be a flourishing municipal town. (Gruter, *Inscr.* p. 518. 4, &c.) Its name is again men-

tioned during the Gothic Wars, and as late as the seventh century P. Diaconus ranks it among the "locupletes urbes" of the province of Aemilia. He tells us that it had a citadel (castrum), which was called Imolas, from whence the modern town has derived the name of *Imola*. (Procop. *B. G.* ii. 19; P. Diac. ii. 18.) [E. H. B.]

FORUM DECII, a town of the Sabines, mentioned only by Pliny (iii. 12. s. 17), the site of which is wholly unknown. It has been identified by Cluver with the "Forocori" of the Tabula; but there is no authority for this, and the latter name is probably corrupted from Forocrea or Forocria, analogous to Interocrea. (Cluver, *Ital.* p. 690; Holsten. *Not. ad Cluv.* p. 118.) It is more probable that Forum Decii was situated much further S., in the neighbourhood of Forum Novum (*Vescovio*). [E. H. B.]

FORUM DIUGUNTORUM or JUGUNTORUM (*Φόρος Διουγουντῶν ἢ Ἰουγουντῶν*, Ptol. iii. 1. § 31), a town of Transpadane Gaul, known only from Ptolemy, who places it in the territory of the Cenomani, SW. of Bergomum; but its site is otherwise wholly unknown. [E. H. B.]

FORUM DOMITII, is placed by the Itins. on the great Roman road from Nemausus (*Nimes*) to Narbo (*Narbonne*). The distance from Cessero (*St. Tiberi*) on the *Hérault* to Forum Domitii is 18 M. P.; and the Antonine Itin. makes it 17 M. P. from Forum Domitii to Sextantio (*Soustantion*), which is a few miles west of *Montpellier*. Though Forum Domitii lies between two well-known places, its position is not known. We may conclude that it was on the Via Domitia, so called from Cn. Domitius Ahenobarbus, who defeated the Allobroges (Liv. *Epit.* 61). This road is mentioned by Cicero (*pro Font.* 4) as repaired by the legati of M. Fonteius. [G. L.]

FORUM FLAMINII (*Φόρον Φλαμίνιον*, Strab.; *Φόρος Φλαμινίου*, Ptol.: *Eth.* Foroflaminiensis), a town of Umbria, situated on the Flaminian Way, where it first entered the Apennines, 3 miles from Fulginium. It is evident from the name that it was founded by the censor C. Flaminius, at the time that he constructed the celebrated highway on which it was situated, B. C. 220: but its name is not mentioned in history. Strabo speaks of it as deriving its chief importance from the traffic along the road: but we learn from Pliny, and from inscriptions, that it was a municipal town of some consideration. (Strab. v. p. 227; Plin. iii. 14. s. 19; Ptol. iii. 1. § 54; Gruter, *Inscr.* p. 347. 1; Orell. *Inscr.* 98.) It was here that the emperors Gallus and Volusianus were defeated and slain by the pretender Aemilianus in A. D. 256. (Hieron. *Chron. ad ann.*; Cluver, *Ital.* p. 631.) Forum Flaminii is still termed a "civitas" in the Jerusalem Itinerary, and continued the see of a bishop till the eighth century, when it was destroyed by the Lombards, and the remaining inhabitants established themselves at Fulginium. The Itineraries place it 3 miles from Fulginium, and 12 from Nuceria: but the ruins which, according to Holstenius, still mark its site at a place called *S. Giovanni pro Fiamma* (or *in Forifiamma*), are hardly 2 miles from the former city. (*Itin. Ant.* p. 125; *Itin. Hier.* p. 614; *Tab. Peut.*; Holsten. *Not. ad Cluv.* p. 92.) [E. H. B.]

FORUM FULVII (*Valenza*), a town of the interior of Liguria, mentioned by Pliny among the "nobilia oppida" of that province, between the Apennines and the Padus. He adds the distinctive appellation of "Valentinum" ("Forum Fulvii, quod Valentinum"), though no other place of the name is known. It is also mentioned in the Tabula, in a manner that would afford but little clue to its position; but the distance of 22 M. P. from Asta (corruptly written *Hasia*) accords with the position of the modern *Valenza*, a considerable town on the right bank of the *Po*, about 16 miles below *Casale*, the name of which is evidently connected with the epithet of Valentinum given to the ancient city. In the Notitia (where it is called Forum Fulviense) we find it mentioned as the station of a body of troops, probably to defend the passage of the Padus at this point. (Plin. iii. 5. s. 7; *Not. Dign.* ii. p. 121; *Tab. Peut.*) [E. H. B.]

FORUM GALLORUM (*Ἀγορὰ Κελτῶν*, Appian), a village on the Via Aemilia, between Mutina and Bononia. It is remarkable only as the scene of the first battle between M. Antonius and the consuls Hirtius and Pansa, who were attempting to raise the siege of Mutina. The forces of Pansa, which were first engaged with those of Antonius, were worsted in the encounter, though not defeated, and the consul himself mortally wounded: but Hirtius, having unexpectedly fallen upon the rear of Antonius, when he was withdrawing to reoccupy Forum Gallorum, completely routed his forces and compelled him to retreat to his camp before Mutina. This battle (which was fought on the 15th of April, B. C. 43, twelve days before the more decisive action of Mutina) is described in detail by Serv. Sulpicius Galba, in a letter to Cicero: from his account we learn that the place called Forum Gallorum was a mere village (vicus) and that it was situated *on* the Aemilian Way, which here, as through great part of its course, was a raised causeway, with low marshy ground on each side. (Cic. *ad Fam.* x. 30; Appian, *B. C.* iii. 66—70; Dion Cass. xlvi. 37; Frontin. *Strat.* ii. 5. § 39.) Nor did it ever rise to the dignity of a town: and though its name is again found in the Tabula Peutingeriana, its omission from all the other Itineraries shows that it was still only a village. The distances there given (8 miles from Mutina and 17 from Bononia) show that it must have occupied nearly the site of the modern *Castel Franco*. [E. H. B.]

FORUM GALLO'RUM. [ILERGETES.]

FORUM HADRIANI. One of the roads which the Table marks from Lugdunum Batavorum (*Leiden*) to Noviomagus (*Nymegen*), passes through Flenio [FLENIO]. Between Lugdunum and Flenio is Forum Hadriani, and though the distance from Lugdunum is not given in the Table, there is no doubt that it is represented by a place named *Voorbourg*. Excavations have been made on this site, and there were found mosaic pavements, coins, and other memorials of the Roman period. (Ukert, *Gallien*, p. 532.) [G. L.]

FORUM JULII (*Fréjus*), a town of Gallia Narbonensis on the coast between Telo Martius (*Toulon*) and the Varus (*Var*). Strabo (p. 184) calls it *Φόρον Ἰούλιον*, and a naval station of Caesar Augustus, situated between Olbia and Antipolis, and distant from Massilia about 600 stadia. But the name Forum Julii existed before the time of Caesar Augustus, for it is mentioned in a letter of Plancus to Cicero, B. C. 43 (*ad Fam.* x. 15); and he makes it 24 M. P. from Forum Voconii to Forum Julii (x. 17). We may infer that it took its name from C. Julius Caesar, though there is no evidence about what he did to the place, and that Augustus improved it. Pliny (iii. 5) names it "Forum Julii Octavano-

rum Colonia quae Pacensis appellatur et Classica." The river Argenteus was within its limits. (Ptol. ii. 10.) The name Octavanorum, mentioned also by Mela (ii. 5), is supposed to show that a detachment from the eighth legion was settled here. The name Classica is probably derived from the fleet being stationed here by Augustus. The place has the various names of Oppidum Forojuliense (Tacit. *Ann.* iv. 5); Forum Julium Narbonensis Galliae Colonia (*Ann.* ii. 63); Colonia Forojuliensis (Tacit. *Hist.* ii. 14).

Forum Julii was a naval station in the time of Tiberius, and ships of war were kept there, which Augustus took at the battle of Actium, and used for the defence of this part of the Gallic coast (Tacit. *Ann.* iv. 63); and it is again mentioned as an important naval station in the time of Vitellius (Tacit. *Hist.* ii. 43). It was the birthplace of Cn. Agricola, the conqueror of Britain (Tacit. *Agric.* 4); and an old and distinguished Colonia, as Tacitus calls it. The sauce called "garum" was made here. (Plin. xxxi. 7, 8.)

The port of Forum Julii was at the bottom of a small bay, but the entrance has been filled up by the earth brought down by the Argenteus, which river flows a little to the west of Forum Julii. The traces of the two moles which formed the entrance of the port, still remain; but the entrance is now about 3000 feet from the sea. The width of the Roman port is estimated at about 1500 feet, and its depth from the entrance between the moles at 1680 feet. These dimensions show that the port of Forum Julium may be compared with those made by Trajan at the mouth of the Tiber and at Centum Cellae, and with the port of Antium. There is no water now in the port of *Fréjus*, except a small lagune, near a quay of Roman construction, which forms an angle with the mole on the right to one who enters the port. The traces of the walls show that the old town was much larger than the modern.

There is a triumphal arch, which is supposed to have formed one of the four gates of the town. The circuit of the amphitheatre is about 650 feet. The arena, which is buried under rubbish, is probably entire. A road has been formed through the two chief entrances right through it, as in the amphitheatre at *Trèves*. Near the amphitheatre is one of the old gates, which is at the bottom of a concave semicircle, formed of thick walls and defended by a tower at each extremity. The aqueduct brought into the town the waters of the *Siagne* from a distance of more than 20 miles. The channel for the water in some parts was under ground, in others it was supported on arches. At the gate of *Fréjus* it divided into two branches, one of which entered the town and the other went to the port. Parts of this aqueduct are well preserved.

The Roman Via Aurelia passed by Forum Julii; and there were roads from Forum Julii to Aquae Sextiae, Massilia, and Arelate. (D'Anville, *Notice, &c.*; Walckenaer, *Géog. &c.* vol. ii. p. 9; Ukert, *Gallien*, p. 429; Richard et Hocquet, *Guide du Voyageur*, p. 797.) [G. L.]

FORUM JULII or JULIUM. 1. (*Φόρος Ἰούλιος*, Ptol.: *Eth.* Forojuliensis: *Cividale di Friuli*), a city of Venetia, situated about 25 miles N. of Aquileia, and nearly at the foot of the Julian Alps. Ptolemy reckons it in the country of the Carni, and there is little doubt that this is correct, though it is not possible to separate the territory of that people from the rest of Venetia. [CARNI.] Paulus Diaconus ascribes its foundation to Julius Caesar (P. Diac. *Hist. Lang.* ii. 14); and it is probable that this is correct, though we have no earlier authority for the fact. It appears that it was at first merely a sort of central place of meeting for the neighbouring Carni, and where probably the Roman magistrates held intercourse with the mountaineers. In Pliny's time it seems to have been still but an inconsiderable place, as he enumerates the "Forojulienses cognomine Transpadani" among the unimportant towns of Venetia, which were unworthy of fuller notice. But Ptolemy calls it a Roman colony, and it appears to have risen in importance during the latter ages of the Roman empire. It was not, however, till after the fall of the neighbouring Aquileia, A. D. 452, that it attained the dignity, which it continued to hold under the Gothic and Lombard rulers of Italy, of the capital of Venetia. (Plin. iii. 19. s. 23; Ptol. iii. 1. s. 29; Cassiod. *Varr.* xii. 26: P. Diac. ii. 14, iv. 28, 38.)

Forum Julii became under the Lombards the seat of a separate duchy, and has imparted to the whole province in which it is situated the name, by which it is still known, of the *Friuli*: the modern town being called *Cividad* or *Cividale*, obviously a corruption of "Civitas."

The period of the destruction of Forum Julii is unknown; but recent excavations on the site have brought to light numerous remains of antiquity, including the foundations of temples and other public buildings, scattered over a considerable extent of ground around and in the neighbourhood of the modern *Cividale*. The monuments discovered belong, however, for the most part to a very late period, and confirm the inference which we should draw from the few historical notices we possess, that Forum Julii did not rise to any great importance till near the close of the Western Empire. Very exaggerated ideas of its greatness, and of the value of the discoveries made on the spot, were spread abroad by the Canonico della Torre, who carried on the excavations. (*Annali dell' Inst. Arch.* 1835, pp. 213—220; *Bullett. d. Inst.* 1834, p. 5, 1835, p. 134.)

2. We learn from an inscription that the town of Iria in Liguria bore also the name of "Forum Julii Iriensium" (Orell. *Inscr.* 73), but no other notice of it occurs under this name. [IRIA.]

3. Pliny mentions among the municipal towns of Umbria, in the sixth region of Italy, the "Forojulienses cognomine Concubienses;" but these, as well as the "Forobrentani," who immediately follow them, are wholly unknown. [E. H. B.]

FORUM JULIUM. [ILLITURGIS.].

FORUM LEPIDI. [REGIUM LEPIDUM.]

FORUM LICINII, a town of Transpadane Gaul, mentioned only by Pliny (iii. 17. s. 21), who writes the name Licinitorum, and, strangely enough, tells us that it was a city of the Orobii, a people mentioned by Cato; though it is evident from its name that it was a Roman foundation, or at least settlement. From the same passage it would appear to have been in the neighbourhood of Comum and Bergomum, and has been fixed, plausibly enough, though only conjecturally, at a place called *Incino*, near the small town of *Erba*, on the road from *Como* to *Lecco*, and about 7 miles from the former city, where some inscriptions and other antiquities have been found. (Annoni, *Memoria intorno il Piano d' Erba*, Como, 1831.) [E. H. B.]

FORUM LIGNEUM, is placed by the Antonine Itin. on the road from Caesar Augusta (*Saragosa*)

in Spain, to Beneharmum, in Gallia. [BENEHARMUM.] The distance from Summus Pyrenaeus to Forum Ligneum is marked 5, and from Forum Ligneum to Aspaluca (*Pont Lesquit*), 7. Walckenaer takes these distances to be Gallic leagues, though one would suppose that they are Roman miles. However, distances measured in a mountain pass are very loose; and there is no certainty about the exact position of Forum Ligneum. [G. L.]

FORUM LIMICORUM. [GALLAECIA.]

FORUM LIVII (*Forli*), a town of Gallia Cispadana, situated on the Via Aemilia, between Faventia and Caesena. Its foundation is commonly ascribed by local historians to Livius Salinator, but there is no authority for this. Its name is not found either in Strabo or Ptolemy, but is mentioned by Pliny among the municipal towns of the region; and by the Itineraries, which place it 13 M. P. from Caesena and 10 from Faventia. It therefore occupied the same site as the modern city of *Forli*, on the right bank of the *Montone*, the Vitis of Pliny. (Plin. iii. 15. s. 20; *Itin. Ant.* p. 287; *Itin. Hier.* p. 616; *Tab. Peut.*) In A. D. 412 it was the scene of the nuptials of Placidia, the sister of Honorius, with the Gothic king Athaulfus (Jornand. *Get.* 31), but notwithstanding its selection for this purpose it seems to have never been a town of importance in ancient times. The modern city of *Forli*, on the contrary, is a populous and flourishing place. [E. H. B.]

FORUM NERONIS. [CARPENTORACTE.]

FORUM NOVUM. 1. (*Eth.* Foronovanus: *Vescovio*), a town in the territory of the Sabines, mentioned among the municipal towns of that region by Pliny, and in the Liber Coloniarum. (Plin. iii. 12. s. 17; *Lib. Colon.* p. 255.) From its name we may infer that it was of Roman foundation, and not an ancient Sabine town. Its position is clearly fixed at a place called *Vescovio* (no longer inhabited, but retaining an ancient church), about 3 miles W. of *Aspra* (Casperia) and 12 NW. of *Correse* (Cures). Here there are considerable ruins, which were mistaken by Cluver for those of Cures, but are clearly identified as the remains of Forum Novum by inscriptions found among them with the name of the Foronovani. From these we learn that it was a municipal town in the reign of Gordian: it subsequently became the see of a bishop, and, after the decay of Cures, appears to have claimed to be the metropolitan see of the Sabines, whence it came to be commonly known as *Il Vescovio di Sabina*. The ancient church that marks the site still bears the title of "Ecclesia Cathedralis Sabinorum." (Cluver, *Ital.* p. 675; Holsten. *Not.* p. 107; Chaupy, *Maison d'Horace*, vol. iii. p. 127.)

The name of Forum Novum was probably given to it for the purpose of distinguishing it from Forum Decii, which is also placed by Pliny in the Sabine territory, but is otherwise wholly unknown, and there is no clue to its situation.

2. A town of Gallia Cispadana, known only from an inscription in which we find it mentioned as a municipal town ("Municipium Foronovanorum," Gruter, *Inscr.* p. 492. 5); but as this inscription was found at Parma, there can be no doubt that the Forum Novum there meant is the place still called *Fornovo*, in the valley of the *Taro*, 15 miles SW. of Parma. It is evidently the same place called by P. Diaconus "Foronianum," and mentioned by him among the "castra Aemiliae." (P. Diac. *Hist. Lang.* vi. 49.)

3. A town of Samnium, mentioned only in the Itineraries, which place it 10 miles from Beneventum on the road to Equus Tuticus; this distance fixes it at *Buonalbergo*, a spot where numerous coins and other antiquities have been found. (*Tab. Peut.*; *Itin. Hier.* p. 610; Mommsen, *in Bullett. d. Inst.* 1848, p. 7.) [E. H. B.]

FORUM NARBASORUM. [GALLAECIA.]

FORUM POPILII. 1. (*Forlimpopoli*), a small town on the Via Aemilia about half-way between Forum Livii and Caesena, noticed by Pliny (iii. 15. s. 20) among the municipal towns of Gallia Cispadana, as well as in the Tabula and the Jerusalem Itinerary, in both of which the name is written "Foro *Populi*." The latter calls it a "civitas," but the total omission of its name in the same route as given in the Antonine Itinerary proves that it was (in ancient as well as modern times) but a small town. (*Itin. Hier.* p. 616; *Tab. Peut.*)

2. A town of Campania, mentioned by Pliny as situated in the Falernian district ("Foropopulienses ex Falerno," Plin. iii. 5. s. 9): it is also noticed by Ptolemy, who writes the name Φόρος Ποπλίου (Ptol. iii. 1. § 68), and incidentally by Dionysius (i. 21), who tells us that near it were the remains of a very ancient city, which had been long desolate, called Larissa and of Pelasgic origin. The ruins to which he refers are unknown, but it appears from his expressions that they, as well as Forum Popilii (ἀγορὰ Ποπιλία), must have been situated in the hilly district in the N. of Campania: Ptolemy appears to place the latter town between Capua and Teanum, but its exact site has not been determined. We learn from the Liber Coloniarum (p. 233, where the name is written Forum Populi), that it received a body of colonists under Augustus, to which a fresh settlement seems to have been added by Vespasian.

3. A town of Lucania, mentioned only in the Tabula, where the name occurs in a manner that would afford scarcely any clue to its position, the neighbouring lines of route being altogether confused. But a remarkable inscription found at a place called *Polla* in the *Valle di Diano*, leaves scarcely any doubt that that place is the site of the Forum Popilii. This inscription records the construction by a Roman magistrate (whose name is unfortunately lost) of a high road from Capua to Rhegium, giving the intermediate distances of the principal places: and a comparison of these with those given in the Tabula leaves little doubt that the modern village of *Polla* is the Forum Popilii, and that the magistrate's name which has disappeared at the beginning of the inscription, erroneously supplied by some writers as that of M. Aquillius, was in reality that of P. Popilius Laenas, who was praetor in B. C. 134. (Mannert, *Geog. von Italia*, vol. ii. p. 146; Mommsen, *Inscr. R. N.* No. 6276; Ritschel, *Monum. Epigr.* pp. 11, 12.) From this document we learn that Forum Popilii was distant 51 M. P. from Nuceria and 74 from Muranum. [E. H. B.].

FORUM SEGUSIANORUM, a town of the Segusiani (Ptol. ii. 8), who were on the west bank of the Rhone, in the latitude of Lugdunum. The term Forum seems to indicate the chief town of the Segusiani, or a place where a Conventus was held; and the place has the usual mark of a capital or chief town in the Table. A place called *Feurs*, or more properly *Feur*, west of *Lyon*, represents the Forum Segusianorum. An inscription was found at *Feurs*, as it seems to this effect:—"Fabri Tign. qui Foro Segus. consistunt;" and La Mure, in his *Histoire du Forest* (Lyon, 1671), mentions four milestones found at *Feurs*, with the inscriptions I, II, III, IIII, each preceded by

L, which means leuga or league. Thus, it appears that a road was measured from this Forum. It is also stated that the inscription C. IVL. F. SEG. LIBERA. occurs on these stones, or on some of them. From this the place appears to have been made a Colonia, with the title of Liberi, which Pliny (iv. 18) gives to the Segusiani. "The historian of the *Forez* (Forest) mentions a Roman copper weight, on which were marked in characters of silver DEAE SEG. F., a circumstance which shows that the Forum of the Segusiani was deified, and accordingly had an honour which we know to have been conferred on several other towns in Gaul." (D'Anville.)

The Table mentions Forum Segustavarum. on a road from Segodum (*Rhodez*) to Lugdunum (*Lyon*), and it is the next place to Lugdunum. Part of the route is this:—Icidmago (*Issengeaux*), Aquis Segeste, Foro Segustavarum, Lugdunum. Another route in the Table, between Augustonemetum (*Clermont*) and Lugdunum, stands thus in the last part:—Rodamna (*Rouanne*), Mediolanum (*Meylieu*), Foro Segustavarum, Lugdunum. D'Anville (*Notice*, art. *Mediolanum*) supposes that Mediolanum is wrongly placed in the Table, and he inserts it between Forum Segusianorum and Lugdunum. Walckenaer contends that the Table and its distances are right, that Forum Segustavarum is a different place from Forum Segusianorum, and he places it in the neighbourhood of *Farnay*. The measures, he says, are very exact, as we may convince ourselves by seeing how he has applied them to our modern maps. But we give no confidence to these assertions. Segustavarum and Segusianorum are evidently the same word, and the difference in a few letters is easily explained by their close resemblance, and the liability of one being put for the other.

The district of *Forez* or *Foreste* is supposed to derive its name from Pagus Forensis, the canton of the Forum. Parts of the aqueduct which brought water to Forum Segusianorum still remain. In one part the aqueduct is about 10 feet high to the spring of the arch, and about 3 feet wide. The outer wall is formed of small red stones, and the inner part of fragments of the same stone embedded in cement. A very remarkable mosaic was discovered at *Feurs* a few years ago, under the entrance door of a house. There are also in the courts of the same house some Corinthian columns, which support a staircase. The church of *Feurs* appears to have been built with the materials of Roman edifices. There are also remains of ancient baths near a part of the town called the *Palais*. Near this Palais were found, under the ground, the four milestones mentioned above. They are now placed in a part of the town, according to a recent authority, where they are much exposed to damage. (D'Anville, *Notice*, &c.; Walckenaer, *Géog.* &c. vol. i. p. 332; Ukert, *Gallien*; Richard et Hocquart, *Guide*, &c.) [G. L.]

FORUM SEMPRONII (Φόρον Σεμπρώνιον, Strab.; Φόρος Σεμπρωνίου, Ptol.: *Eth.* Forosemproniensis: *Fossombrone*), a town of Umbria, situated on the Flaminian Way, in the valley of the Metaurus, 16 miles from Fanum Fortunae (*Fano*), on the Adriatic. (Strab. v. p. 227; *Itin. Ant.* p. 125.) We have no account of its foundation, or the origin of its name: but it was the only town in the valley of the Metaurus, between its mouth and the central range of the Apennines; and from this circumstance, and its position on so frequented a highroad, it seems to have risen into a place of some importance, and was a flourishing municipal town under the Roman empire. (Strab. *l. c.*; Plin. iii. 14. s. 19; Ptol. iii. 1. § 53; Orell. *Inscr.* 3774, 4039, 4063.) The site of the ancient city is marked by the vestiges of a theatre, and other ruins of Roman date, which are visible about 2 miles from the modern city of *Fossombrone:* this last retains the ancient episcopal see, and its name is evidently a mere corruption of Forum Sempronii. (Calindri, *Statistica del Pontif. Stato*, p. 121.) The latter was 8 miles distant from the celebrated pass of Intercisa, or the *Furlo*. [INTERCISA.] The great battle in which Hasdrubal was defeated by the Roman consuls Livius and Nero, in B. C. 207, was probably fought in the neighbourhood of Forum Sempronii, but the exact site is uncertain. [METAURUS.] [E. H. B.]

FORUM TIBERII, is placed by Ptolemy (ii. 9) among the Helvetii. It is unknown where it is. D'Anville guesses *Kaiserstuhl* on the Rhine, chiefly because of the meaning of the German name; which is very unsatisfactory. Haller guesses *Zurzach* on the Rhine, where there are Roman walls. Another guesses *Steckborn* on the Lake of *Constanz*. (Ukert, *Gallien.*) [G. L.]

FORUM TRAJANI, a town in the interior of Sardinia, known only from the Itineraries, which place it on the road from Tibula, through the interior of the island, to Othoca. (*Itin. Ant.* p. 82.) Its site is fixed at a place called *Fordongianus*, on the left bank of the river *Tirsi* (Thyrsus); about 16 miles from *Oristano*, where there are considerable Roman remains, including those of a bridge, and of Thermae on a scale of great magnificence. These doubtless owe their origin to the emperor Trajan. (Valéry, *Voy. en Sardaigne*, vol. ii. c. 35). [E. H. B.]

FORUM TRUENTINORUM or DRUENTINORUM, a town of Gallia Cispadana, mentioned by Pliny among the municipal towns of that region (iii. 15. s. 20). His authority is confirmed by inscriptions, in which we find "Municipium Forodruent.," for Forodruentinorum. As the name is not mentioned in the Itineraries it seems clear that it was not situated on the Via Aemilia, and it has been supposed to occupy the site of *Bertinoro*, a small episcopal town about 3 miles S. of *Forlimpopoli;* this however is a mere conjecture. (Gruter, *Inscr.* pp. 492. 5, 1094. 2; Orell. *Inscr.* 80; Cluver, *Ital.* p. 295.) [E. H. B.]

FORUM VIBII (Vibi Forum, Plin. iii. 17. s. 21: *Eth.* Forovibiensis, Id. 16. s. 20), a small town of Liguria, near the sources of the Padus, and in the territory of the Vagienni. Pliny tells us that the Padus had its source in the Mons Vesulus (*Monte Viso*), and, after flowing a short distance, plunged under the ground, and again emerged "in Forovibiensium agro." (Plin. iii. 16. s. 20; Solin. 2. § 25.) As there is no truth in this account of the subterraneous course of the Padus, it affords us no assistance in determining the real position of Forum Vibii, which must have been situated somewhere in the upper valley of that river, in the neighbourhood of *Saluzzo*, but on the N. bank of the *Po*, as Pliny (iii. 17. s. 21) reckons it in the Regio Transpadana. [E. H. B.]

FORUM VOCONII, a place in Gallia Narbonensis, distant from Forum Julii [FORUM JULII; ARGENTEUS] 24 M. P., as it appears from the letter of Plancus to Cicero. The Antonine Itin. also makes the distance the same. D'Anville fixes Forum Voconii at a place called *Gonfaron*, which he supposes to be a corruption of such a word as *Vocon-foron*, which he invents for the occasion. Papon, who is followed by Walckenaer, fixes it at *Le Canet;* and

others fix it at *Vulauban*, east of *Le Canet*. Pliny (iii. 5) calls Forum Voconii a Latin town, that is, it had the Latinitas. [G. L.]

FORUM VULCANI. [PUTEOLI.]

FOSI, a small German tribe, of which nothing is known beyond what Tacitus (*Germ.* 36) relates of them, viz., that they were subject to the Cherusci, and became involved with them in their ruin. The banks of the stream *Ferse*, in *Brunswick*, are generally looked upon as the country once inhabited by them, and the little town of *Fosenbrock* may have derived its name from them. In the time of Ptolemy their country was already occupied by the Langobardi. [L. S.]

FOSSA CORBULO'NIS. When Corbulo commanded in the parts about the mouths of the Rhine, he employed his men in making a cut, 23 M. P. long, between the Mosa and the Rhenus, "qua incerta Oceani vetarentur." (Tac. *Ann.* xi. 20.) Some critics have proposed to change "vetarentur" into "vitarentur," but probably the text is right. Dion Cassius (lx. 30), who speaks of this canal, says that it was about 170 stadia long. If we take the usual estimate of the Roman mile, which is 8 stadia, the distance of Dion is somewhat too small, if the text of Tacitus is right. The reason for making the canal which the Greek historian gives, was, "that the rivers might not flood the country, by having their waters driven back by the high tides;" an explanation which seems to agree with "vetarentur" in Tacitus, and to be a probable explanation of Corbulo's design. There seems little doubt about the position of this canal, though there has been great difference of opinion. It is the channel which runs from *Leiden*, past *Delft*, to *Maasland-sluys* near *Vlaardingen* (Flenium). The distance agrees very well, and the position agrees with the purpose for which the canal was made. The old Rhine, or the Rhine proper, runs past *Leiden*, and was a more considerable stream in the Roman period than it is now. [G. L.]

FOSSA DRUSIA'NA. [FLEVO LACUS.]

FOSSA MARIA'NA or FOSSAE MARIA'NAE. Plutarch (*Marius*, c. 15) gives a sufficiently clear account of this canal. When C. Marius, B. C. 102, crossed the Alps to oppose the Teutones and their barbaric allies, he fixed his camp near the Rhone. The entrance to the river was choked with mud, sand, and clay, and "was thus made difficult and laborious, and shallow for the vessels that brought supplies. As the army had nothing to do, Marius brought the soldiers here and commenced a great cut, into which he diverted a large part of the river; and by making the new channel terminate at a convenient point on the coast, he gave it a deep outlet, which had water enough for large vessels, and was smooth and safe against wind and wave. This cut still bears the name of Marius." Plutarch supposed that the canal was on the east side of the outlets of the Rhone. Strabo (p. 183)—after quoting Polybius, who says that the Rhone had two outlets, and Artemidorus, who says that it had three—adds: "but Marius, afterwards seeing that the channel was becoming obstructed by the alluvium and difficult of access, cut a new channel, in which having received the greater part of the river, he gave it to the Massaliots, as a reward for their services in the war against the Ambrones and Toygeni; from which channel the Massaliots acquired great wealth, by exacting tolls from those who sailed up and down. However, the difficulties of the navigation continue, owing to the violence of the stream and the alluvium, and the lowness of the coast, which cannot be seen, even when a vessel is near, in foggy weather: wherefore the Massaliots set up towers as beacons, making the country their own in every way; and especially they built there also a temple of the Ephesian Artemis, having taken possession of the part which is made an island by the mouths of the river. And there lies beyond the mouth of the Rhodanus, a sea-lake, which they call Stomalimne; some have reckoned it one of the mouths of the Rhodanus, and especially those who say that the river has seven mouths (or five, as the text perhaps should be),—being right neither in one thing nor the other, for there is a hill between, which separates the lake from the river." Here Strabo finishes his description of the coast as far as Massalia, and he then describes the coast as far as the Var. His description of this coast of Gallia shows that the canal of Marius was on the east side of the outlets of the Rhone. Mela's description must be interpreted the same way (ii. 5). Pliny (iii. 4) calls one of the mouths of the Rhodanus the Massaliotic; and this is the most eastern of the mouths. (Polyb. iii. 41.) Beyond, that is east of, the Massaliotic branch, are "the canals from the Rhodanus, the work of C. Marius, which bears his name; a lake (stagnum) Mastramela; a town Maritima, of the Avatici, and above it the stony plains (campi lapidei)." The stony plains are the *Crau*, an extensive flat tract, which is covered with stones. Pliny's text has "Astromela," which Harduin has changed to Mastromela, to make it agree with the name in Stephanus Byzantinus and Avienus; for which Walckenaer finds fault with him, without reason,—for it is plain that, as "stagnum" ends with "m," the next word, if it began with "m," might easily lose it in transcription

The Itineraries also place the Fossa Mariana on the east side of the Rhone. But Ptolemy (ii. 10) in the common texts, has it on the west side. Proceeding from west to east he has: Setius hill; Fossae Marianae; the west mouth of the Rhone; and the east mouth. He correctly places Maritima east of the east mouth of the Rhone. It is hard to explain how Ptolemy made a mistake in a matter which was known to every body. Walckenaer (*Géog. &c.* iii. p. 133) supposes that we ought to read Marinae for Marianae (Μαριαναὶ Φόσσαι), in Ptolemy's text; and he adds, that the edition of 1475 has "Fossae Marinae." There is also the reading "Fossae Marinae," in the Latin edition of Pirckheimer (1524.) The two words might easily be confounded. If we do not accept this conjecture we must either allow that Ptolemy has made a very great mistake, or that the Fossae Marianae have been transposed in his text, without transposing the numbers. For it is hardly possible that he should place in his geography Fossae Marinae, a name otherwise unknown, and omit the Fossae Marianae, the great work that was familiar to all geographers.

The best and most recent authority for the antiquities of this part of France (*Statistique du dép. des Bouches du Rhône*) states that the canal of Marius ran in a straight line from east to west from the gulf of Stomalimne, now the *E'tang de l'Estouma*, to the Rhone, which it joined about a mile above its mouth. The length was 16 miles. There are many proofs of the existence of the canal in the place here assigned to it. The village of *Foz*, which retains the name of this canal, stands just

above the place where the canal entered the gulf. There is still visible on one of the sides a long cutting made in the rock at the base of the hill, and it is probable that the sluice was here. West of Foz is a large marsh, called *Le Marais de Foz*, which the canal crossed. This marsh ends in an *étang* of the same name, which joins the *étang de Galéjon*, where was the outlet of the Massaliot branch of the Rhone in the time of Marius. The marsh of Foz, along the whole line, where the canal is supposed to have run, still presents a hollow, which is filled with water in the rainy season.

The Maritime Itinerary makes it xvi M. P. from the Fossae (*Foz*) to "Ad Gradum Massilitanorum," which was on the Rhone; and the Itinerary, which gives the land routes, places Fossae between Massilia and Arelate (*Arles*). The order of places is: Massilia, Calcaria [CALCARIA], Fossae Marianae (*Foz*), Arelate: the direct distance from Fossae Marianae to Arelate is 13 M. P., which is too small. In another place the Itineraries make it 33, which is too much. However, there is no doubt that Fossae is *Foz*, or *Fos-les-Martigues*. The direct road from Fossae to Arelate ran through the *Crau*, the Campi Lapidei. The "Ad Gradum" seems to have been at or near the place where the canal of Marius joined the Rhone. The distance from "Ad Gradum" along the river up to Arelate is marked 30 M. P. in the Maritime Itinerary.

The "Statistique, &c." supposes that the canal of Marius was continued due north about twelve miles, reckoning from Ad Gradum to the *étang* of the Desuviates, which comprised the marshes of *Arles*, of *Mont-Majous*, and of *Baux*: this étang received part, at least, of the water of the Louérion, a canal which runs from the *Durance* (Druentia) near *Orgon*. It is further stated that the Louérion fed the Fossae Marianae; and that Marius also made another canal, which has since been replaced by that of *Craponne*. Some of these assertions are very doubtful; but the canal to the Rhone from the Stomalimne (*étang de l'Estouma*, or *Estruma*, as it is also still written) seems to be the work of Marius. At a place called *Pont-du-Roi*, in front of the bar of *Foz*, there are the remains of the foundations of houses; and this agrees with the Table, which marks the Fossae Marianae, by a semicircular building open to the sea, as a haven and station. The hill mentioned by Strabo, as separating the Stomalimne from the Rhone, is supposed to be a hill between *Foz* and *Istres*. Whether Marius made more than one cut, and whether Fossae or Fossa is the true name, we cannot tell. It is likely enough that there was more than a single cut; or, at least, some small cuts, besides the large cut. This great work of the Roman soldier was a monument of his talent and his perseverance, as glorious as the victories by which he saved Italy from a barbaric deluge. (D'Anville, *Notice*; Mela, ed. J. Voss, who has a good note on the Fossae; Ukert, *Gallien*, p. 131, &c., which contains the references to the French authorities.) [G. L.]

FRANCI, the name of a confederation of German tribes to which belonged the Sigambri (the principal people), Chamavi, Ampsivarii, Bructeri, Chatti, Marsi, Tubantes, Attuarii, Dulgibini, and others. This confederation, which had stepped into the place of that of the Cherusci on the Lower Rhine, is mentioned for the first time by Vopiscus (*Aurel.* 7), about A. D. 240. The name Franci gradually absorbed the names of the separate tribes forming the confederation, which, however, is sometimes designated by the name of the leading people, the Sigambri (e. g. Claudian, *de IV. Con. Hon.* 446). These Franci, or Franks, as they are commonly called, conquered the northern parts of Gaul; and, having amalgamated with the Romanised Celts of that country, they adopted the civilisation of the conquered people, and soon acquired such power that, under their great king Clovis, A. D. 496, they returned and subdued their own kinsmen in the north and south of Germany, and thus established the great Frankish empire. But their history belongs to the middle ages. [L. S.]

FRATUERTIUM or FRATUENTUM, a town of Calabria, mentioned by Pliny (iii. 11. s. 16), in conjunction with Soletum and Lupiae. Its municipal existence is confirmed by an inscription on which the Fratuentini are associated with the citizens of Neritum, a town in the same neighbourhood (Lupui, *Iter. Venus*, p. 108; Orell. *Inscr.* 3108); but its site is unknown. It seems, however, probable that the ruins of an ancient city, described by Galateo (*de Situ Tapygiae*, p. 96) as existing at *Muro*, may be those of Fratuertium.* The name is written in the inscription just cited Fratuentum, which is probably the correct form. [E. H. B.]

FRA'XINUS. [LUSITANIA.]

FREGELLAE (Φρεγέλλαι, Strab.; Φρέγελλα, Steph. B.: *Eth.* Φρεγελλανός, Fregellanus), a city of Latium, in the more extended sense of the term, but properly a city of the Volscians, situated on the left bank of the Liris, nearly opposite to its confluence with the Trerus, and a short distance on the left of the Via Latina. (Strab. v. p. 237.) According to Livy it was originally occupied by the Sidicini, and afterwards by the Volscians, from whom it was again wrested by the Samnites. The latter are said to have destroyed the city; but in B. C. 328, the Romans, having made themselves masters of this part of the valley of the Liris, restored Fregellae, and established there a colony of Roman citizens, an act which was so strongly resented by the Samnites, that it became the immediate occasion of the outbreak of the Second Samnite War. (Liv. viii. 22, 23; Appian, *Samn.* iv. 1.) During the course of that war Fregellae was more than once surprised by the Samnites, but on every occasion recovered by the Romans. (Liv. ix. 12, 28.) During the advance of Pyrrhus upon Rome, in B. C. 279, he is said to have ravaged Fregellae ("Fregellas populatus," Flor. i. 18. § 24); but whether he actually took the town, or only laid waste its territory, is uncertain. At a later period (B. C. 211), we know that it was able to defy the arms of Hannibal, and its citizens had the courage to break down the bridge over the Liris, for the purpose of retarding his march upon Rome, while they sent in all haste to the city, to give warning of his approach. (Liv. xxvi. 9.) As a punishment for this offence their territory was ravaged by him with peculiar severity, but, notwithstanding this, the Fregellans were two years afterwards (B. C. 209) found among the eighteen colonies faithful to Rome (Liv. xxvii. 10), and a body of their cavalry is mentioned with peculiar distinction in the action in which Marcellus perished (Id. xxvii. 26, 27; Plut. *Marc.* 29). It is singular that Fregellae, which was at this time distinguished

* These are assigned by Romanelli to Sarmadium, a name found in the old editions of Pliny, but for which there is no authority.

for its fidelity to Rome, should have subsequently taken the lead in an insurrection against that city, when at the height of its power. The circumstances of this revolt are very imperfectly known to us, but it is evident that it was only a symptom of the discontent then beginning to prevail among many of the Italian cities. The outbreak was, however, premature: Fregellae alone had to bear the brunt of the unequal contest, and was quickly reduced by the praetor L. Opimius, B. C. 125. The city was utterly destroyed, as a punishment for its rebellion, and appears never to have again arisen to prosperity: the establishment of a new colony at Fabrateria, in its immediate neighbourhood, in the following year, was evidently designed to prevent Fregellae from recovering its former position. (Liv. *Epit.* lx.; Vell. Pat. ii. 6; Val. Max. ii. 8. § 4; Jul. Obseq. 90; Cic. *de Fin.* v. 22; Auct. Rhet. *ad Herenn.* iv. 9, 15.) In the time of Strabo it was a mere village, which was, however, still resorted to by the people of the surrounding towns, for sacrificial and other purposes. (Strab. v. p. 237.) Hence, its name is not found in Pliny among the towns of Latium: the Fregellanum mentioned in the Itineraries (*Itin. Ant.* pp. 303, 305) was apparently a station distinct from the town of the name.

Both Strabo and the rhetorical writer above cited affirm that Fregellae was previous to its destruction one of the most flourishing and important cities of Italy: but its ruin appears to have been complete, and hence considerable difficulty has arisen in determining its exact site. Ruins of a city of considerable extent having been found on the right bank of the Liris, just opposite a spot called *Isoletta*, and below the village of *S. Giovanni in Carico*, these have been regarded by local antiquarians at those of Fregellae, but the inscriptions found there, as well as the character of the remains themselves, which are wholly of Roman date, and for the most part not earlier than the time of the empire, seem to prove these to be the ruins of Fabrateria Nova, the Roman colony of that name. [FABRATERIA.] The true site of Fregellae appears to be that indicated by the Abbé Chaupy, on the left bank of the Liris, nearly opposite the modern town of *Ceprano*, where there is a plain of considerable extent, filled throughout with foundations and substructions of ancient buildings, including among others the foundations of the city walls, built in a very massive style. No part of these ruins however rises above ground; and as they have served for ages as a quarry for the supply of building materials to *Ceprano* and the other neighbouring villages, even the substructions have much disappeared. The quarter still retains the name of *Opi* or *Opio*, probably a corruption of "Oppidum." (Chaupy, *Maison d'Horace*, vol. iii. p. 475.) This position of Fregellae would account for its importance in a military point of view, as commanding the passage of the Liris. The modern town of *Ceprano*, which has grown up on the right bank of the river, is supposed by the Abbé Chaupy to occupy the site of the Fregellanum of the Itineraries; but it is not easy to understand how the Via Latina should have proceeded so far as that point, and then turned south to Fabrateria Nova before it crossed the Liris. The remains of two ancient bridges of Roman imperial times at the latter place clearly prove that it was there the Via Latina of later days crossed the river, though it is evident from Livy's narrative (xxvi. 9) that in the time of Hannibal the bridges were close to Fregellae itself. The whole neighbourhood certainly requires, and would reward, a more careful inspection of the localities, especially of the remains of the ancient roads. (Chaupy, *l. c.* p. 476; Romanelli, vol. iii. pp. 377—381). [E. H. B.]

FREGE'NAE (Φρεγήνα, Strab.), a maritime town of Etruria, situated between Alsium and the mouth of the Tiber. (Strab. v. p. 226; Plin. iii. 5. s. 8; *Itin. Ant.* p. 300.) It is mentioned by Livy among the "coloniae maritimae" (xxxvi. 3); and there is every reason to suppose that it was established at the same time with Alsium, in B. C. 245, and that we should read *Fregenae* for *Fregellae* in Velleius Paterculus (i. 14), where he speaks of the foundation of these two colonies. This is confirmed by the Epitome of the 19th book of Livy, where, though Alsium is not mentioned, the foundation of Fregenae is coupled with that of Brundusium, which Velleius refers to the following year. (Vell. Pat. *l. c.*; Liv. *Epit.* xix., where the reading Fregenae is supported by the best MSS., though the old editions have Fregellae.) No subsequent notice of it occurs in history: its marshy and unhealthy situation (alluded to by Silius Italicus, viii. 475) probably prevented its rising to prosperity; and, after the construction of the Portus Augusti on the right bank of the Tiber, it seems to have gradually sunk into insignificance. Hence, though its name is found in Strabo, Pliny, and the Itineraries, it is not noticed by Rutilius in his description of the coast of Etruria, and no ruins now mark the site. But the distances given in the Itinerary of 9 M.P. from Alsium, and the same from Portus Augusti at the mouth of the Tiber, enable us to fix its position with certainty at a spot now called the *Torre di Maccarese*, just midway between *Palo* and *Porto*, and at the mouth of the river *Arone*. (Cluver, *Ital.* p. 499; Nibby, *Dintorni di Roma*, vol. ii. p. 280.) [E. H. B.]

FRENTA'NI (Φρεντανοί, Strab., Ptol.; Φερεντανοί, Pol., Dionys.), a people of Central Italy, occupying the tract on the E. coast of the peninsula from the Apennines to the Adriatic, and from the frontiers of Apulia to those of the Marrucini. They were bounded on the W. by the Samnites, with whom they were closely connected, and from whom they were originally descended: hence, Scylax assigns the whole of this line of coast, from the frontiers of Apulia to those of Picenum, to the Samnites. (Scyl. § 15. p. 5.) Their exact limits are less clearly defined, and there is considerable discrepancy in the statements of ancient geographers: Larinum, with its territory (extending from the Tifernus to the Frento), being by some writers termed a city of the Frentani (Ptol. iii. 1. § 65), while the more general opinion included it in Apulia, and thus made the river Tifernus (*Biferno*) the limit of the two countries (Plin. iii. 12. s. 17; Mel. ii. 4. § 6). The northern boundary of the Frentani is equally uncertain; both Strabo (v. p. 242) and Ptolemy (*l. c.* § 19) concur in fixing it at the river Sagrus or *Sangro*, while Pliny extends their limits as far as the Aternus, and, according to Mela, they possessed the mouths both of that river and the Matrinus. The latter statement is certainly inaccurate; and Strabo distinctly tells us, that the Marrucini held the right bank of the Aternus down to its mouth, while the Vestini possessed the left bank (v. p. 241): hence, the former people must have intervened between the Frentani and the mouth of the Aternus. Pliny's account is, however, more near the truth than that of Strabo and Ptolemy; for it is certain that Ortona and Anxanum, both of which are situ-

ated considerably to the N. of the Sagrus, were Frentanian cities. The latter is indeed assigned by Ptolemy himself to that people (iii. 1. § 65), while Strabo also terms Ortona the port or naval station of the Frentani (*ἐπίνειον Φρεντανῶν*, v. p 242), but erroneously places it to the S. of the river Sagrus. Hence, their confines must have approached within a few miles of the Aternus, though without actually abutting upon that river. On the W. they were probably not separated from the Samnites by any well-marked natural boundary, but occupied the lower slopes of the Apennines as well as the hilly country extending from thence to the sea, while the more lofty and central ridges of the mountains were included in Samnium.

The Frentani are expressly termed by Strabo a Samnite people, and he appears to distinguish them as such from the neighbouring tribes of the Marrucini, Peligni, and Vestini, with whom they had otherwise much in common. (Strab. v. p. 241). They, however, appear in history as a separate people, having their own national organisation; and though they may at one time (as suggested by Niebuhr) have constituted one of the four nations of the Samnite confederacy, this seems to have been no longer the case when that power came into collision with Rome. Their conduct during the long struggle between the Samnites and Romans renders this almost certain. In B. C. 319, indeed, when their name occurs for the first time in history*, they appear in arms against Rome, but were quickly defeated and reduced to submission (Liv. ix. 16); and a few years afterwards (B. C. 304), at the close of the Second Samnite War, the Frentani are mentioned, together with the Marsi, Marrucini, and Peligni, as coming forward voluntarily to sue for a treaty of alliance with Rome (Id. ix. 45), which they seem to have subsequently adhered to with steadfastness. Hence we find more than once express mention of the Frentanian auxiliaries in the war with Pyrrhus; and one of their officers, of the name of Oblacus, distinguished himself at the battle of Heracleia. (Dionys. *Fr. Didot.* xx. 2; Plut. *Pyrrh.* 16; Flor. i. 18. § 7). They gave a still more striking proof of fidelity during the Second Punic War, by adhering to the Roman cause after the battle of Cannae, when so many of the Italian allies, including the greater part of the Samnites, went over to Hannibal. (Liv. xxii. 61; Sil. Ital. viii. 521, xv. 567). Throughout this period they appear to have been much more closely connected in their political relations with their neighbours the Marrucini, Peligni, and Vestini, than with their kinsmen the Samnites: hence, probably, it is that Polybius, in enumerating the forces of the Italian allies, classes the Frentani with the Marsi, Marrucini, and Vestini, while he reckons the Samnites separately. (Pol. ii. 24.) Notwithstanding their vaunted fidelity, the Frentani joined in the general outbreak of the Italian allies in the great Social War, B. C. 90 (Appian, *B. C.* i. 39; Strab. v. p. 241): they do not, however, appear to have taken any prominent part, and we can only infer that they received the Roman franchise at the same time with the neighbouring tribes. Hence we find them mentioned by Cicero, a few years later, as sending some of their chief men ("Frentani, homines nobilissimi," *pro Cluent.* 69) to support the cause of Cluentius, a native of Larinum. Their territory was traversed without resistance by Caesar at the outbreak of the Civil War, B. C. 49 (Caes. *B. C.* i. 23): and this is the last occasion on which their name appears in history. Their territory was comprised in the fourth region of Augustus, together with the Marrucini, Peligni, Marsi, &c. (Plin. iii. 12. s. 17); but at a later period it appears to have been reunited to Samnium, and was placed under the authority of the governor of that province (Mommsen, *ad Lib. Col.* p. 206). It is now included in the kingdom of Naples, and divided between the provinces of *Abruzzo Citeriore* and *Sannio*.

The territory of the Frentani is for the most part hilly, but fertile. It is traversed by numerous rivers which have their sources in the more lofty mountains of Samnium, and flow through the land of the Frentani to the Adriatic: the principal of these, besides the TIFERNUS, which (as already mentioned) constituted the southern limit of their country, are the TRINIUS or *Trigno*, which, according to Pliny, had a good port at its mouth ("Flumen Trinium portuosum," Plin. iii. 12. s. 17); and the SAGRUS or *Sangro*, a very important stream, which enters the Adriatic about half way between Histonium and Ortona. The Tabula also gives the name of a river which it places between Ortona and Anxanum, and calls "Clotoris" (?) The name is probably corrupt; but the stream meant (if its position can be depended upon) can be no other than the *Moro*, which falls into the Adriatic a few miles S. of *Ortona*. The coast-line of this part of the Adriatic presents few remarkable features, and no good natural harbours. The mouths of the rivers, and the two projecting points of *Termoli* (Buca) and the *Punta della Penna*, afford the only places of anchorage.

The towns of the Frentani mentioned by ancient writers are few in number; but the topography of the district has been thrown into great confusion by the perverted zeal of certain local antiquarians, and by the reliance placed on inscriptions published by some early writers, which there is great reason to regard as forgeries. The *Antichità Frentane* (2 vols. 8vo., Naples, 1809) of the Abbate Romanelli, who was a native of this part of Italy, is a very uncritical performance; but the author was led astray principally by the inscriptions and other documents put forth by Polidoro, an Italian antiquary of the last century, who appears to have had no hesitation in forging, or at least corrupting and altering them in such a manner as to suit his purpose. (Mommsen, *Inscr. Regn. Neap., Appendix*, p. 30.) Romanelli, in his later and more extensive work (*Antica Topografia Istorica del Regno di Napoli*, 3 vols. 4to., Naples, 1818), simply abridged the results of his former book; and Cramer, as usual, blindly follows Romanelli. Along the sea-coast (proceeding from N. to S.) were situated ORTONA, HISTONIUM, and BUCA. The two former may be clearly fixed, Ortona retaining its ancient name, and the ruins of Histonium being still extant at *Il Vasto d'Ammone*: but there is considerable difficulty in determining the site of Buca, which may however be fixed with much probability at *Termoli* [BUCA]; the arguments that have led many writers to place it at *Sta. Maria della Penna* being based principally upon the spurious inscriptions just alluded to. The existence of a town called Interamna, supposed by Romanelli and Cramer to have

* The old editions of Livy have "Ferentani;" but the conjecture of Sigonius that we should read "Frentani," is supported by some of the best MSS., and may be regarded as certainly correct. (See Alschefski, *ad. loc.*; Niebuhr, vol. iii. p. 225.)

occupied the site of *Termoli*, is derived only from the same apocryphal source; and, even were the inscription itself authentic, the Interamna there meant is probably the well-known town of the Praetutii. (Murat. *Inscr.* p. 1050, no. 7; Mommsen, *l. c.*) The only inland town of importance among the Frentani was ANXANUM, now *Lanciano;* but, besides this, Pliny mentions, in the interior of the country, the "Carentini supernates et infernates," and the "Lanuenses;" both of which peoples are otherwise unknown, and the site of their towns cannot be fixed with any approach to certainty. On the other hand, the Tabula gives the name of a place called PALLANUM, of which no other mention occurs; but the site of which, according to Romanelli, is marked by extensive ruins at a place called *Monte di Pallano*, about 3 miles S.W. of *Atessa*. The previous station given by the same authority is called "Annum;" a name probably corrupt, but the true reading for which is unknown. (*Tab. Peut.*; Geogr. Rav. iv. 31.) USCOSIUM, a place given in the Itinerary of Antoninus, which reckons it 15 miles from Histonium, on the road into Apulia (*Itin. Ant.* p. 314), is fixed by this distance at a spot near the right bank of the little river *Sinarca*, about 5 miles S.W. of *Termoli*, but in the territory of *Guglionisi*, where considerable remains of an ancient town are said to exist. (Romanelli, vol. iii. p. 24.)

There is considerable obscurity in regard to the Roman roads through the territory of the Frentani. The name of the "Via Trajana Frentana" rests only on the authority of a dubious inscription; nor is there any better evidence for the fact that the construction of the high road through this district was really owing to that emperor. But it is certain that an ancient road traversed the territory of the Frentani, in its whole length from Aternum to Larinum, keeping for the most part near the sea-coast, but diverging for the purpose of visiting Anxanum. The stations along it are thus given in the Itinerary of Antoninus:—

Ostia Aterni.	M.P.
Angelum (Angulus)	x.
Ortona	xi.
Anxano	xiii.
Histonios	xxv.
Uscosio	xv.
Arenio (Larinum ?)	xiv.

Of these, Angulus is certainly misplaced, and should have been inserted between Hadria and the Aternus. The distance from the mouths of the Aternus at *Pescara* to Ortona is considerably understated, and that from Ortona to Anxanum as much overrated; but still the line of the road may be tolerably well made out, and an ancient Roman bridge, over the *Sangro* between *Lanciano* and *Il Vasto*, supplies a fixed point in confirmation. The road given in the Tabula, on the contrary, strikes inland, from the mouth of the Aternus to Teate, and thence to Ortona, and again between Anxanum and Histonium makes a bend inland by Annum and Pallanum. The distances given are very confused, and in many instances probably corrupt. They stand thus:—

Ostia Aterni.	M. P.
Teano Marrucino	xvi.
Ortona	xi.
Anxana	iii.
Annum	iiii.
Pallanum	xii.
Istonium	xxiii.
Larinum.	

There exist copper coins with the Oscan legend—"Frentrei," which may probably be referred to the Frentani rather than to the town of Ferentum in Apulia, to which they have been assigned by some writers. Others are of opinion that they indicate the existence of a *city* of the name of Frentrum as the capital of the Frentani, which is supposed to be the one referred to by Livy (ix. 16) where he says—"Frentanos vicit *urbemque ipsam*—in deditionem accepit,"—without naming the city; but this inference is, to say the least, very dubious. (Friedländer, *Oskische Münzen*, p. 42; Millingen, *Numismatique de l'Italie*, p. 180.) [E. H. B.]

FRENTO (*Fortore*), a river of Apulia, which rises in the Apennines near *Baselice*, and has a course of near 50 miles from thence to the Adriatic. In the lower part of its course it formed the boundary between the territory of Larinum and that of Teanum in Apulia, and, consequently, formed the northern limit of Apulia if Larinum was not included in that country. Pliny tells us it had a port at its mouth, whence he terms it "flumen portuosum Frento:" some remains of this are still visible on its right bank, at a place called *Torre di Fortore*. About 10 miles from its mouth, it was crossed by an ancient bridge constructed on a scale of great magnificence, and still known as the *Ponte di Civitate*, from the ruins of Teanum, now known as *Civitate*, which are situated at a short distance from it. It was traversed by the high road leading from Larinum to Teanum. (Plin. iii. 11. s. 16; *Tab. Peut.*; Romanelli, vol. iii. p. 11.) [E.H.B.]

FRETUM GADITA'NUM, HERCULEUM, TARTESSIUM, &c. [GADITANUM FRETUM.]

FRETUM GALLICUM, is a name which Solinus (c. 25, ed. Steph.) gives to the straits which separate Gallia and Britannia. Tacitus (*Agric.* c. 40) calls it "Fretum Oceani." It is the πορθμὸς Βρεταvικός of Strabo (p. 128). Thus, in ancient times, both the countries which it separates gave this narrow sea a name; and it has no general name, for the English call it the Straits of Dover, and the French sometimes Pas de Calais. [G. L.]

FRIGIDUS FLUVIUS, a river of Venetia, in the country of the Carni, placed by the Itineraries on the road from Aquileia to Aemona across the Julian Alps. (*Itin. Ant.* p. 128; *Tab. Peut.*) It can be no other than the stream now called the *Wippach* (in Italian, *Vipao*), which falls into the *Isonzo* (Sontius), near *Gorizia*. It was on the banks of this river that the usurper Eugenius was defeated and slain by Theodosius, A.D. 394. Claudian, in alluding to this victory, notices the extreme coldness of the waters from which the river derived its name. (Claudian, *de III. Cons. Honor.* 99; Zosim, iv. 58; *Hist. Miscell.* xii. p. 530.) [E. H. B.]

FRISIABO'NES, are placed by Pliny (iv. 17) in North Gallia, between the Sunici and Betasii [BETASII]. We cannot tell exactly where to fix them, unless they were near the Betasii; nor is it certain that the name is right, for the Frisii belong to another place. The "Frisaei" appear on an inscription in Gruter, but this is a different name. Forbiger, who refers to his authorities, states that Frisiabones is only another way of writing the name Frisaevones (Gruter, p. 522, 7, &c.). (Forbiger, *Handbuch, &c.* vol. iii. p. 254; Ukert, *Gallien*, p. 271.) [G. L.]

FRISII (Frisones, Paul. Diac. vi. 37; Frigones, Geogr. Rav. iv. 23; and Frisei, Frisaei, or Frisaevones, in inscriptions; Φρίσσιοι, Ptol. ii. 11. § 11;

Φρείσιοι, Dion Cass. liv. 32; *Φρίσσονες*, Procop. *B. G.* iv. 20), one of the great tribes of North-western Germany, belonging to the Ingaevones. They inhabited the country about Lake Flevo and other lakes, between the *Rhine* and *Ems*, so as to be bounded on the south by the Bructeri, and on the east by the Chauci. Tacitus (*Germ.* 34) distinguishes between *Frisii Majores* and *Minores*, and it is supposed that the latter dwelt on the west of the canal of Drusus in the north of *Holland*, and the former between the rivers Flevus and Amisia, that is, in the country still bearing the name of *Friesland*. Pliny mentions a tribe, under the name of *Frisiabones*, as dwelling in Northern Gallia between the Sunici and Betasii. They have been identified by many writers with the lesser Frisii, but without sufficient reason. [FRISIABONES.]

The Frisians joined the Romans from the first, and remained faithful to them after the undertakings of Drusus, until, in A. D. 28, irritated by the oppression of the governor Olennius, they rose in arms, and expelled or massacred the Romans. (Tac. ii. 24, iv. 72, xi. 19; Dion Cass. liv. 32.) Corbulo's attempt to reconquer them in A. D. 47, was unsuccessful, as he was recalled. Under Nero, they invaded the Roman dominion on the Rhine, but were obliged to retreat. On this occasion, their kings Verritus and Malorix went to Rome to negotiate, and were honoured with the Roman franchise, though they behaved with noble independence. (Tac. *Ann.* xiii. 54.) During the fourth and fifth centuries, the Frisians were allied with the Saxons, with whom they sailed across to Britain, and shared their conquests. (Procop. *B. G.* iv. 20.) Their chief occupation was agriculture and the breeding of cattle. (Tac. *Ann.* iv. 72, xiii. 54; comp. Latham on Tac. *Germ.* p. 116.) [L. S.]

FRUDIS (*Φρούδιος ἐκβολαί*) is placed by Ptolemy (ii. 9) between the mouth of the Sequana (*Seine*) and the Promontory Itium. The reading *Φρούνου ἐκβολαί* in Marcian (p. 50) is conjectured by Ukert (*Gallien*, p. 146) to be an error for *Φρούδου ἐκβολαί*. D'Anville supposes that Ptolemy's Frudis is the outlet of the Samara (*Somme*). [G. L.]

FRUSINO (*Φρουσίνων* or *Φρούσινον*: *Eth.* Frusinas, -ātis: *Frosinone*), a city of Latium, situated on the Via Latina, 7 miles from Ferentinum, between that city and Fregellae. (*Itin. Ant.* pp. 303, 305.) It seems to have been originally a Volscian city, though entertaining close relations with its neighbours the Hernicans: hence, on the first occasion in which its name appears in history, it is mentioned as having joined in exciting the Hernicans to revolt against Rome. For this offence the city was punished with the loss of a third part of its territory. (Liv. x. i.; Diod. xx. 80.)

Frusino is next mentioned on the occasion of the march of Hannibal against Rome, B. C. 211 (Liv. xxvi. 9), and incidentally alluded to by Plautus, together with some other towns in the same neighbourhood (Plautus, *Capt.* iv. 2. 103). Silius Italicus also notices its rocky situation and the hardy character of its inhabitants (viii. 398, xii. 532). Cicero appears to have possessed a farm in its territory, to which he alludes more than once in his letters to Atticus (*ad Att.* xi. 4, 13). We learn from the Liber Coloniarum (p. 233) that it received a colony of veterans; but it remained a place of only municipal rank, and is mentioned, by Strabo, Pliny, and Ptolemy, among the towns in this part of Latium. Its position on the Via Latina probably caused it to retain some degree of prosperity, and Juvenal notices it as a respectable country town where houses were cheap. (Juv. iii. 224; Strab. v. p. 237; Plin. iii. 5. s. 9, Ptol. iii. 1. § 63.) Its existence at a later period is attested by the Itineraries, and it appears to have retained its ancient site throughout the middle ages down to the present day. It is now an episcopal town with about 7000 inhabitants, standing on a hill which rises above the river *Cosa* (Κόσας, Strab.) about 5 miles above its confluence with the *Sacco* (Trerus). Some remains of an amphitheatre are still visible in the plain beneath, but the town itself contains no relics of antiquity. [E. H. B.]

FU'CINUS LACUS (*ἡ Φουκίνα λίμνη*, Strab.: *Lago Fucino* or *Lago di Celano*), a lake in the centre of Italy, in the country of the Marsi, remarkable as being the only one of any extent that is found in the central Apennines. Strabo calls it "in size like a sea" (*πελαγία τὸ μέγεθος*, v. p. 240); but this expression would convey a very exaggerated notion of its magnitude: it is, however, the largest lake in Central Italy, though but little exceeding those of Trasimene and Volsinii. Its circumference is variously estimated at 30, 40, or even 50 miles, but according to the best maps does not really exceed 25 Italian, or about 29 English miles. Its form is nearly oval; and it is situated in a basin, surrounded on all sides by mountains, without any visible natural outlet. In a geographical point of view the lake Fucinus is of importance as being situated almost exactly in the centre of the peninsula of Italy, being just about half way between the Tyrrhenian sea and the Adriatic, and also at the middle point of a line drawn from the northern ridge of the Apennines to the gulf of Tarentum. It would therefore have justly deserved the name of the "Umbilicus Italiae," applied with much less reason to the insignificant pool of Cutilia. [CUTILIAE LACUS.] The basin of the lake Fucinus is itself at a considerable elevation, the waters of the lake being not less than 2176 feet above the level of the sea; but the mountains rise on all sides of it to a much greater height, especially on the N., where the double-peaked *Monte Velino* attains the elevation of 8180 feet. On the E. and W. the basin of the lake is bounded by limestone ridges of much inferior elevation, but steep and rocky, which separate it from the valleys of the Liris and the *Gizio*. Towards the NW. its shores are gentle and sloping, and separated only by a very moderate acclivity from the waters of the *Imele* or *Salto*, which flow towards *Rieti* and the valley of the Tiber.

The lake Fucinus is almost always described as situated in the country of the Marsi (Strab. v. p. 240; Vib. Seq. pp. 16, 23; Dion Cass. lx. 11), and that people certainly occupied its shores for at least three-fourths of their extent; but Alba (surnamed Fucensis from its proximity to the lake) appears to have been more properly an Aequian city. [ALBA FUCENSIS.] Alba stood on a hill about 3 miles from the NW. extremity of the lake; on its eastern shore, close to the water's edge, was situated MARRUBIUM, the capital of the Marsi, of which the ruins are still visible at *S. Benedetto*. CERFENNIA, also a Marsic town, occupied the site of *Sta. Felicità*, about 2 miles N. of Marrubium, and at the foot of the steep mountain pass known as the Mons Imeus or *Forca Caruso*, which afforded the only communication from the basin of the Fucinus to that of the Aternus and the Adriatic. On the W. shore of the

lake stood the LUCUS ANGITIAE, a sanctuary and sacred grove of the goddess Angitia, who was in all probability a native Marsic divinity, whose supposed connection with Circe and Medea was derived from the fact of her presiding over the magic herbs and incantations for which the Marsi were always famous. [MARSI.] At a later period there grew up a town upon the spot, which is called in inscriptions ANGITIA, but must have also been currently known as Lucus; for we find the Lucenses mentioned by Pliny among the towns of the Marsi, and the name is still retained by the modern village of *Luco* or *Lugo*. [LUCUS ANGITIAE.] The beautiful lines of Virgil, in which he associates the grove of Angitia with the "glassy waters" of the Fucinus, are well known. (Virg. *Aen.* vii. 759; Sil. Ital. iv. 344.)

According to a tradition mentioned by Pliny and Solinus there had formerly existed on the shores of the Fucinus a town named Archippe, which had been swallowed up by the waters of the lake (Plin. iii. 12. s. 17; Solin. 2. § 6); and Holstenius tells us that the neighbouring inhabitants still preserved the tradition, and pretended that the remains of the lost city were visible, when the waters were low, at a spot between *Trasacco* and *Ortucchio*, near the S. shore of the lake. (Holsten. *Not. ad Cluv.* p. 154.) But the whole story has a very fabulous aspect. Another marvel related of the lake Fucinus was, that it was traversed by a river called the Pitonius, without their waters becoming mingled. (Vib. Seq. p. 16; Plin. ii. 103. s. 106, xxxi. 3. s. 24.) The story (which is told of many other lakes) is the more singular in this case, because the Fucinus has no visible natural outlet, no stream flowing *from* it in any direction. But there can be no doubt that its surplus waters were originally carried off by a subterranean channel, the opening of which, at a spot a little to the N. of *Luco*, is distinctly visible, and is still called *La Pedogna*, a name evidently retaining that of the ancient Pitonius. On the other hand, the only stream of any magnitude that flows *into* the lake is that now called the *Giovenco*, which enters it close to Marrubium, and is a perennial stream of clear water, supposed by some local writers to be derived from the neighbouring *Lago di Scanno*: this, therefore, must be the Pitonius of the ancients. There can be little doubt that a part of the waters of the Fucinus sink into a chasm or natural cavity at *La Pedogna*, from which they emerge (as is often the case in limestone countries) at some distant point: and this is precisely the statement of Lycophron, whose expressions are unusually clear upon the subject of the Pitonius, though he has distorted the name of the Fucinus into that of λίμνη Φόρκη Μαρσωνίς (*Alex.* 1275). Later writers went further, and conceived that they could recognise the spot where these waters emerged again from their subterranean channel, which they identified with the sources of the Aqua Marcia in the valley of the Anio, though these are more than 20 miles distant from the lake Fucinus, and separated from it by the deep valley of the Liris. This belief appears to have had no better foundation than the great clearness of the water in both cases (which would apply equally to many other sources much nearer to the lake), but it was generally adopted in antiquity: Strabo states it as a well-known fact; and Pliny, combining both marvels in one, relates that the Aqua Marcia, which was called at its source Pitonia, took its rise in the mountains of the Peligni, flowed through the Marsi and the lake Fucinus, then sunk into a cavern and ultimately emerged in the territory of Tibur, from whence it was carried by an aqueduct to Rome. Statius also speaks of the Aqua Marcia as derived from the snows of the Marsic mountains. (Strab. v. p. 240; Plin. xxxi. 3. s. 24; Stat. *Silv.* i. 3.)

The subterranean outlets of the Fucinus were, however, often insufficient to carry off its surplus waters; and the lake was in consequence subject to sudden rises, when it overflowed the low grounds on its banks, and caused much mischief. Strabo tells us that it sometimes swelled so as to fill up the whole basin to the foot of the mountains, at others would sink and leave dry a considerable tract, which then became susceptible of culture. (Strab. v. p. 240.) The project of obviating the evils arising from this cause, by the construction of an artificial emissary or subterranean canal from the lake into the valley of the Liris, was among the great designs entertained by Caesar, but frustrated by his death. (Suet. *Caes.* 44.) Its execution was afterwards repeatedly urged upon Augustus by the Marsi, but without effect, and it was reserved for Claudius to accomplish this great work. The main difficulty consisted in the hardness of the limestone rock through which the gallery had to be cut: the length of this is stated by Suetonius at three Roman miles (an estimate somewhat below the truth*); and he tells us that 30,000 workmen were employed on it continuously for a period of 11 years. The opening of it was celebrated by Claudius with great magnificence, and a mock naval combat was exhibited on the lake upon the occasion; but owing to the defective arrangements, a catastrophe ensued, in which many persons lost their lives, and the emperor himself narrowly escaped. (Suet. *Claud.* 20, 21, 32; Tac. *Ann.* xii. 56, 57; Dion Cass. lx. 33.) The emissary, however, appears to have fully answered its purpose at the time; but Nero, through hatred of Claudius, suffered the works to fall into decay, and it became necessary for Hadrian to restore them, on which account his biographer gives him the credit of having constructed them. (Plin. xxxvi. 15. s. 24; Spartian. *Hadr.* 22, who says briefly, "Fucinum emisit.") From this period we have no further account of it; but it appears to have fallen into decay in the middle ages, and became obstructed by the falling in of stones and earth from above; and though many attempts have been made from the year 1240 to the present day to clear it out, and restore it to a serviceable state, they have been hitherto without effect. It is, however, readily accessible at both ends, and even in its present state sufficiently attests the justice of Pliny's admiration, who deservedly ranks it among the most memorable proofs of Roman greatness. (Plin. *l. c.*) The whole work was examined in detail and described, in 1825, by a Neapolitan engineer named Rivera: the results of his researches are given by Kramer, whose excellent monography of the lake Fucinus (*Der Fuciner See*, 4to. Berlin, 1839) and the surrounding country is one of the most valuable contributions to our knowledge of Italian geography. Its authority has been generally followed in the present article. [E. H. B.]

* The actual length, according to the measurements of Rivera, is 21,395 palms, or about 15,600 English feet. (Kramer, *Der Fuciner See*, p. 40.) The *Monte Salviano*, through the solid limestone rock of which it was pierced, rises more than 1000 feet above the level of the lake.

FULGI'NIUM (*Φουλκίνιον*, App.: *Eth.* Fulginas, -ātis: *Foligno*), a municipal town of Umbria, situated on the Via Flaminia at the western foot of the Apennines. It was distant only 8 miles from Mevania, and 3 from Forum Flaminii. It appears to have been a place of no great importance, at least till a late period, as its name is wholly omitted by Strabo, who enumerates all the other towns on or near the Via Flaminia. But we learn from Cicero that it was a municipal town, though in the subordinate condition of a praefectura. (Municipium Fulginas, Praefectura Fulginas, Cic. *Fr. ap. Priscian.* vii. 14. § 70. The notion that it was a "foederata civitas" rests upon the false reading of "Fulginatium" for "Iguvinatium" in Cic. *pro Balb.* 20. See Orelli, *ad loc.*) It is mentioned also during the Perusian War in B. C. 41, when it was occupied by Ventidius and Asinius, the generals of Antony. (Appian, *B. C.* v. 35.) Silius Italicus describes it as situated in an open plain, without walls (viii. 461): the proximity of the more important towns of Mevania and Hispellum probably kept it from rising to consideration, though its position at the junction of the main line of the Via Flaminia with the same branch which led by Interamna and Spoletium must have been favourable to its development, and it is mentioned as a "civitas" in the Jerusalem Itinerary. (*Itin. Hier.* p. 613.) The modern city of *Foligno* has risen to importance after the destruction of the neighbouring Forum Flaminii, and is now the most populous and flourishing town in this part of Italy. An inscription discovered here has preserved the name of a local nymph or divinity named Fulginia (Orell. *Inscr.* 2409): another records the erection of a statue to a certain C. Betuus Cilo, by 15 towns of Umbria, of which he was the common patron. (Orell. *Inscr.* 98.) This has been absurdly interpreted as indicating the existence of a league or confederacy of these cities of which Fulginium was the head. (Cramer, *Anc. Italy*, vol. i. p. 268). [E. H. B.]

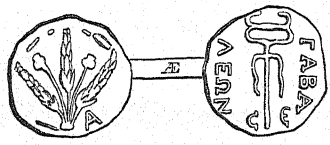
FUNDI (*Φοῦνδοι*: *Eth.* *Φουνδανός*, Fundanus: *Fondi*), a city of Latium, in the more extended sense of the term, situated on the Appian Way between Tarracina and Formiae, and about 5 miles from the sea-coast. In the marshy plain between it and the sea is a considerable lake or pool, known in ancient times as the LACUS FUNDANUS (Plin. iii. 5. s. 9), and still called the *Lago di Fondi*. The city was probably at one time in the hands of the Volscians; and in B. C. 340, during the great Latin War, it would appear to have occupied a sort of neutral position between the Latins and Campanians, and, as well as its neighbour Formiae, continued faithful to the Romans during that trying period. For this conduct the inhabitants of both cities were rewarded with the Roman "civitas," but without the right of suffrage. (Liv. viii. 14.) Shortly after this, however, a part of the citizens of Fundi joined in the revolt of their neighbours of Privernum, under the lead of Vitruvius Vaccus, who was himself a native of Fundi. But the authorities of the city succeeded in excusing themselves to the Roman senate, and escaped without punishment. (Ib. 19.) They did not however obtain the full Roman franchise with the right of voting till B. C. 190, when they were for the first time enrolled in the Aemilian tribe. (Liv. xxxviii. 36; Vell. Pat. i. 14.) Hence it is to this interval that Pompeius Festus must refer when he speaks of Fundi as well as Formiae as having been in the condition of praefecturae. (Fest. p. 233.) At a subsequent period it received a colony of veterans under Augustus (*Lib. Colon.* p. 234), and appears to have continued under the Roman empire to be a flourishing municipal town (Strab. v. p. 234; Mel. ii. 4. § 9; Plin. iii. 5. s. 9; Ptol. iii. 1. § 63; Orell. *Inscr.* 821, 2951), for which it was probably indebted to its situation on the Appian Way, which is here compelled to deviate from the sea-coast, and make an angle inland from Tarracina to Fundi, and thence again to Formiae, where it rejoins the coast. According to the Itineraries, Fundi was distant 13 miles from each of the above towns. (*Itin. Ant.* pp. 108, 121: *Itin. Hier.* p. 611.) The mention of its name by Horace on his journey to Brundusium, and the ridicule cast by him on the pompous airs assumed by its local magistrate or praetor, Aufidius Luscus, are familiar to all readers. (Hor. *Sat.* i. 5. 34.) It is incidentally mentioned also by Cicero and Suetonius, from whom we learn that the family of Livia, the wife of Augustus, came originally from Fundi: some writers also represented Tiberius himself as born there. (Cic. *ad Att.* xiv. 6; Suet. *Tib.* 5, *Cal.* 23, *Galb.* 8). Silius Italicus seems to include Fundi as well as Caiēta in Campania (viii. 524—530), but it is certain that they were both comprised within Latium, according to the bounds assigned to it under the Roman empire, or what was called Latium Novum. [LATIUM.]

The modern city of *Fondi* still retains the ancient site, and considerable remains of antiquity, of which the most important are an ancient gateway with a portion of the walls adjoining it, the lower part of which is of polygonal construction, and the upper part of later Roman style. An inscription over the gate (now called the *Portella*) records the construction of the walls and gates of the city by the local magistrates or aediles. (Hoare, *Class. Tour*, vol. i. p. 106.) The principal street of the town is still formed by the Via Appia, and retains great part of the ancient pavement: numerous fragments of ancient buildings are also scattered throughout the modern town, or have been employed in the middle ages in the construction of its castle, cathedral, &c.

Fundi was celebrated among the Romans for the excellence of its wines: the famous Caecuban wine was in fact produced within its territory [CAECUBUS AGER], but besides this the wine of Fundi itself (Fundanum vinum) seems to have enjoyed a high reputation, though inferior to that of the Caecuban and Falernian. (Martial, xiii. 113; Plin. xiv. 6. s 8.) It was probably on this account that the "Fundanus ager" was one of those districts which the agrarian law of Servilius Rullus sought to apportion among the needy citizens of Rome. (Cic. *de Leg. Agr.* ii. 25.) [E. H. B.]

FURCAE CAUDI'NAE. [CAUDIUM.]

FURCO'NIUM. [VESTINI.]



G.

GABAE (*Γάβαι*). 1. A strongly fortified post in Sogdiana, mentioned in the invasion of that country by Alexander's army. (Arrian, iv. 17.) It is not possible to identify it with any known place, but it has been supposed not improbable that it may be the same as that mentioned by Arrian under the name of Gaza (iv. 2), and by Curtius under that of Gabaza (viii. 4. § 1). It is clear that the three places were occupied by a Scythian race sometimes called generically Massagetae, and sometimes by a more local

title, Sogdiani; but the identity of the three places is by no means certain.

2. One of the royal palaces of the kings of Persia, situated, according to Strabo (xv. p. 728), in the upper country of Persis. According to Ptolemy (vi. 4. § 7) it must have been situated at no great distance from the Pasargadae. The name is probably connected with the district Gabiene, which was in Susiana, and may not unlikely have comprehended a part of Persis. [V.]

GABALA (Γάβα, Γάβαλα), a place in Galilee fortified by Herod the Great (Joseph. *B. J.* xv. 9. § 5), supposed to be identical with Gamala. [GAMALA.] [G. W.]

COIN OF GABALA.

GABALENE. [GEBALENE.]

GA'BALI or GABALES (Γαβάλεις, Strab. p. 191). "The Ruteni and the Gabales," says Strabo, "border on the Narbonitis." In Caesar's time the Gabali were under the supremacy of the Arverni. (*B. G.* vii. 75.) In another passage, he speaks of the "Gabalos proximosque pagos Arvernorum" (*B. G.* vii. 64). Their position is in a mountainous country between the Arverni and the Helvii. It corresponds to the *Gévaudan* of the ante-revolutionary history of France, a name derived from the middle-age term Gavaldanum, and nearly to the present department of *Lozère*. There were silver mines in the country of the Ruteni and Gabali (Strabo). The cheese of this country was famed at Rome (Plin. xi. 42); it came from the "Lesorae Gabalicique pagi." The Lesora is the mountain *Lozère*. Sidonius Apollonaris (*Carm.* xxiv. 27) says,

"Tum terram Gabalum satis nivosam."

A large part of it is a cold, mountainous country. The chief town of the Gabali, according to Ptolemy, is Anderitum. [ANDERITUM.] [G. L.]

GABAZA, a district of Sogdiana apparently from the description of Curtius, who states that Alexander's army suffered much there from the severity of the cold in the northern part of that province (viii. 4. § 1). [GABAE, No. 1.] It must have been between the 40th and 42nd parallels of N. lat., and near the furthest limit northward of Alexander's march. [V.]

GABIE'NE (Γαβιηνή, Strab. xvi. p. 745), one of the three eparchies into which Elymais was divided in ancient times: the other two were Mesabatica and Corbiana. It appears from the notice in Strabo that Gabiene was in the direction of Susa. It is mentioned in the wars of Alexander's successors, Antigonus having attempted to cut off Eumenes in that locality, and Eumenes having succeeded in wintering there in spite of the enemy. (Diod. xix. 26, 34; Plut. *Eumen.* 15; Polyaen. *Strat.* iv. 6. § 13.) [V.]

GA'BII (Γάβιοι: *Eth.* Γάβιος, Gabinus: *Castiglione*), an ancient city of Latium, situated between 12 and 13 miles from Rome on the road to Praeneste, and close to a small volcanic lake now called the *Lago di Castiglione*. All accounts represent it as a Latin city, and both Virgil and Dionysius expressly term it one of the colonies of Alba. (Virg. *Aen.* vi. 773; Serv. *ad loc.*; Dionys. iv. 53.) Solinus alone ascribes to it a still earlier origin, and says it was founded by two Sicilian brothers, Galatus and Bius, from whose combined names that of the city was derived. (Solin. 2. § 10.) In the early history of Rome it figures as one of the most considerable of the Latin cities, and Dionysius expressly tells us (*l. c.*) that it was one of the largest and most populous of them all. According to a tradition preserved both by him and Plutarch, it was at Gabii that Romulus and Remus received their education, a proof that it was believed to have been a flourishing city at that early period. (Dionys. i. 84; Plut. *Rom.* 6.) Yet no subsequent mention occurs of it in history during the regal period of Rome till the reign of Tarquinius Superbus. At that time Gabii appears as wholly independent of Rome, and incurred the hostility of Tarquinius by affording shelter to fugitives and exiles from Rome and other cities of Latium. But it was able successfully to withstand the arms of Tarquin, who only succeeded in making himself master of the city by stratagem and by the treachery of his son Sextus, who contrived to be received at Gabii as a fugitive, and then made use of the influence he obtained there to betray the city into the hands of his father. (Liv. i. 53, 54; Dionys. iv. 53—58; Val. Max. vii. 4. § 2; Ovid, *Fast.* ii. 690—710.) The treaty concluded on this occasion between Rome and Gabii was among the most ancient monuments preserved in the former city: it is evidently one of those alluded to by Horace as the

"foedera regum
Cum Gabiis aut cum rigidis aequata Sabinis,"

and was preserved on a wooden shield in the temple of Jupiter Fidius at Rome. (Hor. *Ep.* ii. 1. 25; Dionys. iv. 58.) Its memory is also recorded by a remarkable coin of the Antistia Gens, a family which appears to have derived its origin from Gabii. (Eckhel, vol. v. p. 137.) Whatever were the relations thus established between the two states, they did not long subsist: Sextus Tarquinius took refuge at Gabii after his expulsion from Rome, and, though according to Livy (i. 60) he was soon after murdered by his enemies there, we find the name of the Gabians among the Latin cities which combined against the Romans before the battle of Regillus. (Dionys. v. 61.) We may hence conclude that they at this time really formed part of the Latin League, and were doubtless included in the treaty concluded by that body with Sp. Cassius in B. C. 493. (Niebuhr, vol. ii. p. 17.)

From this time their name is but rarely mentioned; and, whenever they appear in history, it is as allies or dependents of Rome. Thus in B. C. 462 we are told that their territory was ravaged by the Volscians (Liv. iii. 8) in a predatory incursion against Rome; and in B. C. 381 they suffered in like manner from the incursions of their neighbours the Praenestines, who were at that time on hostile terms with the Republic (Id. vi. 21). Even in the last great struggle of the Latins for independence, no mention occurs of Gabii, nor have we any account of the terms or conditions on which it was admitted to the position in which we subsequently find it, of a Roman municipium. In B. C. 211 it is again mentioned on occasion of Hannibal's march against Rome (Liv. xxvi. 9); and an incidental notice of it occurs in B. C. 176 (Id. xli. 16): but, with these exceptions, we hear little more of it in history. In B. C. 41, however, we find it selected for a conference between

Octavian and L. Antonius, probably on account of its position midway between Rome and Praeneste. (Appian, *B. C.* v. 23.) But long before this period it had ceased to be a place of importance and appears to have fallen into complete decay. We learn, indeed, that the dictator Sulla restored its walls, and divided its territory among his veterans (*Lib. Colon.* p. 234); but this measure, if it did not accelerate its decline, at least did nothing to arrest it: and in B. C. 54 we find Cicero speaking of Gabii among the towns of Latium which were so poor and decayed that they could hardly take their accustomed part in the sacrifices on the Alban Mount. (Cic. *pro Planc.* 9.) Dionysius also attests its decayed condition at a somewhat later period, and tells us that in his time the greater part of the space enclosed within the ancient walls was no longer inhabited, though the traffic along the high road (the Via Praenestina) preserved the adjacent parts of the town from depopulation (iv. 53). This distinct statement explains, at the same time that it confirms, the expressions of poets of the Augustan age, which would otherwise give an exaggerated idea of its state of desolation. Thus Horace calls it a "deserted village," and Propertius speaks as if it were almost devoid of inhabitants. (Hor. *Ep.* i. 11. 7; Propert. v. 1. 34.) The still stronger expressions of Lucan (vii. 392) are scarcely meant to be historical. Juvenal also repeatedly alludes to it as a poor country town, retaining much of rustic simplicity, and in imitation of Horace couples its name with that of Fidenae. (Juv. iii. 189, vi. 56, x. 100.) But we know from other sources, that it had been considerably revived at this period; it is not improbable that its cold sulphureous waters, which are already noticed by Horace (*Ep.* i. 15. 9), had become a source of attraction, but the monuments and inscriptions which have been recently discovered on the site, prove that it not only continued to exist as a municipal town, but recovered to a considerable extent from its previous decay. This revival, which appears to have commenced as early as the reign of Tiberius, was greatly accelerated by Hadrian, and continued under his immediate successors down to the commencement of the third century. From this time all trace of the town disappears; though it is probable that the bishops of Gabii, mentioned in early ecclesiastical documents down to the 7th century, belong to this city, rather than to a Sabine Gabii, of which nothing else is known. (Visconti, *Monum. Gabini*, pp. 7—14; Nibby, *Dintorni*, vol. ii. pp. 76—78.)

The site of Gabii is clearly fixed by the statements of Dionysius and Strabo, that it was distant 100 stadia from Rome, on the Via Praenestina, with which the Itineraries, that place it 12 M. P. from the city, closely accord. (Dionys. iv. 53; Strab. v. p. 238; *Itin. Ant.* p. 302; *Tab. Peut.*) Strabo correctly adds that it was just about equidistant from Rome and Praeneste; and as the ruins of an ancient temple have always remained to mark the spot, it is strange that its site should have been mistaken by the earlier Italian topographers, who (before Cluverius) transferred it to *Gallicano* or *La Colonna*. The temple just mentioned stands in a commanding position on a gentle eminence, a short distance on the left of the ancient road, the line of which is clearly marked by its still existing pavement: and the site of the ancient city may be readily traced, occupying the whole ridge of hill from thence to an eminence on the N. of the lake, which probably formed the ancient citadel, and is crowned by the ruins of a mediaeval fortress, now known as *Castiglione*. Some remains of the walls may be still observed near this castle: their extent, to which Dionysius appeals as proof of the former greatness of Gabii, is considerable, the circuit being about three miles, but the ridge nowhere exceeds half a mile in breadth. The only ancient edifice now visible is the temple already noticed, which has been supposed, with much probability, to be that of Juno, who, as we learn from Virgil and his constant imitator Silius Italicus, was the tutelary deity of Gabii. (Virg. *Aen.* vii. 682; Sil. Ital. xii. 537.) Livy, however, notices also a temple of Apollo in the ancient city (xli. 16), and the point is by no means clear. The existing edifice is of a simple style of construction, built wholly of Gabian stone, and with but little ornament. It much resembles the one still remaining at Aricia; and is probably, like that, a work of Roman times [ARICIA], though it has been often ascribed to a much earlier date. Nothing else now remains above ground; but excavations made in the year 1792 brought to light the seats of a theatre (or rather, perhaps, ranges of semicircular seats adapted to supply the place of one) just below the temple, facing the Via Praenestina,—and a short distance from it, immediately adjoining the high road, were found the remains of the Forum, the plan of which might be distinctly traced: it was evidently a work of Imperial times, surrounded with porticoes on three sides, and adorned with statues. The inscriptions discovered in the same excavations were of considerable interest, as illustrating the municipal condition of Gabii under the Roman Empire; and numerous works of art, statues, busts, &c., many of them of great merit, proved that Gabii must have risen, for a time at least, to a position of considerable splendour. Both the inscriptions and sculptures, which are now in the Museum of the Louvre, are fully described and illustrated by Visconti. (*Monumenti Gabini*, Roma, 1797, and Milan, 1835.)

Gabii was noted in ancient times for its stone, known as the "lapis Gabinus," a hard and compact variety of the volcanic tufo or *peperino* common throughout the Roman *Campagna*: it closely resembles the "lapis Albanus," but is of superior quality, and appears to have been extensively employed by the Romans as a building-stone from the earliest ages down to that of Augustus and Nero. (Strab. v. p. 238; Tac. *Ann.* xv. 43; Nibby, *Roma Antica*, vol. i. p. 240.) It is singular that no allusion is found in any ancient writer to the lake of Gabii: this is a circular basin of small extent, which must at one time have formed the crater of an extinct volcano; it immediately adjoins the ridge occupied by the ancient city, which in fact forms part of the outer rim of the crater. Pliny, however, alludes to the volcanic character of the soil of Gabii, which caused it to sound hollow as one rode over it. (Plin. ii. 94.)

A strong confirmation of the ancient importance of Gabii is found in the fact that the Romans borrowed from thence the mode of dress called the Cinctus Gabinus, which was usual at sacrifices and on certain other solemn occasions. (Virg. *Aen.* vii. 612; Serv. *ad loc.*; Liv. v. 46, &c.) Still more remarkable is it that, according to the rules of the Augurs, the "Ager Gabinus" was set apart as something distinct both from the Ager Romanus and Ager Peregrinus. (Varr. *L. L.* v. 33.) The road leading from Rome to Gabii was originally called the VIA GABINA, a name which occurs twice in the earlier books of Livy (iii. 6, v. 49), but appears to

have been subsequently merged in that of the Via Praenestina, of which it formed a part. [E. H. B.]

GABRANTOVICI. Γαβραντουΐκων εὐλίμενος κόλπος is one of the notices in Ptolemy (ii. 3. § 6) of a locality lying between *Dunum Sinus* (Δοῦνον κόλπος) and *Ocellum Promontorium* (Ὀκέλλου ἄκρον). Name for name, and place for place, Dunum is *Dun*-s-ley Bay near Whitby in Yorkshire. Ocellum is probably *Flamborough Head*. This makes the bay of the Gabrantovici the equivalent to the present *Filey Bay*. Philipps (in his *Mountains and Rivers of Yorkshire*) takes this view; which is, probably, the right one. Others, however, and amongst them the editor of the *Monumenta Britannica*, place it at *Burlington*, or *Hornsea*—in which case the Ocellum Promontorium must be *Spurn Head*. If so, a promontory so important as *Flamborough Head* has no name in Ptolemy. If so, too, the entrance to the *Humber* is mentioned twice over—first, as *Spurn Head* (Gabrantovicorum Sinus), and next, as the outlets of the river Abus, i. e. the headland is mentioned, and so are the waters immediately in contact with it. This is not the ordinary form of Ptolemy's entries. Hence, the reasoning lies in favour of *Filey Bay*, strengthened by the fact of the entry in this case being a double one in a single form—Γαβραντουΐκων εὐλίμενος κόλπος.

But the "bay with the good harbour" was one thing, the "Gabrantovici" was another: indeed, the form in -vici (rather than -vicae or -vica) is an assumption. All that we collect from the form of the word is, that the object expressed by the crude form Gabrantovici- was an object of which the name had a plural number. It might be the name of a population; it might be the name of something else.

Whatever may have been the real case, it is a word which in the eyes of what may be called the minute ethnologist is one of great interest; since it bears upon a question which, every day, acquires fresh magnitude, viz. the extent to which German or Scandinavian settlements had been made in Britain anterior, not only to the time of Hengist and Horsa, but to the time of Roman conquest. Professor Philipps, and probably others besides the present writer, have believed that German glosses and German forms are to be found in the British part of Ptolemy.

Now, if we admit the possibility of *Gabrantovic* being a German word, we have as a probable analysis of it the participle *gebraente* (=*burnt*) and the substantive *wic* (*village, station, bay*). What determined the name is uncertain. It might be the presence of a beacon. This, however, is not the main point; the main point is the extent to which it is an equivalent to the modern compound *Flam-borough*. This, in the mind of the present writer, is *not* an accident. Further remarks on the question to which this notice relates are found under the words PETUARII and VANDUARII. [R. G. L.]

GABRETA or GABRITA SILVA (Γαΐβρητα, Γάβριτα, or Γάβρητα ὕλη), a range of mountains in Germany, mentioned by Strabo (vii. p. 292) and Ptolemy (ii. 11. §§ 5, 7, 24) in such a manner as to lead several of the earlier geographers to identify it with the *Thüringerwald*; but later investigations have shown that the *Böhmerwald*, in the north of Bavaria, is meant. The name is evidently of Celtic origin (compare the name *Vergobretus* in Caes. *B. G.* i. 16), and probably signifies "a woody mountain." [L. S.]

GABROMAGUS, a town in the interior of Noricum, on the south of the river Anisus. It is identified by some with *Lietzen*, on the *Inn*, and by others with *Windish-Garstein*. (*Itin. Ant.* p. 276; *Tab. Peut.*) [L. S.]

GABROSENTUM, in Britain, probably the nominative form of the *Gabrosente* of the Notitia, and the *Gabrocentio* of the geographer of Ravenna. It was a station along the line of the Vallum (*per lineam Valli*) and was occupied by the second cohort of the Thracians. The editor of the *Monumenta Britannica* identifies Gabrosentum with *Drumburgh* in Cumberland: Mr. Bruce, with *Bowness*. At Bowness slight traces of the walls of a station may with difficulty be detected, "its southern lines near the church being those which are most apparent." A small altar, dedicated to Jupiter, by Sulpicius Secundianus, has been dug up at *Bowness*. [R.G.L.]

GAD. [PALAESTINA.]

GADAR (Γάδαρ, Isid. *Stath. Parth.* p. 2), appears to have been a small place between Nisae and Antiocheia of Margiana. Rennell (*Geogr. of Herod.* vol. ii. p. 390) has conjectured, from the names of two other small places mentioned also by Isidorus, that Gadar is represented now by *Gandar* or *Caendar*, called by Abulfeda *Kondor*, and not improbably one of the later seats of the Gandarii or *Gandhâras*. [V.]

GADARA (τὰ Γάδαρα: *Eth.* Γαδαρεύς, fem. Γαδαρίς), a city of Palestine, accounted the capital of Peraea by Josephus (*B. J.* iv. 7. § 3), to the SE. of the sea of Tiberias, and 60 stadia distant from the town of Tiberias, on the confines of Tiberias, and of the region of Scythopolis (*Vita*, §§ 65. 9). It is placed by Pliny (v. 16) on the river Hieromax, now the *Yarmak*; and the district which took its name from it, the Γαδαρήνων γῆ of the Evangelists (*St. Mark*, v. 1; *St. Luke*, viii. 26), was the eastern boundary of Galilee (*B. J.* iii. 3. § 1). Polybius, who records its capture by Antiochus, calls it the strongest city in those parts (v. 71, and *ap.* Joseph. *Ant.* xii. 3. § 3). It was restored by Pompey (*Ant.* xiv. 4. § 4), having been shortly before destroyed, and was the seat of one of the five Sanhedrims instituted by Gabinius (*Ant.* xiv. 5. § 4), which is the more remarkable, as it is reckoned one of the Grecian cities (πόλεις Ἑλληνίδες), on which account it was exempted from the jurisdiction of Archelaus (*Ant.* xvii. 13. § 4, *B. J.* ii. 6. § 3), and subjected to the prefecture of Syria, although it had been granted as a special grace to Herod the Great (*B. J.* i. 20. § 3). It was one of the first cities taken by the Jews on the outbreak of the revolt (ii. 18. § 1), which act was soon afterwards revenged by its Syrian inhabitants (§ 5); but Vespasian found it in occupation of the Jews, on his first campaign in Galilee, when he took it, and slaughtered all its adult inhabitants, and burnt not only the city itself, but all the villages and towns in the neighbourhood (iii. 7. § 1). It seems to have been again occupied by the Jews, for, on his next campaign in Galilee, it was voluntarily surrendered to the Romans; a measure prompted by a desire of peace, and by fear for their property, for Gadara was inhabited by many wealthy men (iv. 7. § 3). This last observation is in some measure confirmed by the existing remains of the city, among which are the ruins of stately private edifices, as well as of important public buildings.

Om Keiss, the ancient Gadara, is situated in the mountains on the east side of the valley of the Jordan, about 6 miles SE. by E. of the sea of Galilee, and to the south of the river *Yarmak*, the Hieromax of Pliny. The ruins are very considerable. "The

walls of the ancient Gadara are still easily discernible. Besides the foundations of a whole line of houses, and the remains of a row of columns which lined the main street on either side, there are two theatres, on the north and west sides of the town, one quite destroyed, but the latter in very tolerable preservation, and very handsome; near it the ancient pavement, with wheel-tracks of carriages, is still visible. Broken columns and capitals lie in every direction, and sarcophagi to the east of the town, where is the necropolis, the tombs of which are by far the most interesting antiquities of *Om Keiss.* The sepulchres, which are all under ground, are hewn out of the live rock, and the doors, which are very massy, are cut out of immense blocks of stone; some of these are now standing, and actually working on their hinges." (Irby and Mangles, p. 297; Lord Lindsay, vol. ii. pp. 96, 97; Traill's *Josephus*, vol. i. p. 35, vol. ii. p. 88, and the Plates there referred to.)

The hot springs and baths of Gadara were celebrated in ancient times, and reckoned second only to those of Baiae, and with which none other could be compared. (Eunap. Sardian. *ap.* Reland, *Palaest.* p. 775.) They are mentioned in the Itinerary of Antoninus Martyr: "In parte ipsius civitatis, miliario tertio, sunt aquae calidae quae appellantur thermae Heliae, ubi leprosi mundantur;" and again: "Ibi est etiam fluvius calidus qui dicitur Gadarra, et descendit torrens, et intrat Jordanem, et ex ipso ampliatur Jordanis et major fit" (*ap.* Reland, *l. c.*). Eusebius and St. Jerome are more accurate; they describe the hot springs as bursting forth from the roots of the mountain on which the city is built, and having baths built over them. (*Onomast. s. vv.* Αἰθάμ and Γάδαρα, cited by Reland, p. 302.) They were visited by Captains Irby and Mangles. "They are not so hot as those of Tiberias. One of them is enclosed by palm-trees in a very picturesque manner. The ruins of a Roman bath are at the source; we found several sick persons at these springs, who had come to use the waters." (*Travels*, p. 298.) [G.W.]

GADDA (Γάδδα), a town of the tribe of Judah, mentioned only in *Joshua* (xv. 27). A village of this name is noticed by Eusebius as existing in his day, on the site of the ancient town, in the extremity of the country, called Daroma. St. Jerome adds, "contra orientem, imminens mari mortuo." (*Onomast. s. v.*) [G. W.]

GADE'NI (Γαδηνοί), in Britain, mentioned by Ptolemy (ii. 3. § 10) as lying to the north of the Damnii. [DAMNII.] *Berwickshire*, with (perhaps) parts of *Roxburgh* and *Haddington*. [R. G. L.]

GADES (-IUM; also GADIS, and GADDIS), the Latin form of the name which, in the original Phoenician, was GADIR (or GADDIR), and in the Greek GADEIRA (τὰ Γάδειρα; Ion. Γήδειρα, Herod.; and, rarely, ἡ Γαδείρα, Eratosth. *ap. Steph. B. s. v.*), and which is preserved in the form *Cadiz* or *Cadix*, denotes a celebrated city, as well as the island on which it stood (or rather the islands, and hence the *plural* form), upon the SW. coast of Hispania Baetica, between the straits and the mouth of the Baetis. (*Eth.* Γαδειρεύς, fem. Γαδειρίς, also, rarely, Γαδειρίτης, Γαδειραῖος and Γαδειρανός, Steph. B.; *Adj.* Γαδειρικός, *e. g.* with χώρα, Plat. *Crit.* p. 114, b: Lat. *Adj.* and *Eth.* Gaditanus). The fanciful etymologies of the name invented by the Greek and Roman writers, are barely worthy of a passing mention. (Plat. *Critias*, p. 114, Steph. B. *s. v.*; *Etym. M.*; Suid.; Hesych.; Eustath. *ad Dion. Perieg.* 64.) The later geographers rightly stated that it was a Phoenician word (Dion. Per. 456; Avien. *Ora Marit.* 267—269:

"Gaddir hic est oppidum:
Nam Punicorum lingua conseptum locum
Gaddir vocabat.")

It was the chief Phoenician colony outside the Pillars of Hercules, having been established by them long before the beginning of classical history. (Strab. iii. pp. 148, 168; Diod. Sic. v. 20; Scymn. Ch. 160; Mela, iii. 6. § 1; Plin. v. 19. s. 17; Vell. Paterc. i. 2; Arrian. and Aelian. *ap.* Eustath. *ad Dion. Perieg.* 454.) To the Greeks and Romans it was long the westernmost point of the known world; and the island on which it stood (*Isla de Leon*) was identified with that of Erytheia, where king Geryon fed the oxen which were carried off by Hercules; or, according to some, Erytheia was near Gadeira. (Hesiod. *Theog.* 287, et seq., 979, et seq.; Herod. iv. 8; Strab. iii. pp. 118, 169; Plin. iv. 21. s. 36; and many others: for a full discussion of the question, see Ukert, vol. ii. pt. 1, pp. 240, 241.) The island was also called Aphrodisias, and Cotinussa, and by some both the city and the island were identified with the celebrated TARTESSUS.

The early writers give us brief notices of Gades. Herodotus (*l. c.*) places Gadeira on the ocean, beyond the Pillars of Hercules, and near it the island of Erytheia. Scylax states that, among the Iberi, the first people of Europe (on the W.), there are *two* islands, named Gadeira, of which the one has a city, a day's journey from the Pillars of Hercules. (Scylax, pp. 5, 120, ed. Gronov., pp. 1, 51, ed. Hudson.) Eratosthenes mentioned the city of Gadeira (*ap.* Steph. B. *s. v.*), and the "happy island" of Erytheia, in the land of Tartessis, near Calpe (*ap.* Strab. iii. p. 148, who refers also to the views of Artemidorus). In the period of the Carthaginian empire, therefore, the situation of the place was tolerably well known to the Greeks; but it is not till after the Punic Wars had given Spain to the Romans, that we find it more particularly described. The fullest description is that of Strabo (iii. pp. 140, 168), who places it at a distance of less than 2000 stadia from the Sacred Headland (*C. S. Vincent*), and 70 from the mouth of the Baetis (*Guadalquivir*) on the one side, and about 750 from Calpe (*Gibraltar*) on the other, or, as some said, 800. Mela (ii. 7) transfers it to the entrance of the *Straits*, which he makes to begin at Junonis Pr. (*C. Trafalgar*). Pliny, who makes the entrance of the Straits at Mellaria, places Gades 45 M. P. outside (iv. 22. s. 36, with Ukert's emendation: the MSS. vary between 25 and 75). The island is described as divided from the mainland of Baetica by a narrow strait, like a river (Mela, iii. 6), the least breadth of which is given by Strabo as only 1 stadium (606 ft.), and as barely 700 ft. by Pliny, who makes the greatest breadth 7½ M. P. (ii. 108. s. 112): it is now called the *River of St. Peter*, and the bridge which spanned it (*Itin. Ant.* p. 409) is called the *Puente de Zuazo*, from Juan Sanchez de Zuazo, who restored it in the 15th century. The length of the island was estimated at about 100 stadia (Strab. *l. c.*), or 12 M. P. (Polyb. *ap. Plin. l. c.*: Pliny himself says 15): its breadth varied from one stadium to 3 Roman miles (Strab., Plin., *ll. cc.*). The city stood on the W. side of the island, and was from the first very small in comparison with its maritime importance. Even after it was enlarged by the building of the "New City," under the

Romans, by its wealthy and celebrated citizen, the younger Balbus, the "Double City" (ἡ Διδύμη), as it was called, was still of very moderate dimensions, not exceeding 20 stadia in circuit: and even this space was not densely peopled, since a large part of the citizens were always absent at sea. In fact, the city proper seems to have consisted merely of the public buildings and the habitations of those immediately connected with the business of the port, while the upper classes dwelt in villas outside the city, chiefly on the shore of the mainland, and on a smaller island opposite to the city, which was a very favourite resort (*Trocadero* or *S. Sebastian*). The territory of the city on the mainland was very small; its wealth being derived entirely from its commerce, as the great western emporium of the known world. Of the wealth and consequence of its citizens Strabo records it as a striking proof, that in the census taken under Augustus, the number of Equites was found to be 500, a number greater than in any town, even in Italy, except Patavium; while the citizens were second in number only to those of Rome. Their first alliance with Rome was said to have been formed through the centurion L. Marcius, in the very crisis of the war in Spain, after the deaths of the two Scipios (B. C. 212): another instance of the disaffection of the old Phoenician cities towards Carthage; a feeling all the stronger in the case of Gades, as she had only submitted to Carthage during Hamilcar's conquest of Spain after the First Punic War. The alliance was confirmed (or, as some said, first made) in the consulship of M. Lepidus and Q. Catulus, B. C. 78. (Cic. *pro Balbo*, 15; comp. Liv. xxxii. 2.) C. Julius Caesar, on his visit to the city during the Civil War in Spain, B. C. 49 conferred the *civitas* of Rome on all the citizens of Gades. (Dion Cass. xli. 24; Columella, viii. 16.) Under the empire, as settled by Augusta, Gades was a municipium, with the title of AUGUSTA URBS JULIA GADITANA, and the seat of one of the four *conventus juridici* of Baetica. (Plin. iii. 1. s. 3, iv. 22. s. 36; Inscr. *ap.* Gruter, p. 358, no. 4; Coins *ap.* Florez, *Med.* vol. ii. p. 430, vol. iii. p. 68, who contends that the city was a colony; Mionnet, vol. i. p. 12, Suppl. vol. i. p. 25; Sestini, p. 49; Eckhel, vol. i. pp. 19—22.) There are extant coins of the old Phoenician period, as well as of the Roman city; the former are, with one exception, of copper, and generally bear the head of the Tyrian Hercules (Melcarth), the tutelary deity of the city, on the obverse, and on the reverse one or two fish, with a Phoenician epigraph, in two lines, of which the upper has not been satisfactorily explained, while the lower consists of the four letters which answer to the Hebrew characters אגדר or הגדר, *Agadir* or *Hagadir*, that is, the genuine Phoenician form of the city's name, with the prosthetic breathing or article, the omission of which gives GADIR, the form recognised by the Greek and Roman writers. (Eckhel, *l. c.* and vol. iii. p. 422.) The coins of the Roman period are very remarkable for the absence of the name of the city, which occurs only on one of them, a very ancient medal, having an ear of corn, with the epigraph MUN (i. e. Municipium) on the obverse, and on the reverse GADES, with a fish. The remaining medals bear, for the most part, the insignia of Hercules, and naval symbols, with the names of the successive patrons of the city, namely, Balbus, Augustus, M. Agrippa, and his sons Caius and Lucius, and the emperor Tiberius. (Eckhel, vol. i. pp. 20—22.)

The first of these names refers to two eminent citizens of Gades, who are distinguished by the names of Major and Minor. L. Cornelius Balbus Major, who is generally surnamed Gaditanus, or, as Cicero writes jestingly, Tartesius (*ad Att.* vii. 3), served against Sertorius, first under Q. Metellus, and then under Pompey, whom he accompanied to Rome, B. C. 71, and who conferred upon him the Roman citizenship, his right to which was defended by Cicero in an extant oration. With both he lived in terms of intimacy, as well as with Crassus and Caesar, and afterwards with Octavian. He was the first native of any country out of Italy who attained to the consulship. But his nephew, L. Cornelius Balbus Minor, who, as proconsul of Africa, triumphed over the Garamantes in B. C. 19, and who attained to the dignity of Pontifex (Vell. Paterc. ii. 51, and coins), is probably the one to whom the coins refer, as he was the builder of the New City of Gades. He undertook this work when he was quaestor to Asinius Pollio in Further Spain, B. C. 43. (Dion Cass. xlviii. 32.) Balbus also constructed the harbour of Gades.—Portus Gaditanus,—on the mainland (Strab., Mela, *ll. cc.*; *Itin. Ant.* p. 409; Ptol. ii. 4: now *Puerto Real*), and the bridge already mentioned, which was so constructed as to form also an aqueduct. The Antonine Itinerary places the bridge 12 M. P. from Gades, and the harbour 14 M. P. further, on the road to Corduba. Of the other public buildings the most remarkable were the temples of the deities whom the Romans identified with Saturn and Hercules. The former was in the city itself, opposite to the little island already mentioned; the latter stood some distance S. of the city, 12 M. P. on the road to Malaca, in the Itinerary, and still further according to Strabo, who has a long discussion of a theory by which this temple was identified with the Columns of Hercules (iii. pp. 169, 170, 172, 174, 175; Plin. ii. 39. s. 100; Liv. xxi. 21; Dion Cass. xliii. 40, lxxvii. 20). The temple had a famous oracle connected with it, and was immensely rich. It was also remarkable for a spring, which rose and fell with the tide. Its site is supposed to have been on the *I. S. Petri* or *S. Pedro* (*St. Peter's Isle*), a little islet lying off the S. point of the main island of *Leon*. The city had one drawback to its unrivalled advantages as a port: the water was very bad. (Strab. iii. p. 173.) Besides the general articles of its commerce, its salt-fish was particularly esteemed. (Athen. vii. p. 315; Pollux, vi. 49; Hesych. *s. v.* Γάδειρα.) The immense wealth which its inhabitants enjoyed led naturally to luxury, and luxury to great immorality. (Juv. xi. 162; Mart. i. 61, foll., v. 78, vi. 71, xiv. 203.) The modern city of *Cadiz* stands just upon the site of Gades, that is, on the NW. point of the island of *Leon*, together with the island of *Trocadero*. (The following are the authorities for the antiquities of *Cadiz* cited by Ford, *Handbook of Spain*, p. 6: J. B. Suarez de Salazar, *Grandezas*, &c., Cadiz,

COIN OF GADES.

1610, 4to.; Geronimo de la Concepcion, *Emporio de el Orbe*, Amst. 1690, folio; Ms. de Mondejar, *Cadiz Phenicia*, Madrid, 1805, 3 vols. 4to.; *Historia de Cadiz*, Orosco, 1845, 4to.) [P. S.]

GADILONI'TIS. [GAZELON.]

GADITANUM FRETUM (*Straits of Gibraltar*), the well-known channel connecting the Mediterranean and Atlantic [ATLANTICUM MARE], and separating the continents of Europe and Libya, only needs a notice in a work on *ancient*, as distinguished from *general*, geography, for the sake of recording the many different names by which it was known to the Greeks and Romans. These are collected as follows by Ukert, who gives ample references to ancient authorities:—Fretum and Πορθμός, simply: Γαδειραῖος πορθμός: Ἡράκλειος πορθμός: Πορθμὸς or Πόρος κατὰ τὰς Ἡρακλείους στήλας: Στόμα καθ' Ἡρακλείους στήλας: τὸ τῆς θαλαττης τῆς Ἀτλαντικῆς στόμα: Fretum Gaditanum: Fretum Herculeum: Fretum Tartessium: Fretum Iberum: Fretum Hispanum: Fretum nostri maris et Oceani: Ostium Oceani: Maris Ostium: Limen Interni Maris: Herculis Via or Herma: and lastly Fretum Septem, or Septe Gaditanum, or Septe simply, from the hills called Septem Fratres on the Libyan shore. (Ukert, *Geogr. d. Griechen u. Römer*, vol. ii. pt. 1. p. 248, b.) Its extent is sufficiently marked on the E. by the hills of ABYLA and CALPE, the Pillars of Hercules, and on the S. side of its W. entrance by the promontory of AMPELUSIA; but the NW. point was variously placed [GADES], the proper position being the Pr. Junonis (*C. Trafulgar*). [P.S.]

GADITA'NUS OCEANUS. [ATLANTICUM MARE.]

GAESUS, GESSUS (Γαῖσων), a small river in Ionia, near Mount Mycale and the town of Priene. (Plin. v. 31; Mela, i. 17; comp. Herod. ix. 97.) Athenaeus (vii. p. 311) observes that Gaeson or Gaesonis was, according to some, a lake between Priene and Miletus, which had a communication with the sea. [L. S.]

GAETARA. [ALBANIA.]

GAETULIA (Γαιτουλία, sometimes written Γετουλία: *Eth.* Γαιτοῦλος, and sometimes Γαιτούλιος, Gaetūlus: *Adj.* Γαιτούλιος, Gaetūlus, Gaetulicus), a country in the NW. of Libya, S. of Mauretania and Numidia: on the E. divided by hills from the GARAMANTES, who dwelt S. of Africa and Syrtica: on the W. extending to the Atlantic Ocean; and on the S. to a margin of the great basin of the river NIGIR, or, according to Pliny, to the river Nigir itself, which he considers as the boundary between Africa and Aethiopia, that is, the country of the Negroes (v. 4). According to the tradition preserved by Sallust (*Jug.* 18, 19), the Gaetulians and the Libyans were the two great races which originally inhabited Africa; i. e. the NW. portion of the continent. When the N. sea-board came into the possession of various tribes from Asia (afterwards known as Numidians and Mauretanians), the Gaetulians were forced back into the region to the S. of Atlas; and they led a nomade life in the oases of the W. part of the Great Desert belt (*Sahara*), which lies between the Atlas and the basin of the Nigir, while the GARAMANTES inhabited its E. portion. Strabo extends the habitations of the Gaetulians even as far as the Syrtes (xvii. p. 829); and it may well be believed that the land on the margin of the Great Desert, though nominally a part of Numidia, was really a sort of neutral ground, into which the Gaetulians may have extended their wanderings. (Comp. Strab. xvii. p. 838.) Strabo uses Gaetulia as a sort of general name for Inner Africa, and calls the Gaetulians the greatest of the Libyan peoples. (Comp. Mela, i. 4: "Natio frequens multiplexque Gaetuli.") Up to the time of the war with Jugurtha, they were ignorant, says Sallust, of the Roman name; but in that war they served as cavalry in the army of Jugurtha, besides making predatory attacks on the Romans. (Sall. *Jug.* 80, 88, 97, 99, 103.) Sallust expressly states that a part of the Gaetulians were subject to the kings of Numidia. (*Jug.* 19.) It appears that a body of them took service under Marius, who assigned them lands; and, being placed, at the close of the war, under the authority of Hiempsal, they and their successors remained in the service of the Numidian kings until the Civil War, when we find considerable numbers of them deserting from Juba to Caesar, and employed by him as emissaries to stir up their tribes to revolt. (*Bell. Afr.* 25, 32, 35, 55, 56, 61, 93.) Under Augustus, a portion of the people, who were nominally subject to Juba, king of Mauretania, became so troublesome, that an army was sent against them under the command of Cornelius Cossus Lentulus, who obtained a triumph and the surname of Gaetulicus, A. D. 6. (Dion Cass. lv. 28; Tac. *Ann.* iv. 42, 46, vi. 30; Flor. iv. 12, 40; Juv. viii. 26.) We find some traces of the improved knowledge of the Romans respecting the country in Pliny (v. 1, 4, 8, vi. 31. s. 36, xxi. 13. s. 45, xxv. 7. s. 38, xxxv. 6. s. 26). He includes under the name of Gaetulians some tribes which had also their own specific names, such as the Autololes Gaetuli and the Gaetuli Darae (v. 1). Ptolemy includes Gaetulia under his very extensive appellation of Libya Interior, of which it is the northern part, immediately S. of the Mauretanias. (Ptol. iv. 6. § 15, viii. 13. §§ 1, 2.)

The ancients clearly recognised the distinction between the Gaetulians and the Negro peoples who dwelt S. of them. The former they justly considered as a Libyan people of the same stock as the later settlers on the N. coast who displaced them: their darker colour and fiercer disposition were ascribed to their greater proximity to the torrid zone. ("Gaetuli sub sole magis [quam Libyes] haud procul ab ardoribus," Sall. *Jug.* 18.) They resembled their northern neighbours in their nomade mode of life; and there was a theory which ascribed the origin of the nomade peoples of the Algerian Sahara (for the exact meaning of this phrase see AFRICA) to an intermixture of the Gaetulians with the later Asiatic settlers. On the other hand, the southern Gaetulians mingled their blood with their Negro neighbours, the Nigritae, thus giving origin to a people called the Melanogaetuli, or Black Gaetulians (Μελανογαιτοῦλοι, Ptol. iv. 6. § 16; Agathem. ii. 5).

The Gaetulians are described as men of a warlike disposition and savage manners, living on milk and flesh, clothed with skins (Varro, *R. R.* ii. 11. § 11), part dwelling in tents and others wandering about without settled abodes, and under no settled government (Sall. *Jug.* 18, 19, 80; Plin. x. 73. s. 94). They seem, however, like their eastern neighbours, the Garamantes, to have carried on a portion of the trade of Inner Africa; and their country furnished some highly esteemed productions of nature, especially the purple dye, which was obtained from the shell-fish of the W. coast, and gigantic asparagus. (Ath. ii. p. 62; Eustath *ad Dion Per.* 215; Steph. B. *s. v.*; Mela, iii. 10; Plin. v. 1, vi. 31. s. 36, ix. 60, xxxv. 6. s. 26.)

The Gaetulians appear to be the chief ancient representatives of the great aboriginal people of modern Africa, who call themselves *Amazygh* or *Amazergt* (i. e. *free* or *noble*), and to whom belong the *Berbers* of M. Atlas, as well as the *Tuaricks*, who still wander over the oases of the Great Desert, and are supposed to be the lineal descendants of the Gaetuli. (Ritter, *Erdkunde*, vol. i. pp. 1034, foll.; Hornemann, *Reise*, p. 223.) The ancient Gaetulia included the S. regions of *Marocco*, as well as the W. part of the Great Desert. [P. S.]

GAGAE (Γάγαι: *Eth.* Γαγαῖος), a town on the south-east coast of Lycia, from which the *Gagates lapis* derived its name. (Plin. v. 18, xxxvi. 34; Steph. B *s. v.*; Nicand. *Ther.* 37; Galen, vol. xii. p. 203, ed. Kühn; Hierocl. p. 683, with Wesseling's note.) Ruins at *Aladjá* are regarded by Leake (*Asia Minor*, p. 185, foll.) as marking the site of the ancient Gagae, while Sir Charles Fellowes identifies the place with the modern village of *Hascooe*, where ruins stand upon and between two isolated rocks, now literally covered with walls. (*Discov. in Lycia*, p. 210.) [L. S.]

GAGANA GAGANAE, a station in Dacia, on the road from *Orsova* to the frontier of *Moldavia*, which the Peutinger Table places between Ad Pannoniam and Mascliana. The geographer of Ravenna calls it Gazana. Its position must be sought along the valley of the *Temes*. [E. B. J.]

GALACTOPHAGI. [Hippemolgi; Abii.]

GALACUM, in Britain, mentioned in the 10th Itinerary. [Galava]. [R. G. L.]

GALADRAE. [Eordaea.]

GALAESUS or GALESUS (Γαλαῖσος, Pol.), a small river of Calabria, flowing into the gulf of Tarentum, at the distance of a few miles from that city. It was famed in ancient times for the pastures on its banks, on which were fed the sheep that produced the celebrated Tarentine wool: hence its praises are sung by several of the Roman poets. (Hor. *Carm.* ii. 6. 10; Virg. *Georg.* iv. 126; Propert. ii. 34. 67; Stat. *Silv.* iii. 3; Claudian. *Prob. et Ol. Cons.* 260; Sidon. Apoll. *Carm.* 24. 59.) Polybius tells us it was often called the Eurotas, from the river of that name in Laconia (Pol. viii. 35); but the Galaesus, which was probably its indigenous name, is the only one by which it is mentioned in any other author. Both Livy and Polybius notice it on the occasion of the siege of Tarentum by Hannibal (B. C. 212), who encamped on its banks with his main army to watch and protect the blockade of the citadel. (Pol. *l. c.*; Liv. xxv. 11.) Though its name was so celebrated, the Galaesus was a very trifling stream, and there is considerable difficulty in identifying it. The name is generally given by local antiquarians, and apparently by a kind of local tradition, to a small stream of limpid water which flows into the great port of Tarentum or *Mare Piccolo*, on its N. side, now known as *Le Citrezze;* and, according to Zannoni's map, there still exists in its neighbourhood a church called *Sta. Maria di Galeso*. Both Polybius and Livy, however, give the distance of the Galaesus from Tarentum at 5 miles or 40 stadia, a statement wholly irreconcilable with the popular view; and the stream in question is moreover so small that it is impossible for an army to have encamped on its banks, its whole course being only a few hundred yards in length. Swinburne's supposition that the *Cervaro*—a much more considerable stream, flowing into the *Mare Piccolo* at its head or E. extremity—is the true Galaesus, would certainly accord better with the statement of Polybius and Livy, and at least as well with the poetical epithets of the stream, on which, however, too much stress must not be laid. (Romanelli, vol. i. p. 292; D'Aquino, *Delizie Tarentine*, with the notes of Carducci, p. 49; Swinburne, *Travels*, vol. i. pp. 227, 232; Craven, *Travels*, p. 181.) [E. H. B.]

GALA'RIA (Γαλαρία, Diod., but the older editions have Γαλερία; Γαλαρίνα, Steph. B.: *Eth.* Γαλαρῖνος, Diod.: *Gagliano*), a city of Sicily, which, according to Stephanus, was founded by the Siculian chief Morges or Morgus. (Steph. B. *s.v.*) Though we may infer from this statement (which is evidently meant to connect it with the establishment of the Morgetes in Sicily) that it was a city of great antiquity, we find no mention of it in history till B. C. 345, when it was the only city that ventured to send succours to the Entellini when besieged by the Carthaginians under Hanno. But their small force, amounting to only 1000 men, was intercepted and entirely cut off. (Diod. xvi. 67.) Again, in B. C. 311, Galaria was occupied by the Syracusan exiles under Deinocrates, who were, however, soon after defeated and driven out by the generals of Agathocles. (Id. xix. 104.) No subsequent notice of it is found in history; and as its name does not occur among the Sicilian towns enumerated by Cicero, Pliny, or Ptolemy, it would seem to have ceased to exist under the Roman dominion. It would indeed be natural to suspect that the Galatini of Pliny (iii. 8. s. 14), whom he enumerates among the "populi stipendiarii" of the interior of Sicily, were identical with the Galarini of Diodorus, but that there seems to be some reason to admit the existence of a separate town of the name of Galata. We find the name of this town apparently still preserved in the village of *Galati*, E. of *Militello*, and about 10 miles from the N. coast of the island; while that of Galaria is supposed by Cluverius and Sicilian topographers to be retained by *Gagliano*, on the opposite side of the *Caronia* mountains, and about 6 miles N. of the ancient Agyrium. (Cluver. *Sicil.* pp. 330, 385; Amico, *Lex. Topog. Sic. s. v. Galaria.*) But it does not appear that ancient remains exist at either locality, and the evidence of name alone is inconclusive.

There is nothing in Diodorus to lead us to suppose that Galaria was a Greek city, and the contrary seems to be implied by Stephanus; but there exists a coin of very early date, and of pure Greek style, which bears the inscription ΓΑΛΑ., and must certainly be referred to this city. On the reverse it has a sitting figure of Zeus, with the epithet ΣΩΤΕΡ in ancient characters. (It is figured by T. Combe, *Num. Mus. Brit.* pl. 4. fig. 6.) [E. H. B.]

GALATA. [Galaria.]

GALA'TIA (Γαλατία, Γαλατική, Gallograecia). The history of the establishment of this province is connected with the emigration of Gallic nations to the East. This emigration is an obscure subject, but we may collect enough from the extant authorities to establish the main facts.

Strabo (p. 187) says that the Tectosages, who occupied part of Gallia adjacent to the Pyrenees and extended along a portion of the north side of the *Cévennes*, were once a powerful people, and had a large population. Domestic dissension drove some of them from home, who were joined by others from various tribes; and these were a part of the Galli who occupied Phrygia, bordering on Cappadocia and the Paphlagonians. As a proof of this, he alleges

the fact of the Galatians about the city Ancyra being named Tectosages. There were two other Gallic tribes in Galatia, named Trocmi and Tolistobogii; and he infers that they also came from Gallia, because they were akin (σύμφυλον) to the Tectosages; but he cannot say what parts the Trocmi and Tolistobogii came from, for he had not heard of any Trocmi or Tolistobogii in his time who dwelt either north of the Alps, or in the Alps, or south of the Alps. Justin (xxiv. 4), after mentioning the Gallic invaders of Italy who took Rome, says that other adventurers passed into Illyricum and settled in Pannonia. They subdued the Pannonians, and for many years carried on war with the neighbouring nations. The Galli, then, according to these authorities, spread along the east side of the Adriatic, and along the valley of the Danube. When Alexander (B. C. 335) made his expedition over the Haemus to the banks of the Danube, he had an interview with some Celtae, who lived about the Adriatic. This is on the authority of Ptolemaeus, the son of Lagus. (Strab. p. 301.) Arrian (*Anab.* i. 4), who also used the work of Ptolemaeus, speaks of the Celtae on the Ionian gulf sending an embassy to Alexander when he was near the Danube. This appears to be the first time that the Hellenic and the Gallic nation saw one another beyond the limits of Gallia.

The Galli seem to have been established in the neighbourhood of Macedonia during the troublesome times that followed Alexander's death, or probably still earlier. At the close of the reign of Ptolemaeus in Macedonia, who is named Ceraunus, a band of Galli, under a leader Belgius or Bolgius, invaded his kingdom. The king despised the invaders, because they offered to retire for a sum of money; but his army was totally defeated by them, and he was taken prisoner. The barbarians cut off the king's head, and carried it about on a spear to terrify their enemies (B. C. 280). The Macedonians shut themselves up in their cities, and made no resistance; but when all hope seemed lost, Sosthenes, a Macedonian noble, collected a force, and for the time saved his country from further ravage. (Justin, xxiv.; Pausan. i. 16. § 2, x. 19. § 7.) But another Gallic chieftain, named Brennus,—probably a title of rank, and not a name,—entered Macedonia with a large force, defeated Sosthenes, and ravaged the country. (Justin, xxiv. 6.) Either in the same campaign, or perhaps in another (B. C 279), Brennus led the Galli to plunder Delphi, for the fame of this temple's wealth excited his cupidity. The Galli were an immense force, under several commanders; but they could not agree, and a large division under Leonorius and Lutarius,—as the Greeks and Romans write the names,—separated from Brennus, and, taking their way through Thrace (Liv. xxxviii. 16), reached Byzantium.

Brennus, with several commanders, one of whom the Greeks named Acichorius, led his savage troops through Thessaly to the pass of Thermopylae, where the Greeks under Leonidas had tried to stop the Persians about 200 years before. The Greeks, who had been weakened and disunited since the establishment of the Macedonian supremacy, were roused by a danger that threatened their very existence. A large force from the states north of the Isthmus, and some troops from Macedonia and Asia, reached Thermopylae while the Galli were still in Thessaly, and a detachment was sent forward to destroy the bridges over the Sperchius, and to dispute the passage of the river. The Gaul, who had the talents of a general, seeing the enemy opposite to him and a rapid river between, made no attempt to cross in that part, but he got over a large body of troops by night near the lower part of the river, and prepared to force the defile of Thermopylae. He was driven back in disorder and with great loss. The Athenians distinguished themselves most of all the Greeks on this day.

The Gallic chief now sent off a division to ravage Aetolia, in order to detach from the confederate army of the Greeks the Aetolians, who had left their homes in a numerous body, to repel the invaders at Thermopylae. The barbarians under Combutis and Orestorios (the second seems to be a Greek name) committed dreadful devastation in Aetolia, though they were at last compelled to retreat with great loss. (Pausan. x. 22.) Less than half of them returned to the Gallic camp at Thermopylae. Brennus at last made his way to Delphi, with the assistance of the Aenianes and Heracleotae, through the country of the Aenianes, by the very pass by which Hydarnes the Persian led his troops in the invasion of Xerxes. (Herod. vii. 215; Pausan. x. 22. § 8.) The story of the defeat of Brennus at Delphi is told with many miraculous circumstances; but it seems that the weather greatly helped the Greeks in defeating the barbarians, who made their retreat with difficulty, and amidst dreadful sufferings. Only a few out of so many got back to their camp at Heracleia, where Brennus put an end to his life. Pausanias says that none of the Galli escaped. Justin contradicts himself, for he says in one place (xxiv. 8) that not one escaped, but in another place (xxxii. 3), following, as we may suppose, a different authority, he says that some of the Galli made their way into Asia, and some into Thrace. He also adds that the Tectosages returned to their city Tolosa (*Toulouse*), carrying with them the gold and silver that they had got in their marauding expeditions. Strabo (p. 188) mentions the tradition of the Tectosages returning with their booty to Tolosa, but he does not believe the story. It is possible that some of these Galli did effect a retreat; for the Galli Scordisci, who were settled at the confluence of the Save and the Danube, were said to be a remnant of them (Justin, xxxii. 3; Strab. p. 293, 313), and to be mingled with Thracians and Illyrians. Caesar was told that Volcae Tectosages once settled in Germany about the Hercynian forest (*Bell. Gall.* vi. 24), and continued to maintain themselves there to his time. But instead of concluding that a remnant of the Tectosages returned from the expedition of Brennus, and settled in the basin of the Danube, it seems more likely that their settlements east of the Rhine were made by emigration from Gallia; and it may be that the Tectosages in the army of Brennus did not come direct from Gallia, but from some of the settlements already made beyond the limits of Gallia. Polybius says that some Galli under Comontorius, having escaped the danger at Delphi, reached the Hellespont, and settled in the neighbourhood of Byzantium. The Byzantines paid them a heavy tribute, until the Thracians, who had been subdued by the Gallic invaders, by a change of good fortune succeeded in destroying them. (Polyb. iv. 46.)

Leonorius and Lutarius escaped the misfortunes of Brennus by having taken a different road, as already observed, and through a less difficult country. Livy (xxxviii. 16) does not mention the arrival of Comontorius at Byzantium. Leonorius and Lutarius

levied contributions along the coast of the Propontis, and having seized Lysimachia by treachery, they got possession of all the Thracian Chersonesus. They saw the tempting coast of Asia separated from them by a narrow sea, and they applied to Antipater, the Macedonian, who had then the command of these coasts, to supply them with ships. While waiting on the shore of the Hellespont, the chieftains quarrelled, and Leonorius with the larger part of the Galli returned to Byzantium. Lutarius seized two decked vessels and three boats, which Antipater had sent to the Hellespont, nominally to negotiate with the Gaul, but in fact to watch him. In a few days Lutarius conveyed all his men over the straits. Shortly after, Nicomedes I., king of Bithynia, carried Leonorius and his men over the Bosporus, to help him in his war against his brother Zyboetes. The terms on which the Galli were to serve him were fixed before they left Europe. The Gallic chief promised every thing: he only wanted to get across the strait. (Memnon, *ap. Phot.* c. 20). This disgraceful bargain, which brought so much misery on Asia, was made B. C. 278. There were seventeen chieftains in the Gallic army, of whom Leonorius and Lutarius were the chief (Memnon); from which we may collect that the two principal chieftains were reconciled after they reached Asia, which Livy expressly states (xxxviii. 16). Nicomedes, with the help of the Galli, had the superiority over his brother, and secured the kingdom of Bithynia. During this war, in which it seems that many of the Bithynians perished, the Galli divided among themselves the booty, and probably they had the women, for it is not said that they brought any with them. (Memnon, *ap. Phot.* c. 20.) Justin states (xxv. 2) that Nicomedes gave the Galli part of his conquests, and that they thus got the country called Gallograecia. But they were not permanently settled in Galatia so early, if we follow Livy (xxxviii. 16) and other authorities. After seating Nicomedes on his throne, they set out on a marauding expedition, 20,000 in number, of whom not more than half were armed. All the authorities agree in making three divisions of these Galli, Tolistobogii or Tolistoboii, Trocmi or Trogmi, and Tectosages or Tectosagi. They struck such terror into the people west and north of the Taurus, that all submitted to their demands. They divided the country among them. The Trocmi had the shores of the Hellespont on which to levy contributions; the Tolistoboii took Aeolis and Ionia; and the Tectosages, the central parts of Asia. Their fixed abode, however, says Livy, was about the Halys; but it is hardly consistent to speak of their having yet a settled habitation, when they were rambling about Asia. The Ilium of the historical time was one of the places that the Galli occupied in the Troad, but they soon left it, as Hegesianax says (quoted by Strabo, p. 594), because it was unwalled. It is quite uncertain to what time this event must be referred. No record has been left of the miseries inflicted by the barbarians on the unwarlike Greeks of Western Asia. A few lines in the Anthologia tell us that Miletus was one of the cities that suffered.

The Galli at last found an enemy who resisted them, Antiochus Soter, king of Syria. Lucian (*Zeuxis*, vol. i. p. 838, ed. Hemst.) tells circumstantially, whether truly it is hard to say, the story of this Antiochus fighting a desperate battle with the Galli and defeating them. Indeed, it was owing to this victory that Antiochus took or had the title of Soter, or Saviour (Appian, *Syriac.* c. 65), an appellation which shows that his victory was thought no small affair. It is said, however, by several authorities, that this Antiochus fell in battle against the Galli, B. C. 261; but this must have been in some battle subsequent to his victory, if it is true that he gained his name of Soter from his success against these barbarians. The kings of the East in their wars with one another often employed the Asiatic Galli. (Justin, xxv. 2). The second Ptolemaeus, king of Egypt, had some of them in his pay, but they formed a design to seize on the country, and were all cut off by a stratagem. In the dispute between the two Syrian kings, Seleucus Callinicus and his brother Antiochus Hierax, Antiochus employed Gallic mercenaries, who, after gaining him a victory, compelled him to ransom himself, and to form an alliance with them. (Justin, xxvii. 2.) And there were Galli in the battle of Raphia between Antiochus Magnus and Ptolemaeus Philopator, B. C. 217.

Attalus, the ruler of the petty state of Pergamum, was the first of the Greek kings who effectually checked the licence of the Galli. He defeated them in a great battle, and thereupon assumed the title of king. (Strab. p. 624; Polyb. xviii. 24; Liv. xxxiii. 21.) The reign of Attalus was from B. C. 241 to B. C. 197. It was the glory of Attalus that he was the first prince to refuse to pay tribute to the Galli, and that he confined them within the limits of that part of Asia which is called Galatia. (Paus. i. 8. § 1.)

This invasion of Asia by the Galli, and the victory of Attalus over them, were foretold in the prophecies of Phaennis, a full generation before the events happened. (Paus. x. 15. § 2.) It must have been a great necessity which compelled Attalus, in his war with Achaeus, to invite a body of Tectosages (the text of Polybius, v. 77, has Αἰγοσαγεῖς) to cross the Hellespont to assist him. The Galli came with women and children. Whether this was a fresh body of emigrants to the East, or a part of those who had settled in Thrace, as mentioned before, is not stated. Attalus employed these mercenaries against the cities of Aeolis, which had joined Achaeus from compulsion. While Attalus was encamped on the Macistus an eclipse of the moon took place, which the Galli took to be an unfavourable sign; and they were also wearied of moving about with their wives and children, who followed in the carts. Accordingly they refused to march on. Attalus, being afraid of the treachery of his hirelings, and, unlike the king of Egypt, too scrupulous to destroy the people whom he had himself invited into Asia, left them on the Hellespont, with fair promises. The consequence was what might have been foreseen. The Galli began to plunder the cities along the Hellespont, and nothing is said of Attalus checking them. They attacked Ilium, the siege of which was raised by the people of Alexandria in Troas, and the Galli were driven out of the Troas. The barbarians then seized Arisba near Abydus, which they made their headquarters, and from thence annoyed the neighbouring cities, until Prusias I., king of Bithynia, defeated them in a regular fight, B. C. 216. Nearly all their children and women were massacred in their fortified place; and the soldiers of Prusias had the moveables for their booty. Thus Prusias, says the historian (Polyb. v. 111), released the Hellespontine cities from great alarm and danger; and he left a noble warning to posterity that barbarians should not rashly pass over from Europe into Asia.

The three tribes, when permanently settled, occupied part of the country between the Sangarius and the Halys. Memnon incorrectly says that the chief city of the Trocmi was Ancyra; of the Tolistoboii, Tavia or Tavium; and of the Tectosages, Pessinus. (Memnon, *ap. Phot.* c. 20.) The complete reduction of the Asiatic Galli was reserved for their hereditary enemies the Romans. Though they had now a country of their own, they still plundered their neighbours, and were a formidable power to the time of the wars of Antiochus the Great with the Romans. They fought on the side of Antiochus in the great battle at Magnesia ad Sipylum, in which the Syrian king was defeated (B. C. 190); and the consul Cn. Manlius, in B. C. 189, made this a pretext for invading their country. But his real grounds were better than his pretext. He saw that the Romans could not secure their power in Western Asia, if the Galli were not subdued. He led his troops from Ephesus by a circuitous route into Gallograecia, as Livy calls it (xxxviii. 12). The consul, after entering Phrygia, passed by Synnada, Beudos vetus, Anabura, and the sources of the Alander to Abbassus, which was on the borders of the Tolistoboii, where he halted and encouraged his men. He then marched through the woodless tract [AXYLOS], crossed the Sangarius, and reached Gordium. He was accompanied in this expedition by Attalus, the brother of Eumenes, king of Pergamum, who was now at Rome.

The Galli had enemies in their own country, the native Phrygians. The priests of the Mater Magna from Pessinus met the consul with sacerdotal pomp, and declared that the goddess had promised the Romans victory. The Galli had moved off with their women, children, flocks, and carts to the mountains. The Tolistoboii occupied a strong place on the range of Olympus; the Tectosages chose another mountainous spot named Magaba; and the Trocmi, leaving their wives and children to the care of the Tectosages, turned to help the Tolistoboii, against whom the consul was marching. Manlius, who was both bold and cautious, looked at the ground well before he attacked such desperate fighters. He had a great superiority in all munitions of war, and chiefly in light troops, who could annoy the enemy at a distance. The entrenchment of the Galli was stormed and the ground was covered with their dead bodies, whether 40,000 or a smaller number the authorities do not agree, and it is not material. An immense number of men, women, and children were made prisoners. (Liv. xxxviii. 18—23; Florus, ii. 11.)

The consul now marched to Ancyra to attack the Tectosages, who were 10 miles from that town. While the Galli were amusing him with negotiations, an event happened, for which there is better evidence than for most romantic stories; and it gives us some insight into the character of these Galli. Chiomara, the wife of a Gallic prince, Ortiagon, was among the prisoners, and she was the captive of a Roman centurion. The man not being able to corrupt her chastity, used violence. But lust was not his only passion. He was greedy of money; and he accepted the offer of a large ransom. According to agreement, he went alone with the woman to the banks of a river, on the opposite side of which the Gallic friends of Chiomara were ready with the money. The Galli crossed the river, gave the money, and received the woman; and while the greedy Roman was counting it, one of them, on a signal given by Chiomara in her own language, cut off the centurion's head. She wrapped up the bloody head in her clothes, and on meeting her husband, threw it down before him. She told her story, and her husband exclaimed, "My wife, fidelity is a glorious thing." "True," she replied, "but still more glorious that there should be only one man living who has known me." The historian Polybius says that he talked with Chiomara at Sardis, and he was amazed at her noble spirit and her good sense. We may perhaps infer that Chiomara had learned the Greek language in Galatia. (Liv. xxxviii. 24; Plut. *Moral.* ii. p. 58, Wytt.; Valer. Max. vi. 1. § 2.)

The treachery of the Tectosages, according to the Roman historian, stopped the negotiations. They only wanted to get time to send their women and children, and moveables, beyond the Halys; and they made an attempt to seize the Roman consul. Manlius carried the strong position of the Tectosages as he had done that of the Tolistoboii, and this victory ended the campaign. As the cold weather was coming on, the consul retired after giving the Galli orders to see him at Ephesus. In the winter there came to Manlius, who was now proconsul, the year of his consulship having expired, embassies from all the states west of the Taurus. They brought him golden crowns, and their thanks for delivering them from the incursions of the Galli. The Gallic envoys were told that they must wait the arrival of king Eumenes, who was still absent, before their affairs could be settled. It was on the banks of the Hellespont, a country which the Galli well knew, that the Roman proconsul dictated his terms to the Gallic chiefs, who had been summoned there: they were to keep the peace with Eumenes, to give up wandering about, and to confine themselves within their own limits. (Liv. xxxviii. 40.) The humiliation of these terrible invaders, who for a century had kept Western Asia in alarm, made the Roman name known in the East, and, even more than their victory over Antiochus the Great, contributed to their future dominion in Asia. Judas Maccabeus, the heroic leader of the Jews, heard of the fame of the Romans: "It was told him also of their wars and noble acts which they had done among the Galatians, and how they had conquered them, and brought them under tribute" (Macc. i. 8. v. 2). The commentators suppose that the Galli of Europe are meant here, and the context is consistent with this explanation; but the Jews could not be ignorant of the defeat of the Asiatic Galli, which so soon followed that of Antiochus, "the great king of Asia" (Macc. i. 8. v. 6); and we must conclude that the Galatians of this chapter included the Galatians of Asia, whom the Jews had seen or heard of in the armies of the Egyptian and Syrian kings, and whose horrible barbarities were known through all the East. Manlius did not obtain a triumph at Rome for his great victories without opposition from the majority of the ten Roman legati who had attended him to assist in the settlement of Asia after the defeat of Antiochus. They objected that he had no commission from the senate or the Roman people to carry on war with the Galli, and they meanly attempted to disparage his generalship and the enemies whom he had subdued. Manlius defended himself in a vigorous speech, of which Livy (xxxviii. 47) has given the substance, and he got a triumph. In the procession he displayed gold and silver crowns of great value, and an immense amount of coined money, probably the gift of the grateful Asiatic cities, for Manlius had maintained strict discipline, and he is not accused of plundering. Gallic arms and Gallic spoils were carried

in chariots, for it was called a Gallic triumph; and fifty-two Gallic chieftains walked in front of the triumphal car. (Liv. xxxix. 6.) Whether the Galli would have ever established a Gallic kingdom in Asia, is doubtful, for the nation, though it has carried its arms into all parts of the world, has never yet been able to subsist as a nation out of the limits of Transalpine Gallia. But Manlius did not give these Galli an opportunity of trying the experiment; and he did a good work in stopping the career of these merciless plunderers.

Though the Galli no longer ravaged Asia, they were still troublesome to Eumenes, king of Pergamum, whose family they had no reason for liking. In B. C. 167 Attalus, the brother of Eumenes, was sent to Rome to complain of a Gallic rising (tumultus). The Romans sent commissioners into Asia to expostulate with the Galli; but P. Licinius, who had an interview with a Gallic chieftain, Solovettius by name, at Synnada, reported that his remonstrances only increased the insolence of the Gaul. (Liv. xlv. 19. 34; Polyb. xxx. 1.) Livy remarks that it seemed strange, when the words of Roman commissioners had so much weight with powerful kings like Antiochus and Ptolemaeus, that they had no weight with the Galli. The Romans had their reasons, which may be easily conjectured, for leaving Eumenes to deal with the Galli; and it seems that he was successful. (Diod. *Excerpt.* xxxi.) The fragments of Polybius show that the Romans were jealous of Eumenes, who had great talents, and they did not choose that he should reduce the Galli under his dominion. One passage (xxxi. 2) states that certain ambassadors of the Galli, who came to Rome, were told that they should be independent, if they would stay at home, and not move with any force beyond their own boundaries.

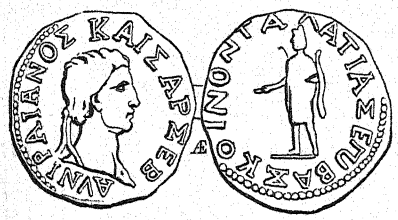
In the wars of Mithridates against the Romans, the Galli were again in arms, both on the side of the king and of the Romans. There were Asiatic Galli in the great army which Mithridates sent into Greece under the command of Archelaus. This army was defeated by L. Sulla at Chaeroneia (B. C. 86). Mithridates, fearing that he should be deserted by the Galli if Sulla should come into Asia, murdered all the Gallic tetrarchs, both those who were about him as friends, and those who had not joined him. He murdered also their women and children. Some of the Galli were killed at a feast to which the king invited them, and the rest in various ways (Appian, *Mithrid.* c. 46); three only of the chiefs escaped. Mithridates seized all the property of the men whom he had murdered, put garrisons in the towns, and set over them as governor Eumachus, probably a Greek. He could not, however keep Galatia, but he kept the money that he had got. The Galli served Cn. Pompeius in the subsequent wars against Mithridates, and Pompeius rewarded the tetrarchs by securing them in their Galatian dominions. (Appian, *Syriac.* c. 50, *Mithrid.* c. 114.) One of them was Deiotarus, who had done good service in the war by defeating Eumachus. (Appian, *Mithrid.* c. 75; Liv. *Epit.* 94.) Mithridates kept some Galli about him to the last; and, in the hour of his extreme need, one of them named Bitoetus, a genuine Gallic name, did the king the last service that he could, by killing him at his earnest request, B. C. 63. (Appian, *Mithrid.* c. 111; Liv. *Epit.* 102.) Pompeius, in settling the affairs of Galatia, extended the Gallic limits, for he gave Mithridatium, a town in the former kingdom of Pontus, to a Gallic chief named Bogodiatorus, whose name, with a slight variation, appears on a silver coin. (Strab. p. 567.) Pompeius gave to Deiotarus part of Gadelonitis in Pontus, an excellent sheep country, and the parts about Pharnacia and the Trapezusia, as far as Colchis and the Less Armenia, of all which countries Pompeius made him king; and Deiotarus kept also his paternal tetrarchy of the Tolistoboii. (Strab. p. 547.) Galatia and its chieftains were now under Roman protection, and Deiotarus was involved in all the troubles that followed the wars of Caesar and Pompeius. He was with Pompeius at the battle of Pharsalia (B. C. 48), and escaped with him. Cicero, in an extant oration, pleaded before Caesar at Rome the cause of Deiotarus, who was charged with a treacherous design against Caesar's life when Caesar was in Galatia. After all his reverses Deiotarus died a king; and was succeeded by his son Deiotarus, who went to Actium on the side of Antonius, but he had the Gallic prudence to go over to Octavius before the battle, in company with Amyntas (B. C. 31). Amyntas was one of the tributary Asiatic kings that M. Antonius set up (B. C. 39). He had Pisidia first, and in B. C. 36 he received from the same king-maker Galatia, with a part of Lycaonia and Pamphylia (Dion Cas. xlix. 32), and he was confirmed in these possessions by Augustus, B. C. 31 (Dion, li. 2). He died B. C. 25, having held, besides Galatia, Lycaonia, and Isauria, the south-east and east part of Phrygia, Pisidia, and Cilicia Trachea. (Strab. pp. 568, 569, 571, 577, 671.) Amyntas was one of the great flock-masters of Asia Minor. He had above 300 flocks on the high, waterless table-lands of Lycaonia. Plutarch (*Ant.* cc. 61, 63) calls Amyntas king of the Lycaonians and Galatians at the time of the battle of Actium; and he also calls Deiotarus a king. This is not inconsistent with other authorities, if we suppose that Deiotarus had his father's kingdom that was beyond the limits of Galatia, and that Amyntas had Galatia, or a great part of it, and the title of king of the Galatians. On the death of Amyntas, Augustus made a Roman province of Galatia, Lycaonia, Isauria, East and South Phrygia, and Pamphylia. The extent of the province of Galatia to the south is expressed by Pliny saying that Galatia reaches both to the Cabalia of Pamphylia and the Milyes, who are about Buris and the Cyllanticus and Orcandicus tract of Pisidia (*H. N.* v. 32). But the Galatia of Ptolemy is still more extensive (v. 3), being bounded on the west by Bithynia and part of Phrygia, on the south by Pamphylia, and on the east by a part of Cappadocia; it thus extended from the Euxine to the Taurus. The sea-coast of Ptolemy's Galatia commences after Cytorus, which is in Bithynia, and extends to the mouth of the Halys and to Amisus. Sinope is within these limits. The three Gallic tribes and their three several cities assumed, under Augustus, the names Σεβαστηνοί and Σεβαστή: the people of Pessinus were named Σεβαστηνοὶ Τολιστοβώγιοι: those of Ancyra, Σεβαστηνοὶ Τεκτοσάγες; and those of Tavium, Σεβαστηνοὶ Τρόκμοι. The first Roman governor of this Galatia was M. Lollius, who governed it as the legatus of the emperor, with the title of pro-praetor. This province of Galatia is supposed to have continued in this form to the time of Constantine. The metropolis of the province was Ancyra; and Termessus and Sagalassus were free towns.

The Romans established in Galatia Proper the colony of Germe, which is known both from Ptolemy

and its coins. Ptolemy also has a place called Claudiopolis in the country of the Trocmi.

The country properly called Galatia lay south of the range of Olympus. The limits can only be approximated to by the enumeration of the towns. The Tolistoboii, the most western tribe, made Pessinus, near the left bank of the Sangarius, their chief town. There were also in their territory, Tricomia, the Roman colony Germe, and Vindia; Abrostola, Amorium on the road to Laodicea Catacecaumene; and a place Tolosochorion, a compound of a Gallic and a Greek word, the first part of which looks like the name Tolosa. The Tolistoboii probably occupied the principal part of the country between the Alander, a branch of the Sangarius, and the Sangarius up to its junction with the Alander. They bordered on Bithynia and Phrygia Epictetus. Pliny (v. 32), besides the Tolistoboii, mentions the Gallic tribes Voturi and Ambitui as settled in this part. They were probably the names of tetrarchies. The Tectosages, who were between the Sangarius and Halys, had the old town of Ancyra for their chief place. [ANCYRA.] Pliny mentions the Teutobodiaci as a Gallic tribe, occupying this country with the Tectosages. There were few places in the territory of the Tectosages, and they are insignificant. There were several roads from Ancyra, but the names in the Itineraries are apparently so corrupted, that it is difficult to say if we can discover a Gallic element in them. Ptolemy has a list of places among the Tectosages, and among them Corbeus [CORBEUS]: Aspona [ASPONA] is mentioned by Ammianus. The Trocmi seem to have been partly on the east side of the Halys: they bordered on Pontus and Cappadocia; and Strabo says that their country was the most fertile part of Galatia. Their chief town was TAVIA or TAVIUM. There were also in this territory Mithridatium, already mentioned, and Danala, where Cn. Pompeius and L. Lucullus had an interview, before Lucullus gave up the command to Pompeius in the Mithridatic War. Ptolemy has a list of unknown Trocmic towns.

One undoubted Gallic name appears in the Itineraries on the road from Ancyra to Tavium, Ecobriga, a place at the ford or bridge of some river.



When the Galli settled in the country which was called from them Galatia, or Gallograecia, there were Phrygians in it, Greeks, Paphlagonians, and probably some Cappadocians. The Paphlagonians were on the north of Galatia. The Phrygians were the most numerous race, and occupied the west and centre of Galatia. The Greeks probably were not in any great numbers in Galatia till after the time of Alexander; but they must have been numerous at the time of the Gallic occupation, for their language became the common language of the country. The three Gallic tribes had each their territory, as we have seen; and each tribe was divided into four divisions, which were called tetrarchiae. Plutarch (*de Virt. Mul.* vol. ii. Wytt.) mentions the Tosiopi as forming a tetrarchy, that is, one of the subdivisions of the tribes. Each tetrarchia had its tetrarch, and one judge and one general, both subordinate to the tetrarch; and two lieutenant-generals. The council of the twelve tetrarchs was a body of 300 men, who met at Drynaemetum. [DRYNAEMETUM.] The council were judges in cases of murder; but the tetrarchs and the judges heard all other cases. "This," says Strabo (p. 567), "was the old constitution; but in my time the power had come into the hands of three rulers, then two, and finally one, Deiotarus, who was succeeded by Amyntas." He seems to mean the elder Deiotarus, and to take no notice of the younger, whose Galatian kingship is a doubtful matter.

The Galli probably at first, after their fashion, treated the Phrygian worship with contempt. At any rate we have seen that at the time of Manlius' invasion the Phrygian hierarchy turned against the Galli. The Romans and the Phrygians were already acquainted, for in the Second Punic War the Romans sent five commissioners to Attalus, king of Pergamus, who politely conducted them to Pessinus in Phrygia, where they got what they wanted,—a large stone. But this stone was the Mother of the Gods, and the deliverance of Italy depended on her being brought to Rome. (Liv. xxix. 10, &c.) We are not told how the Phrygians were persuaded to part with such a treasure; but the transaction, which was a friendly one, was well adapted to make them favour the Romans, especially as the Galli were intruders. Caesar says of the European Galli (*B. G.* vi. 15), "Natio est omnis Gallorum admodum dedita religionibus"; and the Asiatic Galli got a taste for the Phrygian worship, as the temples were rich, and priesthood was profitable. Cicero (*pro Sestio*, c. 26) mentions one Brogitarus, who was the chief priest of the Mother of the Gods at Pessinus; and he had a good title to the place, for he bought it: also another Gaul, Dyteutus, in the time of Augustus obtained the valuable place of chief priest at Comana [COMANA]. We also read of Camma, a priestess of Artemis, a deity held in great veneration by the Galli. Camma is one of Plutarch's noble women (*de Virt. Mul.*) of whom he tells the tragic story of her fidelity to her husband, and her vengeance on his murderer. The nation had its wonderful women in Asia as it has had in Europe. The Galli, the richer at least, adopted with Phrygian and Greek superstitions the language of the Greeks, even before the time of Augustus. Deiotarus had a Greek wife whose name was Stratonice, and the evidence of coins and inscriptions fully establishes the fact of the Galli being Hellenised; which indeed we might infer from their name of Gallograeci, if there were no other evidence. Yet we have the testimony of Hieronymus, who visited Galatia in the fourth century of our aera, in his preface to his Commentary on the Epistle to the Galatians, that the Galli still kept their own language, which was almost the same as the language of the Treviri or the people of Trèves; and Hieronymus, who was a good linguist, and had lived at Trèves, was a competent judge of this. Thierry (*Histoire des Gaulois*), who cites this passage of Hieronymus, misinterprets it however, when he infers from it that the Gallograeci did not use the Greek language. He also derives from this passage a confirmation of his hypothesis that the Tolistoboii and the Volcae Tectosages of Narbonensis were Kymri, and that the Volcae Tectosages were Belgae, and came to the south of Gallia from the north.

The Apostle Paul visited Galatia after it had been made a Roman province, and established churches there. (*Ep. to the Galatians*, i. 2.) His first visit is mentioned in the Acts of the Apostles, xvi. 6; and his second, in xviii. 23. In his epistle to the Galatians he does not speak of more than one visit, from which some commentators derive very unfairly the conclusion that he wrote the epistle in the short interval between the two visits. This inquiry, however, does not belong here. It is generally assumed that St. Paul in his epistle addresses the

Galli or Gallograeci; but there is nothing in the epistle from which this can be inferred. In the Acts of the Apostles, the term Galatia is indeed used in its limited and proper sense, and not in the sense of a Roman provincial division; for Lycaonia is also mentioned in the Acts, and Pisidia. There is no doubt, then, that the Epistle to the Galatians is addressed to the inhabitants of Galatia Proper; but to the Greek inhabitants of Galatia and perhaps the Hellenised Galli, who were the wealthier and better instructed part of the Galli. For this Gallic constitution of Galatia was evidently an aristocratic constitution, like the political systems of Gallia Transalpina, in which the common sort went for nothing, "paene servorum loco habentur" (*B. G.* vi. 13). The bulk of the Galli of Asia, the herdsmen, shepherds, and tillers of the land, probably knew no language except Gallic; and it is clear that the epistle was not addressed to such people.

The student may read with profit Amedée Thierry's *Histoire des Gaulois*, if he will always turn to the ancient authorities, which will set the author right, when he gets wrong. [G. L.]

COIN OF GALATIA.

GALAVA, in Britain, mentioned in the 10th Itinerary, which runs —

Iter a Clanoventa Mediolano M. P. cl. (*sic*).

Galava	-	M. P.	xviii.
Alone	-	„	xii.
Galacum	-	„	xviii.
Bremetonaci	-	„	xxvii.
Coccio	-	„	xx.
Mancunio	-	„	xvii.
Condate	-	„	xviii.
Mediolano	-	„	xviii.

For the elements of uncertainty in this Itinerary see CLANOVENTUM. In the Monumenta Historica Britannica *Galacum=Appleby, Whallop Castle*, or *Kendal*, and *Galava*=either *Old Town* or *Great Keswick*. [R. G. L.]

GALEPSUS (Γαληψός, Herod. vii. 122), a town on the N. coast of the peninsula of Sithonia, which Colonel Leake (*Trav. in North. Greece*, vol. iii. p. 155) takes to have been the same place afterwards called PHYSCELLA (Plin. iv. 10; Pomp. Mela, ii. 3. § 1), a distinction which was required, as there was another Galepsus at no great distance.

2. A colony of Thasos, on the coast of Thrace, which was taken by Brasidas after the capture of Amphipolis (Thuc. iv. 107), and retaken by Cleon in the ensuing year. (Thuc. v. 6.)

Livy (xliv. 45) relates that Perseus, when flying from the Romans, after the defeat at Pydna, sailed from the mouth of the Strymon to Galepsus on the first day, and on the second to Samothrace, which renders it probable that it was one of the most remarkable harbours of the intervening coast, which data can only be reconciled at the harbour of *Neftér*, which is situated 2 hours to the S. of *Právista*, just within the Cape forming the W. entrance of the Gulf of *Kavála*, where still remain the ruins of a Greek city, now known by the names of *Paleópoli*, or *Nefterópoli*, or *Dhefterópoli*. (Leake, *Trav. in North. Greece*, vol. iii. p. 178.) [E. B. J.]

GALIBA (Γάλιβα ἄκρα, Ptol. vii. 4. § 3), a promontory on the northern coast of the ancient Taprobane, or *Ceylon*, at no great distance, as it would seem, from *Cory Island*. The name is also connected with those of certain mountains in the immediate neighbourhood of the promontory, called Γάλιβα ὄρη (Ptol. vii. 4. § 3), and the inhabitants of which were called Galibi (Γάλιβοι, Ptol. vii. 4. § 9). From the Galibi Montes, according to Ptolemy (vii. 4. § 8), flowed down two rivers to the sea, the Phasis and the Ganges,—a statement which, as regards the latter river, is erroneous. In the plains at the base of these mountains Ptolemy states that there were elephants in his day, as there are now. [V.]

GALIBI. [GALIBA.]

GALILAEA. [PALAESTINA.]

GALINDAE (Γαλίνδαι), mentioned by Ptolemy (iii. 5. § 21) in connection with the Venedae, Sudini, and Stavani. There can be but little hesitation in identifying the names (as Zeuss has done) with that of the Galinditae of *Dusberg* and the Prussian antiquarians; whose locality was the tract called Galanda, Galandia, Galendia, Golentz, &c. in East Prussia, on the Spirding Lakes, and in contact with that of the *Sudo*-witae the equivalents of the *Sudini*. Galindia was one of the eleven divisions of Prussia, that is, of Prussia before it became German; its language being that of the *Old* Prussians, a branch of the Lithuanic. The name of the Galindae is said to occur on the coin of the emperor Volusianus (A. D. 253) which has been the subject of so much controversy. (Vaillant, *Num. Imp. Rom.* vol. ii. p. 317; Eckhel, vol. vii. p. 369; *Mém. de l'Acad. des Inscr.* vol. xxviii. p. 606.)

Jornandes (*de Get.* 23) enumerates this people, under the name of GOLTHES, among the northern tribes who were vanquished by Hermanric, king of the Ostrogoths. [R. G. L.]

GALLAE'CIA or CALLAECIA (Καλλαικία, Καλαικία: *Eth.* Καλλαϊκοί, Callaïci, Callaeci, Gallaeci: *Galicia* and part of *Portugal*), a large district in the extreme NW. of Hispania Tarraconensis, N. of LUSITANIA, and W. of the ASTURES and VACCAEI, its boundaries being on the S. the river Durius (*Douro*), on the NE. the river Navia or Navilubio (*Navia*), and on the E. the mountains of the Astures; so that it corresponded almost exactly to the modern *Gallicia*, with the addition on the S. of the Portuguese provinces of *Entre Douro et Minho* and *Tras os Montes*, and, on the E., of small portions of *Asturias* and *Leon*. Sometimes a wider extent was assigned to the country, so as to include the Astures (Dion Cass. xxxvii. 53; Plin. iii. 3. s. 4, xix. 1. s. 2), and even, as used by late writers, the whole of Cantabria (Oros. vi. 21; Isid. xiv. 15; Zosim. iv. 24). In the earliest times, however, Gallaecia, or at least its S part, was reckoned a part of Lusitania. (Strab. iii. p. 152). The people were divided into two great tribes, the CALLAÏCI (or GALLAECI) BRACARII (Καλλαϊκοὶ οἱ Βρακάριοι), and the CALLAÏCI (or GALLAECI) LUCENSES (Κ. οἱ Λουκήνσιοι), besides the ARTABRI, who, though geographically belonging to the country, were regarded as a separate people. The Callaïci Bracarii received their name from their chief city, BRACARA AUGUSTA, and inhabited the S. of Gallaecia, from the Durius (*Douro*) up to the Minius (*Minho*): and the Callaïci Lucenses the N.

part, from the Minius to the Navia; these received their name from their capital, LUCUS AUGUSTI. It should be observed, however, that this division was not an arbitrary one, as might perhaps be inferred from the derivation of the names from the two Roman cities; but the river Minius established a natural boundary between the two tribes. Each of the two capital cities was, under the Romans, the seat of a *conventus juridicus*, that of Lucus including 16 peoples besides the Celtici (i. e. Artabri) and the Lebuni, and a free population of about 166,000; that of Bracara, twenty-four cities, and 175,000 persons, among whom Pliny mentions, besides the Bracarii themselves, the Bibali, Coelerini, Gallaeci, Hequaesi, Limici, Querquerni (Plin. iii. 3. s. 4). Ptolemy (ii. 6. §§ 24—27) mentions, as minor tribes of the Callaïci Lucenses, the Capori (Κάποροι), Cilini, (Κιλινοί), Lemavi (Λεμανοί), Baedyes (Βαίδυες), and Seurri (Σευρροί, vulgo Σεβουρροί); and, (§§ 40—49), as minor tribes of the Bracarii, the Turodi (Τουροδοί), Nemetatae (Νεμέτται), Coelerini (Κοιλερινοί, comp. Plin. iv. 20, s. 34), Bibali (Βίβαλοι, comp. Plin. iii. 3. s. 4), Limici (Λιμικοί, comp. Plin. *l. c.*) on the river Limia, Luanci (Λουαγκοί), Gruii (Γρούιοι, the Grovii of Pliny and Mela, and the Gravii of Silius Italicus, i. 235, iii. 366, who assigns to them the whole country from the Durius to the Limia, while Mela gives them even a wider extent, from the Durius to some distance N. of the Minius; perhaps originally the Grovii were between the Durius and Limia, and the Bracarii between the Limia and Minius), Quacerni (Κουακερνοί, the Querquerni of Pliny, *l. c.*, and Quarquerni of an inscription *ap.* Gruter, p. 245, no. 2), Lubaeni (Λουβαινοί, the Lebuni of Pliny, *l. c.*), and Narbasi (Ναρβασοί).

Gallaecia is a rugged, mountainous country, formed by the extreme branches of the great mountain chain which strikes off from the Pyrenees westward along the north side of the peninsula. Its chief river was the MINIUS (*Minho*), flowing through the plain enclosed between the range just named and its SW. branch, the mountains of the Astures, and falling into the Atlantic on the W. coast. Between this and the Durius are three smaller rivers, one of them, at least, possessing considerable interest, but of which the names are somewhat difficult to identify, probably on account of the imperfect knowledge possessed by the earlier writers. Ptolemy gives them in regular order, from S. to N., as follows:—AVUS (Ἄϋου ποταμοῦ ἐκβολαί, Ptol. ii. 6.§ 1; Mela, iii. 1: *Rio d'Ave;* the Celadus, which Mela mentions next, seems to be the N. tributary of the *Ave*, now called *Salha* or *Deste*, which flows down from near *Braga*): NEBIS (Νήβιος ποταμοῦ ἐκβολαί, Ptol. *l. c.*; Mela, *l. c.*: *R. Cavado;* this would be taken, on the evidence of the name, for the Βαῖνις of Strabo (iii. 153), were it not that he expressly identifies the Baenis with the Minius, evidently by a confusion of names; for this, and the next to be mentioned, are the only considerable rivers that he knows in these parts): LIMIUS, or LIMIAS (Λιμίου ποταμοῦ ἐκβολαί: *Lima*), doubtless the river which Strabo (*l. c.*) calls the river of Lethe, adding that some named it Limaea and others Belion (ὁ τῆς Λήθης, ὅν τινες Λιμαίαν, οἱ δὲ Βελίωνα καλοῦσι), and that it flowed from the Celtiberi and Vaccaei. Mela, who transposes it to the N. of the Minius, calls it Limia, or the River of Oblivion ("et cui Oblivionis cognomen est Limia;" where some scholars find in the word "Oblivionis" the origin of Strabo's Βελίων; comp. Plin. iv. 21, s. 35, "ab Minio cc. M.P. ut auctor est Varro, abest Aeminius, quem alibi quidam intelligunt et Limaeam vocant, Oblivionis antiquis dictus, multumque fabulosus;" Sil. Ital. i. 235, 236.; comp. xvi. 476, 477:

"Quique super Gravios lucentes volvit arenas,
Infernae populis referens oblivia Lethes"):

it is also mentioned under the name of Lethe by Appian (*Hisp.* 72) and Plutarch (*Quaest. Rom.* 34), who relate that the first Roman that crossed it was Decimus Brutus, when, after his conquest of Lusitania, he advanced against the Bracarii, as far as the Minius, B. C. 136. From Livy's history of the same event, it would seem that the river was an object of superstitious terror to the soldiers of Brutus, for they were only incited to pass it by the example of their general, who snatched a standard from the bearer, and led the way in person. (Liv. *Epit.* lv., where the name is "flumen Oblivionem;" comp. Flor. ii. 17, "formidatumque militibus flumen Oblivionis.") But whether the name originated in the superstition of the soldiers, who had been taught to look for the abodes of the dead in that far west to which they seemed to be advancing, aided by some resemblance in the native name, or from the latter cause only, is all uncertain. (Comp. Strab. p. 106.) It deserves notice, however, that a trace of the name Belion, given to it by Strabo, appears to be preserved in that of the lake *Beon*, from which the river flows; and hence Belion may perhaps have been the true name, and Flumen Oblivionis its corruption. The names of the rivers in the country of the Callaïci Lucenses, N. of the Minius, which possess no particular interest, are obtained from Mela, Pliny, and Ptolemy, though with some uncertainty, as follows: LAERON (*Ler*), ULLA (Mela; Οὔλα, Ptol.: *Ulla*), TAMARIS (*Tambre*), SARS (*Sar*), FLORIUS (*Rio de Castro*), NELUS (*Rio de la Puente*), VIRUS (*Allones*), MEARUS (*Mero*), IVIA (prob. the Νάϐιος of Ptol.: *Juvia*); the two last falling into the Sinus Artabrorum (*G. of Ferrol*) and the NAVILUBIO (*Navia*).

The only natural productions for which Gallaecia was famed among the ancients were its minerals. Besides the golden sands of the Limius referred to in the passages quoted above from Silius Italicus, the country yielded abundance of tin (Strab. iii. p. 147), and a sort of precious stone, called *gemma Gallaïca.* (Plin. xxxvii. 10. s. 59.) The people were among the least civilised in Spain; the very prototypes of the modern *Gallegos*. Their chief serious employment was divination, their superstitious addiction to which art alone rescued them from the imputation of Atheism. Engrossed by this occupation, or else engaged in sports, or sunk in indolence, except when roused by wars, they left all husbandry to the women. (Sil. Ital. iii. 344—353:

"Fibrarum et pennae divinarumque sagacem
Flammarum misit dives Callaecia pubem,
Barbara nunc patriis ululantem carmina linguis,
Nunc pedis alterno percussa verbere terra,
Ad numerum resonas gaudentem plaudere cetras.
Haec requies ludusque viris, ea sacra voluptas.
Cetera femineus peragit labor: addere sulco
Semina, et impresso tellurem vertere aratro,
Segne viris; quidquid duro sine Marte gerendum,
Callaïci conjux obit irrequieta mariti.")

They were a most warlike people, preferring death to flight, and even the women went armed to the battle-field, and put themselves to death when they were taken captive. (Appian, *Hisp.* 27.) Their conquest by Decimus Brutus has already been referred to. But, although he is said, in general terms,

to have subdued all the peoples of Gallaecia (Flor. ii. 17), yet, from the few particulars recorded, his conquests appear clearly not to have extended far, if at all, N. of the Minius, so that they included only the Callaïci Bracarii. As, at the very same time, the proconsul M. Aemilius Lepidus failed in an expedition against the Vaccaei (Liv. *Epit.* lvi.), and as the Astures were not subdued till the time of Augustus, the country of the Callaïci Lucenses, being only open to the Romans on the S., must have been very imperfectly, if at all, subjected, until it yielded to Augustus with the other NW. tribes.

Besides the two capitals of BRACARA AUGUSTA (*Braga*) and LUCUS AUGUSTI (*Lugo*), the following cities and towns are mentioned:—

I. Towns of the Callaïci Bracarii: 1. CALE or CALEM (*Oporto*), at the mouth of the Durius, and on the road from Olisipo to Bracara, 35 M. P. from the latter. 2. On the road from Bracara to Asturica, which made a great bend southwards to, and perhaps even beyond, the Durius (*Itin. Ant.* pp. 422, 423): SALACIA, 20 M. P. (*Salamonde?*); PRAESIDIUM, 26 M. P. (*Castro de Codezoso?*); CALADUNUM, 16 M. P. (*Ciadia?*); AD AQUAS, 18 M.P. (*Trindad?*); PINETUM, 20 M. P. (*Pinhel?*); ROBORETUM, 36 M. P. (*Robledo* or *Bragança?*); COMPLEUTICA, 29 M. P. (*Compludo*); VENIATIA, 25 M. P. (*Vinhaes?*); the remaining stations belong to the Astures. Besides these, Ptolemy mentions TUNTOBRIGA (Τουντόβριγα) and ARADUCTA (Ἀραδοῦκτα), as towns of the Bracarii (ii. 6. § 39). 3. On another and more direct road, leading N. from Bracara to the Minius, and thence up the river towards Asturica (*Itin. Ant.* pp. 427, 428): SALANIANA, 21 M. P. (*Santiago de Villela*); AQUAE ORIGINIS, 18 M. P. (*Bannos de Bande* or *Orense*); AQUAE QUERQUENNAE, 14 M. P. (Ὕδατα Κουακέρνων, Ptol. *l. c.* § 47: *Rio Caldo*); GEMINAE, 16 M. P. (*Baños de Molgas* or *Sandras?*); SALIENTES, 14 M. P. (*Caldelas* or *Orense?*); PRAESIDIUM, 18 M. P. (*Castro de Caldelas* or *Rodicio?*), on the border towards the Astures. 4. On the road from Bracara to Lucus (*Itin. Ant.* p. 429): LIMIA, 19 M. P., or Forum Limicorum (*Ponte de Lima*), probably different from the Φόρος Λιμικῶν of Ptolemy (§ 44); TUDE, 24 M. P., or Tyde (Plin. iv. 20. s. 35; Sil. Ital. iii. 367, xvi. 369; Τοῦδαι, vulgo Τοῦνδαι, Ptol. *l. c.* § 45: *Tuy*), a fortress of the Gruii or Gravii, said to have been founded by Diomed and a colony of Aetolians. (Plin., Sil. Ital., *ll. cc.*; Dion. Per. 485; Avien. *Descr. Orb.* 651: other notices of supposed Greek settlements in this quarter are found in Strabo, iii. p. 157.) Besides these, Ptolemy (*l. c.*) mentions the following: AQUAE LAEVAE (Ὕδατα Λαιά, § 40), among the Turodi; VOLOBRIGA (Οὐολόβριγα, § 41), among the Nemetatae; COELIOBRIGA (Κοιλιόβριγα, § 42), among the Coelerini; FORUM BIBALORUM (Φόρος Βιβαλῶν, § 43: prob. *Viana de Bollo*), the city of the Bibali; MERVA (Μερούα, § 46), that of the Luanci; CAMBAETUM (Κάμβαιτον, § 48), that of the Lubaeni; and FORUM NARBASORUM (Φόρος Ναρβασῶν, § 49), that of the Narbasi. To these must be added the baths of AQUAE FLAVIAE, the ruins of which are found E. of Bracara, at *Chaves* on the river *Tamega*, which is still crossed by the ancient Roman bridge of 18 arches. (Inscr. *ap.* Gruter, p. 162. no. 4, p. 245. no. 2; Florez, *Esp. S.* vol. xv. p. 79; Miñano, *Diccion.* vol. iii. p. 85; Ukert, vol. ii. pt. 1. p. 346.)

II. Towns of the Callaïci Lucenses: 1. On the road already mentioned (No. 4) from Bracara to Lucus, and thence to Asturica (*Itin. Ant.* pp. 429, 430): from Tude (see above), BURBIDA, 16 M. P. (*Borriño?*); TUROQUA, 16 M. P. (*Toureu?*); AQUAE CELENAE or CELINAE, 24 M. P. (Ὕδατα Θερμὰ τῶν Κιλινῶν, Ptol. ii. 6. § 25: *Caldas del Rey*); PRIA, 12 M. P, which is probably an error for IRIA FLAVIA, a city of the Capori (Ptol. *l. c.* § 24; Inscr. *ap.* Gruter, p. 305, no. 8: *El Padron*), where the road, which has thus far kept to the N. along the sea-coast, turns NE. up the valley of the *Ulla* or the *Sar;* ASSECONIA, 23 M. P. (*Santiago o' Compostella* or *Assorey?*); BREVIS, 12 M. P. (*Urbo* or *Burres?*); MARCIAE, 20 M. P., probably an error for PONS NARTIAE (Geog. Rav. iv. 45: *Narla*, on the river of the same name); LUCUS AUGUSTI, 13 M. P. (*Lugo*). 2. On the continuation of the same road to Asturica: TIMALINUM (*Fontaneira?*), 22 M. P., or TALAMINA, a city of the Seurri (Ταλαμίνη, Ptol. *l. c.* § 27, who mentions N. of it another town of the same people, AQUAE QUINTINAE, Ὕδατα Κουίντινα, *Quinta?*); PONS NEVIAE or NAVIAE, i. e. the *Bridge of the River Navia* (prob. *Navia de Suarna*), whence the road turns S. to UTTARIS, 20 M. P. (*Cerredo* or *Doncos*), 16 M. P. from Bergidum in Asturia. [ASTURES.] 3. Another route, beginning and ending in the same general direction, but striking further to the NW. through the ARTABRI, is given in the Itinerary as follows (pp. 423—425). From Bracara by sea to Aquae Celenae, 165 stadia; thence again by sea, 195 stadia to VICUS SPACORUM (Οὖοικα ἡ Οὔικα, Ptol. *l. c.* § 23: *Vigo*); thence 150 stadia by sea to AD DUOS PONTES (prob. *Pontevedra*); thence 180 stadia by sea to GRANDIMIRUM or GLANDIMARIUM (Geog. Rav. iv. 43; Γλανδόμιρον, Ptol. *l. c.*: prob. *Muros*, at the mouth of the *Noya*), whence, avoiding the promontory of Nerium (*C. Finisterre*), the road proceeded by land NE. to TRIGUNDUM, 22 M. P. (*Berreo* or *Aranton;* apparently the Τούρργα ἡ Τούργινα of Ptolemy, *l. c.*), and thence to BRIGANTIUM, 30 M. P., the chief sea-port of the country (see art.); whence it struck inland to Lucus Augusti, with the intermediate station of CARANICUM, 18 M. P. from Brigantium and 17 from Lucus (prob. the Καρόνιον of Ptolemy, *l. c.*: *Guitinez?*). Ptolemy mentions, in addition to the above places, the following: among the Callaïci Lucenses (§ 23), BULUM (Βοῦρον), OLINA (Ὀλίνα), LIBUNCA (Λιβοῦγκα), PINTIA (Πιντία), TURUPTIANA (Τουρουπτίανα), OCELUM (Ὄκελον); and among the Lemavi (§ 25), DACTONIUM (Δακτόνιον); and Pliny (iv. 20. s. 34) mentions ABOBRICA, as a not inconsiderable place (*Bayona*). [P. S.]

GA'LLIA CISALPI'NA (Caes. *B. G.* vi. 1), also called GA'LLIA CITE'RIOR (Caes. *B. G.* i. 54; Cic. *de Invent.* ii. 37), and simply GA'LLIA (Cic. *ad Fam.* xii. 5), is the name which the Romans gave to North Italy as late as the time of the dictator Caesar and Cicero, and even to B. C. 43. Caesar (*B. G.* i. 10, 54; ii. 35) sometimes includes Gallia Cisalpina under the name Italia; but he then uses the term in a geographical, and not in a political sense. The name Cisalpina denoted Gallia south of the Alps, as opposed to Transalpina Gallia, or Gallia north of the Alps; and Citerior is the nearer Gallia, as opposed to Ulterior (Caes. *B. G.* i. 7, 10; *B. C.* i. 33) or the further, which in Caesar means the Provincia. Ulterior Gallia was also used sometimes generally, to signify all Gallia north of the Alps. The name Gallia Togata, applied to Cisalpine Gallia

which occurs in the eighth book of the Gallic War (viii. 24, 52), and in later writers, was given at some time after the country was settled by the Romans, and it indicated the numerical superiority of the Togati or Romans over the Gallic population. The inhabitants north of the Po were sometimes called Transpadani (Cic. *ad Fam.* xvi. 12), a term which implies Cispadani, or the inhabitants south of the Po; but there does not appear to be any Latin authority for the word Cispadani.

Among the various names by which the Greek writers designate this country, some are simply descriptive of its geographical position, and others represent the Roman names. Plutarch (*Caes.* c. 20) calls it ἡ περὶ Πάδον Γαλατία; but there is no Latin authority for the name Circumpadana. Walckenaer conjectures that the names Gallia Circumpadana, Transpadana, and Cispadana are older than the term Gallia Cisalpina; and if he could prove that all these terms were used, we might accept his hypothesis. Livy (xxi. 35) calls the plains about the Po "Circumpadanos campos."

Polybius names this country both Κελτική and Γαλατία (iii. 77, 87); but though he applies the Latin word Transalpini to the Galli north of the Alps, and explains it (iii. 15) as a term in use in his time, he does not use the word Cisalpini, or any equivalent Greek word. He comprehends this Celtice or Galatia in the geographical term Italia, and describes it as a part of the Italian peninsula. We may conclude that the term Gallia Cisalpina was not used by the Romans before they were acquainted with Gallia Transalpina; and that the oldest name of North Italy among the Romans was simply Gallia. The fact that the Romans gave the name of Gallia to the chief part of the basin of the Po, and the name of Galli to the people, would be some evidence of the identity of the Galli north and south of the Alps. We have no historical evidence of the emigration of the Galli into Italy before the time that Livy mentions; but there was a tradition, partially preserved, that this was not the first time that the nation appeared south of the Alps. Cornelius Bocchus proved that the Umbri were of the stock of the Galli Veteres. (Solinus, *Polyhist.* c. 8.) Servius (*ad Virg. Aen.* xii. 753), using nearly the same words as Solinus, refers to Marcus Antoninus as his authority, by which name is meant M. Antonius Gnipho. It appears, then, that some of the Roman men of letters believed that the ancient nation of the Umbri were Galli Veteres; but we know nothing of the facts which led to this conclusion. Nor do we know who the Galli Veteres were; but we may suppose that these writers meant a nation of Galli who were in Italy before the Galli who crossed the Alps at a later period. There are no means of approximating to a solution of this question, except by a comparison of the old Italian languages with the existing Cumri (Welsh), or with the Gaelic, and by an examination of the names of the mountains, rivers, and other natural features of the Italian peninsula, which we may assume to be the oldest historical records that exist of the inhabitants of Italy. There is no ancient language of Italy, except the Latin, of which we have any competent knowledge; and there is no ancient language now known, with which we can compare the Latin and the names in the Italian peninsula, except the Basque, the Cumri, and the Gaelic dialects. This comparison has been made, to some extent, for the Cumri, by Archdeacon Williams, who is well acquainted with the Welsh language. (On one source of the non-Hellenic portion of the Latin language, by the Rev. Archdeacon Williams, *Transact. of the Royal Society of Edinburgh*, vol. xiii.) In this essay the author limits himself, as he states, "to the subject of the original population of Central Italy," of which he affirms, "that it was of the Cumrian or Cimbrian race, cognate with the Cumri of our island, and that their language formed some portion of the non-Hellenic elements of the Latin tongue." The question is one that requires great nicety in dealing with, for resemblances of words are very deceptive; but it is a fair conclusion that we cannot absolutely reject as a probable hypothesis, the existence of a people in the peninsula long before all historical periods commence, whose language was nearly related to some one or all of the languages which come under the general denomination of Celtic. The great mountain-range which forms the back-bone of the peninsula has a pure Celtic name, A-penninus; for whether the A is a euphonic prefix, or whether we prefer the form Ap-penninus, and consider the *Ap* to be significant, we have in either case the root *Pen*, "a summit," which appears in the Alpes Penninae, and in numerous mountain names in Great Britain. The names of rivers in the basin of the Po, and as far as the limits of Central Italy at least, the Duria, Stura, Tura, Turia, Athesis, Bedesis, Medoacus, Aesis, Tinia, Ausar, and many others, are either precisely the same with the names of many rivers in France and Great Britain, or may be reduced to the same forms by a perfectly fair process. (See Mr. Williams's Essay.)

The Romans, after they had got a footing in Transalpine Gallia, often recognised the Aedui, a people once the chief of all Gallia, as their "brethren and kinsmen" (Caes. *B. G.* i. 43); and this has been used as evidence that the Romans thought the relationship to be proved, or they would not have given such a title to barbarians, and those who were their greatest enemies. If the relationship did exist, we must of course go a long way back for its origin, to the ante-historical times when a Roman nation rose out of a mixture of races, one of which was Celtic. But this fraternising with the Aedui seems as easy to be explained, as the kinship of the Romans and the Segestani of Sicily through their common ancestor Aeneas. (Cic. *Verr.* ii. 4. c. 33.) It may be observed, that if we admit the probability of Celtic nations (Galli Veteres) having existed in Italy before the great invasion which Livy mentions (v. 34), this probability is not diminished by the fact of the Galli Veteres not having maintained themselves as a nation; unless they be the Umbri, as to which we shall never make all the learned agree. For the Galli have not been able to fix themselves permanently anywhere out of their native limits; and their second settlement in Italy, recorded by Polybius and Livy (admitting the fact of a prior settlement) was ultimately unsuccessful. The proof of some Celtic nation having been in the peninsula long before all historical times, rests on the incorruptible evidence of the geographical names of the peninsula.

The authorities which Livy followed state that the great immigration of the Galli into Italy took place in the reign of the Roman king Tarquinius Priscus, at which time the Bituriges in the basin of the Loire were the dominant people in Transalpine Gallia. The causes of the emigration were excessive population (Liv. v. 34), or, as Trogus, Justin's authority, says, civil commotions. The cause is not very material

nor can we with certainty say what it was; but it may have been both these causes, and something else. The Galli have always been a military people; and the desire of active employment, the weariness of doing nothing, and the hope of plunder would at any time be sufficient to put their fighting men in motion. Two chieftains led the emigrants. Sigovesus conducted his men into Germany, into the great Hercynian forest. Livy does not mention what tribes accompanied him; nor is it certain whether he is following the same authority as Caesar (*B. G.* vi. 24), who speaks of the Gallic settlements in the Hercynian forest. Bellovesus, the other chief, led to the conquest of North Italy, Bituriges, Arverni, Senones, Aedui, Ambarri, Carnutes, and Aulerci, all which nations belonged to that division of Gallia which Caesar calls the country of the Celtae (i. 1). The invaders entered Italy by the Taurinus Saltus, or the pass of *Mont Genèvre*, and defeated the Tuscans or Etruscans, who then held the plain of the Po, not far from the banks of the Ticinus. Finding here a people named Insubres, which was also the name of a pagus of the Aedui, they built a city and called it Mediolanum (*Milan*). The Insubres of Gallia Transalpina are only known from this passage; but there was a Mediolanum near Lugdunum, and it is supposed that this place may mark the position of the pagus of the Insubres. Of the names of all these tribes menti ned by Livy, not one appears in the geography of Italy except that of the Senones, and the country which the Senones occupied was south of the Po. Livy, or the authorities that he followed, probably attempted to explain the origin of the Cisalpine tribe of the Insubres or Isombri (Ἰσομβροι) as the Greek writers call them, by the clumsy expedient of supposing all these invading tribes to have changed their name for one that they found on the spot, which happened to be the name of a small Transalpine pagus. But Livy has not explained the origin of the Insubres; and if the Insubres were in North Italy before this invasion, and were a Celtic people, they must have come in a former immigration; and if Is-umbri is the genuine form of the word, we may assume that they were Umbri, who had long been settled in the basin of the Po. Indeed, if we look carefully at Livy's narrative, we shall see that he does not say that these Insubres whom the invaders found in Italy were Galli; nor does he say who they were. He lets all the names of the invaders disappear, and that of the Insubres remain in their place. Yet the Insubres were Galli beyond all doubt. Polybius merely fixes the position of the Insubres as one of the Gallic nations of Cisalpine Italy. The name appears in his text in various forms. Strabo has the Roman form Insubri, and in one place Σύμβροι (p. 218; and Groskurd's Note, Transl. Strab. vol. i. p. 373).

A new band according to Livy's authorities soon crossed the Alps by the same pass, the Cenomani (Liv. v. 35) under Elitovius, and occupied the places where in Livy's time Brixia (*Brescia*) and Verona were: the Libui were the previous occupiers of these parts. Livy may not have perceived that he has already mentioned (v. 34) the Aulerci as Gallic invaders of Italy, and that the Cenomani were a division of the Aulerci. [CENOMANI.] Cato found a tradition somewhere (Plin. iii. 19) that the Cenomani once dwelt near Massilia (*Marseille*) in the country of the Volcae, which, if the tradition is true, may have been during their migration from their original country between the *Loire* and the *Seine*. The Cenomani (Livy) were followed by the Salluvii, who settled near "an ancient people, Laevi, Ligures," as some texts have it, "who dwelt about the river Ticinus." But here Livy has not observed, though he knew the fact, that the Salluvii or Salyes were Ligurians, and dwelt between the Lower Rhone and the Alps. In this passage (v. 35) perhaps he may mean the Salassi.

Another band of invaders, Boii and Lingones, crossed the Alps by the Pennine pass (the *Great St. Bernard*), and finding all the country occupied between the Alps and the Po, they passed the river on rafts, and drove out of the country both Etruscans and Umbri; but they did not advance beyond the Apennines. (Liv. v. 35.) The position of the Gallic Lingones of Caesar's time is marked by the site of *Langres*, in the country at the head of the *Saône;* but the original country of the Boii [BOII] is uncertain. The Senones (Liv. v. 35) were the last invaders, and they occupied the coast of the Adriatic from the river Utis (*Montone*) to the Aesis (*Esino*), which is a little north of Ancona. Livy has already mentioned Senones among the first invaders. The Senones and Lingones were also Celtae; and the Senones were from the basin of the *Seine*. All the tribes which Livy here enumerates appear in Caesar's history of the Gallic War, except the Insubres, and the Salluvii, who were in Caesar's time within the limits of the Provincia.

At the time of the Gallic invasion the Tuscans, who were the masters of this country, had built many towns, cleared the forests, cut canals, and made embankments; at least, tradition assigned to them the credit of doing this. Polybius (ii. 17) assigns a very simple cause to the Gallic invasions of this fine country. The Galli had often crossed the Alps to trade with the inhabitants of the plains, and they soon found a pretext for seizing this land of plenty, as they have done since. Mantua, one of the old Tuscan towns north of the Po (Plin. iii. 19), survived the Gallic invasion, being probably saved by its position amidst marshes; but Melpum (as it stands in Pliny's text, iii. 17), one of the richest Tuscan cities, was destroyed by the Insubres, Boii, and Senones, on the day on which Camillus took Veii. The description which Polybius gives of the habits of these Transalpine nations (ii. 17) is just what we might expect. They lived in unwalled villages,—in houses of some kind, we must suppose, or they could not have been villages,—but they had no household stuff: their bed was straw, leaves, or grass, and flesh their food; their only business and all that they understood was agriculture and war. Their agriculture did not consist in tilling the ground, but in feeding sheep and cattle, which, with gold, formed their wealth, because these were the things that they could most easily carry about with them: the chiefs were most concerned to have a large train of followers, for a man was feared and respected in proportion to the number of folk that he had about him. Such a people would not found towns on their first invasion of Italy: indeed, the founding of towns would have been useless, for they did not live in them, and if they had chosen that mode of life they might have been content with the Tuscan cities. Livy's story of the foundation of Mediolanum, Brixia, and Verona is a fable; and yet Mediolanum at least is an undoubted Gallic name, for there are several cities in Transalpine Gallia called Mediolanum; and Brixia and Verona are probably Gallic too.

These audacious barbarians levied contributions on

all their neighbours. The most memorable event in the early history of Rome is the capture of the city by a band of these Italian Galli, who, after threatening Clusium (Liv. v. 33), turned their arms against the Romans, who had taken this Etruscan city under their protection. The Galli and the Romans first tried their strength on the Allia, a small affluent of the Tiber. The Romans were defeated, and this was for ever a black day in their calendar (B. C. 390). The capture of Rome and the siege of the Capitol by the Galli were embellished with the fiction that characterises all the early Roman history. To the Galli this was no more than one of their ordinary marauding expeditions. An invasion of the lands of the Galli by their neighbours the Veneti is assigned as the immediate cause of their retreat from Rome. Domestic quarrels kept them at home for some time; and they had also enemies around them. The Galli had become possessed of the plains only, and the mountaineers of the Alps knew the value of plunder as well as the Galli. They were probably kept fully employed in taking care of themselves for the space of thirty years that elapsed between the capture of Rome and the next expedition to the south. But, from the time of their little city being sacked, the Romans knew that they had an enemy whom they must destroy, or perish themselves. "Gallicus tumultus," or simply "tumultus," was the name that they gave to a hostile movement of the Gallic tribes of North Italy. This was the signal to prepare for a desperate fight (Liv. viii. 20); for with the Galli, says Sallust, the Romans fought for their existence, not for glory (*Bell. Jug.* c. 114). They set apart a reserved treasure in the Capitol for the emergencies of a Gallic war; for the fear of the Galli seems to have been the origin of the aerarium sanctius, as it was sometimes called. (Appian, *B. C.* ii. 41; Liv. xxvii. 10.)

Thirty years after the capture of Rome, as Polybius (ii. 18, 19) fixes the time, the Galli came again with a large force as far as Alba, and the Romans were afraid to meet them. The historian does not say how long they staid in the neighbourhood of Rome; but, as he says that they came twelve years afterwards with a great force, we may infer that they staid the first time as long as the country could maintain them. The second time that they came the Romans with their allies were ready to meet them; but the Galli fled as the Romans advanced, and, returning to their own country, remained quiet for thirteen years. Finding that the Romans were increasing in power, the Galli consented to a treaty of peace with them, which they strictly observed for thirty years. This dry narrative of Polybius is enough to show what a dangerous enemy the Gaul was to the city on the Tiber. We can easily imagine what Latium suffered from these pitiless barbarians. The Romans had many traditions or fictions about these Gallic wars; and a marvellous story of Titus Manlius fighting a duel with a Gallic giant on the banks of the Anio, in presence of both armies, and killing him. (Liv. vii. 10.) Manlius took from the neck of his enemy a blood-stained chain (*torques*), and put it on his own neck; and the soldiers gave him the name Torquatus, which became the distinctive appellation of a noble Roman family. The narrative of Livy contains two facts worth notice. The Galli made Tibur on the Anio their strong post in some one or more of these invasions, and the people of Tibur joined them against the Romans. The Galli also carried their incursions into Campania (Liv. vii. 11), and, either going or returning, plundered the country about Lavicum, Tusculum, and the Alban territory. The Roman annalists here repeat the story of Torquatus under another form. A Gallic giant challenges the Romans, and is killed in a duel by M. Valerius; but his glory was not equal to that of Manlius, for a raven came to his assistance and pecked and scratched the face and eyes of the Gaul, till, blinded and frightened out of his senses, he was pierced by the sword of the Roman. (Liv. vii. 26.)

About B. C. 299 some fresh bands of Transalpine Galli crossed the mountains into the valley of the Po, without being invited. Though we do not know when the Transalpine people first found their way across the Alps, we know that they have at intervals, whenever the opportunity has offered, repeated these visits up to the present time. To get rid of these dangerous kinsmen, the Cisalpine Galli pushed them on against the Romans, and joined them in an expedition to the south. In their way through Etruria their numbers were increased by some Tuscans. They got a good booty within the Roman territory, and returned; but, as usual with the nation, they had a dispute about the division of the spoil, and came to blows. They were given to drink and all kinds of excess, and fond of quarrels. Four years later (B. C. 296) the Galli and the Samnites were leagued together. (Polyb. ii. 19.) Livy (x. 21) mentions the Umbri and Etruscans also as joining the league against the Romans. Polybius states that the Romans were defeated with loss in the territory of the Camertii, as he calls it. (Comp. Liv. x. 26). But in another battle, fought a few days after in the neighbourhood of Sentinum, on the north side of the Apennines, the Romans defeated the Galli and their allies. Livy, in his description of this battle (x. 28), for the first time mentions the war-chariots of the Galli (*esseda*). Caesar, in his Gallic War, never speaks of the Transalpine Galli using war-chariots; and when he invaded Britain and found them there, the strangeness of the thing led him to describe it minutely. These war-chariots of Livy are probably a rhetorical embellishment. The chariots (*συνωρίδες*) which Polybius (ii. 28) speaks of do not seem to have been war-chariots. Livy is, however, satisfied with fixing the number of the enemy that fell at 25,000, which later writers raised to 40,000 and 100,000. It was a victory won after a hard fight, and on Gallic ground. It was a sign that Rome was growing stronger, and that the latter days of the Galli were approaching.

About ten years later (B. C. 283) the Galli Senones, with a large force, besieged Arretium (*Arezzo*), an Etruscan town under the protection of Rome. The Romans came to its relief, under L. Caecilius Metellus. Roman ambassadors, however, were first sent to expostulate with the Senones, and to induce them to retire; but they were murdered by the Galli, contrary to the law of nations. Polybius tells the story of the massacre somewhat differently. Upon this the consul P. Cornelius Dolabella entered the country of the Senones, burnt all before him, put the men to the sword, and carried off the women and children. He treated the Galli as they had treated other nations. In the mean time Metellus was defeated by the Senones before Arretium, with great loss; but it does not appear that the town was taken by the enemy. (Comp. Polyb. ii. 19 with Liv. *Epit.* 12, and Freinsheim's *Supplement*). The quarrel between the Romans and the Senones was soon decisively settled. The Romans gave them a com-

Plete defeat. Most of the Senones fell in the battle, and the Romans, driving the remainder out of the country, at last got a firm footing north of the Apennines, and on the coast of the Adriatic. This was the first part of Gallia to which they sent a colony. It was named Sena Gallica (*Senigaglia*), to distinguish it from Sena in Etruria. The *Epitome* of Livy (*Ep.* 11) places the foundation of Sena Gallica before the complete conquest of the Senones, which must be a mistake. This occupation of the country of the Senones alarmed their neighbours the Boii, who, prevailing on the Tuscans to join them, advanced as far as Lake Vadimon in Etruria, apparently on their way to Rome. But they were met at the lake by the Romans, who slaughtered the greater part both of the Tuscans and the Boii. The next year the Etruscans and Boii mustered all the youth that could bear arms, and again were defeated by the Romans. The Galli and Etruscans were now glad to accept terms of peace. "These events," says Polybius (ii. 20), "took place in the third year before Pyrrhus crossed into Italy, and in the fifth year before the destruction of the Galli at Delphi; for at these times Fortune put into all the Galli a kind of pestilential disposition for war." This statement fixes the events at the year B. C. 282. These wars with the Galli were the Roman apprenticeship to danger, for they never met with more desperate enemies; and the interval of forty-five years' rest from all further disturbance from that quarter which followed the peace, left the Romans leisure to fight with Pyrrhus, who invaded Italy, and to carry on their first war with the Carthaginians.

The Romans had excited the fears of the Galli by founding the Roman colony of Sena; but in 268 they went further north, and founded the Latin colony of Ariminum (*Rimini*). Polybius (ii. 21), in a few words full of meaning, shows how the new war began: "When those of the Galli who had seen the terrible things departed from this life by reason of their years, and a new race came on, full of passion, without reason, and having no experience of and never having seen all kinds of evil and events, they began again to stir the state of affairs, as is natural, and to be irritated against the Romans by any thing that occurred." The chiefs privately sent for a body of Transalpine Galli, who marched to Ariminum; but there the common sort among the Boii, distrusting the new comers, and quarrelling with their own leaders, killed their chiefs Atis and Galatus, and then came to a pitched battle with their Transalpine allies. Five years after this (B. C. 232) the tribune C. Flaminius carried a bill for the division of the land in Picenum, from which they had ejected the Senones, and the distribution of it among Roman citizens. This is the allotment of the "Gallicus ager" which is often mentioned (Cic. *de Sen.* c. 4); a measure which Polybius considers to have been the beginning of a change in the Roman state to the worse, but which was certainly the cause of a dangerous war; for the Galli now saw that the Romans aimed at their total destruction. The Boii, who were nearest to the new Roman territory, and the Isombri (Insubres), the most powerful of the Gallic peoples in Italy, invited some Galli from beyond the Alps to come and help them against the Romans. These Galli, who were from the Alps and the Rhone, were called Gaesati, or "mercenaries," for that, says Polybius, is the proper meaning of the word. But though the word might have got that sense in the time of Polybius, it was apparently not the original meaning; for "gaesum" is a Gallic name for a javelin. The men from beyond the Alps came under the kings Concolitan and Aneroest; and never did a larger, more famous, or more warlike body of troops go out of these parts of Gallia. (Polyb. ii. 22.) The Romans made great preparations for this war, which was to decide whether they or the Galli were to be the masters of Italy. It was eight years after the division of the lands of Picenum, and in B. C. 225, when the Gaesati came to the Po. They were joined by the Isombri and Boii; but the Cenomani and the Veneti, having been visited by some Roman ambassadors, forsook the Gallic confederation for a Roman alliance, and the Galli were obliged to leave a force behind them to watch these people. They entered Tuscany with 50,000 foot and 20,000 horse and waggons, under the command of Concolitan, Aneroest, and Britomar. (Florus, ii. 3.)

The alarm of the Italians was shown by their readiness to assist the Romans with men and all kinds of supplies; for they did not view the Galli simply as the enemies of Rome, but as the enemies of the whole peninsula, from whom they could expect no mercy. Polybius (ii. 24) has given an enumeration of the force of Italy at this critical time, for the purpose of showing what a bold undertaking Hannibal's subsequent invasion was. The whole number of men capable of bearing arms, Romans and Socii, was 700,000 foot, and 70,000 horse. The number that was called out for the defence of Rome was above 150,000 foot, and 6000 horse. The Gallic army advanced through Etruria as far as Clusium, plundering all before them; but learning that there was a Roman army in their rear, they retreated towards Faesulae, followed by the Romans. A battle was fought, in which the Romans were defeated. The consul L. Aemilius Papus, who had been sent to Ariminum to oppose the enemy's march in that quarter, hearing of the advance of the Galli upon Rome, moved from the upper sea, and came up with the Galli after their victory over the Romans. The Galli, who wished to save their booty, moved down to the coast, with the consul after them; and it happened at this time that C. Atilius Regulus, the other consul, who was returning from Sardinia, had landed with his troops at Pisae, and was marching towards Rome by the opposite road to that which the Galli had taken. They were going north, and the consul was coming south. Thus they were hemmed in between two armies; but, like brave and skilful soldiers, finding an enemy before and behind, they formed two lines of battle, and presented two fronts to their enemy's two armies. The Galli were near Telamo, as Polybius says, on the coast of Etruria, when their foragers fell in with the advanced troops of Atilius; but it is not easy to see why they had got so far south, as their object was to retreat as quickly as they could. The Galli fought with the most resolute courage, being in no respect inferior to the enemy, except in the quality of their weapons and their armour. It is said that 40,000 Galli perished, and 10,000 were made prisoners. "In this manner, then, the most formidable of the Celtic invasions was brought to nought, after threatening all the Italians, and especially the Romans, with great and terrible danger." (Polybius.)

In the following year the Boii submitted; and in B. C. 223 the Romans for the first time crossed the Po with their armies, and invaded the country of the Insubres, under the command of the consul C. Flaminius, who defeated the enemy in a great battle.

Polybius on this occasion states a curious fact about the Gallic swords: they were made only for cutting, and were so bad that they were bent by the first heavy blow, and could not be used again till the men had straightened them on the ground by means of their feet. The Roman sword was pointed and fitted for a thrust. In the following year (B. C. 222) the consuls M. Claudius Marcellus and Cn. Cornelius Scipio continued the war against the Insubres, who sent for a fresh body of Gaesati to help them. The Romans took Acerrae on the Addua, and Mediolanum, the chief town of the Insubres, by storm. This ended the war; and the Insubres submitted without terms. Marcellus (B. C. 221) had a triumph in which he carried the Spolia Opima, having killed with his own hand a Gallic prince, Virdomarus. (Plut. *Marcellus*, 8.) In B. C. 218 the Romans planted two Latin colonies in their new conquests, each of 6000 men,—Placentia (*Piacenza*) on the south side of the Po, and Cremona near the north bank of the river a little lower down. The Italian Galli, though beaten, were not disposed to remain quiet, and it was in the hope of rousing this formidable people against the Romans that Hannibal determined to invade Italy through their country (B. C. 218). He hoped with the aid of the Galli to destroy the Roman empire. When Polybius began his history of the Second Punic War, he wrote as an introduction to it his historical sketch of the history of the Cisalpine Galli down to B. C. 218, which has often been referred to here. But as he well knew the value of a geographical description of a country which is the scene of historical events (iii. 36), he prefixed to his historical sketch of the Cisalpine Galli an outline of the geography of the country which they occupied (ii. 14, &c.). This is the first attempt that we find at a geographical description that deserves the name. Polybius (ii. 14) compares Italy to a triangle, the apex of which is at the south, in the promontory which he calls Cocynthus. [COCINTHUS.] The base of this triangle is the hill country along the foot of the Alps (ἡ τῶν Ἄλπεων παρωρεία), which, beginning from Massalia (*Marseille*) and the parts above the Sardinian sea, extends without interruption to the innermost recess of the Adriatic; but it does not quite reach the Adriatic, for it stops short, and leaves a small intervening space. At the base of this hill country, on the south, lie the most northern plains of Italy, which were the seat of the Gallic peoples. These plains also form a triangular figure, the apex of which is at the junction of the Alps and Apennines, not far from the Sardinian sea above Massalia. The northern side of this triangle, which is formed by the Alps, is 2200 stadia long; and the southern, which is formed by the Apennines, is 3600 stadia long. The sea-coast of the Adriatic forms the base of the triangle, which from the city Sena to the northern extremity of the Adriatic is 2500 stadia long. Consequently, the text says, the whole circuit of these plains is not far short of 10,000 stadia. The Ligustini (Ligures) inhabit the Apennines, from the place where they commence above Massalia and their junction with the Alps. They inhabit both the slope towards the Tyrrhenian sea and the slope towards the plains; along the coast as far as Pisae, the most western city of the Tyrrheni, and inland as far as Arretium (*Arezzo*), where the Tyrrheni begin. Next to them, the Umbri occupy both slopes of the Apennines. At the place where the Apennines are about 500 stadia from the Adriatic, they turn to the right and run through the middle of Italy. The remainder of this side of the triangle belongs to the plain country, and extends to the sea and the city Sena. The Po, famed by the poets under the name of Eridanus, has its sources in the Alps, about the apex of the triangle described above, and it descends to the plains by a southern course. Having reached the plain country, the river turns to the east, and flowing through it, enters the Adriatic by two mouths. The greater part of the plain country, which is divided into two parts by the Po, lies on the side towards the Alps and the northern part of the Adriatic.

The junction of the Alps and Apennines is an arbitrary point. [APENNINUS.] There is no branch of the Po which answers the description of Polybius, except the Duria Major (*Dora Baltea*); and if he means this branch, he makes the Apennines extend as far north as the *Little St. Bernard*. This may seem to explain why he gives so large an extent (3600 stadia) to the Apennines, from the point of junction with the Alps to the latitude of Sena. But a place so remote from the Sardinian sea and from Massalia does not agree with the rest of his description, which would apply better to the branch of the Po which rises in Mons Vesulus (*Monte Viso*). But this branch runs north before it turns to the east. His choice of Massalia as a point of reference is not exact; but it was the best known place on the coast between the Var and the Rhone. The conclusion is, that his knowledge of the western part of the basin of the Po was not very exact; but his general description of the great plain is correct, and, with such means and maps as he had, it is good. [ALPES.]

This basin of the Po consists of a hill country, which lies at the base of the highest ranges, and of a plain country, a fact which Polybius had observed in his travels; for he says, "On each side of the Alps, the side to the Rhodanus, and the side to the plains, the hilly and earthy (not rocky) parts, those towards the Rhone and the north, are inhabited by the Transalpine Galatae, and those towards the plains by the Taurisci and Agones, and several other barbaric peoples." The northern slope of the Apennines is formed by lateral branches, which run down from the axis of the mountain to the plain. The direction of these branches is shown by the numerous river valleys, from the Stura in the west, which flows into the Tanarus, which flows into the Po, to the streams which enter the sea about Ravenna, which town may be considered near the southern limit of the basin of the Po. The streams that flow from the Apennines south of Ravenna as far as the Aesis, which is a little south of Sena, run into the Adriatic, and are beyond the basin of the Po. The boundary between the plain and the hill country in the eastern part of the Po is marked pretty nearly by the road from Ariminum through Modena to Parma.

On the north side of the Po, the valleys which lie within the hill country (ἡ παράρεια) along the base of the Alps have a general southern direction, as the course of the rivers shows by which they are drained. In several of these valleys there are deep, longitudinal depressions, into which the rivers flow at the north, and, filling them up, flow out from the southern extremity through the plain to the Po. The depressions filled with water are the lakes of the sub-Alpine region,—Verbanus (*Lago Maggiore*), Larius (*Lake of Como*), Sebinus (*Lago d'Iseo*), Benacus (*Lago di Garda*), and some smaller lakes. The southern end of these lakes marks in a general way the limit of the hill country, and south of this limit

the great plain begins. The most eastern of these affluents of the Po is the Mincius, which flows through the great lake Benacus. A ridge of hills lies between this lake and the river Athesis (*Adige*), which descends from the Rhaetian Alps in a long valley, which has a general southern direction. On reaching the plain, the Athesis turns SE. and E., and, running parallel to one of the branches of the Po, enters the Adriatic. The Athesis forms a natural boundary in this great plain, and is the limit of Gallia Cisalpina, considered as the country of the Galli. The territory east of it, Venetia, or the country of the Veneti, extended along the Adriatic to the head of the gulf. It is drained by numerous streams, whose upper courses are in narrow valleys in the mountain region; and the lower part of their course is through the flat country which borders the coast of the Adriatic from Ravenna northwards to the bay of Tergeste (*Trieste*). The Po, and the numerous streams that enter the Adriatic through the plains north of it, are described under their several names [ATHESIS, PADUS, &c.].

The length of the great plain from Augusta Taurinorum (*Torino*) to the delta of the Po is above 200 miles; the breadth varies in different parts. Between Bononia (*Bologna*) and Verona it is near 70 miles wide. From the towers of Bologna, a man can see over this wide level as far as the Euganean hills at the back of Verona.

Gallia Cisalpina, as already observed, has a narrow meaning, if we limit the term to the parts which were occupied by the Galli. There is no doubt that the Romans first used it as a general name for North Italy, without fixing its meaning exactly, though they meant by it the country of the Cisalpine Galli. Afterwards they gave the name to all the basin of the Po, and included in it at least so much of the hill country as they had subdued; but the people within the Alps (Inalpini) and on the Italian side were not subdued till the time of Augustus.

The following are the chief Alpine tribes of Gallia Cisalpina, proceeding from west to east. The Lepontii were both on the north and on the south side of the Alps, in the country that lies between the sources of the Rhodanus, Rhenus, and Ticinus. The Focunates were probably on the west side of the Lago Maggiore; the Mesiates, at the north end of the lake; and the Isarci, on the south-east side. The Genauni are placed by some writers on the north-east side of the Maggiore. About the lake Larius, or *Como*, in the south part, were the Orobii, in whose country Caesar established the Latin colony of Novum Comum. The Culicones [CULICONES] were on the NE. side of the lake of Como; and the Vennones are supposed to be the inhabitants of the Valteline. The Suanetes and Rugusci seem to have been in the hills north of Bergomum (*Bergamo*). The Camuni [CAMUNI], a tribe akin to the Euganei, were in the upper valley of the Ollius (*Oglio*); and the Euganei, an old Italian people, were situated, in the historical times, about the lake Benacus (*Garda*) and about Edrum (*Idro*). The Stoni, mentioned by Pliny, may, perhaps, be somewhere north of the Benacus. The warlike nation of the Rhaeti, who gave name to a part of the High Alps, were east of the Lepontii, but only a small part could be within the limits of Italy. The valley of the Adige, which forms one of the great roads into Italy from the basin of the Danube, contained the Tridentini, whose position is determined by that of Tridentum (*Trento*) on the Adige; and the Brixentes are the people of *Brixen*, higher up in the valley of the Adige. The Breuni were still further north [BREUNI]: they are incorrectly placed by some modern writers east of the *Lago Maggiore*.

East of the Athesis in the hill country the position of the Medoaci was probably in the upper valleys of the two rivers named Medoacus or Meduacus; and in the mountains above the head of the Adriatic were the Carni, a Celtic people,—for there were Celtae in these parts. [CARNI.] The country between the Adige and the Carni was Venetia, or the country of the Veneti, which is generally excluded from the descriptions of Gallia Cisalpina in the limited sense; and this is correct enough, for the Romans had no wars with the Veneti, and their writers have not told us that they were Galli. This name, one of the oldest national names of Italy, has subsisted to the present day. If the Veneti were Celtae or Galli, they belong to some very early migration, and the supposition that they were Celtae, is at least as probable as any other. The remark of Polybius (ii. 17) as to their language, is not decisive against the supposition of their being of Gallic or Celtic stock. Herodotus (v. 9) had heard of the Heneti or Eneti on the Adriatic, and he speaks of Eneti (i. 196) as Illyrians, from which, even if it be true, we can conclude nothing, except that the Eneti, who are probably the Veneti, were on the Adriatic in the fifth century before our era. Strabo (p. 212) gives two traditions about the Veneti; one that they were from the Armoric Veneti in Gallia, and another that they were from the Paphlagonian Heneti. In another place (p. 195) he has a sensible remark on this matter: he says, "I think that these Veneti of Transalpine Gallia were the parent stock of the Veneti on the Hadriatic, for nearly all the rest of the Celtae who are in Italy, here migrated thither from the country beyond the Alps, like the Boii and the Senones; but on account of the sameness of name (some) say that they are Paphlagonians. However, I do not speak positively, for in such matters probability is sufficient." This passage contains a good deal. First, it states that nearly all the Celtae of Italy came from the country beyond the Alps, which implies that there were some Celtae who did not come from Transalpine Gallia; secondly, he means to say, that the Veneti are Celtae, for he says, "nearly all the rest of the Celtae," which implies that the Veneti were Celtae. Besides, if they were not Celtae, but something else, he would not have supposed that they were descendants of the Transalpine Veneti. His text clearly means that they were Celtae. His argument for their Transalpine origin is not worth much. We might just as well suppose these Italian Veneti to be the progenitors of the Transalpine Veneti; for, as Herodotus says, "in a very long time any thing may take place."

Polybius (ii. 17) enumerates the principal Gallic tribes, for he does not profess to mention all, from west to east; and first, those on the north side of the Po. He places the Lai and Lebecii or Laevi and Libicii, about the sources of the Po, which is not very precise. Probably they did not extend farther east than the Ticinus. Polybius only mentions the Salassi once (*Frag.* xxxiv. 10), and he describes one of the passes over the Alps as lying through their country. They were north of the Laevi and Libicii, in the valley of the Duria Major, the *Val d'Aosta*, in which was the subsequent Roman settlement of Augusta Praetoria, and lower down at the entrance

of the valley was Eparedia, also a Roman settlement; and, according to Pliny (iii. 17), a Gallic name. There is no evidence that the Salassi were Celtae, though the want of evidence does not prove that they were not. They were mountaineers, not inhabitants of the plains. They took no part in the wars of the Cisalpine Galli against Rome; and they were not subdued till the time of Augustus, though Eporedia, at the southern entrance of the great valley, was settled before that time. [EPOREDIA.] Next to the Laevi and the Libicii were the Isombri, or Insubres, between the hill country and the Po. Their eastern limit seems to have been the Addua (*Adda*); and their chief city, Mediolanum, had a Gallic name, but its origin is unknown. There is a curious confusion in the MSS. about the name of this people. In the passage already quoted from Polybius (ii. 16), where he describes the Apennines next to the Ligurians as occupied by Umbri, three MSS. (ed. Bekker) have Isombri instead of Umbri; and in iii. 86 one MS. has Isombri. But in both passages the Umbri are meant. Another form of the name, Sumbri, has been mentioned, which occurs in Strabo. Editors generally take great pains to get rid of all these troublesome varieties, and to reduce them to uniformity. The forms Insobares, Insobri, are stated to be the forms in Polybius by Stephanus (*s. v.*); and the form Insobri occurs in the Fragments of Polybius, but this does not prove that it was his genuine form. In the Roman form Insubres, the *n* does not seem to be a radical part of the name, and *subr* is the real element. There is no authority for the existence of a tribe in Gallia called Insubres, except the passage of Livy already cited; and this name ought to be excluded from the maps of Transalpine Gallia. The Isombri are an Italian people, of whose origin nothing is known; but they were Galli.

The Cenomani or Gonomani, as Polybius writes the name, were due east of the Isombri along the Po, and their eastern limit was probably the Adige; but we do not know whether they occupied the country between the Lower Adige and the Po. Mantua would lie within their territory, and Cremona, the first Roman settlement north of the Po (B. C. 218), the choice of which may have been determined in some measure by the friendly relations between the Romans and the Cenomani at that time. Verona, east of the Adige, is named by Livy as one of the towns of the Cenomani, which is certainly not true, unless the territory of the Cenomani extended some distance east of the Adige; for this river is a natural and a political boundary. Brixia was one of the towns of the Cenomani, and there may be no reason to doubt that Bergomum was one also. The northern limit of the Cenomani was the hill country of the Euganei.

The tribes on the south of the Po were also all in the plain. The most western were the Ananes (Polyb. ii. 17), whom Polybius, the only author who mentions them, describes as about the Apennine, by which he means the base of the hills. They are otherwise unknown. Their neighbours on the east were the Boii. Polybius (ii. 32) speaks of Anamares, who have been identified with the Ananes; but the name is different enough, and Polybius places the Anamares in Gallia Transalpina near Massilia. The Boii occupied the country along the south side of the Po to the foot of the Apennines, and the northern slopes of these mountains. Their limits can only be approximated to by mentioning the towns within their territory. Bononia, originally called Felsina, when it was an Etruscan city, was one of them, and Mutina and Parma were two others. Placentia, near the junction of the Trebia and the Po, may have been within their limits; if it was not, we must place it in the country of the Ananes. East of the Boii were the Lingones, "towards the Adriatic" (Polybius). This would place them in the low flat land east of Modena and Bologna, in the Ferrarese, a country that cannot be inhabited without keeping up the canals and embankments any more than many parts of the Netherlands. If the Lingones really maintained themselves in this place, they must have been an industrious people. We know nothing at all of their history in Italy, except what a modern writer says, founding his remark on Livy (v. 35), that the Lingones came into Italy with the Boii, and probably shared all their undertakings and their fate, since there is no other special mention of them. A man who has the gift of reason would come to a different conclusion: that the Lingones shared neither the undertakings nor the fate of the Boii. They were in their marshes, keeping out the water and looking after their hogs and beasts, and the Romans would not touch such people till all the rest were subdued. The last tribe was the Senones, "on the sea" (Polybius). The limits of the Senones cannot be exactly defined. The river Aesis may have been their southern limit. Strabo (p. 217) says that the Aesis was originally the boundary of Gallia Cisalpina (ἐντὸς κελτική), and afterwards the river Rubico.

Thus we see that these Gallic nations, with whom the Romans had so long a struggle, were all inhabitants of the plains, and only of those parts of the hilly region which are contiguous to the plains; but not a hill people, nor mountaineers. Only two nations make a great figure among them, the Isombri and the Boii. There is no evidence that the Isombri came from Gallia Transalpina; and very little to connect the Boii with this Gallia. These facts are worth the consideration of a future historian of ancient Italy. Niebuhr, who rejects Livy's account of the time of these Cisalpine Galli settling in Italy, supposes them to have crossed the Alps only some ten or twenty years before they took Rome, and he affirms this on the authority of Polybius. Diodorus certainly places the passage of these Galli over the Alps (xiv. 113) immediately before the capture of Rome; but we cannot infer from Polybius at what time he supposed these Cisalpine Galli to have crossed the Alps. He says nothing of ten or twenty years, for he knew nothing of the time, and like a prudent man he leaves the thing as obscure as he found it. The true conclusion is, that we know nothing at all of the Gallic settlements in North Italy; and yet there were Galli there, and the country which they occupied was Gallia in Italy. We cannot suppose that the Galli exterminated all the people of the plains which they got possession of. If any were left, they would be Umbri; for as to the Tuscans, they, probably, during their possession of the Po country, lived in strong towns, and made somebody else cultivate the ground for them. There is one remarkable place in the country, Spina, an Hellenic settlement near the sea, and perhaps on the southern branch of the Po. What effect it had on the civilisation of Cisalpine Gallia, we do not know; and, indeed, it may have been at an early period reduced to insignificance. It was fixed in a like position with respect to inland Galli and barbarous tribes with the Phocaean town of Massalia, on the south coast of Trans-

alpine Gallia; but it had a less fortunate and less brilliant history. (Strab. v. p. 214.)

The other tribes in the plain of the Po, which have not yet been spoken of, are Ligurians, or else tribes of unknown origin. Polybius (ii. 15) has already mentioned Taurisci and Agones as inhabiting the hill country in the basin of the Po. He does not say that they were Galli, but he seems to mean that they were. There were Taurisci in the Gallic army at the great battle near the Telamo. (Polyb. ii. 28.) After mentioning these Taurisci, Polybius adds that the Ligustini inhabit both sides of the Apennines. As he places the junction of the Alps and Apennines considerably north, and describes the position of the Taurisci in the terms already stated, he may intend to place them a great way to the east, and they may be a people belonging to the Taurisci of Noricum. If this is true, it shows that the Cisalpine Galli in their contests with the Romans got help from other Galli besides those within the limits of Gallia Transalpina as determined by the Romans. It is at least certain, notwithstanding the similarity of name, that Polybius, when he speaks of the Taurisci does not mean the Taurini, whom he places in the west part of the basin of the Po, in the higher part of the river (iii. 60). We might infer from Polybius that the Taurini were not Galli; and Strabo (p. 204) and other authorities distinctly state that they were Ligures. Their chief town, afterwards Augusta Taurinorum (*Torino*), determines their position in a general way, which is all that is necessary here. In that angle of the Po which is drained by the Stura and other branches of the Tanarus were the Vagienni, whose limits Pliny (iii. 16) extends to Mons Vesulus. Their chief town was afterwards Augusta Vagiennorum (*Bene*). [AUGUSTA VAGIENNORUM.] East of the Vagienni were the Statielli, one of whose places, Aquae Statiellae, is the modern *Acqui* in the valley of the Bormida. None of these Ligurian tribes in the basin of the Po belong to Gallia Cisalpina in its limited sense of the country of the Galli; but they were included in the political Gallia Cisalpina of a later period, together with Liguria south of the Apennines. As Ligurians however they are properly treated under that name. We cannot fix the limit between the Ligures and Ananes on the south side of the Po. It was probably west of the Trebia, and certainly east of the Tanarus. Nor can we fix the limit between the Ligures and Galli on the north side of the Po; but it seems likely that the Duria Major may have been the limit.

Hannibal arrived in the north of Italy B. C. 218, with his forces diminished and weakened by a long march and the passage over the Alps. Before he reached Italy the Boii and Insubres took up arms and invaded the lands of Placentia and Cremona. The Roman triumviri, who had come to mark out the allotments, fled to Mutina, where they were besieged by the Galli. (Liv. xxi. 25; Polyb. iii. 40.) L. Manlius, who was hurrying to Mutina to relieve the Romans there, lost many of his men from the attacks of the Galli in his march through the forests, but at last he made his way to Tanetum near the Po, where some Cenomani from Brixia came to him. Manlius was also joined at Tanetum by the praetor C. Atilius, who was sent to his aid.

Though Hannibal had prepared the Italian Galli for his arrival, and relied on them for the success of his invasion, he was coldly received at first. The Cenomani, Veneti, and some of the Ligures, were on the Roman side; and the Boii and Insubres were kept in check by the presence of the consul P. Cornelius Scipio. The victory of Hannibal at the Ticinus, though it was only a fight between cavalry, determined the disposition of his wavering allies, and from this time the Galli followed him through his Italian campaigns. In the battle on the Trebia there were still Cenomani on the Roman side (Liv. xxi. 55), who fought against the other Galli who were with Hannibal. The Carthaginian won the battle of the Trebia, with little loss of his Iberian and Libyan soldiers. His Gallic auxiliaries lost a great number of men. When he crossed the Apennines he had a large body of Galli with him, and it required all the prudence of this great commander to keep his turbulent, discontented auxiliaries in order. The Galli, however, served him well in the great battle at the Trasymene lake (B. C. 217), and also at Cannae (B. C. 216), where 4000 of them fell—more than two-thirds of the whole loss on the Carthaginian side. (Polyb. iii. 117.)

Though the victory of Cannae brought many of the Southern Italians to the side of Hannibal, they were not like the desperate fighters who had followed him from the banks of the Po, and of whom he had now lost the greater part without being able to get fresh supplies. He never could recover his communication with North Italy after he had gone to the south. The Romans turned their arms against Gallia Cisalpina, both to punish the revolted Galli and to cut Hannibal off from getting recruits. L. Postumius (B. C. 216), consul designatus, was sent over the Apennines into the country of the Boii, but he and nearly all his army perished in the great forest called Litana, which was somewhere on the northern slope of the Apennines which looks to the basin of the Po. The story is told by Livy, with marvellous circumstances of exaggeration, probably founded on some small truth (xxiii. 24). The consul's head was cut off by the Boii; and the skull, being cleaned, was lined with gold, after Gallic fashion, and used as a cup in their great temple on solemn occasions. This barbaric practice of the Galli was not so inhuman as Roman superstition, for the year before at Rome they had buried alive a vestal virgin who was accused of unchastity; and among the extraordinary religious ceremonies performed after their great defeat at Cannae they buried a Gaul male and female, and a Greek male and female, alive, in a stone vault in the cow-market. (Liv. xxii. 57.)

Hannibal was still in South Italy in B. C. 207, near eleven years after he had crossed the Alps. He attempted to open his communication with North Italy by his brother Hasdrubal, who marched from Spain through Gallia and crossed over the Alps into the basin of the Po, by the route that his brother had taken. Hasdrubal had been joined in Gallia by the Arverni,—the warlike people of the *Auvergne*,—and by other Gallic and Alpine tribes (Liv. xxvii. 39); and he got recruits from the Cisalpine Gauls. One of the consuls, M. Livius Salinator, who was sent to oppose him, posted himself near the small stream Metaurum, which flows from the eastern Apennines into the Adriatic between Pisaurum and Sena. The other consul, C. Claudius Nero, who was watching Hannibal in the south, intercepted a letter from Hasdrubal to Hannibal. He saw the danger of letting the two brothers unite their forces, and he determined to prevent it. He hurried to the north with a division of his army, and joined his colleague.

Hasdrubal was compelled to fight, and he made the best disposition of his troops that he could. Against the right wing of the Romans, where Nero commanded his picked men, Hasdrubal posted the Galli on his own left,—not so much because he trusted them, as because he supposed that the Romans feared them. On the banks of the Metaurum the Romans got full satisfaction for Trasymenus and Cannae. The enemy was slaughtered by thousands; and so complete was the victory that Livius allowed some Ligures and Cisalpine Galli, who either had not been in the battle or had escaped from the rout, to move off without being followed: "Let some remain," he said, "to be the messengers of the enemy's defeat and of our victory." (Liv. xxvii. 29.) Hasdrubal perished in the battle; and when Nero returned to his camp in the south he ordered his head to be thrown before the Carthaginian outposts, that Hannibal might have no doubt about his brother's fate.

The Carthaginians made another and last effort to assail the Romans through North Italy. In the summer of B. C. 205, in the fourteenth year of the war, Mago, the son of Hamilcar, landed on the Ligurian coast and seized Genua, where the Galli flocked to him. Here also Mago received twenty-five ships from Carthage, 6000 infantry, 800 horsemen, and seven elephants, a large sum of money to hire troops with, and orders to move on towards Rome and join Hannibal. (Liv. xxix. 4.) Mago maintained himself in Cisalpine Gallia to the year B. C. 203, when he was defeated in the territory of the Insubres by the Romans, and dangerously wounded. He was recalled to Africa by the Carthaginians, and he set sail, but he died on the voyage. Hannibal, who was recalled about the same time, took with him some of the men who had followed him all through his Italian campaigns; and in the battle of Zama (B. C. 202), where he was defeated by P. Scipio, one-third of his men, it is said, were Ligures and Galli. The Second Punic War ended B. C. 201.

Mago left one of his officers, Hamilcar, behind him in Cisalpine Gallia (Liv. xxxi. 10), or he was one of those who escaped from the slaughter on the Metaurum; it is not certain which. Hamilcar stirred up the Insubres, Boii, and Cenomani, and some Ligurians, and falling on Placentia took and burnt it. He then crossed the Po to plunder Cremona. L. Furius Purpureo, the governor of the provincia, as Livy (xxxi. 10) terms it, was near Ariminum with a force too small to relieve Cremona. He wrote to the senate for help, and his letter states the fact of Placentia and Cremona having maintained themselves all through the Punic War. Purpureo soon after defeated the Galli, before Cremona, and Hamilcar fell in the battle. (Liv. xxxi. 21.) But the war still continued, and the praetor Cn. Baebius Tamphilus fell into an ambuscade in the territory of the Insubres, and was compelled to leave the country with the loss of above 6000 men. (Liv. xxxii. 7.) Sex. Aelius, one of the consuls of B. C. 198, did no more in Gallia than settle the colonists of Placentia and Cremona, who had been dispersed in the late troubles. It was only by securing those two colonies that the Romans could subjugate this country, and they prosecuted the work with the characteristic national stubbornness. In B. C. 197 both the consuls, C. Cornelius Cethegus and Q. Minucius Rufus, went to Gallia. Cethegus went direct against the Insubres; Rufus went to Genua and began the war with the Ligures in the basin of the Po. Having reduced all the Ligurians on the south of the Po except the Ilvates, and all the Galli except the Boii, he led his troops into the country of the Boii, who had gone over the river to help the Insubres. The Boii returned to defend their lands. The treacherous Cenomani were induced by Cethegus to betray the Insubres, whom they had joined; and the story is, that in the battle which followed the Cenomani fell upon their own countrymen and contributed to their defeat. Above 30,000 Galli are said to have fallen; and according to some authorities it was in this battle that Hamilcar fell. (Liv. xxxi. 21, xxxii. 30.) Livy found even some authorities which affirmed that Hamilcar appeared in the triumph of Cethegus. (Liv. xxxiii. 23.) The news of this defeat discouraged the Boii, who dispersed to their villages, and left the Roman commander to plunder their lands and burn their houses, which is still the way of dealing with nations who will not consent to be beaten in a pitched battle. In B. C. 196 the consuls, L. Furius Purpureo, who as praetor had served before in Gallia, and M. Claudius Marcellus, of a race well known in Gallic wars, were both employed at home. They had Italia for their provincia, as the Roman phrase is. (Liv. xxxiii. 25.) Marcellus defeated the Insubres in a great battle, and took the town of Comum, upon which eight-and-twenty strong places surrendered to him. Purpureo carried on the war in the country of the Boii in the usual way; burning, destroying, and killing. The story of these campaigns is confused; but if the narrative is true, we learn that the Boii, being unable to do any damage to the cautious Purpureo, crossed the Po and fell on the Laevi and the Libui, who were Galli. Returning home with their booty, they met the two consuls; and the fight was so fierce, for the passions on both sides were greatly excited, that the Romans left scarcely a Boian to return home and tell of the defeat. (Liv. xxxiii. 37.) Marcellus had a triumph at Rome; and Livy on this and on previous occasions records the fact of the great quantity of copper and silver coin which was brought into the aerarium from this Gallic war. There is no doubt that the Galli used copper and silver money, and probably had their own mint, as in Transalpine Gallia. Part of this money might be Roman or Italian, the produce of old plunder. The consul, L. Valerius Flaccus, the colleague of M. Porcius Cato, was employed in B. C. 194 in fighting with the Boii, and restoring the buildings in Placentia and Cremona which had been destroyed in the war. (Liv. xxxiv. 22.) Flaccus continued in Cisalpine Gallia the following year as proconsul, carrying on the war in the country of the Insubres. The consul, T. Sempronius Longus, led his troops against the Boii. This unconquerable people were again in arms under a king Boiorix. They attacked Sempronius in his camp; and after a desperate fight, with great loss on both sides, and a doubtful result, the consul took shelter in Placentia. (Liv. xxxiv. 46.) The numbers that fell in these battles are exaggerated, and are a mere guess: but these continued losses were destroying all the manhood of the Boii. In B. C. 192 the Ligures were in arms, and advanced as far as the walls of Placentia. (Liv. xxxiv. 56.) The history of these campaigns shows that the ultimate success of the Romans depended on their two colonies on the Po. The senate declared that there was a "Tumultus," a Gallic war. One consul, Minucius Thermus, was sent against the Ligures. The other consul, Merula, had a battle with the Boii near Mutina; and the

narrative of the Roman historian admits the obstinate resistance of the Galli, of whom 14,000 fell, and 1092 of the foot were taken prisoners. The mention of the exact number of the captives is curious (Liv. xxxv. 5), and Livy probably had good authority for it. The number of prisoners could be ascertained, for they would be sold. The Romans also counted their loss in this battle by thousands.

The complete subjugation of this brave people was accomplished by the consul P. Cornelius Scipio Nasica (B. C. 191), a cruel man, who slaughtered the Boii without mercy, and made it one of the grounds for claiming a triumph that he had left only children and old men alive. (Liv. xxxvi. 40.) In the triumph of Scipio a great quantity of the precious metal appeared. Like most uncivilised people, and civilised too, as they are called, the Boii were fond of gold ornaments. They had also bronze vessels and silver vessels, which they made themselves, and not without skill, for the nation has always excelled in ingenuity, and shown an aptitude for all works of taste. They must have become a very different people in their habits from the Gallic invaders whom Polybius describes. The brutal consul led in his triumph, all together, the nobles of the Boii and the horses that he had taken from them. The nation had surrendered ("sese dediderunt"), according to Roman phrase; and about half the land was declared the property of the Roman people. This was the end of the nationality of the Boii in Italy. The survivors are said to have left the country. [BOII.] In B. C. 189 the Romans made Bononia a Latin colony (Liv. xxxvii. 57), and six years later the Roman colonies (Liv. xxxix. 55) of Parma and Mutina were settled. Polybius incorrectly speaks of Mutina as a colony in B. C. 218. The name of the Senones had been effaced long ago; the Boii now disappeared, and of the Lingones we know nothing, nor of the Ananes. The whole of Gallia Cispadana was Roman. In Gallia Transpadana there were no enemies except the Insubres, who, next to the Boii, had made the most vigorous resistance to Rome; but they had taken no part in the last wars, and they were now quiet. The perfidious Cenomani were long since the slaves of the Romans, and the Veneti never gave them any trouble.

It is generally supposed that Gallia Cisalpina was made a province upon the conquest of the Boii, B. C. 191. But though a great part of the basin of the Po was now brought under Roman dominion, and colonies were planted, we have no account of a regular provincial administration being established. In fact, the Romans dealt with their conquered countries in different ways, according to circumstances. Gallia Cisalpina was a Roman province, in one sense, long before B. C. 191, for every praetor or consul who was commissioned by the senate to carry on war there, had it for the time as his "provincia," the field of his operations. However, the making of the great road, called the Via Flaminia, from Rome to Ariminum, and the Via Aemilia from Placentia to Ariminum (B. C. 187), proves that the Romans were now settling in the country, and it must have had some kind of administration. A road was also made from Bononia across the Apennines to Arretium. (Liv. xxxix. 1, 2; Strab. p. 217.) But the limits of this provincial administration were less than those of the Cisalpine Gallia of Caesar's time. The conquest of the Ligurians, both those in the plains of the Po, and those in the mountains, was not yet completed; but these industrious, brave people were incessantly attacked by the Romans. The consul, M. Popillius, made war on the Statielli, near Carystum (B. C. 173), and sold the people and their property, though they had never attacked the Romans. The senate, however, made amends for this monstrous injustice as far as they could, by an order for restoring the people to their liberty, and giving back what could be found of their goods; an order which we may be certain could only be imperfectly executed. (Liv. xlii. 7, 22.) It was probably from B. C. 109, when M. Aemilius Scaurus made the road from Pisae, past Luna, over the Apennines to Dertona, that we may date the subjugation of the Ligures. The Ligurian country was certainly a separate province, in the Roman military sense, for some time after the final defeat of the Boii. (Liv. xlii. 1, 10.)

In B. C. 186, 12,000 Transalpine Galli crossed the Alps into Venetia. Probably they came down the valley of the *Adige*. They began to build a town near the site where Aquileia afterwards stood. The Roman consul Marcellus (B. C. 183) gave them notice to quit. He took from them the implements that they had seized in the country, and what they had brought with them. These poor people sent some of their number humbly to state their case to the Roman senate: poverty had compelled them to cross the Alps, and they had chosen an uninhabited spot, where they had settled without troubling anybody; and they had begun to build a town, which was a proof that they had not come to plunder. They were told that they must quit Italy, and their things would be restored to them. They quietly packed up their moveables and crossed the Alps under the inspection of three Roman commissioners, who were well received by the Transalpine Galli. So humbled was this warlike nation, that the Transalpine chiefs affected to complain of the great lenity that the Romans had shown to a body of men who, without permission of their nation, had dared to intrude on Roman ground. (Liv. xxxix. 54.) The consul Marcellus now asked permission of the senate, which he got, to lead his legions into Istria. At the same time the Romans founded the Latin colony of Aquileia, in the same year that they sent colonists to Parma and Mutina. Thus they secured a position at the head of the gulf of Venice, which they carefully maintained, to check the inroads of barbarians on that side of Italy, and to extend their own dominion to the east of the gulf. In B. C. 179 3000 Transalpine Galli crossed the Alps peaceably, and begged the consul, Q. Fulvius Flaccus, and the senate to allow them to settle in Italy as subjects of the Roman people; but the senate ordered them to quit the country, and the consul received instructions to punish the leaders of the emigration. We do not know from what part these men came, whether from Transalpine Gallia, as limited by Caesar in his Commentaries, or from the country north of the eastern Alps. But, if we consider the state of Gallia as it was in Caesar's time, when the poor were oppressed by the rich, and the cultivator of the soil was a serf, we can easily understand what drove these men to seek for a new home.

We know very little of the history of Gallia Cisalpina as a Roman province. It was rapidly filled with Romans, and became one of the most valuable of the Roman possessions. An instance of the wanton exercise of power by the consul C. Cassius, is recorded when he held the province (B. C. 170). The ambassadors of a Gallic prince, Cincibil, a mountaineer, complained to the senate that Cassius had invaded the country of the Alpine people, who

were Socii of the Romans, and carried off many thousands into slavery. The consul filled his pockets by selling his prisoners. He was no better than a barbarous African chief, who catches men, and sells them to the white man of Europe or America. A like instance of gross injustice occurred at a later time (B. C. 44), when D. Brutus, then governor of Cisalpine Gallia, led his men against the people in the Alps (Inalpini), to please his soldiers, and secure their fidelity. (Cic. *ad Fam.* xi. 4.) The senate declared their willingness to hear the evidence against Cassius, when he returned from Macedonia, where he then was. But in the mean time they got rid of their troublesome complainants by handsome presents, and allowing them to purchase ten horses and take them out of Italy. (Liv. xliii. 7.) The peace of Cisalpine Gallia was not disturbed again, except in B. C. 101, when the Cimbri came over the Eastern Alps, and crossed the Adige. They were defeated by Marius and Catulus in the great battle near Vercellae.

Gallia Cisalpina remained quiet during the Social War, and it was probably to reward the people for their fidelity that the consul Cn. Pompeius was empowered, B. C. 89, by a Lex Pompeia to give the political condition called Jus Latii or Latinitas to the towns north of the Po. Asconius, who is the authority for this, does not say that the Latinitas was given to all the towns north of the Po; but it is probable that it was. He remarks that Pompeius did not establish new colonies, but gave this Jus Latii to the towns which existed. The Latinitas placed the Transpadani in a middle position between Romani Cives and Peregrini, for those who had filled a magistratus in the towns that had the Latinitas acquired thereby the Roman civitas. This new Latinitas or Jus Latii is a different thing from the former condition of the towns of Latium and the Latinae coloniae. The Roman colonies (coloniae civium Romanorum) consisted only of Roman citizens, and they were Roman communities. Latinae coloniae might be composed either of Roman citizens or of Latini; but a Roman citizen who joined a Latina colonia in order to get a house and land, lost his civitas; and these Latinae coloniae were viewed as Latin communities. The Lex Julia, B. C. 90, after the Social War had broken out, gave the Roman civitas to all the Nomen Latinum, that is, to all such towns of Latium as were not already municipia or coloniae; and to all the Latin colonies in Italy. Thus all the Latinae coloniae became municipia; and when it is said that the Latinitas or Jus Latii was given by Cn. Pompeius to the Transpadani, it means to those towns which were not Latinae coloniae. The new political condition of these Transpadani was expressed by this term Latinitas or Jus Latii; and accordingly the word Latini now received a new signification, designating a class of people in a certain legal condition, and having no reference to a particular country and people.

It is not stated by any ancient authority what was done with the inhabitants of Gallia south of the Po, when the Transpadani received the Latinitas; but we cannot refuse to accept Savigny's conjecture, which he supports by the strongest arguments, that they received the Roman civitas; and it may be, as he supposes, by virtue of the same Lex Pompeia. It appears from Cicero (*ad Att.* i. 1, B. C. 65), that Gallia, which means all Cisalpine Gallia, had great influence over the elections at Rome by their votes; and therefore a large part of Gallia had the civitas at this time, and it must have been given either in B. C. 89, or between B. C. 89 and B. C. 65. But there occurred no occasion between these two dates for giving new political rights to Cisalpine Gallia, so far as we know; and there was a good reason for giving them after the close of the Social War. The conclusion, then, of Savigny is this: "In B. C. 89 the towns of the Cispadan regions became Roman municipia, and the Transpadani became Latinae coloniae. We must except Placentia, Cremona, and Bononia, which, being old Latinae coloniae, were changed into municipia by the Lex Julia (B. C. 90); also Mutina and Parma, which, being old Roman coloniae, underwent no change in their condition; we must also except Eporedia in Gallia Transpadana, which must have belonged to the one or the other of these two classes, for we do not know whether it was a Roman or a Latin colonia." This explains why Mutina is called by Cicero (*Phil.* v. 9) a colonia. It was in its origin a colonia, and might always be called so; but in Cicero's time it was a Roman town, and a municipium in the sense of that period. Cicero also calls Placentia a municipium, and he calls it so correctly, for such it was in his time; but it was originally a Latina colonia.

There is a passage of Suetonius (*Caes.* c. 8) in which he says that Caesar, when he was quaestor in Spain (B. C. 66), left it sooner than he ought to have done, in order to visit the Latinae coloniae, who were agitating about the civitas. This is explained by Savigny to refer to the Transpadani. In the following year (Dion Cass. xxxvii. 9) the censors could not agree whether they should admit the Transpadani as cives or not; which is another proof that the people south of the Po had the civitas. It was again talked of in B. C. 51, as we infer from the letters of Cicero (*ad Att.* v. 2, *ad Fam.* viii. 1), when they are rightly explained. Finally, in B. C. 49, Caesar, after crossing the Rubicon, gave the Transpadani the civitas. (Dion Cass. xli. 36.) Thus the towns of the Transpadani became municipia, except Cremona, Aquileia, and Eporedia, which were already municipia by virtue of the Lex Julia. When it is said that the towns of Gallia Cisalpina became municipia, we must understand this of course only of the larger towns: the smaller places were attached to the large towns, and depended on them. During Caesar's government of Gallia Cisalpina he added a body of colonists, some of whom were Greeks, to the inhabitants of Comum, and put them on the same footing as the former inhabitants. (Strab. p. 212.) Appian (*B. C.* ii. 26), states that Caesar established Novum Comum, and gave it the Latinitas; and he shows that he understood what he was speaking about, for he says, "Those who discharged an annual magistracy there became Roman citizens, for this is the effect of the Latinitas." Caesar's enemies at Rome took a malicious pleasure in treating a magistrate of Comum as if he were not a Roman citizen, intending by this to insult Caesar. Suetonius (*Caes.* c. 28) says that it was by virtue of a Rogatio Vatinia that Caesar gave the civitas to the people of Comum. He may be mistaken about the civitas, but Caesar no doubt acted under some lex.

The limit of Gallia Cisalpina on the south-east, during Caesar's proconsulate, was the Rubico; and it was this circumstance that made his crossing the river with his troops into Italy equivalent to treason against the state. The boundary on the west side

is fixed at the Macra (*Magra*), which enters the sea a little west of Luna. Some (Sigonius, *de Ant. Jur. Italiae*, i. c. 22) would extend the boundary to the Arnus. Polybius certainly (ii. 15) extends the Ligurian territory to the neighbourhood of Pisae, yet not to the Arno; for Pisae was an Etruscan city. But the boundary of Liguria, in the time of Augustus, was the Macra; and on the Gallic frontier the boundary was the Varus (*Var*): and this may have been so when Caesar was proconsul of Gallia. In the NE. the province extended at least to Aquileia. Caesar had Gallia Cisalpina and Illyricum as his provinces, besides Transalpina Gallia. Liguria was certainly within his province. At Aquileia he had three legions at the commencement of the Helvetic War (B. C. 58), which he carried over the Alps with him. (*B. G.* i. 10.) Aquileia was in the country of the Carni, but it was at this time within the province of Cisalpine Gallia; and this explains Livy (xl. 34), when he says that Aquileia was in the Ager Gallorum, which he might say in a certain sense. Venetia was of course in the province of Gallia Cisalpina. It seems from a passage in the eighth book of the Gallic War (*B. G.* viii. 24), that Caesar considered Tergeste (*Trieste*) to be in Gallia Togata; or at least the author of this book did. Sigonius makes the Formio (*Risone*), a little south of Tergeste, the boundary of Gallia Cisalpina in this part; but the boundary probably was not fixed. If the province included Istria, into which the proconsuls of Cisalpine Gallia had carried their arms, we may perhaps extend the limit here as far as the river Arsia (*Arsa*), which was at a later time the boundary of Italia. But there is no evidence to show how far the civitas was extended when the Transpadani became Roman citizens; it must have extended to Aquileia, or further, but we know nothing about this. Caesar generally passed the winter in North Italy during his Gallic wars, and he used to hold the conventus at this season. (*B. G.* i. 54, vi. 44.) Gallia Cisalpina, therefore, at this time had its division into conventus, like Sicily, and Hispania and Lusitania at a later time; but we do not know the names of the conventus, nor the divisions of the country for judicial and administrative purposes. The proconsul had the complete civil power in his hands.

Even after B. C. 49, when Gallia Cisalpina had the civitas, and consisted of Roman communities organised after Roman fashion, there was still one exception. The towns had no II. vir juri dicundo, or magistrates for the administration of justice. The proconsul had the general administration of justice, which he exercised either in his own person, or by praefecti, to whom he delegated his authority. "The towns were consequently here, on the whole, in a like condition with the single praefecturae elsewhere, which however were not numerous; with this exception, that they had not, like the praefecture, separate praefects, but the proconsul was the general praefectus for the whole province. Only one place, Mutina, was a real praefectura. The praetor did not exercise jurisdiction there, but a praefectus juri dicundo was sent from Rome." (Savigny.)

After the dictator's murder, B. C. 44, D. Brutus, one of his friends and assassins, held the province of Gallia Cisalpina, as governor, by the authority of the senate. He was beseiged in Mutina by M. Antonius; and in the spring of B. C. 43 the battle took place, before Mutina, in which the consuls Hirtius and Pansa fell. Cicero, in his Philippics, still speaks of the Provincia Gallia to the end of April, B. C. 43. In the autumn of B. C. 43 the last proconsul of Gallia Cisalpina, D. Brutus, was caught and put to death by order of M. Antonius. No governor of Cisalpine Gallia was again appointed. Dion Cassius (xlviii. 12) speaks of Galatia Togata, as he calls it, in the year B. C. 41, as being already included in Italia; "so that no one, on the pretext of having the government there, could maintain troops on the south side of the Alps." This seems to imply an arrangement made between Octavianus and M. Antonius. From this time the name Italia, which in the popular language had sometimes been extended to Gallia Cisalpina, as already observed, comprehended all the country south of the Alps.

A lex was enacted for the regulation of the jurisdiction in Gallia Cisalpina, which is termed the Lex de Gallia Cisalpina. A considerable part of it was found A. D. 1760, in the ruins of Veleia, and it is preserved in the Museum at Parma. The date of its enactment was probably soon after B. C. 43. The name of the lex is now generally admitted to be the Lex Rubria, or Lex Rubria de Gallia Cisalpina, though some critics do not think that the name of the proposer of the lex is known. In his first essay on this subject Savigny doubted about the propriety of calling this lex the Lex Rubria, and he also supposed the object of the lex to be to give directions to the newly established magistrates in Gallia as to procedure. In the additions to his original essay he has expressed himself perfectly satisfied with Puchta's explanation of the purpose of the lex, and he derives from this explanation satisfactory evidence that the true name of the lex is Lex Rubria. The purpose of the lex is important for the understanding of the municipal organisation of Italy under the empire.

In the Digest we find the jurisdiction of the municipal magistrates limited in two ways: first, by the amount of the sum of money or matter in dispute; secondly, by the fact that they had the powers which belonged to the proper jurisdictio only, and not those which were comprised in the imperium. The origin of this double limitation, which appears in the Digest as a general rule for all municipal magistrates, must be sought for in the Lex Rubria. The second limitation deprived those magistrates of the power of granting a missio, bonorum possessio, and restitutio, and of compelling a praeterio stipulatio. As to the amount or value of the matter in dispute, the magistrates of Gallia were not allowed to decide in cases where it was above 15,000 sesterces. The lex, then, had two objects: one was to limit the amount, as just stated, and to exclude the magistrates from the exercise of those powers which were contained in the imperium; the other was to provide rules for their direction, which these limitations made necessary, in order to prevent the administration of justice from being impeded. The magistrates mentioned in the lex are II. vir, IIII. vir, praefectus. The first is the ordinary name for a municipal magistrate; but probably II. viri I. D. (juri dicundo) were in Gallia, as in other places, more common than IIII. viri I. D. The third name, praefectus, occurs twice with the designation of Mutinensis. The old colony of Mutina was a praefectura, and the only one in Gallia. Accordingly, all the Gallic towns had for magistrates either II. viri I. D. or IIII. viri I. D., except Mutina, which had a praefectus I. D.

The amount of the matter in dispute in which a Gallic magistrate had jurisdiction was, as we have

seen, 15,000 sestertii. It remains to be explained what was the process, if the party who was condemned to pay did not obey the judgment. Puchta, who keeps close to the principle (which is true in the main) that execution belongs to the imperium, infers that the municipal magistrates had no power to order execution, but that the praetor at Rome must be applied to. This monstrous unpractical conclusion is a simple impossibility. According to this, as Savigny remarks, if a plaintiff at Padua obtained judgment in his favour in the matter of a few denarii, or for a bushel of wheat that he had sold, and the defendant did not pay, the plaintiff must make a journey to Rome to get execution. We must conclude that it was one of the objects of the lex, after having limited the jurisdiction of the Gallic magistrates to a fixed sum, to provide the means of enforcing their judgments, though we have no evidence of this. But both the general principles of Roman law as to jurisdictio (Javolenus, L. 2. *de Jurisdict.* 2. 1), and other arguments urged by Savigny, are decisive against the absurd conclusion of Puchta.

The names by which these Gallic communities are mentioned in the lex are various. In one passage "municipium" is used as a generic name, comprehending coloniae and the praefectura; and this denomination could be correctly used, for the whole country contained only Roman communities. In another passage occur "municipium," "colonia," "locus;" where "locus" means any place which does not belong to the other two classes. Savigny supposes that "coloniae" may mean such places as had not consented to be changed into "municipia;" but that these could only be a few, for he thinks that the towns south of the Po, when that country obtained the civitas, and the Transpadani, when they also, at a later time, obtained the civitas, must first have become Fundus, as the Romans termed it (see *Dict. Antiq.*, Art. FUNDUS); that is, must have given their consent to become Roman municipalities, like the Italian cities which received the civitas by virtue of the Lex Julia. This explanation of the word "coloniae" in the Lex Rubria seems doubtful; and it may be nothing more than a legal superabundance of language. It is true that, if there was not and could not be a colonia in Gallia, the name would have no meaning in the lex, and would be not only an idle, but an absurd redundancy; but there had been coloniae, and the lex may mean, whether you call the place municipium or colonia, or any other name which is applicable to it. In another passage there is a larger enumeration of places, if the abbreviations are rightly explained :— "oppidum, municipium, colonia, praefectura, forum, vicus, castellum." Here "oppidum" is generic, not a particular class; "municipium" comprehends most of the chief towns; "colonia," according to Savigny, only a few towns; and "praefectura," only Mutina. The other three names denote smaller places, which had a less complete organisation. Places of this kind, it is assumed (and there can be no doubt of it), had not their separate magistrates; a village had not its own judge. This appears from the general system of town organisation in Italy, where each chief place had its district or territory, the smaller places or villages in which were attached to the chief place, and included in its jurisdiction. A "forum," "vicus," or "castellum," would be a part of the territory of a "municipium." The municipium was the centre of administration, as we see in the fact of the census being taken there. When the lex, in speaking of these smaller places, says, "qui ibi juri dicundo praest," this does not lead to the conclusion that these places had their separate magistrates, for this expression may apply just as well to the II. viri of the town to whose jurisdiction the "vicus" or the "forum" belonged. (Savigny, *Vermischte Schriften*, vol. iii., *Tafel von Heraklea*; Puchta, *Zeitschrift für Geschicht. Rechtsw. Lex Rubria*, &c. vol. x.)

The division of Italy into eleven "regiones" by Augustus had for its immediate object the taking of the census, which was conducted in a new way, and was taken in the several districts. The regiones into which Gallia was divided were: Regio XI., which was Transpadana, or Italia Transpadana; Regio X., which was Venetia et Histria, sometimes called Venetia only; Regio IX., which corresponded to the former Liguria; and Regio VIII., which was bounded on the north by the Po, on the east by the Hadriatic, on the south by the Rubicon, and on the west by the Trebia, which separated it from that part of Regio IX. which was north of the Apennines. [G. L.]

GA'LLIA TRANSALPINA, or simply GALLIA (ἡ Κελτική, Γαλατία: *Adj.* Gallicus, Κελτικός, Γαλατικός). Gallia was the name given by the Romans to the country between the Pyrenaei Montes and the Rhenus. When it became Roman, and was divided into several parts, they were called Galliae. (Plin. iii. 3; Tac. *Ann.* i. 31.) It is sometimes called Ulterior Gallia, to distinguish it from Citerior Gallia or Gallia in North Italy; though the name Ulterior is applied by Caesar in one or two passages to the Provincia only. It was also called Gallia Comata (Cic. *Phil.* viii. 9), with the exception of the Narbonensis, because the people let their hair grow long. The southern part of this country along the shore of the Mediterranean, which Caesar calls Provincia, was originally called Braccata, because the natives wore "braccae" or breeches; afterwards it was termed Narbonensis. (Mela, ii. 5; Plin. iii. 5.)

The Greek name Celtice (ἡ Κελτική) was earlier in use than the Roman name, for the Greeks were settled on the south coast of France long before the Romans knew anything of the country. But the name Celtice was used in a vague sense by the early Greek writers. [CELTICE.] The name Galatia came into use from the time of the historian Timaeus; and even the compound Κελτογαλατία (Steph. B. *s. v.* Λούγδουνον; Ptol. ii. 7) was afterwards used. In the Roman period the Greek writers sometimes also used the Roman form Γαλλία. The Greek names by which Transalpina Gallia was distinguished from Cisalpina, were merely descriptive of its position, as: ἡ ὑπὲρ τῶν Ἀλπεων Κελτική, ἡ ὑπεράλπειος, ἡ ἔξω, ἡ ἔκτος. The Romans used the name Galli as a general term for all the people whom they considered to be of Gallic race. But the oldest Greek form of the name was Κελτοί (Herod. ii. 33), and Κέλται, and Γαλάται. Polybius (ii. 15) uses the Roman word Τρανσαλπινοί, to distinguish the Transalpine from the Italian Galli, which word Strabo renders by the Greek ὑπεράλπειοι (p. 212).

A complete geography of Gallia might be a chronological exposition of all that the Greeks and Romans said or supposed about this country; but, as much of this is erroneous, and as their knowledge of it was gradually extended and corrected, the proper purpose of such an article as this is to say what can be said within reasonable limits, and what is useful for reading the best Greek and Roman writers. When Herodotus (ii. 33) says that the "Istrus (*Da-*

nube), which has its source in the country of the Celti and at the city Pyrene, in its course divides Europe into two equal parts," and "that the Celti are out of the Pillars of Hercules, and that they border on the Cynesii, who are the remotest inhabitants of Europe to the west," it is clear that he was entirely ignorant of the geography of Northern and Western Europe. Nor does he mend the matter when he says, in another place (iv. 49), that the "Istrus flows through the whole of Europe, rising in the country of the Celti, the remotest people towards the setting of the sun, after the Cynetes, that dwell in Europe." It is the universal practice of all who write and speak of distant places of which they know nothing, to suppose them indefinitely removed from the writer or speaker, but near to one another. Ignorance makes all the unknown meet in a point of indeterminate position. Even when we come to the time when Gallia was pretty well known to the Greeks and Romans, there is a great deal that is erroneous in their geographical notions which it would take many words to correct. A great part of our labour in comparative geography consists in determining what are the countries, mountains, rivers, and places which they designated by certain names: but if we attempt to correct all the erroneous notions which they attached to such names, we shall undertake a labour of infinite extent; nor shall we be able to correct it completely, for geographical knowledge always admits of improvement. With their imperfect means and imperfect maps, the Greeks and Romans were not bad geographers. They were often better than many modern historical writers, who have much superior means at their command.

The chief ancient authorities for Gallia are few. They are: Caesar's Gallic War; Strabo (lib. iv.), who used Caesar, but got much from Posidonius, who had travelled in Gallia; Mela (ii. 7, and iii. 2); Pliny (iii. 4, and iv. 17—19), and Ptolemy who made a map of Gallia, not very correct. His particular merit, as D'Anville observes, consists in having assigned a chief town, and sometimes two, to each people; for without his assistance we should be less accurately acquainted with the names of the capitals, since in the period after Ptolemy the original names of the chief cities were replaced by those of the several peoples of which they were the capitals. Thus, Caesarodunum, the chief town of the Turones, became Turones (*Tours*); Avaricum, the chief town of the Bituriges, became Bituriges (*Bourges*); and Andematunum, the chief town of the Lingones, became Lingones (*Langres*).

From the historians we obtain incidental information—from Polybius, Tacitus, Appian, Dion Cassius, and some little on the later period from Ammianus Marcellinus; something also from Ausonius, Sidonius Apollinaris, and the description of the Mediterranean coast called that of Festus Avienus. Something is got from the Notitia Imperii for the later period. But the most valuable information is obtained from the Roman Itineraries. The Itinerary named that of Antoninus, and the Table generally named the Theodosian, extend to all parts of Gallia. There is also a route very particularly described in the Itinerary from Burdigala (*Bordeaux*) to Jerusalem, which runs through the southern parts of Gallia to the Alps. The Roman remains in Gallia are very numerous, particularly in the Provincia or the basin of the Lower Rhone, and they often give information which we find in no writers. The French have a very large number of valuable works on the history and Roman antiquities of their country; and they continue to add to them.

The first description of Gallia that we have, is by the man who conquered it, the Roman proconsul Caesar. His description is brief, after his fashion. It is founded chiefly on his own observation; but for the parts of Gallia, Germania, and Britannia of which he knew nothing, we may infer that he inquired of the "mercatores" or bold traders who carried their wares among barbarous tribes, though his good sense would make him use their information cautiously. He also used the Greek writers, and particularly the geographer Eratosthenes, as we see from his own words (*B. G.* vi. 24). An instance will show that the knowledge of these geographers was not very exact. Hipparchus (Strab. pp. 106, 115), who lived in the second century before the Christian aera, placed Massilia (*Marseille*) and Byzantium in the same parallel; and he did this on the authority of Pytheas of Massilia, who says that the proportion of the gnomon to its shadow is the same in both places. We see, from this and other passages, that the Greeks of Massilia were the authorities for the earlier knowledge of Gallia. Strabo disputes the accuracy of this statement, and proves, in his way, that Byzantium is much further north than Massilia. But Strabo also was mistaken, for Byzantium is about 41° N. lat. and Massilia is north of 43°. Hipparchus also supposed Celtice to extend so far north that the sun never set at the summer solstice; a great mistake (Strab. p. 75), which is corrected by Strabo. Caesar (*B. G.* iv. 10) fixes the northern limit of Gallia at the outlets of the Rhenus.

It is useful to examine the boundary of this extensive country, as the inquiry will show the nature of the mistakes which the ancient geographers made They used to determine their latitudes with tolerable accuracy by ascertaining the length of the longest day at various places, which they measured (Strab. p. 133; Ptol.) by the hours of the equinox, when the night and day are equal. Their methods for the longitude were of course very rude, and here they fail. The part of Gallia that they were best acquainted with was the coast of the Mediterranean. We do not know the earliest boundary between the SE. part of Gallia and Liguria; nor can we suppose that there was one. The boundary in the time of Augustus between Gallia and Italia was the river Varus (*Var*). The boundary at the eastern extremity of the Pyrenees was the Promontorium Pyrenaeum, or *Cap Creux*, which projects into the sea south of Portus Veneris (*Port Vendre*). The most southern Gallic town along the eastern pass of the Pyrenees, in the country of the Sardones, was Cervaria. [CERVARIA.] From the mouth of the *Var* to the delta of the Rhone the coast of Gallia presents an irregular convex outline to the Mediterranean. The interior is a hilly country, which extends to Massilia. Between Massilia and Narbo, which Strabo (p. 106) knew to be in nearly the same latitude, the coast forms a bay called Gallicus Sinus or Massalioticus. Strabo considered this bay to be divided into two bays by the hill Setion (a necessary correction of the false reading Σίγιον), which term comprehends also the island Blascon. [BLASCON.] The coast from the mouth of the Rhone to the country at the foot of the Pyrenees is flat. The whole length of this coast from the *Var* to *Cap Creux* is about 500 English miles; and it was well known to the ancient geographers.

The Pyrene (Πυρήνη) or Pyrenaei Montes were the boundary between Gallia and Iberia, or Hispania, as the Romans called it. Strabo supposed that they ran in a direction parallel to the Rhine (p. 128), which he makes the eastern boundary of Gallia. He must therefore have supposed that the Pyrenees ran from south to north, instead of nearly from east to west; and in another passage he distinctly affirms (p. 137) that they do run north. In a third passage (p. 199) he supposes that the directions of the Rhine and the Pyrenees may deviate from the parallel direction as they severally approach the sea, so as to reduce the 5000 stadia—the greatest distance that he supposes between the Pyrenees and the Rhine—to the smaller distance of 4300 or 4400 stadia between the mouth of the Rhine and the northern extremity of the Pyrenees. Strabo, in fact, makes the range of the Pyrenees the east side of Spain (p. 137), and the coast on the Mediterranean the south side of Spain. He knew, however, that the narrowest part of Gallia was between *Narbonne* and the bay on the Atlantic, which he also calls the Gallicus Sinus,—the bay that is formed between the coasts of France and Spain at the bottom of the bay of Biscay. Posidonius (Strab. p. 188) made the length of this isthmus, as he calls it, less than 3000 stadia. Strabo more correctly says that the isthmus is less than 3000, but more than 2000, stadia wide. The length of the Pyrenees in a direct line from *Port Vendre* to the mouth of the *Bidasoa*, the lower part of which little river is the boundary between France and Spain, is about 255 miles. The limit between Gallia and Hispania on the west coast, according to Ptolemy (ii. 6. § 10) was Oeasso, a promontory of the Pyrenees. We may certainly fix it between Lapurdum, in the Tarbelli (supposed to be *Bayonne*), and Oeasso or Olarso (*Oyarço*, near *Fuente Rabia*) in Spain. The *Bidasoa* is near to *Fuente Rabia*. The passes through the eastern and western Pyrenees were used long before the Romans were in this country. Hannibal crossed from Spain into France through the pass at the east end; and Cn. Pompeius went this way to oppose Sertorius in Spain. The Romans afterwards had a road between *Narbonne* and *Barcelona* in Spain, by the pass where the Tropaea Pompeii were erected. On the west side a road ran from Aquae Tarbellicae (*Dax*), on the *Adour*, to Pompelo (*Pamplona*), in Spain. The boundary may have been at the station of Summus Pyrenaeus, the summit level of the road, between *Dax* and *Pamplona*. Another road led from Aquae Tarbellicae, by Aspaluca [ASPALUCA], and over another Summus Pyrenaeus, to Caesaraugusta (*Saragosa*) in Spain. In Caesar's time the passes were used for commercial purposes, for he bought horses in Spain during his Gallic War; but they had doubtless been used many centuries before.

The coast of Gallia on the Atlantic runs nearly due north, with a flat sandy shore, to the great aestuary of the Garumna (*Garonne*), which Strabo (p. 190) aptly calls a lake-sea (λιμνοθάλασσα). From the aestuary of the *Garonne* the direction of the coast turns a little to the west of north as far as the mouth of the Ligeris (*Loire*). From the mouth of the *Loire* its general course is about WSW. as far as Uxantis Insula (*Ouessant*), which is opposite to the western termination of the great peninsula between the mouth of the *Loire* and the bay of Cancalle. The distance along the coast from the mouth of the *Bidasoa* to the point of the mainland opposite to *Ouessant* is about 814 English miles.

The west coast of this peninsula, the *Bretagne* of ante-revolutionary France, is broken by singular headlands and deep bays. In the latitude of *Ouessant* the French coast runs due east to the bottom of the *bay of Cancalle*, where another peninsula (*Cotantin*) runs nearly due north into the *English Channel* and terminates in *Cap de la Hogue*. The great bay that lies between the *Cotantin* and *Bretagne* contains the islands of Caesarea (*Jersey*), Sarnia (*Guernsey*), and Riduna (*Alderney*). From *Cap de la Hogue* the French coast has a general east direction to the outlet of the Sequana (*Seine*); and from the outlet of the *Seine* its general course is NE. to the mouth of the Samara (*Somme*), and then nearly due north to Itium Promontorium (*Cap Gris Nez*), the nearest point of the European continent to Britannia. The ancient navigators had observed that the coast of Britain from the *Land's End* runs eastward nearly parallel to the French coast, forming a long channel (*La Manche*, or the Sleeve, as the French aptly call it), wide at the western extremity, and narrowing to the eastern, where it terminates in the *Straits of Dover* or *Pas de Calais*, between *Dover* and *Cap Gris Nez*. The length of this channel measured along the French coast is about 660 miles, which is much greater than the distance measured along the English coast of the channel, for the form of the French coast is much more irregular. The distance along the coast from *Cap Gris Nez* to the mouth of the old Rhine near *Leiden* is about 170 miles. The coast of Gallia from the Itium to the mouth of the Rhine is flat: it belongs to the great plain of Northern Europe. Strabo supposed the mouths of the Rhine to be opposite to the *North Foreland* in *Kent*; no very great mistake, for the whole tract from the mouth of the old Rhine at *Leiden* to the aestuary of the Scaldis (*Schelde*) might easily be taken as belonging to the Rhine. Caesar was told that the Scaldis flowed into the Mosa, which receives the Vahalis (*Waal*) from the Rhine (*B. G.* vi. 33). This general parallelism of the NW. coast of France and the south coast of England, led Strabo into a strange mistake. He supposes these two coasts to be exactly of the same length, 4300 or 4400 stadia. He makes the Gallic coast extend from the mouths of the Rhine to the northern promontories of the Pyrenees in Aquitania, and the English coast from Cantium (*Kent*) to the western extremity of Britannia, which he supposes to be opposite to Aquitania and the Pyrenees (p. 199). Consequently he supposed that the *Seine*, *Loire*, and *Garonne* flowed into the *English Channel*. He also says that the distance from the (mouths of the) rivers of Gallia to Britain is 320 stadia; a monstrous mistake, but consistent with what he has said. Ptolemy's map of this coast of Gallia is much better than Strabo's delineation. Mela, who probably wrote somewhat later than Strabo, and compiled a very scanty geography, had however a much more correct notion of the Atlantic coast of Gallia than Strabo. After describing the north coast of Spain up to Oeasso, he says: "Then follows the other (Atlantic) side of Gallia, the coast of which at first not projecting at all into the ocean, soon advancing almost as far into the sea as Hispania had receded from it, becomes opposite to the Cantabrian land, and, winding round with a great circuit, turns its shore to the west; then turning to the north, it again spreads out in a long and direct line to the banks of the Rhine": which is indeed a very fair description. And Mela proves that he under-

stood the form of the coast, by saying, "that from the outlet (exitu) of the Garumna commences that side of the land which runs out into the sea, and the coast opposite to the Cantabrian shores." Ptolemy's notion of the coast was also much more correct than Strabo's. Agrippa (Plin. iv. 17) ascertained by measurement the whole west coast of Gallia to be 1800 M. P.; and the general form of the coast must have been learned when the measurements were made. We do not know, however, from what point on the Spanish border he reckoned, nor to what mouth of the Rhine they were carried; but Gossellin, by assuming that they commenced at Oeasso (*Cape Machicaco*, as he names it), which he takes to be the boundary between Gallia and Hispania, "to the mouth of the Rhine called the passage of the *Vlie*," finds that the Roman measures agree with the truth. But this contains an assumption more than many people will allow, which Walckenaer, who adopts Gossellin's opinion, expresses as a fact as follows:—"The measures show that Ptolemy's eastern outlet of the Rhine is that which is known at present under the name of *Flie-Stroom*, between the islands of *Flieland* and of *Schelling*, which represents the old mouth of the Flevum or of the *Yssel*, before the great inundations of the 13th century converted into a vast lake the ancient Flevo." (*Géog. Ancienne, &c. des Gaules, &c.* vol. ii. p. 291.) However, the true length of the French coast from the Pyrenees to the old Rhine shows that the measurement of Agrippa was a fact.

The great mass of the Alps that lies between the basin of the *Po* and the Rhone forms a natural boundary between Italy and France; but this mountain range, which has a general northern course from near the borders of the Mediterranean to the pass of the *Great St. Bernard* (Alpis Pennina), covers a great extent of country from west to east, and boundaries can be fixed in such a country only at the heads of the valleys which penetrate the mountain mass on each side. The Romans did not trouble themselves with these mountain tribes till they had subdued the people in the lower country. In B. C. 58, when Caesar passed from Aquileia over the Alps into Ulterior Gallia, he had to fight his way. He crossed the Alpes Cottiae by the pass that leads from *Turin*; and he remarks that the last place in Cisalpine Gallia is Ocelum, *Uxeau* or *Ocello*, in the valley of the Cluso. He was attacked by Centrones, Graioceli, and Caturiges, all of them Alpine tribes, and it was on the seventh day from Ocelum that he reached the Vocontii in the Ulterior Provincia (*B. G.* i. 10). It is clear that Caesar did not consider these Alpine tribes as belonging either to the province of Citerior or Ulterior Gallia. [ALPES COTTIAE.]

At *Mont Blanc*, the highest point in the mountains, the axis of the Alps takes a general east and then a NE. direction towards the snow-covered masses in which the Rhone and the Rhine rise. The road from *Aosta*, in the basin of the *Po*, to the Summus Penninus (the pass of the *Great St. Bernard*), was used at a very early period. It leads down to Octodurus (*Martigny*), where Caesar's troops were attacked in the winter of B. C. 57. Octodurus is at the great bend which the Rhone makes after descending the longitudinal valley which lies between the Pennine Alps and their continuation on the south side, and the Bernese Alps, one of the chief Alpine ranges on the north side. The lower part of this valley, between Octodurus and the head of the Lacus Lemanus (*Lake of Geneva*), into which the Rhone flows, was occupied by the Nantuates. Above Octodurus in this long valley were the Veragri and the Seduni, all Gallic tribes, but neither included in the Provincia by Caesar's description nor in the country of the Helvetii. In fact, this long valley is entirely within the Alps. Caesar has not attempted to fix any boundary between the Citerior and Ulterior Provincia from the sea to the sources of the Rhine. He heard of an Alpine people named Lepontii (*B. G.* iv. 10) in the high valley of the Upper Rhine, and he found it convenient to define the eastern limit of Helvetia and of Gallia, which was his Provincia, by the course of the Rhine from its source to the German Ocean. After the Lepontii he mentions Vatuantes or Mantuantes (Nantuates in the common texts is a corruption), the Helvetii, Sequani, Mediomatrici, Tribocci, and Treviri, as the nations on the Gallic side past which the river flows. It would be useless to inquire which of the branches of the Rhine above *Chur* Caesar meant; but from *Chur* to the *Lake of Constanz* he obtained a well-defined boundary in the river. The Rhine within the Alpine region was certainly not the limit of the Gallic mountaineers, who extended along the north face of the Alps into the basin of the Danube. The *Lake of Constanz* and the course of the Rhine in a general western direction from the outlet of that lake to *Bâle*, formed a well-defined boundary of Gallia in this part. Caesar's description shows that he excluded from the country of the Helvetii all the parts to the south of the Leman lake and of the Bernese Alps; and he knew that the Rhine where it entered the hill and the plain country was the disputed boundary between the Germanic and the Celtic nations (*B. G.* i. 1). From *Bâle* to the outlets of the Rhine the river was the boundary of the two races, though there were Galli east of the Rhine in the Hercynian forest, and Germans had got to the west side in several parts long before Caesar's time.

The Rhine, as Caesar was told (*B. G.* iv. 10), entered the sea by many outlets, between which great islands were formed. Asinius Pollio (Strab p. 193), who took a pleasure in finding fault with Caesar, says that the Rhine had only two mouths. The Batavorum Insula was within the limits of Caesar's Gallia. In the time of Augustus, when Drusus made his Fossa [FOSSA DRUSIANA], which established a navigation between the Rhenus and the Flevo [FLEVO] and thence to the North Sea, this river line became a frontier against the Germans, extending from *Arnheim* on the Rhine along the canal of Drusus to *Doesburg*, and thence along the *Yssel* to the lakes. This new river frontier seems to be Ptolemy's eastern outlet of the Rhine; the middle outlet being that at *Leiden*, and the western being where the *Leck* now is. (Ptol. ii. 9.)

This extensive country lies between 42° 35′ and 52° 10′ N. lat., if we carry the boundary no further than Lugdunum Batavorum (*Leiden*). It lies between the meridians of 4° 45′ W. of London and 9° 40′ E. of London. The following measurements will give a better notion of its extent. A straight line from the mouth of the *Var* to the NW. extremity of *Bretagne* is about 660 miles long. A line drawn from the Spanish frontier on the west side of the Pyrenees to 48° 50′ N. lat., 8° 10′ E. long. on the Rhine, near *Radstadt*, is about 615 miles long; and a line drawn from this point on

the Rhine, through *Paris*, nearly due west to *Bec du Raz* in *Bretagne*, is about 594 miles long. A line from the eastern extremity of the Pyrenees to *Paris* is 445 miles; and a line from *Paris* to *Arnheim* on the Rhine is about 270 miles long. It comprehends all France, Belgium, Luxembourg, and a part of the kingdom of the Netherlands, those parts of the German states which lie west of the Rhine, the greater part of Switzerland, and the country south of the Leman lake which belongs to the kingdom of Sardinia. The area of France within its present limits is estimated at about 200,000 square miles.

Gallia has the best position of any country in Europe. It has a large coast on the Mediterranean and a larger on the Atlantic, which give it a communication with all the world. These seas are well stocked with fish. Except the mountains that form its boundaries, and a few ranges that cover only a comparatively small part of its surface, it is a plain country with a very large proportion of fertile soil. It produces corn in abundance, wine of the best quality, and, in the southern part of the valley of the Rhone, the olive. Some parts have good pasture, and it is well adapted for the growth of timber. Though the winters are cold in the north, the summer is warm, and fruits generally ripen well. It is not so rich in minerals as Britain, but it contains coal, and iron in abundance; also lead, copper, and a great variety of valuable stone. It is rich in mineral springs, and it has brine springs and rock salt. This wealth was not neglected even in the period before the Roman conquest; but under Roman dominion it was still more productive. The Galli of Caesar's time were an ingenious people: they had made some progress in the working of metals and other useful arts, and they were apt learners. Of all the nations of Western Europe none has had more influence on civilisation than the Galli, both before and during the Roman dominion, except the Romans themselves; and since the establishment of the Franks in Gallia, the country between the Rhine and the Pyrenees, though now containing several states and parts of states, has still a unity both natural and social which makes it the most important part of the whole world.

The ancient geographers had a better notion of their work than some of the moderns. Strabo says (p. 177), in his book on Gallia: "It is the office of the geographer to describe natural divisions, and national, and also all that is worthy of mention; but whatever rulers variously dispose in their political arrangements according to circumstances, it is enough if a man mention it in a summary way. As to the particulars, he must leave that to others." The Roman geographers (Pliny, Mela), as well as Strabo, had a right conception of the great natural divisions of Gallia. Pliny and Mela describe Gallia Narbonensis apart from the rest of Gallia, and they place their description of it between the descriptions of Spain and Italy, not only because Narbonensis was then completely Romanised, but for better reasons. "Narbonensis," says Pliny (iii. 4), "is divided from the rest of Gallia on the north side by the mountains Gebenna and Jura, a country in its cultivation, population, and civility of manners, and in its wealth, inferior to no provincia, and in brief Italia rather than a provincia." The range of the *Cévennes*, as these geographers rightly saw, separates Gallia on the Mediterranean from the Gallia that is bordered by the ocean. [CEVENNA.] Strabo made a mistake about the position of the *Cévennes*; for as he supposed it to be at right angles to the Pyrenees, he must also have supposed that it ran from west to east. The basin of the Rhone below *Lyon*, bounded on the west by the *Cévennes*, and on the east by the Alps, is a country by itself, and in all respects more like Italy than the rest of Gallia. Pliny may have supposed or he may not have supposed that the Jura was a continuation of the *Cévennes*, which it is not; but the Jura also forms a natural division between Gallia to the east and the west, as Caesar saw. The Jura, as Caesar supposed (*B. G.* i. 2), extends from the north bank of the Rhone at *Fort l'Ecluse* about 20 miles below Geneva to the Rhine; for he estimates the width of the country of the Helvetii at 180 M. P., and this is about the length of the Jura from the Rhone to the junction of the Rhine and *Aar*. The Jura is a natural boundary between France and Switzerland. Caesar makes the length of the country of the Helvetii 240 M. P., which may be measured from *Fort l'Ecluse* along the Rhone, the Leman lake, and the northern base of the snow-covered Bernese Alps to the source of the *Reuss*, and thence along the *Vorderrhein* to *Chur*, the Roman Curia, where the Rhone begins to be navigable with rafts. But the longest straight line that can be drawn in Switzerland eastward from *Fort l'Ecluse* is to *Bregenz* on the *Lake of Constanz*, and this line agrees very well with Caesar's length. Neither the Valais or Wallis, down which the Rhone flows, as already observed, nor any part of the highest Alpine country, is included in Caesar's Helvetia, though a large part of it is a mountainous country. He says, therefore, quite correctly, "Undique loci natura Helvetii continentur,"—on the west by the Jura, on the south by the Rhone, the Leman lake, and the mountains, on the east and the north by the Rhine. The basin of the Upper Rhone is a distinct country from the basin of the Lower Rhone, and from the rest of Switzerland: it is shut in between the Bernese and Pennine Alps as far as a point somewhat lower down than the bend at *Martigny*. The valley widens before it reaches the *Lake of Geneva*, which is a deep cavity in the valley of the Rhone filled with water. The level of this large lake, the lowest part of the valley of the Upper Rhone, is more than 1000 feet above the Mediterranean. The high lands on the west side of the Rhone basin extend northward under various modern names, from the utmost limit that we can assign to the *Cévennes* [CEBENNA], but with diminished elevation. They extend to the heights of *Langres*, the country of the Gallic Lingones, and form the west limit of the basin of the Arar (*Saône*) which joins the Rhone at *Lyon*. The heights of *Langres* run eastward, and are connected with the Vosegus of Caesar (*B. G.* iv. 10), the *Vosges*. This Vosegus, which Caesar saw, runs northward from the valley of the Alduasdubis (*Doubs*), a branch of the *Saône*, and parallel to the Rhine as far as Bingium (*Bingen*) on the Rhine. Between the *Vosges* and the Rhine is a long, narrow, and fertile plain, one of the finest parts of Gallia, which the Germans from the other side of the river looked on with a longing eye. The high lands about *Langres* and the neighbouring *Vosges* contain the sources of the *Mosel*, the *Maas*, the *Seine*, and the *Saône*; and from this elevated, but not mountainous country, a tract of moderate height runs NW., forming the northern boundary of the basins of the *Seine* and the *Somme*, and terminates in the chalk cliffs (*Cap Gris Nez*) which project into the *English Channel* between

Calais and *Boulogne*. All the streams north of this watershed, the *Schelde*, the *Maas*, and the western branches of the Rhine, belong to the great flat which extends northward along the coast from *Cap Gris Nez* to the mouths of the Rhine. The streams which lie south of this watershed, and between it and the Pyrenees, flow into the *English Channel* and the Atlantic,—the *Somme*, the *Seine*, the *Loire*, the *Garonne*, and other smaller rivers. Thus four large river-basins west of the *Cévennes* and the *Vosges* discharge their waters into the Atlantic. The basin of the great central stream, the *Loire*, drains a surface as large as England. One large river-basin, the Rhone, discharges its waters into the inland sea. The rest of the surface of Gallia is drained into the Rhine, and the North Sea. The *Mosel* and part of the course of the *Maas* lie in a deep bed sometimes several hundred feet below the level of the high irregular plains through which they flow; and part of this country, which extends from the Rhine at *Coblenz* in a western direction through *Luxembourg* and the north of France into Belgium, is the Arduenna Silva of Caesar (*Ardennes*), to which he gives an extent far beyond the truth. [ARDUENNA.] Nearly the whole of Gallia west of a line drawn from *Narbonne* to *Coblenz* is a plain country. A man may walk from *Leiden* to the *Auvergne* for 450 miles without meeting with a mountain or a really hilly country. The peninsula of *Bretagne*, which contained the Armoricae Civitates of Caesar, is rough and hilly, but not mountainous. The centre of France is the only mountainous country which is completely within the modern limits, the *Auvergne*, an extensive region of extinct volcanoes, which on the east is connected, so far as elevation of surface makes the connection, with the rugged *Cévennes*. This country of the Arverni of Caesar contains many lofty summits, some of them 6000 feet high. The *Auvergne* and the highest parts of the *Cévennes* have a short summer, and a long cold winter, during which the mountains are covered with snow, which, when it melts, swells the Duranius (*Dordogne*), Oltis (*Lot*), and Tarnis (*Tarn*), three of the great branches of the *Garonne*; and the heavy rains in the upper valley of the *Loire* and its great branch the Elaver (*Allier*) pour down floods into the basin of the *Lower Loire* which fill the river (Caes. *B. G.* vii. 35), and often do great damage.

This outline of the geography of Gallia, if it is well understood, will enable a student to comprehend many things in the history of the people which are otherwise unintelligible. He will see that this extensive country has natural limits, two seas, two great mountain ranges, and a large river. It is subdivided into a western and north-western, and into an eastern and south-eastern, part by natural, well-defined boundaries.

Caesar divides this country into four parts. The first is the Provincia, afterwards Narbonensis, which lies altogether in the basin of the Rhone, except that small part of the basin of the *Garonne* between *Toulouse* and *Narbonne* which for political reasons was included in the Provincia before Caesar's time. He divides the rest of Gallia into three parts, the limits of which he marks in a general way. Between the Pyrenees and the Garumna he places the Aquitani. North of them he places the people whom the Romans called Galli, but who called themselves Celtae or Celts, as he says (*B. G.* i. 1). He makes the Sequana and the Matrona (*Marne*), its chief branch, the northern limit of these Celtae; and though he does not express himself with great precision, he means to say that they extended from the ocean to the Rhine. The Helvetii were Celtae, and also their northern neighbours the Sequani, who reached to the Rhine; and north of them the Lingones. North of the Lingones were the Leuci, in the highest part of the basin of the *Maas* and the *Mosel*; and north of them the Mediomatrici, on the *Mosel*, whose position is shown by Divodurum (*Metz*): the Leuci and Mediomatrici were Belgae. North of the *Seine* and the *Marne* were the Belgae. [BELGAE.] We should conclude that there was a great diversity in the language and manners of a people spread over such a country as Gallia, if nobody told us so, for the fact is the same even now. But Caesar, who observed this diversity, saw also that there was both difference enough between the peoples of the great divisions to show that they were not the same, and resemblance enough among the peoples of the several divisions to show a nearer relationship among them. The division of the Aquitani seems satisfactorily established. They were Iberians, probably mixed with Celts. The Celtae form a well-determined division, but they were not confined to this country between the *Garonne* and the *Seine:* they were the natives of the Provincia, a fact that Caesar of course knew, and that the Ligurians also were there; but in his general description he purposely omits the Provincia. The Belgae properly so called may have been a pure race; but the Germans had long been in this part of Gallia, and we must suppose an intermixture to have taken place between them and some of the native Belgae, if Belgae was their true name.

As an hypothesis which rests on probable grounds is better than no opinion at all, if the hypothesis is not accepted as final, and so as to exclude inquiry, we may take that of Thierry (*Histoire des Gaulois*) without taking all his reasons and all his history. The Gallic race seems to consist of two great divisions, which we may call Galli and Cumri; and, while we admit the relationship of these races to be shown by their language, religion, and usages, we may also admit that the differences are sufficiently marked to distinguish them. The modern representatives of the Cumri, the Welsh, have preserved their integrity better than any of the Gallic tribes. Of the other peoples in the north of Great Britain, and in Ireland, who belong to the Gallic race, the writer has no distinct opinion, and is not required to express any here; nor has he the knowledge that would enable him to form an opinion. The Belgae, as Caesar calls the Galli north of the *Seine*, though the name properly belonged in his time to the inhabitants of a part only of this country, were different from the Celtae, and they may be the Cumri; and this, probably, was the race that occupied all the Armorica or the sea-coast as far as the *Loire*. The representatives of these people are the modern Bretons, a fact which cannot be denied, whatever opinion there may be about the origin of their present name and that of their country (*Bretagne*), or about settlers from Britannia having gone over there in the fourth century of our aera, or later. Of the two races the Celtae seem to be superior in intelligence, and we found this opinion on the character of the French nation at the present day; for it is admitted by all competent judges, that though the Romans formed a dominion in Gaul which lasted several centuries, though many Germanic nations have settled in it, and though the Franks founded the empire now called the French, the great mass of the

people south of the *Seine* are still of Celtic stock. The Franks, who were a small tribe, probably had less effect on the Celtic population except in the north than the Italians who, during the Roman dominion, settled in all parts of Gallia in a peaceable way. Whatever may be the exact truth within the limits of these probabilities, the Celtic race, as now modified, is superior to the Cumri and to the German in some respects; superior certainly in the striking talents of distinguished individuals, inferior probably in the solid qualities that fit the bulk of a nation for daily life.

The physical type of the Gallic race and its various branches, may be better fixed now than by the doubtful evidence of the ancient authorities; for the race exists and may be examined, and the ancient authorities are vague. To enter on such an investigation without prejudice, a man must get a firm conviction, which may be got, that, though nineteen centuries have now passed since Caesar subdued the Galli, the population in a large part of the country is still essentially what it was then. The Romans and the Greeks describe the Galli as big men, and as having a white skin, blue eyes, and light-coloured hair, which they even reddened by artificial means. (Diod. v. 28; Plin. *H. N.* xviii. 12.) Their desperate courage, warlike character, fickle temper, and great ingenuity are also recorded. If a man will read attentively their history two thousand years ago, he will find the good and the bad, the weak and the strong, part of the Gallic character very much the same that it is now.

All the ante-historical history of the Gallic race, which some writers amuse themselves with producing, must be rejected as fiction. Nothing is certain except that the Gallic race has been widely diffused over Europe, but on what soil it first displayed its restless activity and versatile talent we do not know. The Galli have been in various parts of Spain, in Italy, probably, as far at least as the central parts, and east of the Rhine to a limit that we cannot fix. Within the historical period they have crossed the disputed boundary of the Rhine into Germany, and the Germans have crossed into Gallia; and even in our times the French have, by their warlike talents, reduced Germany to a temporary subjection. But in the long contest the slow and heavy German has had the advantage over his more lively neighbour, and his race occupies extensive tracts on the west side of the Rhine, and he made good his footing there in some parts even before Caesar's time.

The historical period of Gallia commences with the settlement of Massilia or Massalia, as the Greeks called it, by the Phocaeans of Asia Minor (about B. C. 600), on the south coast of Gallia east of the Rhone, in a country occupied by Ligures. Few settlements on a barbarous coast have had a longer or more brilliant history than this ancient city, which still subsists, though it does not occupy exactly the same ground. The Greeks brought with them the cultivation of the vine, though the vine is a native of Gallia, and they taught the Galli the use of letters. The origin of Gallic civilisation is probably purely Greek. The history of this town and its settlements requires a separate article. [MASSALIA.]

In the article GALATIA the history of a Gallic invasion of Delphi and of Asia Minor is briefly told; and the fact of the Galli being in the country north of the Julian and Carnic Alps, in the basin of the Danube, has been stated. It seems that this people must have been also on the east side of the *gulf of Venice*, either mingled with Illyrians, whoever they may be, or among them as a separate race. For Pyrrhus, the adventurous king of Epirus, after his unlucky knight-errantry in Italy, took a body of Galli into his pay, who probably came from the country north of Epirus. Pyrrhus was a captain quite to the taste of the Galli. He led them into Macedonia against Antigonus Gonatas, who had a Gallic army too. Pyrrhus defeated Antigonus, whose Galli, as usual, made a desperate resistance. Having got possession of Aegae, he left a garrison of Galli there, who, as the biographer says, being a nation most greedy of money, plundered the royal sepulchres of the precious metals that they contained, and kicked about the bones of kings. (Paus. i. 11—13; Plut. *Pyrrhus*, c. 26.) His Galli followed Pyrrhus into the Peloponnesus, and were with him at Argos, where he was killed (B. C. 273). We know not if any of them returned.

The Carthaginians, who had settlements on the Spanish coast, and in Sardinia and Sicily, and composed their armies of mercenaries, found employment for some Galli in the First Punic War. These men served them in Sicily; but they were turbulent and dangerous auxiliaries. When the Romans were besieging Eryx, in the west part of Sicily, during this war, the Carthaginians had some Galli in garrison there, who, after failing in an attempt to betray the place and their comrades, went over to the Romans. The Romans afterwards entrusted them with the place, and they pillaged the temple. When the First Punic War was over, the Romans, disgusted with these fellows, put them in vessels, after disarming them, and got them out of Italy. The Epirotae received them, and suffered for their folly in trusting men who could not be trusted. (Polyb. ii. 7.) After the close of the First Punic War the Carthaginians had a dreadful struggle with their own mercenary troops, — Iberians, Ligurians, Galli, and a race of mongrel Greeks. A Gallic chief, Autaritus, made a great figure in this war; for though he had only 2000 men, the remainder of his troops having gone over to the Romans during the siege of Eryx (Polyb. i. 77, 80), he had great influence with the rebels from being able to speak the Punic language, which the long service of these men in the Carthaginian armies had made the common language. The mercenaries were finally destroyed, after a war of three years and four months; a war distinguished above all others, says Polybius, for the cruelty with which it was conducted, and the disregard of all morality.

The history of the Galli in Italia is placed under GALLIA CISALPINA.

The Romans had carried their arms into Africa, Macedonia, Greece, and Asia, before they got a firm footing in Transalpine Gallia. In B. C. 154 the Massaliots came to ask their assistance against the Ligurian Oxybii and Deceates, who were besieging the Greek settlements of Antipolis (*Antibes*) and Nicaea (*Nizza*). The senate sent three commissioners, who landed at Aegitna, a town of the Oxybii, near Antipolis. The people of Aegitna were not willing to receive the Romans; and, a quarrel ensuing, two Roman slaves were killed, and Flaminius, one of the commissioners, escaped with difficulty. The consul Q. Opimius was sent with a force against the Ligurians. He marched from Placentia, across the Apennines, took Aegitna, made slaves of the people, and sent those who were the prime movers in the attack on Flaminius in chains to Rome. Opimius,

who was a bold and prudent commander, defeated the Oxybii and Deceates in two successive battles. The Ligurians now submitted, with the loss of part of their land, which the consul gave to the Massaliots. (Polyb. xxxii. 7. &c., ed. Bekker.) A second demand of aid from the Massaliots, who were pressed by the neighbouring Ligurian tribe of the Salyes, brought the consul M. Fulvius Flaccus into the country (B. C. 125). Flaccus defeated the Salyes, and even invaded the country of the Vocontii, who lived north of them; though it does not appear that they had given the Romans any provocation. (Liv. *Ep.* 60.) C. Sextius Calvinus, consul B. C. 124, and afterwards proconsul in Gallia, completed the subjugation of the Salyes, whom he sold (B. C. 123). The Salyes had a king Teutomal, who, with other chiefs, fled for refuge among the Allobroges, a people higher up the Rhone. Calvinus cleared the way for the passage of the Romans from Etruria into Gallia, along the Ligurian coast, by removing all the barbarians to a certain distance from the sea-shore. During a winter residence north of Marseille, near some hot springs, he found the place so pleasant that he chose it as the site of a town; and here the Romans planted the Latin colony of Aquae Sextiae (*Aix*), their first settlement north of the Alps (B. C. 122). (Liv. *Ep.* 61.)

At this time, the Aedui, a people between the *Saône* and the upper course of the *Loire*, were at war with the Allobroges, whose allies were the powerful people of the Arverni, who lived in the mountains of Auvergne. The Romans chose the party of the Aedui, made an alliance with them, and gave the barbarians, as they called them, the grand title of brothers and kinsmen. (Caes. *B. G.* i. 45, vi. 12.) The consul Cn. Domitius, who now commanded in Gallia (B. C. 122), demanded of the Allobroges the refugee chiefs of the Salyes. Bituit (as Appian calls him, perhaps incorrectly), king of the Allobroges, sent an ambassador to the consul, to deprecate his anger. The ambassador was richly dressed, and had with him a splendid train and a number of fierce dogs. He was accompanied by his bard, who sung the glories of his king, of his nation, and of the ambassador; but the Roman consul was not moved by his music. The Allobroges now crossed the *Isère*, and found the consul at Vindalium, at the junction of the Sulgas (*Sorgue*) and the Rhone, a little north of Avignon. The Allobroges were entirely defeated (B. C. 121). The consul for this year, Q. Fabius Maximus, came with large reinforcements, and Cn. Domitius had a command under him. The Roman generals crossed the *Isère*, and entered the territory of the Allobroges. The Arverni, with their neighbours the Ruteni, were now advancing upon the Romans, who found that they had just crossed the Rhone by a bridge of boats, near the junction of the Rhone and the *Isère*. (Strab. p. 191.) The king of the Arverni, called Bituit by Livy (*Ep.* 61), who was at the head of more than 200,000 men, no doubt a greatly exaggerated number, looked with contempt on the Roman legions, whom he considered hardly enough for a dinner for his dogs. But he soon discovered what an enemy he had to deal with. His men were frightened by the elephants in the Roman army (Flor. iii. 2); and in the rout the Arverni fled across the bridge, which broke under their weight, and men and horses were swallowed up in the rapid current of the Rhone. It appears that the Allobroges also were in the battle. King Bituit wandered about the mountains, till Domitius treacherously got him into his hands, and sent him to Rome. The senate put him in prison at Alba, on the lake Fucinus; and they afterwards got his son Congentiat into their hands. The Arverni, though defeated, were not further molested by the Romans: in fact, it was not easy to enter their country. But the Allobroges were declared Roman subjects; and the Romans constituted the country on the east side of the Rhone as far north as Geneva, the remotest town of the Allobroges, a Roman province, which they designated simply by the name of Provincia. Fabius, who got the name of Allobrogicus from his victory, and Domitius, recorded their victory by erecting a trophy of marble near the battle-field (Strab. p. 185), or each erected one; and Fabius built two temples. Domitius, a worthy ancestor of the emperor Nero, went about the new province riding on an elephant, with a rout of soldiers after him. (Sueton. *Nero*, c. 2.) Fabius and Domitius had a triumph at Rome for their victories, in which king Bituit appeared in his various-coloured armour and his silver chariot. The Provincia had now always a Roman army in it, and a Roman army was always kept employed. The successors of Fabius extended the province, west of the Rhone, along the *Cévennes;* and the Helvii, Volcae Arecomici, and Sardones, at the foot of the Pyrenees, were included in it. They also made an alliance with the Volcae Tectosages, whose chief town was Tolosa (*Toulouse*); and thus they prepared the way for getting into the basin of the *Garonne*. The Romans had hitherto no passage into Gallia except that along the sea. It was to secure some passage over the Alps, as it seems, that the consul Q. Marcius Rex (B. C. 118) attacked the brave tribe of the Stoeni, an Inalpine Ligurian people, all of whom perished, either by the sword of their enemies or by their own hand. (Oros. v. 14; Liv. *Ep.* 62.) A brief notice is preserved of a memorable defeat of the Romans about this time. The Scordisci, a people somewhere about the *Save*, a Gallic race, or a mixed race, annoyed the Macedonian frontier, and threatened Italy. The consul C. Porcius Cato crossed into their country, where he and his army perished. These savage people, however, still annoyed the Northern Greeks, whom they horribly maltreated. It is to these and the like incursions of the Galli that Polybius seems to allude when he says (ii. 35): "The alarm from the Galatae, not only of old, but in my time also several times, has terrified the Hellenes." We have here, and in many other places, evidence of the existence of a great number of Galli in the country north of Macedonia and Epirus.

The Roman dominion in the Provincia was secured (B. C. 118) by the establishment of Narbo Marcius (*Narbonne*), a Colonia Romana, on the Atax (*Aude*). The Romans thus commanded the road into Spain through the Eastern Pyrenees, and had an easy access to their new friends the Tectosages. They spared no pains to secure and embellish the important position of Narbo, which became a commercial rival to Massilia.

An invasion of barbarians from the east of the Rhone and north of the Danube now threatened the Roman dominion. Livy (*Ep.* 63) speaks of a nation called Cimbri who entered the country over the mountains north-east of the Adriatic, the country which the Romans called Noricum. This was the first time that the Romans heard the name of the Cimbri. (Tacit. *Germ.* c. 37.) Appian (*de Reb. Gall.* xiii) calls these invaders Teutones. The consul Cn. Papirius Carbo (B. C. 113) crossed the

Alps against them, and, after coming to terms with the barbarians, treacherously attacked them, but he lost a large part of his army, and narrowly escaped (B. C. 113). The Cimbri then, according to Appian's story, which is worth very little, retreated to the country of the Galatae; but what Galatae are meant we do not know. Some few years later Teutones and Cimbri entered the country of the Belgae. (Caes. *B. G.* ii. 4.) This seems to have been a fresh set of barbarians: Caesar says that the Belgae were the only people of Gallia who prevented the Cimbri and Teutones from invading their territory, which may be true if he means the Belgae properly so called [BELGAE]; but it is not exact, if he has told the truth in another place (ii. 29), where he says, that the Aduatuci on the Mosa were a part of these barbarians, who were left behind to guard the cattle and baggage, while the rest moved on to the south. A short notice of the terrible devastations of these barbarians is preserved by Caesar (*B. G.* vii. 77.) They ravaged Celtica; and the people, who shut themselves up in their towns, were compelled by famine to eat one another. From Celtica the invaders passed into the Provincia; and, in B. C. 109, the consul M. Junius Silanus was defeated by them (Liv. *Ep.* 65). In B. C. 107 L. Cassius Longinus had the province of Transalpine Gallia. The Tigurini, one of the Helvetian pagi, under the command of Divico, were entering the country of the Allobroges, who were within the Provincia, and the consul went to meet them. The Roman commander fell in the battle, and his army was ignominiously compelled to pass under the yoke. The text of Orosius (v. 15), which is undoubtedly corrupt, states that Cassius pursued the Tigurini to the ocean, where he was defeated; but the Leman lake was probably the place. (Liv. *Ep.* 65.) L. Calpurnius Piso, who commanded under Cassius, perished in the battle. He was the grandfather of the Piso whose daughter Caesar married (*B. G.* i. 12). M. Aemilius Scaurus, a legatus probably of Caepio, the consul of the following year, was defeated about this time by the Cimbri, and being taken prisoner was killed by a prince named Boiorix, because he advised the Cimbri not to invade Italy. (Liv. *Ep.* 67.)

In B. C. 105 the consul, Cn. Manlius Maximus, was in Gallia north of the Alps, with Q. Servilius Caepio, consul in the preceding year. It was during Caepio's consulship, it seems, that he took and plundered Tolosa, the capital of the Volcae Tectosages, who had formed an alliance with the invading barbarians, or showed a disposition to do so. (Dion. Cass. *Frag.* 97.) The consul and Caepio were encamped separately near the Rhone, when the barbarians fell upon them, and stormed one camp after the other. The incredible number of 80,000 Roman soldiers is said to have perished. (Liv. *Ep.* 67.) Among the few who escaped was Q. Sertorius, who saved himself by swimming over the Rhone. After such a victory it is not surprising that the invaders advanced further south. The Cimbri ravaged the country between the Rhone and the Pyrenees, and entered Spain. But they were driven back by the Celtiberi, and returning into Gallia joined the Teutones. The brief notices of these wars generally mention the Cimbri and Teutones together. We have hardly any evidence whether they were two people or one. It is generally assumed that the Teutones must be a Teutonic race, as their name would show; but this is not conclusive. The Cimbri are also supposed by some writers to be a Germanic people, though the reasons for this supposition are not sufficient. Plutarch (*Marius*, c. 11) has collected some of the opinions about the origin and nationality of these people, and nobody has found out anything better yet. It was a whole nation in movement, with their waggons, dogs, wives, and children. The Romans appointed C. Marius consul for the third time, B. C. 103, to continue the war against the barbarians. Soon after his arrival in the province he made the cut at the outlet of the Rhone the traces of which still remain. [FOSSA MARIANA.] Marius had with him L. Cornelius Sulla, as legatus, who defeated the Tectosages, who were in arms against the Romans, and took their king Copill prisoner. (Plut. *Sulla*, c. 4.) The barbarians now divided themselves into two parts. The Cimbri, with the Helvetic Tigurini, crossed Helvetia to make their way into Italy by the Tridentine Alps. The Teutones, and a people with them named Ambrones, moved on towards the Ligurian country. (Plut. *Mar.* c. 15.) The story of the movements of the barbarians cannot be accepted as true. The fact of a body of barbarians advancing along the Rhone towards Italy, and of another body about the same time entering the basin of the Po from the north-east, is all that we know. C. Marius (B. C. 102.), now consul for the fourth time, entrenched himself near the junction of the Rhone and the *Isère*, while the countless host of barbarians past him on their way to the south. Marius followed the Teutones, and in a battle near Aquae Sextiae destroyed and dispersed them. Their king Teutobocchus, a gigantic barbarian, was made prisoner, and afterwards walked in Marius' triumph at Rome. (Florus, iii. 3.) In the next year, C. Marius, consul for the fifth time, with his colleague Lutatius Catulus, defeated the Cimbri in the country north of the Po. The destruction of these invaders kept Northern Gallia quiet for a time, and there was no great movement of the barbarians until B. C. 58.

In the wars which followed Sulla's usurpation, Q. Sertorius, he who escaped from the rout of Caepio's army on the Rhone, maintained in Spain the cause of the Marian faction; and many of this party fled to the Provincia. Some of the Aquitani served under Sertorius in Spain, where they learned the art of war. (*B. G.* iii. 23.) In B. C. 78 L. Manilius, proconsul of Gallia, was obliged to quit Aquitania with the loss of his baggage; and the legatus, L. Valerius Praeconinus, was defeated and killed. (*B. G.* iii. 20.) In B. C. 76 Cn. Pompeius marched into Spain against Sertorius. He made his way into the Provincia, over the Alps, by a new route to the Romans, and his road to Narbonne was marked by blood. The Galli of the Provincia were in arms against the Romans. Pompeius gave the lands of the Helvii and Volcae Arecomici, who had been the most active in the rising, to the Massaliots. (Caes. *B. C.* i. 35.) Pompeius left M. Fonteius governor of the Provincia. During his administration the Provincia was in rebellion, and the Galli attacked both Massilia and Narbo, but Fonteius drove them off. He was three years in Gallia, during which time the country was drained of its resources to supply the Roman armies opposed to Sertorius in Spain. Fonteius was also charged with enriching himself by illegal means; and when affairs were more settled, B. C. 69, he was tried at Rome, on charges made by the Allobroges and Volcae, for the offence of Repetundae. He was

defended by Cicero; part of whose oration on this occasion is extant.

Another governor of the Provincia, during B. C. 66, 65, C. Calpurnius Piso (consul B. C. 67), was prosecuted by C. Julius Caesar B. C. 63 on a charge of repetundae and other offences. Cicero defended him, and he was acquitted.

In the consulship of Cicero (B. C. 63) Catilina and his desperate associates made proposals to the ambassadors of the Allobroges who were then at Rome. The ambassadors had come to get protection from the senate against the greediness of the Roman governors. They were overwhelmed with debt, both the state and individuals; a common complaint of the provincial subjects of Rome. The Romans levied heavy contributions on those people who had made most resistance, and both communities and individuals felt it. Besides this, the Gallic cultivator seems to have been always in debt. He borrowed money from the Roman negotiatores at a high rate, and his profits would be hardly sufficient to pay the interest of the money. The profitable business of feeding sheep and cattle was in the hands of Romans, who probably got the exclusive use of much of the pasture land. As the Allobroges were a conquered people, we may conjecture that their waste lands had been seized by the Roman state, and were covered with the flocks of Romans who paid to the Roman treasury a small sum for the right of pasture. P. Quinctius, for whom Cicero made a speech which is extant, had a good business in Gallia as a flock-master ("Pecuaria res satis ampla," *pro P. Quinctio*, c. 3). A Roman named Umbrenus, who had been a "negotiator" in Gallia, undertook to open the conspiracy of Catiline to the Allobroges, and he promised them great things if their nation would join in the rising. From fear, however, or some other cause, the Allobroges betrayed the conspirators to the consul Cicero. (Sallust, *Cat.* 40; Appian, *B. C.* ii. 4.) It does not appear that the ambassadors got anything for their pains, though they well deserved it. There were signs of insurrection in Southern Italy as well as in Gallia Citerior and Ulterior, and the revelations of the ambassadors saved Rome at least from a civil war.

The Allobroges at home were not satisfied with the mission to Rome, for they rose against the Romans, and ravaged the country about *Narbonne*. Manlius Lentinus, a legatus of the governor C. Pomptinus, narrowly escaped perishing with his army near the *Isère*, having fallen into an ambuscade laid by Catugnat, the commander of the Galli. By sending fresh forces across the Rhone, Pomptinus defeated the Galli near Solonium (perhaps *Sallonaz*), and ended the war by taking the place. (Dion Cass. xxxvii. 47; Liv. *Epit.* 103.)

Though the Greek and Roman writers give us no satisfactory information about the Cimbri and Teutones, they are quite clear about the people whom they call Germani. The Germani were on the east side of the Rhine, opposite to the Helvetii, with whom they were constantly fighting (Caes. *B. G.* i. 1), and to the other Celtic and Belgic peoples who lived along the Rhine from the territories of the Helvetii northward. The Germani had got a footing in the country of the Belgae long before Caesar's time [BELGAE]; and the Tribocci, also a German people, were settled in the plain between the *Vosges* and the Rhine about *Strassburg*, and consequently within the limits of the Celtae. A quarrel between the Aedui, who were east of the *Saône* and in the valley of the *Doubs*, brought fresh Germans into Gallia. One matter in dispute was the tolls on the navigation of the Arar. (Strab. p. 192.) The Sequani made an alliance with the Arverni to annoy the Aedui on one side, and on the other they brought over the Rhine Ariovistus, a chief of the Suevi. The German came with his hardy men, and soon reduced the Aedui to submission. An Aeduan named Divitiacus, a Druid, who had the title and rank of Vergobretus, escaped into the Provincia, and thence made his way to Rome to complain of the tyranny of the German. (Caes. *B. G.* i. 30.) Cicero (*de Divin.* i. 40) entertained this learned Celt at Rome, and his brother Quintus was acquainted with him when he was one of Caesar's legati in the Gallic War. Ariovistus, after defeating the Aedui, took possession of one third part of the lands of his friends the Sequani; and, as new comers from the other side of the river had to be provided with lands, he demanded of the Sequani another third. (*B. G.* i. 31.) This was the state of affairs in that part of Gallia when (B. C. 60) a rumour reached Rome that the Helvetii were preparing to move from their country. (*B. G.* i. 2.) The Romans had already suffered from the arms of the Tigurini one of the four Helvetic pagi. This movement of a whole people was an attempt to seize the supremacy of Gallia, and in the end to eject the Romans. In B. C. 59 C. Julius Caesar was consul; and it happened that during this year Gallia was quiet, partly owing to Caesar's own contrivance, perhaps, for it was during his consulship that the savage German Ariovistus was honoured with the title of "Rex atque amicus" (*B. G.* i. 35) by the Roman senate. Caesar obtained for his "provincia," after the expiration of his consulship, Gallia Cisalpina and Illyricum, with Gallia north of the Alps, for five years; and he had a general commission for doing what he liked north of the Alps under the name of protecting the friends and allies of the Roman people. (*B. G.* i. 35.) Early in B. C. 58 he heard that the Helvetii were beginning to move from their country, and the road they were going to take was through the Provincia. Caesar hastily quitted Rome, crossed the Alps, and in a few days he was at Geneva.

The conquest of Gallia by Caesar is told with great brevity by himself. His purpose was to describe his military operations, and he tells us very little more about Gallia than what strictly belongs to the matter. In one instance (vi. 11—20) he has made a digression to speak of the institutions and manners of the people; but he has given no description of the country except his brief introduction (*B. G.* i. 1). All the rest that we learn about the country and the people is told as part of his military operations; but we may learn from it more of the state of Gallia than from the learned labours of a modern compiler. His war with the Helvetii may be more conveniently spoken of under that heading. [HELVETII.] After driving this nation back to their homes he went against the German Ariovistus. His course was to Vesontio (*Besançon*), the capital of the Sequani, on the *Doubs*, the position of which he has well described. From *Besançon* the direction of his march is not clearly stated: but he reached a large plain, and defeated Ariovistus five miles from the Rhine; for five miles is the true reading, not fifty. (Caes. *B. G.* i. 31—54.) The battle was fought in the plain between the *Vosges* and the Rhine, somewhere north of *Bâle*. Nothing more is

said of Germans in this part of Gallia after the battle near the Rhine: the news of the defeat prevented others from coming over. Caesar only came into the country of the Sequani to drive out the Germans, but he left his army there for the winter, and crossed the mountains into Cisalpine Gallia to hold his circuits ("conventus agere," *B. G.* i. 54). In the winter the Belgic nations formed a union to defend themselves, for they suspected that Caesar would attack them after he had reduced the country of the Celtae. They were urged to arms by some of the Celtae, who did not like to see the Romans wintering in their country. Caesar, who gives these reasons for the combination of the Belgae, adds another; that the great men in Gallia, and those who had the means of hiring followers, were accustomed to usurp royal power whenever they had a chance, and, if the Roman dominion were established, they knew this mode of making what their modern imitators call a "coup d'état" would not be possible (*B. G.* ii. 1). Caesar in his Commentarii mentions several instances of this kind of usurpation. His second book contains his history of the war with the Belgae (B. C. 57). The Remi submitted from the first. The submission of the Suessiones, Bellovaci, and Ambiani followed. He defeated the Nervii and their allies in a great battle on the Sabis (*Sambre*); and then took the stronghold of the Aduatuci, who were the descendants of the Cimbri and Teutoni. (*B. G.* ii. 29.) The survivors of the Aduatuci were sold, and the number reported to Caesar was 53,000. They were purchased by the mercatores who of old followed the Roman camp (Liv. x. 12) and followed Caesar's camp (*B. G.* vi. 31). We do not see how the mercatores could make anything of their bargain, unless they had some escort to assist in conveying the slaves to the nearest market, which would be the Provincia; or it may be that the Belgians would have no objections to buy a few of these intruders. The sale of slaves was one way that Caesar had of raising money. After the great battle with the Nervii, P. Crassus with a single legion was sent to the Veneti, Unelli, Osismi, Curiosolitae, Sesuvii, Aulerci, and Redones, whom Caesar calls "the maritime states which border on the Ocean." All these people submitted to a mere youth at the head of a few thousand men. The Transhenane Germans also sent to Caesar to proffer hostages and to do as they were bid. The proconsul was in a hurry to visit Italy and Illyricum, and he told the Germans to come and see him the next summer. We have no evidence of the Roman armies having been led north of the basin of the Rhone before Caesar's Belgian campaign. The rapidity of his movements, his success, and his savage treatment of those who resisted, struck terror into the barbarians. He placed his soldiers in winter quarters between the *Seine* and the *Loire*, and south of the *Loire*, in the territory of the Carnutes, Andes, and Turones, and immediately went to Italy. (*B. G.* ii. 35.)

Caesar sent a legion and some cavalry under Ser. Galba to winter in the country of the Nantuates, Veragri, and Seduni, who occupied the country from the north-eastern boundary of the Allobroges and the Leman lake to the highest Alps. They were in the great valley called the Vallais, between the Bernese and the Pennine Alps. Galba placed part of his troops in the country of the Nantuates, who were nearest to the lake, and he fixed himself with the remainder at Octodurus (*Martigny*). Caesar says that the purpose of Galba's mission was to clear the pass over the Alps by which the "mercatores" were accustomed to go at great risk and with the payment of heavy tolls. These "mercatores" were the enterprising Italian traders who crossed the pass of the *Great St. Bernard* from Cisalpine Gallia to carry their wares among the Galli. Galba was attacked by the people in his quarters at Octodurus, which he left after driving off the enemy; and, retreating through the country of the Nantuates into the territory of the Allobroges, where he was within the Provincia, he spent the winter there. (*B. G.* iii. 7.)

Caesar was recalled from Italy (B. C. 56) by a rising of the maritime states, whose submission had perhaps only been made to gain time; but the immediate provocation was the demand for supplies made on some of them by P. Crassus, who was wintering somewhere about *Angers* with a legion. The movers of this war were the Veneti, a skilful maritime people, who had many ships with which they traded to Britain. (*B. G.* iii. 8.) Caesar's campaign against these states, and the sea-fight, are one of the most difficult parts of the Commentarii to explain [VENETI.] He defeated the fleet of the Veneti; and Q. Titurius entered the country of the Unelli, who submitted. Before the battle Caesar sent P. Crassus into Aquitania with twelve cohorts, to prevent the Aquitani from coming to the aid of the Armoric states. Crassus first defeated the Sotiates, who lived about the modern *Sos*, between *Auch* and *Bazas*. (*B. G.* iii. 21.) The Vocates and Tarusates, who were next attacked, sent for aid from Spain, which is some evidence in confirmation of the relationship of these Aquitani to some of the Spanish peoples. [AQUITANI.] The Spanish auxiliaries whom Caesar names were Cantabri. (*B. G.* iii. 26.) After defeating the Aquitani and their Spanish allies in the wide plains south of the *Gironde*, Crassus received the submission of the greater part of Aquitania; the names of the peoples are mentioned by Caesar. (*B. G.* iii. 27.) The position of several of these tribes can be determined; but the position of others is uncertain.

The summer was near ended, and Caesar had put down all his enemies except the Morini and Menapii, who were in arms. The Morini lived along the channel, from Gesoriacum (*Boulogne*) northwards at least as far as Castellum Morinorum (*Cassel*). [CASTELLUM MORINORUM.] The enemy fled into the forests and marshes, where the Romans followed them, not without loss. Caesar began to cut a road through the forests, and he had just reached the enemy, when the heavy rains compelled him to retire. (*B. G.* iii. 29.) Before taking leave of the Morini he wasted their lands, and burnt all the buildings that he could reach. He placed his army in quarters between the *Seine* and the *Loire*, in the country of the Aulerci and Lexovii.

In the next year (B. C. 55) the Usipetes, whom Caesar calls Germani (iv. 1), and the Tenctheri, crossed the Rhine, and fell on the Menapii. These invaders were themselves driven on by more powerful enemies, the Suevi, whose habits Caesar describes (*B. G.* iv. 1); and he states that the "mercatores" used to go into their country. Here we have the evidence of the Roman proconsul to the fact of mercatores crossing the Rhine into Germany before the Roman arms had been carried over the river. It is here assumed that these mercatores were Italians. Caesar determined to stop these German invaders,

who, after living on the Menapii during the winter, had moved south into the territories of the Eburones and the Condrusi, who were dependents of the Treviri. The Germans had got as far south as *Liège*, when Caesar came towards them. He tells us his own story of the treacherous dealing of the Germani with him, but he also shows that he was quite a match for them in cunning. The Germans at last were fallen upon by the Romans at the confluence of the Mosa and Rhenus ("ad confluentem Mosae et Rheni," as it is in Caesar's text, iv. 15), where those who escaped the Roman sword were drowned in the river. There is a great difference of opinion about the explanation of this campaign. But the writer still thinks that this river Mosa is the *Mosel*, and that the Germans were beaten and drowned near *Coblenz*. A little below *Coblenz*, if this explanation is accepted, and between *Coblenz* and *Andernach*, Caesar built a wooden bridge on which he passed over the Rhine to the German side (*B. G.* iv. 17), rather to make a display of Roman power than for any other purposes. He stayed eighteen days in Germany, and returning into Gallia destroyed his bridge (iv. 19). The rest of the summer was occupied with Caesar's first expedition to Britain, the immediate motive for which, he says, was the information that he had of aid being supplied from Britain to the Roman enemies in almost all the Gallic wars. (*B. G.* iv. 20.) The fact may be true or not: he does not say that it was so. He has mentioned one occasion (*B. G.* iii. 9) when the Veneti sent to Britain for aid; but he does not say that it came. What he says (iv. 20) may be fairly interpreted to apply to the wars of the Romans with the Galli before his time, as well as to his own time. Caesar remarks that "few persons" went to Britain except "mercatores," and they were only acquainted with the coast and the parts which were opposite to Gallia. These "mercatores" may have been Italians from the Provincia, and also Galli. One would suppose that in those days nobody would go to Britain except traders, but Caesar's expression of "few persons" is explained by other parts of his work. (*B. G.* ii. 14.) Political refugees used to run away from Gallia to Britain. Caesar sailed from Portus Itius (*Wissant*), and landed about *Deal* on the *Kent* coast. On his return to the French coast the Morini, whom he had left on good terms, could not resist the temptation of plundering some 300 Romans, who had landed on a different part of the coast from the rest of the troops (iv. 37). But the Morini got nothing by their treachery; and they lost many of their men in the pursuit by the Roman cavalry. Labienus also entered their country, and the Morini submitted; for this autumn had been a dry season, and the Romans were not stopped by the waters. The country of the Menapii, who lived on the Lower Rhine and the Lower Mosa, was mercilessly ravaged this autumn. The people hid themselves in their thickest forests, while the Romans wasted their lands, cut down the corn, and burnt the buildings. (*B. G.* iv. 38.) Caesar placed all his men in winter quarters within the territory of the Belgae.

Caesar prepared for his invasion of Britain in B. C. 54 by building a great number of ships in Gallia, but he had to get from Spain the materials for fitting them out. (*B. G.* v. 1.) In this spring he visited the country of the Treviri, who were on the Rhine above and below *Coblenz*, and he settled the disputes between the two factions. These Gallic states were continually distracted by quarrels among the chief people. Caesar sailed on his second expedition to Britain from Portus Itius, and landed on the same part of the British coast as in his first expedition. (*B. G.* v. 8—23.) On his return he found that the harvest had failed in Gallia, which made it necessary for him to disperse his troops in winter quarters (v. 24). He had various ways of keeping the Galli quiet. If he found a man who could be useful and was fit for the place, he would make him a king, as in the case of Tasget, who was a man of high rank among the Carnutes, for his ancestors had held royal power. Caesar, finding Tasget useful, restored him to his ancestral rank; but in the third year of his reign he was murdered, and a great number of persons were implicated in the conspiracy. (*B. G.* v. 25.) In this winter the Romans had a great loss; a division of the army was cut off in the country of the Eburones; and Q. Cicero, the brother of M. Cicero, had great difficulty in defending his camp against the Nervii till Caesar came to his assistance. (*B. G.* v. 38—52.) Caesar spent all this winter in Gallia. Things were in too disturbed a state to let him leave. The Senones had a king, Cavarin, whom Caesar had made them a present of. They were going to put their king to death by a determination of the whole people, or the senate at least (publico consilio); but the king, hearing of their designs, escaped to his friend the proconsul. Caesar summoned the senate of the Senones, and the senate refused to come. In this winter the Treviri attacked the camp of Labienus, who was on their borders; but Induciomar, the leader of the Treviri, was killed, and the assailants were defeated. (*B. G.* v. 58.)

In B. C. 53, Caesar, expecting fresh troubles in Gallia, increased his forces. (*B. G.* vi. 1.) After checking a rising of the Nervii, he summoned the states of Gallia to assemble in the spring, as his practice had been, and all came except the Carnutes, Senones, and Treviri. He does not mention the place to which they were summoned; but he moved the meeting to Lutetia Parisiorum (*Paris*), in order to be nearer to the Senones, who soon submitted, and also the Carnutes. (*B. G.* vi. 4.) His principal business now was with the Treviri and Ambiorix, king of the Eburones, who had cut off the Roman troops in the previous winter. The Menapii were friends to Ambiorix, and they had been guilty of the insolence of never having sent ambassadors to Caesar. He entered their country with his forces in three divisions, burnt as usual all that he came near, and carried off many head of cattle and many prisoners. (*B. G.* vi. 6.) This brought them to terms; and the proconsul without delay set off to punish the Treviri, who had got Ambiorix some friends among the Germans east of the Rhine. Before Caesar came Labienus had defeated the Treviri; and on his arrival Caesar built a second wooden bridge over the Rhine, a little above the place where he built the first, and went a second time into Germania. (*B. G.* vi. 9.) This second passage of the Rhine was not marked by any great event. The Ubii, a nation on the east bank, who will afterwards appear on the Gallic side, humbly submitted; and Caesar, finding that his real enemies on the German side were the Suevi, made inquiries about them. They had retired with all their forces a long way, and planted themselves at the place where a forest of boundless extent commenced. There they were waiting for the Romans, who prudently turned their backs on the Suevi and returned by their bridge (vi. 10). Being bent on taking Ambiorix, who had

done him so much mischief, Caesar entered the country of the Eburones. He left his heavy material with Q. Cicero at Aduatuca, the winter quarters of the troops that had been destroyed the year before. (*B. G.* vi. 32.) Aduatuca seems to be the site of *Tongern*, and, as Caesar says that it was about the middle of the territory of the Eburones, it fixes their position. [ADUATUCA; EBURONES.] While Caesar was wasting the lands of this unfortunate people, some Germans, Sigambri, crossed the Rhine, and fell on the camp of Q. Cicero. (*B. G.* vi. 35.) Caesar returned to the camp, but the Sigambri had time to get safe off with their booty. (*B. G.* vi. 41.) Again he set out to vex the Eburones, as he expresses it; and we have his own word for what he did: he burnt every building that he could see, drove off the cattle, and the corn that his men and beasts did not consume was laid by the rains. He left the country with the belief that, if any of the Eburones had escaped him, they would die of hunger. (*B. G.* vi. 43.)

After this merciless devastation Caesar summoned the states of Gallia to Durocortorum (*Rheims*), where he made inquiry into the conspiracy of the Senones and Carnutes. Acco, who had been the cause of the rising, was flogged to death; and his accomplices ran away. (*B. G.* vi. 44.) Caesar put his troops in quarters among the Treviri, the Lingones, a people who had always been quiet, and at Agendicum (*Sens*), the chief town of the Senones. He went into Italy to hold the conventus.

The Galli, hearing of disturbances at Rome this winter, thought that Caesar would be detained in Italy (*B. G.* vii. 1), and this would be a good opportunity for getting rid of the Romans. The Carnutes began, and the Arverni next rose under a brave and skilful commander Vercingetorix, who stirred up the Galli north and west of the Arverni as far as the ocean. This brought Caesar into the Provincia in the depth of winter. (*B. G.* i. 52.) He cut his way through the snows on the *Cévennes*, six feet deep, and came down on the Arverni, who did not expect him by that way. (*B. G.* vii. 8.) But Caesar was in the neighbourhood of Vercingetorix, who, at the request of the Arverni, advanced to their aid from the country of the Bituriges, whom he had brought over to his side. Unless Caesar could collect his scattered forces, he could not make head against Vercingetorix. He resolved to do this himself, without the knowledge of his men, whom he left under the care of Brutus; he went across the *Cévennes* again in the depth of winter to Vienna (*Vienne*) on the Rhone, where he found some newly raised troops of horse, who had been ordered to assemble there. From Vienna he travelled day and night to the country of the Lingones, where he had two legions. Having reached these troops, he summoned the rest of his forces from the country of the Senones and the Treviri, and got them all together before the Arverni could hear of his approach. He left two legions and all his heavy material at *Sens*, and set out towards the country of his allies, the Boii, between the *Allier* and the *Loire*, whom Vercingetorix was threatening. His march was rapid and terrible. In two days he took Vellaunodunum, a town of the Senones, and then came right upon Genabum (*Orléans*) on the *Loire*, where the Carnutes, at the beginning of the outbreak, had murdered the Roman "negotiatores" who were living there. [GENABUM.] He broke into the town, which his men sacked; he left it in flames, and crossed the *Loire*. (*B. G.* vii. 11.) He was now in the country of the Bituriges (*Berri*). The first town that he took was Noviodunum. He then came on the capital Avaricum (*Bourges*), which was defended by a strong wall, made with great skill The Galli had a way of building their town walls, which Caesar describes very briefly and very well (*B. G.* vii. 23); this people had made some progress in the art of defending places. The siege was a work of great difficulty, and the sufferings of the Roman soldiers were extreme; for it was winter, and they had to work in the mud, the cold, and in continual rain. The Roman commander tells the end of the affair in a few words (*B. G.* vii. 28): "The soldiers, whose passions were roused by the massacre at Genabum and their own sufferings, spared neither the helpless through age, nor the women, nor the children; out of the whole number, who were about 40,000, only 800, who had hurried out of the place on hearing the shouts of the invading enemy, escaped safe to Vercingetorix."

Caesar found stores in Avaricum, and, the winter being over, he was ready for a regular campaign. But he had first to settle a domestic dispute among the Aedui. (*B. G.* vii. 32.) Two men had been elected to the chief magistracy, an annual office, and the constitution allowed only one. The whole state was in arms, one party against the other. Caesar summoned the Aedui to Decetia (*Décise*), an island on the *Loire*, and settled the dispute in favour of one of the men. He exhorted the Aedui to give him their assistance in the war, with fair promises of what he would do for them after Gallia was completely subdued. The position of the Aedui, between the *Upper Loire* and the *Saône*, made their alliance most important for the Romans. It was the easiest line of communication between the north part of the Provincia and the basin of the *Seine*. Caesar was still afraid of the Senones and the Parisii, and he sent Labienus with four legions into that country. [PARISII.] He marched south with six legions, with the intention of taking the hill town of Gergovia, in the country of the Arverni, in the upper part of the basin of the *Allier*. This, his most signal failure in Gallia, is told in another place. [GERGOVIA.] After his defeat before Gergovia Caesar was in great straits. He moved northwards to join Labienus; but his treacherous friends, the Aedui, seized Noviodunum (afterwards Nevirnum, *Nevers*) on the *Loire*, where Caesar had great stores, and the booty that he had got in the Gallic War. (*B. G.* vii. 55.) His military chest also was there. His enemies lined the banks of the *Loire* with troops, and the river being swollen by the melted snows was difficult to pass. He could not think of retreating. It would be a confession that he was beaten. Nor could he attempt to cross the *Cévennes*, where the roads were almost impassable; besides, Labienus was on the *Seine*, and he was afraid that he would be cut off. Nothing remained but to cross the river, which he accomplished. He found corn and cattle on the east side, and was joined by Labienus, who was as lucky as himself in escaping from a very dangerous position (*B. G.* vii. 57—62), and getting safe to *Sens*. All Central and Western Gallia was now in arms, and Vercingetorix was chosen commander-in-chief. The Remi and Lingones still stuck to the Roman alliance; and the Treviri, who were kept busy by their German neighbours, sent aid to neither side. Vercingetorix bestirred himself to rouse all the country against the Roman proconsul.

He pushed on the Gabali, and some of the Arverni against the Helvii, who were within the Provincia; and the Ruteni and Cadurci were sent to ravage the land of the Volcae Arecomici, who were also within the Provincia. (*B. G.* vii. 64.) Caesar, knowing that the enemy was superior in cavalry, and that all the roads into the Provincia and Italy were blocked up, got cavalry from over the Rhine, from some of his German friends there, and light troops who fought among the cavalry after German fashion. The proconsul, however, had an eye to the safety of the Provincia, and he began to move through the borders of the Lingones into the country of the Sequani. He was on his road to the Provincia, with the intention, no doubt, of returning when he had got reinforcements. The occasion was tempting to the Galli. They attacked him on his march, and were defeated. (*B. G.* vii. 67.) The Germans contributed largely to the victory. All the cavalry of Vercingetorix was routed, and he fled to Alesia, a town of the Mandubii. [ALESIA.] The siege of this place and the capture of Vercingetorix put an end to the campaign, the result of which was more unfortunate to the Galli than glorious to Caesar. But a man of less ability and energy would have perished, with all his army.

The eighth book of the Gallic War is not by Caesar, though it is possible that he left some memoranda which have been used by the author. Gallia (B. C. 51) was still not quiet. The Bituriges were again preparing to rise, but they were soon checked. The divisions among these Gallic people were more fatal to them than the Roman army. The Carnutes were quiet while Caesar was putting down the Bituriges, and they began to attack them as soon as they had yielded to the Romans. The Bituriges applied to Caesar for protection. It was a hard winter when the Romans again entered the territory of the Carnutes. Caesar sheltered his infantry as well as he could in the ruins of Genabum, and sent out his cavalry to scour the country. The houseless Carnutes had no place of refuge except the forests, which could not protect them against the severity of the season. A large part of them perished, and the rest fled to the neighbouring states. (*B. G.* viii. 5.)

The last great struggle of the Galli was made north of the *Seine* by the Bellovaci and their allies. This campaign, which is not very well told by the author, contains some difficulties (*B. G.* viii. 7—22), but it is well worth a careful study. These Belgae and their allies showed considerable military skill. They seem to have learned something from their enemy, and the Roman general is said to have acknowledged that their plans were "very judicious, and showed none of the rashness of a barbarous people." (*B. G.* viii. 8.) The defeat of the Bellovaci and their allies was considered by Caesar the end of his Gallic wars. (*B. G.* viii. 24.) The revengeful proconsul had not yet caught Ambiorix, nor forgotten him. He once more entered his country, and did all the mischief that he could, thinking, as the historian says (*B. G.* viii. 24), that if he could not catch Ambiorix, the next best thing for his honour (dignitas) was to treat his country in such a way that his people, if any were left, might hate him so much, for the misfortunes that he had brought on them, as never to let him come among them again.

The last town that Caesar had to besiege was Uxellodunum, the site of which is uncertain. It was a town of the Cadurci, in the basin of the *Garonne*, and perhaps on the Oltis (*Lot*). When Gallia revolted in B. C. 52, Drappes, a Senon, had got together what the historian calls (*B. G.* viii. 30) some men of desperate fortune. He had also induced slaves to join him, men banished from the various towns of Gallia, and robbers; with this rabble he had joined Dumnacus, a leader of the Andes, who was up in arms in the country of the Pictones (*Poitiers*). C. Caninius and C. Fabius easily defeated the rebels, as the Romans would call them, near the *Loire*. Drappes escaped from the dreadful slaughter with about two thousand men, and, in company with another adventurer, Lucterius, a Cadurcan, entered the country of the Cadurci. It is worthy of notice that the Carnutes were in the battle on the *Loire*. This obstinate people had not yet come to terms with the Romans. They had been cut to pieces, driven from their homes and dispersed, and again appeared in arms. But it was the last time. They now submitted to the Roman tyranny, and all the Armoric states followed their example. (*B. G.* viii. 31.) The geographical position of the Carnutes, and their courage, made them the defence of all the states to the west between the *Seine* and the *Loire*.

Drappes and Lucterius shut themselves up in Uxellodunum, and Caninius began the siege. Caesar, leaving M. Antonius among the Bellovaci, came among the Carnutes, against whom he had a heavy grudge; for the Carnutes began the great rising in B. C. 52, which had nearly driven him out of Gallia. He caught Gutruat, whom he charged with being the author of all the mischief, and flogged him to death. (*B. G.* viii. 38.) This example was considered sufficient. Nobody else was punished. The reports that he had from Caninius about the resistance of Uxellodunum, irritated Caesar. He despised the rebels, but he thought that he ought to make an example of them. The first five years of his government had been extended by another five years, which commenced from the beginning of B. C. 53. It was now B. C. 51, and the Galli knew that he had not long to stay; it was necessary, therefore, to show them what they might expect, if they were rebellious. His treatment of the prisoners after the capture of Uxellodunum [UXELLODUNUM] is the most disgraceful part of his history. (*B. G.* viii. 44.)

He now thought that he had finished his work; and he had. Gallia remained for centuries a Roman country. Caesar, who had never seen Aquitania, paid that country a visit, and found it submissive. After going to Narbo, he spent a few days in visiting all the conventus of the Provincia, and settling its affairs. He placed his forces, for the winter, in Belgium, and west of the *Cévennes;* four legions in Belgium, a sign that he still feared that warlike people. He only placed two legions east of the *Cévennes,* and they were in the country of the Aedui, a nation that had still great influence among the Gallic people. He spent the winter at Nemetocenna (*Arras*) in the present department of *Pas de Calais*, not a place which an Italian would choose to winter in. But the author (*B. G.* viii. 49) explains this. He wished to conciliate the people north of the *Seine*. He treated the states with respect, made presents to the chief men, imposed no new contributions; and he endeavoured to make them satisfied by a mild administration, after being exhausted by long and bloody wars. After the winter he went into North Italy, a sign that he feared no rising in Gallia. He was received with rejoicings by all the municipia and coloniae

of Gallia Togata. [GALLIA CISALPINA.] The town gates, the roads, and all the places by which he passed were decorated with every device that could be thought of. The whole population, with their children, came out to meet him. The temples and the fora were set out with all the pageantry of a Roman religious festival. The wealthy showed their magnificence, and the poor their good will. The Italians of Cisalpina Gallia were proud of their governor; for he had tamed the warlike nations north of the Alps, the men who for centuries had been the terror of Italy. No commander ever better deserved such fame as is due to military success. The conquest of Gallia is the greatest exploit that a soldier has ever accomplished.

Caesar returned to Nemetocenna; and, for some reason which does not appear, called all his troops from their quarters, and led them to the borders of the Treviri. There he, the Pontifex Maximus of the Romans, the head of the religion of the state, performed the solemn ceremony of a lustratio, or purification. Both he and his men had much need of it. The war was over, the country was quiet; and he moved about just enough to keep himself in health and his troops. (*B. G.* viii. 52.) It was B. C. 50, the year before he crossed the Rubicon. It is hard to understand how so busy a man got through an idle summer. The next year he had plenty to do in Italy.

Caesar really makes four divisions of Gallia, though he formally mentions only three, for he excludes the Provincia; nor does he determine the limits of the Provincia, though we can make them out accurately enough. Of these four divisions, Provincia, Aquitania, the country of the Celtae, and the country of the Belgae, two have been described. [AQUITANIA, BELGAE.] The limits of the Provincia are described in that article. [PROVINCIA.] The Alpine tribes do not belong to any of these divisions.

Caesar's threefold division of Gallia, excluding the Provincia, was not arbitrarily made by himself; it is a division founded on the geographical character of the country and the national character of the people. We see from his Commentaries that the Celtae knew their own limits well, both on the side of the Aquitani and on the side of the Belgae. He has traced the northern boundary of the Celtae by the *Seine* and its great branch the *Marne*, but he has not mentioned the boundary from the source of the *Marne* to the Rhine. He did not go further north in this part than the country of the Lingones; and it is not his manner to tell us what he did not know, or what did not concern his military operations. However, the boundary of the Celtae, from the source of the *Marne* to the Rhine, may be determined well enough for all purposes. [BELGAE.] These natural divisions of Caesar are mentioned by later writers as existing divisions, though the political divisions were changed. Mela (iii. 2) makes the *Garonne* the boundary of Aquitania, though it was not so in his time; but if we take his division to be a division according to races, which he seems to mean, it is true. Pliny (*H. N.* iv. 17) also says that Gallia Comata, which is all Gallia except the Provincia, is distributed among three peoples, whose boundaries are chiefly marked by rivers: from the Scaldis (*Schelde*) to the *Seine* is Belgica; from the *Seine* to the *Garonne* is Celtica; and thence to the Pyrenees is Aquitania. This is correct for Celtica considered as the country of the Celtae; but when he adds, "which Celtica is also called Lugdunensis," he makes an error, for Lugdunensis did not extend to the *Garonne*. But the error is in the form of expression, and it is easy to see how he fell into it.

The following are the nations of Celtica, as Pliny calls the country of the Celtae. Caesar does not use the term Celtica. The HELVETII were between the Jura, the Leman lake, and the Rhine. The SEQUANI were west of the Helvetii, and extended to the *Saône*: they had the valley of the Alduasdubis or Dubis (*Doubs*). The south part of the country between the *Saône* and the Rhone, the modern department of *Ain*, was occupied by the AMBARRI. The ALLOBROGES, who belonged to the Provincia, had some possessions north of the Rhone, and they would in this part be the neighbours of the Ambarri. The RAURACI, neighbours of the Sequani, were along the west bank of the Rhine: they extended from a point on the river above *Bâle* to the borders of the TRIBOCCI.

The AEDUI were west of the Sequani, and their territory extended westward to the *Loire*. The MANDUBII on the north were a dependent state of the Aedui. The position of the BRANNOVICES, or BRANNOVII, also dependents of the Aedui, is uncertain. The SEGUSIANI, or Sebusiani, on the west side of the Rhone, were also dependents of the Aedui; the colony of LUGDUNUM (*Lyon*) was planted in their country.

The ARVERNI were west of the southern part of the territory of the Aedui; and they had as dependent states the GABALI and VELLAVI, or Vellauni, on the south-east, and the CADURCI on the south-west.

The RUTENI, south of the Arverni, were in Caesar's time divided into two parts, Ruteni Provinciales (*B G.* vii. 7), who belonged to the Provincia; and Ruteni, who belonged to the country of the Celtae. The NITIOBRIGES were west of the Ruteni, and on the *Garonne*. The smaller part of their territory seems to have been south of the river, and they were considered to belong to the Celtae; but they may have been a mixed people. (Caes. *B. G.* vii. 31.) The BITURIGES VIVISCI, not mentioned by Caesar, were about *Bordeaux*.

The PETROCORII were north of the Nitiobriges, partly in the basin of the Duranius (*Dordogne*); and north-west of them were the SANTONES, extending along the sea from the aestuary of the *Garonne* to the borders of the PICTONES or Pictavi. The Pictones occupied the country along the sea northwards to the mouth of the *Loire*, and a considerable distance inland. The position of the LEMOVICES east of the Santones and Pictones, is indicated by that of the town of *Limoges*, and the extent of their country by the old diocese of *Limoges*. The BITURIGES CUBI, north of the Lemovices, occupied the rest of Celtica south of the *Loire*. The BOII, who had joined the Helvetii, were settled by Caesar (*B. G.* i. 28) in the territory of the Aedui. The INSUBRES, who are placed in the maps on the *Upper Loire*, north of the Vellavi, are unknown to Gallic history. [GALLIA CISALPINA.]

The TURONES had territory both north and south of the *Loire*; and their limits are those of the diocese of *Tours*. The ANDES or ANDECAVI were west of the Turones, and on the north side of the *Loire*. The NAMNETES or NANNETES were west of the Andes, on the north side of the *Loire*. North

of the Namnetes, along the coast, were the VENETI; and, further west, the OSISMI or OSISMII occupied the extremity of this peninsula. The CORISOPITI, a small people in the territory of the Osismi, are not mentioned by Caesar. The CURIOSOLITAE, one of the Armoric states, are north of the Veneti and east of the Osismi. The REDONES are mentioned by Caesar among the Armoric states: if they really extended to the sea, they could only have had the coast about the bay of *St. Michel*. The town of *ennes* shows their position in the interior. As to the Biducesii mentioned by Ptolemy, or Viducaesii (ii. 8. § 5), see the articles BIDUCESII and VIDUCASSES.

The position of the AMBILIATES, one of the Armoric states mentioned by Caesar, is unknown. The ABRINCATUI are not mentioned by Caesar. The UNELLI, an Armoric state (*B. G.* vii. 75), occupied the peninsula of *Cotantin*. The DIABLINTES and CENOMANI were east of the Redones, and north of the Andes. [AULERCI.] A territory adjoining to that of the Cenomani on the west was occupied by the ARVII, a small people not mentioned by Caesar. The SESUVII (*B. G.* ii. 34) were neighbours of the Diablintes to the north. Caesar and Ptolemy (ii. 8. § 5) place only the LEXOVII on the coast between the mouth of the *Seine* and the Unelli; but two small peoples, BAIOCASSES and VIDUCASSES, seem to have been comprised within their territory. The position of the EBUROVICES is north of the Cenomani, and on the south side of the *Seine*.

The CARNUTES were on the middle course of the *Loire;* and they also touched a part of the *Seine*. This position made their territory a central point of union for the Celtic nations, as we see in the history of the Gallic War. The Carnutes began the great rebellion in B. C. 52, and their submission in B. C. 51 was followed by that of the Armoric states. Their country was also the head-quarters of the Celtic Druids. (*B. G.* vi. 13.)

The position of the AMBIVARETI, who are mentioned by Caesar as dependents of the Aedui, has hitherto been undetermined. In a note to Long's edition of the Gallic War (vii. 90) reasons are given, which the editor thinks satisfactory, for placing them on the east side of the *Loire*, opposite to the Bituriges Cubi.

The PARISII had part of their territory north of the *Seine;* but still they were a Celtic people. Their chief place was Lutetia (*Paris*). Their neighbours the MELDI were on the *Marne;* and part of their territory was north of this river, which Caesar makes the boundary between the Celtae and the Belgae; which, as well as other like instances, shows that when he names the *Garonne*, the *Seine*, and the *Marne*, as boundaries of the Celtae, he speaks in general terms, and does not affect perfect accuracy — which, in fact, was impossible. *Paris* was an important position even in Caesar's time,—being on an island, *La Cité*,—and here he held a meeting of the states of Gallia. Under the later empire it became a chief residence. The Meldi on the *Marne* are not the Meldi whom Caesar speaks of.

The SENONES occupied the basin of the *Seine* and the *Yonne*, above *Paris*,—a nation that sent a colony to Italy, and once captured Rome. Their capital, *Sens*, retains the name of the people, and fixes a central point in their territory. The TRICASSES were on the main branch of the *Seine*, above the junction of the Icauna (*Yonne*): their chief town Augustobona is *Troyes*. The LINGONES were at the sources of the *Seine* and *Marne*, and on the high lands which run east to the Vosegus (*Vosges*). Caesar does not tell us that they were Celtae, but this conclusion may be easily derived from his work. Ptolemy and Pliny assign them to Belgica, which is true as to the political divisions of their time; but the Lingones were a Celtic people, and one of those that settled in Italy. No Belgic people crossed the Alps or invaded Italy; a fact which, among many others, proves that, politically and nationally, there was a marked distinction between the Belgae and the Celtae.

There is an ambiguity in Caesar's Commentaries which is owing to the words Gallia and Galli having two meanings. All Gallia (omnis Gallia) consists of three parts, one of which the people inhabit, who call themselves Celtae, but the Romans called them Galli. (*B. G.* i. 1.) When Caesar uses the word Gallia, he often means all Gallia; and when he uses Galli, he sometimes means the Gallic people generally. (*B. G.* iv. 20.) But his description of the habits of the Galli applies mainly, perhaps altogether, to Celtica; and in many passages, where he uses the word Galli, he means only the inhabitants of the central part south of the *Seine*. If any person will read attentively the description of the Galli (*B. G.* vi. 13, &c.), he will see that it does not apply to the Aquitani, of whom Caesar knew very little, and had little to do with; and certainly not at all to a very large part of the people whom he includes in the general term Belgae. He considered many of these Belgae to be Germans, pure and mixed. Of the Menapii and Nervii he knew little. The Treviri he considered to be as brutal as their neighbours the Germans. (*B. G.* viii. 25.) The Morini have a Celtic name, and were of Gallic stock, but they were chiefly hog-feeders and cattle-feeders; they had not the civilisation of the cultivators of the ground. The Bellovaci and the other pure Belgae were a warlike race, and they had towns, which indicates a certain degree of civilisation. They were nearer, both in position and character, to the Celtic tribes than any other of the Belgae, except the Remi. It seems probable that the Armoric peoples, the Veneti and others, being maritime, were in many respects different from the inland Celtae. Those Celtae, whose habits Caesar describes, the most civilised of the nation, were the Helvetii, Sequani, Aedui, Arverni, Carnutes, Senones, and their dependents. The Remi, though included in Caesar's general term Belgae, seem to have been closely connected with their southern neighbours; and in Caesar's time they were the rivals of the Aedui. (*B. G.* vi. 12.)

In a vine-growing country, and one where the vine is indigenous, as it is in Gallia, the culture of this plant is an indication of greater civility and of general social improvement. Strabo (p. 178) seems to suppose that in his time the vine hardly produced any thing north of the *Cévennes*. In the third century of the Christian aera it was cultivated on the slopes along the waters of the *Mosel*. But Gallia was, in Strabo's time, and even earlier, rich in cattle and hogs: and it had abundance of good pasture and good horses, as their large cavalry force shows. The Galli would give a large sum for a good horse. (*B. G.* iv. 2.) The southern and central parts were cleared to a great extent, and corn was grown in abundance even north of the *Seine*. The Provincia was considered by the Romans as another Italy in climate and products: and Strabo says

(p. 178) of Gallia generally, that "no part of it remained unproductive, except where there were swamps or forests, and even these parts were inhabited, yet rather on account of the populousness than by reason of the industry of the people; for the women are good breeders and careful mothers, but the men are more inclined to war than tilling the ground: but now," he says, "they are compelled to till the ground since they have laid down their arms."

There is no doubt that Gallia was a populous country in Caesar's time, populous at least after the measure of antiquity. There were not so many, nor such large, towns as there are now; and there may have been a larger surface covered with forest. We may suppose, also, that the lands on the rivers and in the low countries were less completely embanked: so there would be more swamp and marsh. But the dry lands were cultivated, and well-inhabited. The proofs are abundant. The news of the insurrection at Genabum in B.C. 52 was carried into the country of the Arverni, a distance of 160 Roman miles, as Caesar reckons it, between sun-rise and before the end of the first watch of the evening on a winter's day. (*B. G.* vii. 3.) This passage, which has sometimes been most absurdly explained, is a clear proof that the country was populous. The news was passed on from village to village. Men must have run to carry it; those who received the news ran on as fast as they could to the next village, and so on. In his wars we find that Caesar had few supplies from Italy. He could hardly get much, even from Cisalpine Gallia, except horses. The resources of the Provincia helped him greatly; but in many parts of Gallia he got all that he wanted from the country, —corn, cattle, hides, and materials for clothing. The war supported him, and even made him rich. The communications seem to have been pretty good in some parts. There were roads; well-known fords at the rivers, which imply roads; and wooden bridges, in Celtica at least. Caesar even mentions a bridge (*B. G.* ii. 5) over the Axona (*Aisne*), in the territory of the Remi.

The Galli were acquainted with the use of the metals. The Bituriges had skill in mining (*B. G.* vii. 22), which they found useful when the Romans besieged their town Avaricum. They worked iron mines extensively. Some of the Celtic nations coined money; the Sequani, for instance. They may have learned this from the Massaliot Greeks and their colonies, as well as the use of letters; for they used the Greek alphabet. There appears to be no evidence that the Galli ever had any other than the Greek or the Roman alphabet, which are the same.

Strabo (p. 189) has some remarks on the great natural advantages of Gallia, both for internal and foreign trade. He says, that it is worth while to observe the adaptation of the country to the rivers and to the sea, both the ocean and the inland sea; for, if any one will attentively examine, he will find that this is not among the least of the advantages of the country: "I mean," he says, "that the necessaries of life are easily interchanged among all, and the advantages are made open to all; so that, even in such things as these, one may believe that there is evidence of the work of Providence, the parts of this country being placed with respect to one another, not as chance might have it, but with wise purpose." The basin of the Atax (*Aude*), on which *Narbonne* stands, is connected with the basin of the *Garonne* by an easy country; and the basins of both rivers are connected with Spain by the passes at the two ends of the Pyrenees. Between the head of the *Saône* and the waters of the *Seine* is a portage of small extent; and there was a navigation down the *Seine* to the sea, and thence an easy voyage to Britain. As the navigation up the Rhone was difficult, some of the goods from the Provincia were taken in carts by an easy land road to the country of the Arverni and the *Upper Loire*, and so carried down to the ocean. There were four sea-routes from Gallia to Britain,—from the country of the Morini, from the *Seine*, from the *Loire*, and from the *Garonne*. These natural advantages of France were not neglected before it became a Roman provincia; but they were used much more afterwards, when the Romans made so many excellent roads in the country. It is a signal example of bad administration in this fine country, that its natural capabilities were neglected for so many centuries, and that till comparatively recent times so little has been done to facilitate the interchange of the necessaries of life, and "make these advantages open to all." The political divisions of ancient Gallia would be a reason for the demanding of tolls or duties on goods carried from one country to another; a mode of raising money obvious to the rudest barbarian, and practised by all nations that call themselves civilised. The Galli had river tolls before Caesar's time, and this impediment to commerce existed in France till the great Revolution of 1789, up to which time the map of France and its political divisions preserved many of the great features of a map of Gallia that would fit the time of Caesar. The division of France into departments is one of the great monuments of her revolutionary convulsion. But political divisions cannot all at once erase national character; and France, only a part of Caesar's Gallia, is still a country of many tribes.

The maritime commerce of the south was chiefly in the hands of the Massaliot Greeks, until the Romans came in for their share by settling *Narbonne*, and finally by reducing all the Greek towns under their dominion. This Massaliot commerce requires a notice by itself. The trade on the Atlantic in Caesar's time seems to have been in the hands of the Armoric states. The course of the tin trade with Britain is described by Diodorus (v. 22), and his description may be true for centuries before his time. The traders sailed to the promontory Belerion (*the Land's End*) for the tin which the natives of Britain conveyed to an island, Ictis (*Mount St. Michael*). The merchants took it from Ictis to the French coast, whence it was conveyed on packhorses to the Rhone, and so down the river.

The social and political condition of the Gallic nation before the Roman conquest would supply materials for a long chapter. Thierry (*Histoire des Gaulois, Deuxième Partie*, chap. i.) has treated this subject at some length, and in an instructive manner, though a careful reader will not accept all the conclusions that he derives from his authorities. The stories that are told of the great ferocity of the Gallic nations may be true only of some of them, and their manners were improving when the Romans came among them. Posidonius (Strab. p. 198), who travelled in Gallia in the second century before our aera, speaks of practices which probably belonged to some of the northern peoples only. "After battle," he says, "they used to fasten the heads of their enemies to their horses' necks, and when they got home nailed them to their doors." He saw this often,

and at first he found it strange, but habit made him indifferent to it. Posidonus was a Stoic.

There is hardly a vice of which the Galli are not accused by the Greeks and Romans; drunkenness, cruelty, and abominable lust. We may easily guess what the Galli would have said of Caesar and his men, if they had written the history of the conquest. The Italian and Massaliot merchants encouraged the Gallic propensity to drink, just as the white trader now demoralises the Indians of North America. (Diod. v. 26.) The Belgae had less intercourse with these greedy adventurers (*B. G.* i. 1), and they were less corrupted than the Celtae. The Galli made beer and mead; but they liked wine better, and would drink till they were mad. A Gall would give a boy for a good jar of wine.

The political condition of the Celtae and of all the Gallic nations was miserable. The country was divided into numerous independent states, the most powerful of which were always contending for the supremacy. The weaker states served one or the other of the more powerful states, and paid them tribute. The political system was a tyranny of the rich over the poor; and the religion was a horrible superstition. Two classes of men had the power and the wealth: the noble, as we may call him, and the priest. The poorer sort went for nothing. (*B. G.* vi. 13.) The Celtae had slaves, and many of the poor chose the state of servitude to some noble, instead of freedom, when they became overloaded with debt, or unable to pay their taxes, or when they were wronged by some powerful neighbour. In servitude the poor Celt would have at least a master to feed him and protect him against other tyrants. These nobles were "equites,"—mounted men,—and each maintained as many dependents as he could, and horses for them. They were always fighting and quarrelling; almost every year till Caesar's arrival. Caesar does not explain how the poorer sort got into debt; nor how the land was divided. The rich had doubtless large tracts. There is no evidence that the poor had any land in full ownership. They were probably in the condition of tenants who paid their rent in kind, or partly in money and partly in kind; and their debts might either arise from arrears of rent, or from borrowing to supply their wants. There is no difficulty in seeing where they might borrow: the towns would contain the traders, and the market would be in the towns. Arms, agricultural implements, and clothing must be bought with corn, cattle, and hogs. The poor cultivator, whether a kind of proprietor or a tenant, would soon find himself in bad plight between his lord, the shopkeeper, and the "mercator," who travelled the country with his cart loaded with the tempting liquor that he could not resist. (Diod. v. 26.) The enormous waste of life in the Gallic domestic quarrels, their foreign expeditions, and in their wars with the Romans, was easily supplied. A poor agricultural nation, with such robust women as the Galli had (Diod. v. 32), is exactly the people to produce soldiers. Among such a people more male children are born than the land requires; and those who are not wanted for the plough, the spade, or to watch the cattle, are only fit to handle the sword. A braver set of men never faced the enemy than the Galli with whom Caesar fought. Most of them were the children of poverty, brought up to suffer and to die. We often read, at earlier periods, of their losing, through intemperance, the fruits of a hard-fought battle; but nothing of this kind appears in the Gallic wars.

The nobles were immensely rich, while the mass of the people was poor. Of their great wealth there is conclusive evidence. Caesar (*B. G.* i. 18) informs us that Dumnorix, an Aeduan, had made a great fortune by farming the tolls and other taxes, and that he was able to maintain a large body of horse. The rich Galli were polygamists, and they had the power of life and death over wife and children. Caesar does not expressly limit this power to the rich; but we may be sure that it was a power which no poor man ever exercised. He mentions a kind of marriage settlement among the rich,—for to them only it can apply,—which shows that the condition of women of that class was not so bad. If the husband received a portion with his wife, he added to it as much from his own fortune. The produce of the joint stock was accumulated, and the whole stock, with its accumulations, belonged to the survivor. (*B. G.* vi. 19.) This is like an English estate by entireties, as it is called. It was a good contrivance for keeping up the wealth of a family and providing for the wife, if she survived. Caesar says nothing of the law of succession among the Galli.

It seems that in Caesar's time things were changed. Gallia had gone though many revolutions. He gives some instances of the superstition of the Galli, and of the barbarous practices of their religion (*B. G.* vi. 15); and he mentions the Druids and the nobles as the ruling classes. But we see little of priestly rule: it had evidently declined before the power of the nobles, and the growth of the numerous towns which Gallia then contained; and probably the influence of the Greeks was felt over a large part of the country. Caesar (*B. G.* vi. 13) was told that the Druidical system was the growth of Britain, and imported into Gallia. He merely tells us what he heard; but he states that in his time those who wished to master thoroughly this mysterious learning, generally went to school in Britain. It is much more likely that some revolution in Gallia drove Druids into Britain, and we must suppose that they carried their most learned doctors with them. The Galli were, as the Roman says, "a nation greatly given to superstitions," a circumstance in which their conqueror and his officers did not resemble them at all. The Gallic Druids had a pontiff: and when one died, the next in merit (dignitas) succeeded; but if several were equal, a successor was chosen by the votes of the Druids, or, as it sometimes happened, the title to the office was decided by arms. Many young men flocked to the Druids to learn what they had to teach; and the priests, we may suppose, were taken from these pupils. It would be an object of ambition to get into this sacred class; for the Druids were highly respected. They were priests, and judges in almost all disputes, public and private. Like the old Roman patricians, they had both religion and law in their hands. The priest did not fight; and he paid no taxes. This explains why parents were so eager to get their sons into this privileged order. (*B. G.* vi. 14.) It was a provision for them. The pupils learned by heart a vast number of verses, though the Druids were well able to write, and used the Greek character for writing their language, both in public and private affairs. Here we have clear evidence that before the Christian aera the Celtic was a written language, a circumstance that would fix it; and the practice of committing to memory this long string of verses would have the same effect. Caesar supposes that the verses were not committed to writing, partly to prevent the learning from being

divulged,—which implies that other people could read besides the Druids,—and partly to exercise the memory. They taught the immortality of the soul and the transmigration into different bodies. They taught their youths also astronomy, and much about the nature of things, and the immortal gods.

In the different states we read of a concilium or assembly, variously constituted. One thing the Galli provided against carefully: there was to be no talk on political matters except in the concilium. If a man heard anything by rumour or report that concerned the state, he must open it only to the magistrates, who concealed what they thought fit, and told the people just as much as they thought proper. (*B. G.* vi. 20.) There was no liberty of speech. Caesar speaks of senates among the Gallic tribes (*B. G.* ii. 5); that is, a governing body to which he gives a name which a Roman would understand. He does not explain the constitution of these senates, which might not always be the same. The head of the state seems to have been elective. The chief magistrate of the Aedui, named Vergobretus (*B. G.* i. 16), was elected for a year, and had "vitae et necis in suos potestatem;" which is sometimes misunderstood to mean, that he could do as he liked. It simply means that he was the chief judge. Something of a popular assembly, of a democratic element, appears in some of the states. Usurpations were common things. A man who was rich enough to get a large body of adherents, would seize on power, and keep it as long as he could. In the early period of Gallic history kings appear more frequently than in Caesar's time; and we read of kings whose fathers had been kings,—which, however, was rather a rare occurrence. A long regular dynasty of princes was not to the taste of the Galli. Either popular insurrection or a successful rival displaced them. These frequent revolutions filled the country with desperate men, who had nothing to lose, and were always ready for adventure. Exiles, fugitives, and men who had saved their lives by running away, swarmed in the country. Those who could not find safety in Gallia found a refuge in Britain. The attempt of Thierry (*Histoire des Gaulois*) to explain the early revolutions and constitutions of Gallia, is ingenious, but not satisfactory. A careful perusal of Caesar will give a better notion of the confusion that reigned between the Pyrenees and the Rhine, when the Romans came to settle all disputes and teach the people how to live.

Caesar was assassinated in B. C. 44. Little is said of what he did with Gallia from the time when he left it to the time of his death; but we may be sure that he did not neglect so profitable a conquest. Suetonius says (*Caes.* 25): "All Gallia which is bounded by the Saltus Pyrenaeus, and the Alps, and the Gebenna, by the rivers Rhine and Rhone, except the allied states and those that had done him service, he reduced to the form of a province, and imposed on the people an annual payment to the amount of 'quadringenties stipendii nomine.'" It was not called "tributum" or "vectigal." Ammianus Marcellinus (xv. 11), who wrote in the fourth century of our aera, has a passage which has caused much difficulty. He speaks of four divisions after Caesar's conquest, made by him as dictator; but he uses terms that can only be understood by referring to the divisions that existed in his time. He says that Narbonensis contained also Lugdunensis and Viennensis; Aquitania was a second division; the Superior and Inferior Germania and the Belgae were under two jurisdictions at the same time." (See the Note of H. Valesius.) Walckenaer attempts to explain this passage, and to show that it agrees with what Strabo (p. 177) says: but it is not worth the labour. Both authors are very obscure here; and Ammianus is too uncritical to be trusted for such a matter, even if one were quite sure what he meant.

The conqueror of the Gauls knew the value of the men whom he had conquered. He had formed a legion of Transalpine Galli, to which he gave the Gallic name Alauda: he fitted them out like Roman soldiers, and drilled them after Roman fashion. (Sueton. *Caes.* c. 24.) Finally he made them Roman citizens, which must have taken place after he was dictator. In the Civil War he had Galli in his army,—Aquitanians, mountaineers from the border of the Provincia, archers from the Ruteni, and Gallic cavalry, which he had found useful also in his Gallic wars. His last military operation in Gallia was the siege of Massilia [MASSILIA], B. C. 49. He afterwards sent, under Ti. Claudius Nero, a supplementary colony to Narbo, and a colony to Arelate (*Arles*), both of which are mentioned by Suetonius (*Ti. Caes.* 4), who speaks of other colonies, but he does not mention them. Baeterrae (*Béziers*) may have been one, and Forum Julii (*Fréjus*) another. All these were colonies of old soldiers. Caesar had Galli with him in his campaigns in Greece and Africa; and there were also Galli on the side of the Pompeian party. These war-loving men had never a better commander, for Caesar led them to victory and paid them well. The civil wars of Rome threw a great number of Gallic adventurers on the coasts of the Mediterranean. Juba, the African, had a picked guard of Gallic and Spanish cavalry (*B. C.* ii. 40); and M. Antonius made a present to Cleopatra of some hundreds of these men. Caesar even placed some of his Transalpine friends in the Roman senate,—some of the semibarbarous Galli, as Suetonius calls them (*Caes.* c. 76, 80),—a measure which well deserved the ridicule that attended it.

Dion Cassius (xliii. 51) says that, in the year B. C. 44, Caesar united the government of the Provincia and Hispania Citerior under M. Aemilius Lepidus. Hirtius had Belgica, and L. Munatius Plancus had Celtica. In B. C. 43, the year after Caesar's death, Lepidus still held his provinces. L. Munatius Plancus, who was also in Gallia, founded the colony of Augusta Rauracorum (*Augst*), in Switzerland, and Lugdunum (*Lyon*), at the confluence of the Rhone and *Saône*, which soon became one of the first cities of Transalpine Gallia (Dion Cass. xlvi. 50); but the colony of Augusta Rauracorum perhaps was not completely settled till the time of Augustus, as we may infer from the name.

The final settlement of Gallia was the work of Octavianus Caesar, afterwards the emperor Augustus. His success in administering the Roman empire is due to his great abilities and to the name that he bore. His able assistant was M. Vipsanius Agrippa, who led his troops from Aquitania, which he found in a state of insurrection (Appian, *B. C.* v. 92), to the banks of the Lower Rhine, B. C. 37. He was the second Roman commander who crossed this river into Germany. The Ubii, a nation already well known to the Romans, had crossed the Rhine into Gallia, and Agrippa permitted them to settle there. (Tac. *Ann.* xii. 27; Strab. p. 194.) The Oppidum Ubiorum afterwards became the Roman colony Agrippinensis. [COLONIA AGRIPPINENSIS.] Probably about this time the Tungri, another Germanic tribe,

were allowed to occupy the country from which the Eburones had perished. Agrippa seems to have established the policy of planting German tribes on the west bank of the Rhine,—nations that were driven by their countrymen from the other side of the river. The true German hated and despised the men who shut themselves up within walls; and the Gallicised German who enjoyed his possessions on the west bank of the Rhine, was ready to defend them against his less civilised brothers.

The disputes of Octavianus Caesar with M. Antonius prevented him from directing all his attention to the Galliae. For some years the country was in a disturbed state. The Treviri were reduced to obedience by Nonius Gallus. C. Carinas defeated the Morini, and drove back the Suevi, who had crossed the Rhine. (Dion Cass. li. 20, 21.) The Aquitani, the last people who continued in arms, were subdued by M. Valerius Messalla, B. C. 28. In B. C. 27, nearly a quarter of a century after Caesar ended his campaigns, and when Octavianus, now Augustus, had become master of the Roman world, Gallia Comata was definitively organised. Augustus, who took into his own hands the administration of the most important provinces, of those which required the largest military force, went to *Narbonne* in B. C. 27. From this time we may date the regular administrative division of Gallia into four parts; but Augustus made very little change. The Provincia received the name of Narbonensis, from the Roman town of Narbo; but its limits were not altered. Aquitania retained its name; but it was extended to the *Loire*, and consequently comprised a large part of Celtica. [AQUITANIA.] The rest of Celtica received the name of Lugdunensis, from the new settlement of Lugdunum. The remainder of Gallia was Belgica. (Strab. p. 177.)

The organisation of the provincia of Narbonensis was the first labour of Augustus. During the Civil Wars it had been hostile to the party of Caesar; and particularly Massilia and its dependencies. [PROVINCIA.] The policy of the emperor was to destroy the nationality of the Galli, to confound the old divisions, and to stamp a Roman character on the country. From Lugdunum, the capital of one of the new divisions, Agrippa made four great roads (Strab. p. 208): one over the *Cévennes* to the Santones, at the mouth of the *Garonne*, and into Aquitania; a second to the Rhine; a third to the Ocean, in the country of the Bellovaci and the Ambiani, the termination of which would be at Bononia (*Boulogne*); and a fourth into Narbonensis and the Massaliot coast. Lugdunum was in fact the centre of Gallia, a kind of acropolis; and in the history of modern France its position has always been of the greatest importance. It was on the high road from North Italy into Gallia Transalpina and to the Ocean: for a carriage road led from Augusta Praetoria (*Aosta*), over the Alps, to Lugdunum; and another, steep and short, from the same town, over the Pennine Alps, into the basin of the Leman lake, and thence to Lugdunum. This road over the Pennine Alps also passed to the Rhone or the Leman lake, after crossing which the traveller proceeded into the plain country of the Helvetii, whence there was a road over the Jura into the country of the Sequani and the Lingones. In the country of the Lingones the road divided; one branch led to the Ocean, and the other to the Rhone. Agrippa made a measurement of the whole ocean coast of Gallia, and of the coast of Narbonensis.

To the time of Augustus we may certainly ascribe the Roman names of many of the Gallic towns. Caesar probably began the work, as we may infer from the name Julia, which appears in several places. Juliomagus (*Anger*), for instance, was a site that Caesar had visited. Gergovia, in the country of the Arverni, where Caesar was defeated, lost its rank; and the neighbouring city of Augustonemetum took its place. The capital of the Suessiones, Noviodunum, became Augusta Suessionum; and the capital of the barbarous Treviri, whose Gallic name is unknown, became Augusta Trevirorum. Bibracte, the capital of the Aedui, received the name of Augustodunum. Some of the old states were put in the class of Foederati; others were Liberi, as the Segusiani. (Plin. *H. N.* iv. 18) The Lingones and the Remi, two people that had always been friendly to Caesar in his Gallic wars, are mentioned by Pliny (iv. 17) among the Foederati. The Ausci in Aquitania had the Latinitas. [AUSCI.] The Roman civitas was sometimes conferred on great families for their merit, that is, their services to the Romans.

Augustus made a census of the three Galliae (Liv. *Epit.* 134; Dion Cass. liii. 22) at the time when he visited *Narbonne*. The object of this census was taxation, for which purpose a register was made of the people and of all their properties.

The Romanising of Gallia under Augustus was rapid, and the measures adopted for this purpose were judicious. Schools were established in the large towns of the Provincia; and Tacitus mentions Augustodunum, the chief town of the Aedui, in the Lugdunensis, as a great school in the time of Tiberius. (*Ann.* iii. 40.) The Latin language took root in Gallia, and also Roman law; and both subsist to the present day. The religion of the Galli was an obstacle to Roman civilisation; but the Romans were too prudent to attack the religion of a nation openly. A kind of mixture of Gallic and Roman religion grew up in many of the towns, and temples to Roman deities were built in all the places where the Romans settled. Some curious proofs remain of the blending of the two religions. On the site where the venerable cathedral of Notre Dame of Paris now stands, on the ancient island of Lutetia, once stood a temple whose sculptures indicate the blending of the Roman and the Gallic superstitions. But among the people of the country the old religion maintained its ground, and it would be very difficult to say that all traces of it have yet entirely disappeared. The importance of pacifying and organising the Galliae explains why the prudent emperor did not attack Britain. He was too busy in Gallia, and the invasion of Britain was not a light matter. Augustus had also a decent excuse; for the Britons, it is said, sent him a pacific embassy He made a second visit to Gallia in B. C. 16 to settle the disturbance that had risen on account of the census (Liv. *Epit.* 137) and the tyranny of C. Licinius his procurator (Dion Cass. liv. 21). Drusus, the step-son of Augustus, completed the census of the Galliae, and he secured the defence of the Rhenish frontier by building numerous forts, chiefly along the left bank of the river. The Roman Itineraries along the west side of the Rhine, from Lugdunum Batavorum southward, show the numerous positions along this route, and indicate the origin of many modern towns. In the time of Tiberius this bank of the river (Tacit. *Ann.* iv. 5) was guarded by eight legions, a force almost equal

to that which protected all the other frontiers of the empire.

Pliny (iv. 17) and Ptolemy (ii. 9) include the Leuci, Lingones, Sequani, and Helvetii in Belgica, which was true for their time; but it is not known when this change was made. The commander in Belgica and on the Rhenish frontier had not only the Belgica of Augustus under him, but the four peoples which have just been mentioned. Thus Celtica was a second time reduced in its extent, the first reduction being that made by Augustus. But Transalpine Gallia still consisted of four great divisions,—Narbonensis, Aquitania, Celtica, and Belgica. These are the divisions in the geography of Ptolemy. But he places in Belgica, or, as he calls it, Κελτογαλατία Βελγική, two subdivisions,—Germania Inferior (ἡ κάτω), and Germania Superior (ἡ ἄνω). His Germania Inferior extended along the Rhine from the sea to the river Obrincus; but we do not know what river Ptolemy means. The southern limit, however, is fixed by the towns that he mentions. Moguntiacum (*Mainz*) is the furthest town to the south. From the Obrincus southward he enumerates, in Germania Superior, the Nemetes, Vangiones, Tribocci, and Rauraci. The Tribocci were on the Gallic side in Caesar's time; the other three tribes came over afterwards. The most southern town in Ptolemy's Germania Superior was Augusta Rauracorum (*Augst*), a little higher up the Rhine than Basilia (*Bâle*). The Germaniae, in fact, were peopled by transplanted Germanic peoples, who were under a military government. This will explain Pliny, when he says that Belgica extended from the *Schelde* to the *Seine:* he means that the part between the *Schelde* and the Rhine was occupied by Germanic peoples. The establishment of the Germaniae belongs to the time of Augustus. They are mentioned by Tacitus (*Ann.* iii. 41, iv. 73); but Dion Cassius (liii. 12, lv. 23) assigns the formation of the Germaniae to Augustus. We learn from Tacitus that Drusus and Germanicus had the command both of Belgica and the Germaniae. At a later period (*Ann.* xiii. 53) he speaks of Aelius Gracilis, as legatus of Belgica, and of L. Vetus, as commanding in the Germania Superior. Vetus (A. D. 59) wished to join the *Saône* and the *Mosel* by a canal, in order that there might be a water communication between the Mediterranean and the North Sea, up the Rhone and the *Saône*, and down the *Mosel* and the Rhine. Gracilis would not let Vetus bring his legions into his province of Belgica; and the canal was not made. The Germaniae then had at this time a distinct administration; but this division existed, as it appears from other passages, even in the time of Tiberius.

Three Alpine provinces are mentioned. On the authority of Dion Cassius (liv. 24), it is said that Augustus formed the Alpes Maritimae into a province. In A. D. 63 Nero certainly gave them the Latinitas or Jus Latii (Tacit. *Ann.* xv. 32); and in A. D. 69 they formed a province, for they were then governed by a procurator (Tacit. *Hist.* ii. 12).

The Alpes Cottiae formed a kingdom under Cottius, an Alpine chief, until the time of Nero, who made this country into a province. (Sueton. *Nero*, c. 18.) It consisted of fourteen communities, and occupied a tract on both sides of the Alps. The chief place was Segusio (*Susa*) on the Italian side.

The Alpes Penninae are mentioned as a province under the later Empire.

In the Geography of Ptolemy all these parts of the Alps are included in Italy. They were not united to Gallia until after the time of Constantine, as some modern writers maintain.

At the very commencement of the administration of Tiberius, the successor of Augustus, Gallia gave a sign of what might be expected from the legions of the Rhine, who were then distributed in two camps, an upper and a lower. Germanicus, the nephew of Tiberius, was busied with the census of the Galliae when the news arrived of the death of Augustus (Tac. *Ann.* i. 31.) The soldiers on the Rhine were dissatisfied; they broke out into mutiny, and Germanicus with great difficulty reduced them to obedience. Some of them would have had him assume the imperial power, the first indication that is mentioned of the legions assuming to name a successor to the power of Augustus. In A. D. 21 there was a rising in Gallia headed by Julius Florus among the Treviri, and Julius Sacrovir among the Aedui, those brothers of the Roman people, who were their most uncertain friends. (Tac. *Ann.* iii. 40.) Both these men were Galli of noble rank, and Roman citizens, a personal distinction that had been conferred on some of their ancestors, after Roman fashion, for their services, which means their fidelity to Roman interests. The taxation, the heavy rate of interest with which they were loaded, and the tyranny of their governors, were the alleged causes of this rebellion of the Galli. Both communities and individuals, under Roman dominion, were always complaining of debt. We do not know what particular contributions oppressed the Gallic states; but it seems probable that the great works undertaken by the towns, probably by the order of the governors, may have been one cause of debt. Temples and other public buildings rose up all over the country, and must have cost immense sums. Works of more direct public utility also, such as bridges, roads, and aqueducts, of which there are so many traces in France, could not have been accomplished without a very large expenditure. The Romans embellished and improved the country, but the people paid dear for it. Gallia not only had to supply all its own expenditure, but to furnish contributions to the empire. This rising, which, if the beginning had been more successful, might have ended in a general rebellion, had no results. The Andecavi, and Turonii or Turones, on the *Loire*, who were the first to begin, were soon put down. Florus did not succeed in stirring up the Treviri, though he made a beginning in true Gallic style by murdering some Roman "negotiatores;" these men of money, who settled themselves in every place where gain was to be got. A body of debtors and clients, as they are called,—needy dependents,—fled into the *Ardennes*, a country which in some parts, even at the present day, is no bad place of refuge. Another Julius, named Indus, also a Trevir, and an enemy of Florus, helped to put down the rising, which ended by Florus killing himself. Among the Aedui the matter was more serious. Sacrovir was defeated by the Roman commander C. Silius, near Augustodunum, in a pitched battle. He retired to his villa with his most faithful adherents, and there he died by his own hands. His men killed one another; and the house, which they had set on fire, consumed them all. This is a sample of Gallic desperation, which is a part of the national character.

Caius Caesar, named Caligula, the successor of Tiberius, went into Gallia, but he did nothing except exhibit his madness and brutality at Lugdunum.

His uncle Claudius, who succeeded Caius, was born at Lugdunum, on the day in which the altar at Lugdunum was dedicated to Augustus. (Sueton. *Claud.* c. 2.) This learned pedant and imperial fool wished to extirpate the old Gallic religion, and he commenced a furious persecution of the Druids. His biographer (Sueton. *Claud.* c. 25) says that he completely abolished the religion of the Druids. Augustus had gone no further than to forbid Roman citizens embracing this superstition. Pliny ascribes the extirpation of Druidism to Tiberius Caesar; but whatever these emperors may have intended to do, they did not succeed. Claudius was the first Roman emperor who set foot in Britain. Aulus Plautius, his general, was already there, and engaged in active warfare. The emperor landed at Massilia, whence he went by land to Gesoriacum, afterwards Bononia (*Boulogne*), and from *Boulogne* he crossed the straits. *Boulogne* became from this time a Roman port, and the usual place of embarkation for Britain. Claudius crossed the Thames with his army, and took Camalodunum, the town of king Cunobelin. He was only sixteen days in Britain, and on his return he had a triumph for the victories which his general had gained. (Dion Cass. lx. 19 - 23.) It was probably when Claudius was in Gallia that the chief persons (primores) of Gallia Comata, "having," as Tacitus says (*Ann.* xi. 23) "long ago had treaties with Rome (foedera) and the Roman civitas, claimed the privilege of obtaining the honores at Rome." This passage of Tacitus has sometimes been misunderstood. The "civitas" had not been given to any of the states of Gallia Comata; but some of the chiefs had obtained the Roman civitas, as we have seen in the examples of Florus and Sacrovir. But it appears from this passage, that it was not the complete civitas, for they had not access to the high offices at Rome and the senate; and yet the Roman "civitas" implies both the suffragium and the honores. The "suffragium" was indeed nothing now; and the "honores" were only a name; but it was something for a Gaul to have the title of praetor and consul, and a seat in the Roman senate. Claudius made a speech to the senate, which is a singular mixture of pedantry and good sense. He supported the claim of the Gallic chiefs by the universal practice of Rome of admitting foreigners into the senatorial body; and the first instance that he mentions was that of his Sabine ancestor, Clausus, the progenitor of the Claudia Gens. He observed that the Galli were already mingled with the Romans by sameness of manners, arts, and marriage; and he argued that it was better they should bring their gold and wealth to Rome than keep it to themselves. The wealthy Gallic nobles often visited Rome, and some of them resided there. The emperor thought it better to attract to Rome the rich men of the provinces than to keep them away. A senatus consultum followed the speech of the princeps; and "the Aedui were the first who obtained admission to the senate in the city" (senatorum in urbe jus). "This," adds Tacitus, "was granted in respect of their ancient foedus, and because they were the only Gallic people that had the title of fraternity with the Roman people" (A. D. 48). It is not said if other Gallic peoples, after the Aedui, obtained access to the senate. Probably we may conclude that they became admissible. But this was purely a personal distinction, conferred at the pleasure of the emperor on such rich Galli as chose to reside in Rome.

The Provincia, the first part of Gallia in which the Romans fixed themselves, became, under the Empire, completely Italian in language, in manners, and in civility; and the parts of Gallia Comata nearest to it soon showed the effects of this proximity. The younger Pliny (*Ep.* ix. 11) states that there were booksellers at Lugdunum in his time, and he was glad to hear that they sold his books. The language and literature of Rome soon extended beyond the limits of the Narbonensis; for Latin was the language of administration, and of the numerous "negotiatores" and "mercatores" who covered the country. It was also the language of most of the legionary soldiers. The great nobles learned it as a matter of course: for their ambition was to live at Rome, and intrigue in public affairs. Julius Africanus, a Santon, was involved in the ruin of Sejanus at Rome (Tac. *Ann.* vi. 7): and Valerius Asiaticus, twice consul, and a man who claimed the merit of having planned the death of Caligula, was a native of Vienna (*Vienne*) on the Rhine; but whether he was of pure Roman blood, for Vienna was a colonia, or Gallic, does not appear. (Tac. *Ann.* xi. 1.)

From Gallia came the blow which struck down the emperor Nero. C. Julius Vindex, the governor of Lugdunensis, an Aquitanian by descent, and a Roman senator through his father, hated Nero, whose infamous debaucheries he had been witness of at Rome. He stirred up the Galli of his province (A. D. 68) to insurrection, not against the Romans, but against a sanguinary tyrant whom he despised. The conspirators fixed on Ser. Sulpicius Galba, then governor of Hispania Tarraconensis, as the successor of Nero, the first example of a Roman emperor being named on a foreign soil. Galba hesitated, and with good cause; for the legions of Gallia had the power in their hands, and they were divided. Lugdunum was the only large city that continued faithful to Nero (Tac. *Hist.* i. 51), who had given 4,000,000 sesterces to restore it when it was burnt (Tac. *Ann.* xvi. 13); but its rival and neighbour, Vienna, was on Galba's side. The legions on the Rhine had not yet declared themselves, and the states in their neighbourhood waited for the decision of the troops. Verginius Rufus, who commanded in the Upper Germania, felt or affected respect for the Roman senate, and would not support an election made by insurgents. He entered the country of the Sequani, who had declared for Galba, and laid siege to Vesontio (*Besançon*). Vindex, with the forces that he had collected, hurried to defend the place, and, though the two generals had an interview, and are supposed to have come to terms, their men fell to blows, and the army of Vindex was routed. Vindex ended his life by his own sword.

Galba had now declared himself, and advanced into the Narbonensis; Rufus, in the mean time, kept his men in suspense. The news of the death of Nero decided the fortune of Galba. The messengers from the Roman senate met him at *Narbonne*, and urged him to hasten to Rome, where he was eagerly expected. (Plut. *Galba*, c. 11.) The new emperor belied the hopes that were formed of his moderation and prudence. He punished the Gallic peoples which had not declared for him; he deprived some of their territory, imposed on them heavier taxes, and even destroyed their fortifications. (Tac. *Hist.* i. 8; Sueton. *Galba*, c. 12.) Plutarch (*Galba*, c. 18) speaks of the Gallic partisans of Vindex obtaining the "civitas," and Tacitus (*Hist.* i. 8) has the same; but, whatever the historians mean by this civitas, it was a name and nothing more. When Tacitus adds,

that there was a diminution of taxation, we understand what he means. The troops on the Rhine soon chose a new emperor. Galba had appointed Vitellius to command in the Lower Germania, in place of Fonteius Capito, whom his officers murdered. Vitellius was more contemptible than Galba, but he had art enough to gain the affection of his men, and he was saluted emperor in the Roman colony of Agrippina (*Cologne*) in January, A. D. 69. Thus Rome got an emperor from the banks of the Rhine, just after receiving one from Spain. In fact, it had now two at the same time. Galba was murdered at Rome, before the end of the month in which Vitellius was proclaimed; and another emperor, Otho, had reigned and died before Vitellius crossed the Alps into Italy. The eastern part of Gallia suffered terribly from the march of Vitellius' troops towards the Alps. They went in two divisions under his generals Valens and Caecina; the lazy emperor followed slowly after. As he was passing through Gallia, Maric, a Boian, one of the meaner sort (Tacitus is almost ashamed to mention so low a fellow, *Hist.* ii. 61), assumed the title of "Vindicator of the Galliae and God." He got about eight thousand men together, and was gaining ground in the nearest cantons of the Aedui, when this honoured state and the elegant youths who had been brought up at Augustodunum, with the help of a few cohorts from Vitellius, dispersed the fanatical rout. Maric was thrown to wild beasts, and because he was not torn, the stolid rabble considered him invulnerable; but Vitellius, who was present, broke the charm by ordering the man to be put to death. The story is significant of the popular ignorance; but a parallel may be found even in our own days.

Vitellius had another rival almost before half the year was over. Vespasian was proclaimed emperor at Alexandria on the first of July, A. D. 69; and not quite twelve months passed from the time when Vitellius was proclaimed at *Cologne* to his ignominious death at Rome. One of the men who mainly helped to place Vespasian on the imperial throne, was a native of Tolosa in the Narbonensis, Antonius Primus.

During the contest between the partisans of Vitellius and Vespasian an insurrection broke out in Gallia, the most formidable since the time when Caesar reduced this country to obedience. It began in the swamps of Holland. Claudius Civilis, of a powerful Batavian family, had served in the Roman armies from his youth, and had the rank of a Roman citizen. Both he and his brother Paulus had fallen under the suspicion of Fonteius Capito, the governor of the Lower Germania. Paulus was put to death by the order of Capito, and Claudius was given up to Nero, who put him in prison. Galba set him at liberty, and sent him back to the Germaniae. Civilis pretended to take the side of Vespasian when the news reached the Rhine of the east having declared for him, but his real object was to establish the independence of his country, and to get power himself. In a short time he drove the Roman troops out of the Insula Batavorum, and besieged two legions in Castra Vetera [CASTRA] near the Rhine. (Tac. *Hist.* iv. 22.) The success of Civilis brought him aid from the Germaniae and the Galliae; and deliverance from Roman oppression was now talked of. The Batavi themselves paid no "tributum" or taxes to the Romans; and an inscription preserves the record of their being honoured with the title of brothers (fratres), as the Aedui of old had been. But Civilis affected to take up arms against their common tyrants, and the Galli were invited to assist in expelling them. When the news of the death of Vitellius reached the Galliae and the Germaniae (Tac. *Hist.* iv. 54), the war against the Romans was carried on by Civilis with new vigour. He did not affect any longer to be on the side of Vespasian. He was fighting against the power of Rome. The burning of the Roman capitol in the contest between the partisans of Vitellius and Vespasian, seemed to the Galli an omen of the end of the Roman empire. The Druids declared that this conflagration was a sign of the wrath of heaven, and that the dominion of the world was given to the Transalpine nations. The Druids were not wrong: they only mistook the time. The Roman camp on the Rhine was full of discord. Hordeonius Flaccus, an old and feeble commander, a partisan of Vespasian, was murdered by his own men. (Tac. *Hist.* iv. 36.) Upon this messages passed between Civilis and Classicus, a Trevir, who commanded a body of cavalry of the Treviri. Classicus was of royal descent, and he boasted rather of his ancestors' hostility to Rome than of their alliance. Two other men joined them; Julius Tutor, a Trevir, and Julius Sabinus, a Lingon. Tutor was set over a part of the banks of the Rhine by Vitellius. Sabinus, a vain man, was puffed up by a false conceit of a Roman descent; he gave it out that one of his female ancestors had an adulterous connection with Caesar during the Gallic War. These men met at *Cologne* to concert their plans, but in secret; for most of the Ubii were still disinclined to revolt. Indeed, it was only a part of Gallia, the north and some parts of the east, that was ready for insurrection; and chiefly the Treviri and the Lingones. The Sequani refused to join any league against Rome. The conspirators made an attempt to corrupt the legions, which were now under the command of Vocula, who was murdered by a deserter from the first legion. (Tac. *Hist.* iv. 59.) Classicus entered the Roman camp, having assumed the insignia of the Roman empire, as Tacitus expresses it, and the Roman soldiers took the military oath in defence of the empire of the Galliae. Tutor compelled the people of *Cologne* and the soldiers on the Upper Rhine to take the same oath. Civilis was still employed on the blockade of the Roman troops at Vetera. Famine at last compelled the soldiers to yield; but before the surrender was accepted, they were required to swear fidelity to the Gallic empire. Civilis cut off his long light hair, which he had let grow, pursuant to a vow made, after the fashion of his country, when he began the war against the Romans. (Tac. *Hist.* iv. 61.) But he neither took the oath to the Gallic empire, nor allowed any Batavian; he trusted to the power of the Germans, and he had ambitious views of dominion. There was among the Bructeri at this time a virgin, named Veleda, who had great authority, for the Germans thought that most women had the gift of divination; and Veleda had proved her claim to this distinction. She had foretold the success of the Germans and the destruction of the Roman legions.

Civilis and Classicus, elated by their success, deliberated whether they should give up *Cologne* to their men to plunder. (Tac. *Hist.* iv. 63.) The Transrhenane people hated this strong walled place, and a deputation from the Tencteri brought their wishes to the municipal body of *Cologne*. The speech which Tacitus puts in the mouth of these Germans is valuable, because it gives us some in-

formation of the state of this flourishing city at that time. The original Roman settlers had intermarried with the German Ubii, and they had become one people. There were duties levied on goods that passed through *Cologne*, and doubtless on goods passing up and down the river. The Ubii consented to abolish these imposts, and to allow the Germans to pass through their town unarmed and in the daytime. The Agrippinenses satisfied the Tenctheri by their concessions; and it was agreed that Civilis and Veleda should be the witnesses to the compact. Commissioners from *Cologne* were sent with presents, and the business was amicably settled. But the holy woman could not be approached: she staid in a lofty tower; and one of her kinsmen brought to her the words of the commissioners, and carried back her answers, as if he were a messenger between a divinity and men. (Tac. *Hist.* iv. 65.)

The insurrection of the Batavians had been prosecuted with vigour and success. In the country of the Lingones it was a miserable failure. Julius Sabinus, proclaiming himself Caesar, led a disorderly rabble into the territory of the Sequani; and the Sequani, faithful to Rome, accepted the challenge. The Lingones were routed, and Sabinus was one of the first to run. His fate does not concern us here, and his name might be forgotten but for the constancy and devotion of his wife Epponina for nine years, during which he lurked in his hiding-places. She was one of the illustrious women of Gallia; for it is one of the characteristics of the nation to produce women above the common stamp. (Plut. *Amatorius*, vol. iv. ed. Wytt.)

The defeat of the Lingones and the news of the approach of the armies of Italy under Annius Gallus and Petilius Cerialis, checked the Gallic insurrection. Seven legions were marching upon Gallia: four from Italy, two from Spain, and one that was summoned from Britain. The Remi, who had received Caesar in a friendly manner when he first entered the country of the Belgae, summoned the Gallic states to deliberate on the question of peace or war. It seems probable that their object was to secure peace, and that they were resolved against war. The deputy of the Treviri, a Gaul with a Roman name, Tullius Valentinus, was the eager advocate of war; but he was more a man for words than for deeds. Julius Auspex, the orator of the Remi, spoke in favour of peace. The states were divided by interests and jealousies; there was discord among them before they had got the victory. (Tac. *Hist.* iv. 69.) This meeting showed that a Gallic rebellion was impossible; for the Galli could not agree as to the conduct of the war, nor what they should do if the Romans were driven from the country. Nor was Rome yet so feeble as to fear the nations of the North. She had good soldiers, able generals, and a man of ability as emperor. Civilis was engaged in a quarrel with a countryman, Labeo, who had a faction of his own. Neither Classicus nor Tutor made any vigorous preparations to resist the Romans. Tutor met one division of the Roman army with the forces of the Treviri, Vangiones, Tribocci, and Caracates, the last a people who lived about *Mainz;* he had also some of the Roman soldiers who had taken the oath of fidelity to the Gallic empire. The Romans of Tutor deserted to the enemy, and the Germans followed their example. Tutor, with his Treviri, retired to Bingium (*Bingen*) on the Rhine, where he was surprised and routed. Cerialis had now got to Moguntiacum (*Mainz*),—a general full of confidence in himself and contempt for the enemy. He declined the aid which the states of Gallia sent, and ordered their troops home: he told the Galli they might turn to their usual occupations; he could finish the war himself. He passed from *Mainz* to Rigodulum on the *Mosel*, where Valentinus had posted himself with a large force of Treviri, and fortified himself. Cerialis quickly dislodged him, and on the next day entered Colonia Trevirorum, the ancient city of *Trier*, on the *Mosel*, the capital of the Treviri. With difficulty he prevented his men from destroying a city which was the native place of Classicus and Tutor. Cerialis summoned the Treviri and Lingones to *Trier*. The speech which Tacitus (*Hist.* iv. 73) has put in the soldier's mouth is a wonderfully brief and masterly composition, well suited to make the Galli satisfied with the Roman dominion, as the only means of averting anarchy, and to detach them from alliance with the Germans. The Treviri and Lingones were well satisfied to be told that they had better be obedient and enjoy what they had, than run the risk of losing all by persevering in their resistance. This was the end of the Gallic rising, which was not a national movement, but the rebellion of a few states. The real rebellion was among the Batavians and the German settlers in Gallia, though there were still some Lingones in the army of Civilis.

Civilis, with Classicus and Tutor, fell upon the camp of Cerialis near *Trier;* for Cerialis, though an able commander, was careless and a man of pleasure. The enemy was not repelled without difficulty. (Tac. *Hist.* iv. 77.) This failure of Civilis encouraged the Agrippinenses to come over to the Roman side, which they had unwillingly deserted for the German and Batavian alliance. They sent to offer to Cerialis the wife and sister of Civilis and the daughter of Classicus, who were with them, as hostages; and they massacred the Germans who were dispersed in the houses of the city. Fearing the vengeance of Civilis, they sent for help to Cerialis. Civilis was marching upon *Cologne*, hoping to find at Tolbiacum (*Zulpich*), in the territory of the colony, a cohort of Chauci and Frisii, on whom he greatly relied; but on the way he heard the news of all these Germans being destroyed by the treachery of the Agrippinenses. The Chauci and Frisii had been gorged with food and wine, and while they were drunk and asleep the Agrippinenses closed the doors of the place, set fire to it, and burnt them all alive. (Tac. *Hist.* iv. 79.) Civilis hastened to *Cologne*, and this important city was again in the hands of the Romans.

Cerialis carried the war into the Insula Batavorum. Civilis at last came to terms, and obtained his pardon. The history of the last part of this campaign is imperfect in Tacitus, whose work breaks off suddenly. (*Hist.* v. 25.)

The political divisions of Gallia remained unchanged till the fourth century of our aera. The origin of the new division is unknown. The history of the Galliae under Roman dominion belongs to the history of the Roman empire, and cannot be separated from it. The subject is instructive, but it belongs to a different kind of work.

This article, though long, is not complete, but perhaps complete enough for its purpose, and within such limits as are reasonable. The following references will be useful. There is a good article on *France* in the *Penny Cyclopaedia*. D'Anville, *Notice de la Gaule Ancienne;* Thierry, *Histoire des*

Gaulois; Walckenaer, *Géographie Ancienne Historique et Comparée des Gaules Cisalpine et Transalpine;* Ukert, *Gallien;* and Forbiger's Compilation, *Handbuch der alten Geographie, &c.*, are all useful. The references in these works will show what a large mass of literature has accumulated on the geography and history of the Galliae. [G.L.]

GA'LLICA FLA'VIA. [ILERGETES.]

GA'LLICUM. [ILERGETES.]

GA'LLICUM, in Macedonia. [ECHIDORUS.]

GA'LLICUM FRETUM. [FRETUM GALLICUM.]

GA'LLICUS SINUS (ὁ Γαλατικὸς κόλπος, Strab. p. 137 : *Golfe du Lion*) was the Roman name of the bay of the Mediterranean, formed by the south coast of Gallia Narbonensis. It was also called Mare Gallicum. (Plin. iii. 5.) The western limit was the Pyrenees Promontorium (Liv. xxvi. 19); the eastern may be fixed near Massilia, and the bay was sometimes called Massaliotic. Strabo gives the same name to the opposite bay on the Atlantic, which is formed by the north coast of Spain and the south part of the Atlantic coast of Gallia; but no other writer seems to have given the name to the Atlantic gulf. [GALLIA.] [G. L.]

GALLINA'RIA INSULA. [ALBIUM INGAUNUM.]

GALLINA'RIA SILVA (Γαλλιναρία ὕλη, Strab. vi. p. 243), a forest on the coast of Campania, occupying the sandy shore which extends from the mouth of the Vulturnus towards Cumae. It is mentioned by Cicero in one of his letters (*ad Fam.* ix. 23) as lying on the road to the latter place. Shortly afterwards it became the headquarters of Sextus Pompeius, where he first organised the predatory bands with which he subsequently undertook his piratical expeditions. (Strab. *l. c.*) Even at ordinary times it was noted as a favourite resort of banditti, and was in consequence often guarded by bands of soldiers. (Juv. iii. 307.) Strabo speaks of it as a forest of brushwood (ὕλη θαμνώδης); but from Juvenal's expression of "Gallinaria pinus" it is evident that there was also a wood of tall pine-trees, such as grow luxuriantly on many of the sandy shores of Italy. In the 13th century we find it mentioned under the name of *Pineta di Castel Volturno;* by which it is still known, though the pines seem to have disappeared. The forest extends from the mouth of the Vulturnus to the *Torre di Patria* (the site of the ancient Liternum), and some distance beyond that towards Cumae. The Via Domitiana, constructed by that emperor as the direct road to Cumae, ran through the midst of the forest, and many portions of it are still visible. (Pratilli, *Via Appia*, ii. 7. p. 183.) [E. H. B.]

GALLITAE, an Alpine people (Plin. iii. 20), supposed to have been about the junction of the *Estevon* and the *Var*, because there is a place there named *Gillette.* [G. L.]

GALLUS (Γάλλος: *Lefke*), a small river of Bithynia, having its sources near Modra in the north of Phrygia, and emptying itself into the Sangarius a little more than 300 stadia from Nicomedeia. (Strab. xii. p. 543.) Ammianus Marcellinus describes its course as very winding (xxvi. 8). Martianus Capella (6. § 687, ed. Kopp) confounds this river with another of the same name in Galatia, which seems likewise to have been a tributary of the Sangarius, and on the banks of which Pessinus is said to have been situated. From the river Gallus in Galatia the Galli, or priests of Cybele, were said by some to have derived their name, because its water made those who drank of it mad. (Steph. B. *s. v.*; Plin. v. 42, vi. 1, xxxi. 5; Herodian, i. 11; Ov. *Fast.* iv. 364.) [L.S.]

GAMALA (τὰ Γάμαλα), a town of Palestine, frequently mentioned by Josephus, and from which the district Gamalitis (*B. J.* iii. 3. § 5) derived its name. This district was apparently identical with that otherwise called Lower Gaulanitis by the same historian, in which Gamala was situated (iv. 1. § 1). It is first mentioned as a fortress of great strength, in the life of Alexander Jannaeus, who reduced it (*B. J.* i. 4. § 8). It is placed by Josephus opposite to Tarichaea, and on the lake. Its site and character are minutely described: "A rugged ridge, stretching itself from a high mountain, rises in a lump midway, and elongates itself from the rise, declining as much before as behind, so as to resemble a camel in form, whence it derives its name. Both in flank and in front it is cleft into inaccessible ravines; but at the back it is somewhat easier of ascent, being there joined to the mountains, from which, however, the inhabitants severed it by a trench, and rendered the approach more difficult. Against the precipitous face of the mountain numerous houses had been built, closely crowded one on another; and the city, apparently suspended in the air, seemed to be falling upon itself, by reason of its perpendicular site. It inclines towards the mid-day sun; and the hill, stretching upward with a southern aspect to a prodigious height, served as a citadel to the town: while an impregnable cliff above it extended downward into a ravine of vast depth. Within the ramparts was a fountain, at which the city terminated." (*B. J.* iv. 1. § 1). At the first outbreak of the Jewish rebellion it was for a time maintained in its fidelity to the Romans, through the influence of Philip, the lieutenant (ἔπαρχος) of King Agrippa (*Vita*, § 11); but subsequently it revolted, and was garrisoned and fortified by Josephus (§ 37) with mines and trenches, so as to make it the strongest fortress in that part of the country (*B. J.* iv. 1. § 2). Accordingly, when its recovery was attempted by the younger Agrippa, his troops were occupied for seven months in an ineffectual attempt to take it by siege. It was taken, however, by Vespasian, after a spirited resistance of the garrison, when the loss sustained by the legionaries was revenged by the indiscriminate slaughter of the survivors, of whom 4000 perished by the sword, and 5000 threw themselves from the walls, and were dashed to pieces in the ravines below.

The site of this strong fortress, though so remarkable, and so minutely described by Josephus, had been forgotten for nearly eighteen centuries, when Lord Lindsay attempted to recover it in a steep insulated hill to the east of the sea of Tiberias, and nearly opposite to that town. It is now called *El-Hossn*, and lies, according to Burckhardt, between the village of *Feik* and the shore, three quarters of an hour from the former; "having extensive ruins of buildings, walls, and columns on its top." (Burckhardt, *Syria*, p. 278, with a wood-cut of the site.) According to Lord Lindsay, the hill, "at a distance, so strongly resembles the hump of a camel, that I think there can be little doubt of its being the ancient Gamala. It has been a place of tremendous strength, and no slight importance. Valleys, deep and almost perpendicular, surround it on the north, east, and south. On the south side, the rock is scarped angularly for defence; on the eastern, it is built up so as to bar all approach from below; to the south-east a neck of

land, of much lower elevation, and scarped on both sides, connects it with the neighbouring mountains, and communicates by a steep descent with the southern valley; travellers from the east and west appear to have met at this neck of land, and thence ascended to the city. If, as I conclude, the houses were built on the steep face of the mountain, Josephus might well describe them as hanging as if they would fall one on the other. All traces of them have been swept away, and the mountain is now covered with thick grass. The top is sprinkled with trees; we found many ruins on it, apparently of the citadel, but not very interesting." (*Travels*, vol. ii. pp. 92, 93.) [G. W.]

GAMBRIVII. [CHAMAVI.]

GAMPHASANTES. [GARAMANTES.]

GANDARAE (Γανδάραι, Ptol. vii. 1. § 4; Steph. B. *s. v.*), a widely extended people of Indian or Arianian origin, who occupied a district extending more or less from the upper part of the *Panjáb* to the neighbourhood of *Kandahar*, and variously called in ancient authors Gandaris (Strab. xv. p. 699) or Gandaritis (Strab. xv. p. 697). The name is of Sanscrit origin, and is found in the *Mahábhárat* under the form Gandháras, in which work these people are classed with the Bahlíkas and other tribes beyond the Indus; the country they inhabited being described as difficult of access, and famous then, as it still is, for its breed of horses. Owing to the distinction which seems to be drawn, in the passages cited above from Strabo, between Gandaris and Gandaritis, some authors, as Groskurd and Mannert, have been led to assign different places for these districts; determining the latter to be the same as Peucelaotis, between *Attok* and the Indus. It is much more probable that one and the same country was intended, the boundaries of which varied according to the reports of the travellers from whom Strabo and others compiled their geographical notices of these remote regions. From Strabo (*l. c.*) it may be inferred that he considered the country of the Gandarae to be to the W. of the Indus; from Ptolemy, that it was somewhat more to the E., in the direction of Caspatyrus (*Kashmir ?*). The latter view agrees with a notice of Hecataeus preserved by Stephanus B. (*s. v. Caspapyrus*), who calls that city πολὶς Γανδαρικὴ Σκυθῶν ἀκτή. Herodotus, like Ptolemy, calls it Caspatyrus (iii 102, iv. 44). In Herodotus these people are called Gandarii, and are included by him in the seventh satrapy of Dareius, along with the Aparytae, Dadicae, and Sattagydae (iii. 91): they are also found with the same name in the armament of Xerxes, in company with the Dadicae, under the same commander, and wearing the same arms, as the Bactrians.

Rennell (*Geogr. of Herod.* vol. i. p. 390) has been induced to place them to the W. of Bactriana; but more minute examination leads to the belief that in this he is in error, and that east and south of Bactriana is really the more correct determination. (Wilson, *Ariana Antiqua*, p. 131; *Asiatic Res.* vol. xv. p. 103; Lassen, *Pentapot. Indica*, p. 105; M. Troyer, *Raja-Tarangini*, tom. ii. p. 319.)

Stephanus speaks of another Indian people whom he calls Gandri, who fought, according to him, against Bacchus; adding, however, that Hecataeus called them Gandarae. There can be no doubt that the real and the mythical people are meant to be one and the same. Professor Wilson draws the general conclusion that Heeren and Rennell have both erred in placing most of these tribes to the N. of *Khorassan*, and that they may be located with more accuracy in the vicinity of the Paropamisan mountains, being the predecessors, if not the ancestors, of the modern *Hazáras*. [V.]

GA'NDARIS. [GANDARAE.]

GANDARI'TIS. [GANDARAE.]

GANGANI, in Ireland, mentioned by Ptolemy as lying south of the Auteri. [AUTERI.] Probably= *Clare*. [R. G. L.]

GANGARI'DAE (Γαγγαρίδαι, Ptol. vii. 1. § 81, 2. § 14), a people who lived along the coast of the bay of Bengal, at the mouths of the Ganges, from which they probably derived their name. According to Ptolemy their capital was named Gange (vii. 1. § 81); in another place, however, he omits the name of the chief town, but adds that there are six towns, whose names he gives, in the country. It would appear from Pliny that a portion at least of these people extended considerably to the south in the country now occupied by the Circars of the *Coromandel* coast, — as he speaks of "gente Gangaridum Calingarum" (vi. 18. s. 22). The Calingae were probably near *Calinapatnam*, between the *Godavery* and *Mahanuddy*. Virgil (*Georg.* iii. 27) and Valerius Flaccus (*Argon.* vi. 66) mention the name of the Gangaridae. Curtius places them beyond the Ganges to the eastward, along with the Prasii (ix. 7). Their name seems to have been sometimes confused with that of the Gandaridae. Thus, when Dionysius Periegetes writes Gargaridae (v. 1144), he probably means Gandaridae and not, as some commentators have supposed, this people. [V.]

GANGAS, GANGITES (Γάγγας, Γαγγίτης, Appian, *B. C.* iv. 106), a river of Macedonia, which takes its rise at and flows round Philippi; after its confluence with the ZYGACTES the united streams bore the name of the ANGITES (*A'nghista*), which was so called from the branch at Philippi. (Leake, *Northern Greece*, vol. iii. p. 225.) It was by this "river side" (*Acts*, xvi. 13), the fountains of which gave the name to the city, before the time of Philip of Macedon—Crenides,— the Place of Fountains,— that the "Proseucha" was situated (in consequence of the ablutions which were connected with the worship) in which the Gospel was first preached within the limits of Europe. (Comp. Conybeare and Howson, *Life and Epistles of St. Paul*, vol. i. p. 316.) [E. B. J.]

GANGE (Γάγγη, Ptol. vii. 1. § 81; Γάγγης, *Peripl. Mar. Erythr.* p. 36), according to Ptolemy, the capital town of the Gangaridae, at the mouth of the Ganges. The author of the Periplus of the Erythraean sea speaks of this place as the chief mart for the finest cotton stuffs, for frankincense, and Chinese *malabathron*. It must have been in the neighbourhood of the modern *Calcutta*, though its exact position cannot be identified. Strabo speaks of a town which he calls Gange, but places it far up the river, in the vicinity of Palibothra or Patna (xv p. 719). [V.]

GANGES. 1. (ὁ Γάγγης, Strab. xv. pp. 686, 719, &c.; Ptol. vii. 1. § 29, &c.; in Lat. Ganges, -is: *Adj.* Γαγγητικός, Gangeticus, Gangetis), one of the largest rivers of Asia, and the most important one of Eastern India or *Hindostán*. It was unknown to Herodotus, Ctesias, and the earlier writers of ancient times, and it was not described by ancient authors till the Greeks under Alexander the Great and his successors penetrated into Western India. It is, indeed, only in very modern times that the exact position of its sources has been determined; the earlier of European

geographers having conjectured that, like the Indus, it arose on the northern side of the chain of the Himálaya mountains, in the direction of Thibet. It is now ascertained that the true river is made up of three separate streams, which bear the respective names of the *Gáhnavi*, *Bhágirathi*, and *Alakánanda*. The second is held to be the most hallowed, and is the one to which the largest concourse of pilgrims resorts. The spot where it bursts forth from the glaciers is called *Gungótri* (*Gangavátari*), and is situated in lat. 30° 59′ 30″ N., long. 96° 44′ W., at an altitude of nearly 10,000 feet above the sea. Above it is the summit of *Pankúparvata*, which rises to the height of about 21,000 feet. (Schlegel, *Ind. Bibl.* vol. i. p. 387; Ritter, vol. ii. pp. 947—952; Lassen, *Ind. Alt.* vol. i. p. 49.) From its sources it flows nearly S. till it reaches *Hástinapura;* thence, with an easterly inclination, as far as *Alláhabád*, where it receives the *Jumna;* and thence nearly SE. till it reaches the bay of Bengal, into which it falls, after a course of about 1150 miles, by numerous mouths. On its way it receives a great number of affluents, of which we shall speak hereafter,—one of which, the *Jumna*, considerably surpasses itself in length.

The ancients held different opinions as to the sources of this celebrated river. Strabo, on the authority of Eratosthenes, made it rise in the Indian Caucasus (the Paropamisus, or *Hindu-Kush*), and, after flowing for some distance, take an eastern direction on reaching the plains, and, after passing the great city of Palibothra, enter the Indian ocean (or bay of Bengal) by a single mouth (xv. p. 690). In another place (xv. p. 719) he quotes Artemidorus, who stated that the Ganges had its source in the Montes Emodi (Imaus or *Himálaya Ms.*), and that it flowed southwards till it reached the city Gange, when it turned off to the E. and passed Palibothra. The same view is implied in Dionysius Periegetes (v. 1146) and in Mela (iii. 7). Pliny seems to have been unable to make up his mind, but states generally that some gave to the Ganges an uncertain source, like that of the Nile, while others placed it in the Scythian mountains (vi. 18. s. 22; see also Solin. c. 52; Mart. c. 6). Orosius placed its source in an unknown mountain, which he calls Osrobares. There is a more general consent as to its magnitude; most authors agreeing that it is a great stream even from its first commencement. Thus Arrian asserts, on the authority of Megasthenes, that where it is smallest it is at least 100 stadia broad, that it is far greater than the Indus, and that it receives no rivers which are not themselves as large and as navigable as the Maeander. (*Indic.* c. 4.) In another place he states that if all the Asiatic rivers which flow into the Mediterranean were joined together, they would not make one Ganges in body of water; while it is equally superior to the European Ister, and the Egyptian Nile. (*Anab.* v. 6.) Strabo considered it the greatest river in the three continents of which he had any knowledge; that the Indus, the Ister, and the Nile, ranked next in order after it (xv. p. 702); and that its average breadth, in the opinion of Megasthenes, was about 100 stadia, and its depth 20 fathoms. The historians of Alexander's invasion agree generally in its size, making it 32 stadia broad, by 100 fathoms deep. (Diod. xvii. 93; Plut. *Alex.* c. 62.) Later writers, like Pliny and Aelian, give to the river a fabulous size; the former asserting that at the narrowest place it was 8 miles broad, and nowhere less than twenty paces deep (vi. 18. s. 22); the latter, that from its first origin it was 80 stadia broad and 20 fathoms deep,—and that, after it had received several tributaries, it acquired a breadth of 400 stadia, and contained many islands as large as Lesbos and Corsica, with a depth of 60 fathoms (*Hist. Anim.* xii. 41). Aelian is most likely here confounding the natural stream with its breadth during great floods. The ancients had similar differences of opinion with regard to the number of mouths by which it entered the ocean. Strabo asserted that it had but one (xv. p. 690), in which view Pliny agrees (ii. 108); Ptolemy (vii. 1. § 18) and Marcian (ap. Huds. *Geogr. Gr. Min.*), five; Mela (iii. 7), Virgil (*Aen.* ix. v. 30), Propertius (iii. 22. 16), and other authors, seven. The fact is, like all rivers flowing with a vast body of water through an alluvial plain, and bringing down an immense annual deposit, its mouths were perpetually changing; and old ones were filled up, while new ones were continually made. The names of some of the ancient mouths have been preserved, and can even now be identified. Their names are given by Ptolemy, in order from W. to E., and are: (1) Κάμβουσον στόμα, now the river *Hoogly*, on which Calcutta stands; (2) τὸ μέγα στόμα, now the river *Roymongul;* (3) Καμβήριχον στόμα, now the *Marjatta;* (4) τὸ Ψευδόστομον στόμα, now the *Huringotta;* (5) Ἀντιβολὴ στόμα, the one nearest the *Brahmaputra*, and for which there does not seem to be any well-ascertained name.

The Ganges, on its course to the sea, is fed by several large rivers, some of which were known to the ancients, and have been satisfactorily identified with their original Sanscrit names. The fullest account of them is in Arrian (*Ind.* 4), and from him or from the journals which he copied most of the other writers who allude to them have probably themselves copied. The following are the seventeen which this author mentions, to which we have added (in parentheses) those Sanscrit names that are probably well ascertained:—the Jobares, no doubt the same as the Jomanes (*Jamuná* or *Jumna*); Cainas, Erannoboas (*Hiranjavahu*), Cossoanus (*Cósaváhá*), Sonus (*Çoná*), Sittocatis (*Çtistá*), Solomatis (*Saravatí*), Condochates (*Gandaki*), Sambus, Magon, Aguranis, Omalis (*Vimalá*), Commenases (*Carmanaça*), Cacultris, Andomatis (*Andhámati* or *Tamasá*), Amystis, Oxumagis (*Ixumati*), Erennesis (*Varanasí*). Pliny speaks of the Jomanes, Prinas, and Cainas, which he calls tributaries of the Ganges (vi. 17. s. 21); and adds that there were in all nineteen such affluents, of which he notices (apparently for their superiority) the Condochates, Erannoboas, Cosoagus or Cossoanus, and Sonus (vi. 18. s. 22). Curtius speaks of three tributaries of the Ganges, the Acesines, Dyardenes, and Erymanthus (viii. 9); but he has clearly here made some confusion with the accounts of the Indus, or there is a defect in our MSS. of his work. The Acesines (now *Chenáb*) is one of the principal rivers of the *Panjáb;* the Dyardenes is not improbably the same as the Oedanes (Οἰδάνης) of Strabo (xv. p. 719), and most likely to be identified with the *Brahmaputra;* while the Erymanthus belongs to neither Indus nor Ganges, but may be the same as Etymandrus (now *Helmend*), the principal river of Arachosia and Drangiana. The Ganges was evidently considered by the ancients as a very wonderful river. Pliny speaks of snakes thirty feet long which live in its waters (ix. 3. s. 2), which, like Pactolus, brought down gold also (xxiii.

4. s. 21); and other authors ascribe to some of its tributaries crocodiles and dolphins (*Οἰδάνης*, Strab. xv. p. 719; Dyardenes, Curt. viii. 9). The Sanscrit name *Ganga* may be, as Pott has suggested, an intensitive form from the root *ga*, to go. Plutarch gives another and fabulous origin of its name (*de Flumin.* ap. Hudson, *Geogr. Gr. Min.* ii. p. 8). (Rennell, *Hindostan;* Lassen, *Ind. Alterth.* vol. i. p. 130; Kiepert u. Lassen, *Karte v. Alt. Indien*, 1853; Pott, *Etym. Forsch.* p. 86.)

2. (*ὁ Γάγγης*, Ptol. vii. 4. § 6), the most important river in the ancient island of Taprobane (*Ceylon*), still known by the name of the *Mahavelle-Ganga*. It rises in the mountains to the S. and W. of *Kandy*, and after flowing round the town pursues a NE. course, till it enters the sea by two mouths, one near *Trincomalee* (close to the *Ὀξεῖα ἄκρα* of Ptolemy), and the other about 25 miles to the S. It appears from modern surveys that the Trincomalee branch is now nearly dry, except in the rainy season, and that the main body of water passes to the sea by the southern branch, which is now called *Virgel*. (Brooke on *Mahavelle-Ganga, Journ. R. Geog. S.* vol. iii. p. 223.) Much of the country through which this river flows is now uninhabited, but there are extensive remains, tanks, and ruins, indicating that it was once thickly peopled. Forbiger has conjectured with some reason that the *Mahavelle-Ganga* is the same river which Pliny calls Palaesimundus (vi. 22. s. 24), and which he says flowed to the N. by a city of the same name, and entered the sea by three mouths; of which the narrowest was five, and largest fifteen, stadia wide. It is curious that the larger stream, which he calls *Cydara*, is the northern or Trincomalee branch; and from modern researches, it is proved that this was originally the principal stream, the water having been diverted into the *Virgel* by the priests of a temple situated at the point where the two streams naturally bifurcate. (Davy, *Account of Ceylon*, Lond. 4to. 1821; Ritter, *Erdk.* vol. vi. 24.) [V.]

GANGE'TICUS SINUS (*Κόλπος Γαγγητικός*, Ptol. i. 13. § 4, vii. 1. § 16), the great gulf into which the Ganges flowed, now generally called the bay or gulf of Bengal. According to Ptolemy it was usual with the mariners of his day to call it 13,000 stadia across; whence, in order to allow for the irregularity of the course pursued, Ptolemy takes off one-third, and reduces the breadth to 8670 stadia. This is, however, more than twice the breadth of the real bay of Bengal. The fact is, Ptolemy, in common with all his predecessors, Hipparchus, Polybius, Marinus of Tyre, greatly extended the degrees of longitude of this part of the world; hence his Caspian Sea, Persian Gulf, and bay of Bengal are all much greater in breadth E. and W. than in length N. and S., which is just contrary to the fact. [V.]

GANGRA (*Γάγγρα*: *Kiengareh, Kangreh*, or *Changeri*), a town of Paphlagonia, to the south of Mount Olgasys, and at a distance of 35 miles from Pompeiopolis, appears to have been a princely residence, for we know that Morzus or Morzeus, and afterwards Deiotarus, the last king of Paphlagonia, resided there. (Strab. xii. p. 564; comp. Liv. xxxviii. 26.) Strabo, notwithstanding this, describes it as only "a small town and a garrison." According to Alexander Polyhistor (*ap. Steph. B. s. v. Γάγγρα*), the town was built by a goatherd who had found one of his goats straying there; but this is probably a mere philological speculation, *gangra* signifying "a goat" in the Paphlagonian language. In the ecclesiastical writers Gangra is often mentioned as the metropolitan see of Paphlagonia. (Socrat. ii. 43; Sozom. iii. 14, and elsewhere.) The orchards of this town were celebrated for the excellence of their apples. (Athen. iii. p. 82.) [L. S.]

GANNARIA PR. [LIBYA.]

GANODU'RUM (*Γανόδουρον*), one of the two Helvetian cities mentioned by Ptolemy (ii. 9. s. 20). The termination *dur* seems to show that it was on some river, but there is no evidence of any kind, except Ptolemy's figures, to fix its position; and that evidence is worth nothing. Some reasons have been given for supposing it to be near the entrance of the Rhine, on to the *lake of Constanz*, not far from *Stein*. (Walckenaer, *Géographe des Gaules*, vol. i. p. 317.) [G. L.]

GANUS (*Γάνος* or *Γᾶνος*), apparently a mountain fortress in Thrace, on the coast of the Propontis. (Xenoph. *Anab.* vii. 5. § 8; Harpocrat. and Suid. *s. v.*; Plin. iv. 18; Scylax, p. 28.) Aeschines (*adv. Ctesiph.* p. 65) speaks of Ganus along with other places as scarcely known to the Athenians, and mentions *Ganis* along with Ganus, from which we may infer that the former was the name of the district in which the latter was situated. [L. S.]

GARAMA. [GARAMANTES.]

GARAMAEI (*Γαραμαῖοι*, Ptol. i. 12. § 5, vi. 2. § 2), a tribe of ancient Assyria, who lived along the banks of the Lycus (*Zab*), between Arrhapachitis and Apolloniatis. [V.]

GARAMANTES (*Γαράμαντες*), a great nation of Inner Africa. In the widest sense the name is applied to all the Libyan tribes inhabiting the oases in the E. part of the Great Desert, as the Gaetulians inhabited its W. part; the boundary between the two nations being drawn at the sources of the Bagradas and the mountain Usargala. In this wide sense they were considered as extending S. and E. to the lake Nuba and both banks of the river Gir, as far as the mountains called GARAMANTICA PHARANX (*ἡ Γαραμαντικὴ Φαράγξ*), which Ptolemy places in 40° long. and 10° N. lat., E. of M. THALA, and N. of M. ARANGAS. (Ptol. iv. 6. §§ 12, 13, 16.)

In the stricter sense, however, the name denoted the people of PHAZANIA (*Fezzan*), a region lying S. of the Great Syrtis, between 24° and 31° N. lat. and 12° and 18° E. long., and forming by far the largest oasis in the Great Desert (*Sahara*), which it may be considered as dividing into an eastern and a western part. It is surrounded by hills of stone and sand, not exceeding 1200 feet high, which protect it from the sands of the desert: the chief of these are the two parallel ranges on the NE. called the *Black and White Haruj* (i. e. *Mountains*), the former being of basalt, and the latter of limestone (the former is the MONS ATER of the ancients); and that on the W. called *Warira*, perhaps the ancient USARGALA. It is, however, only a small part, not above one-tenth, of the surface that is cultivable; the region being intersected by ridges of hills from 300 to 600 feet high: and even in the valleys between these ridges the soil is a stratum of sand, on chalk or clay, needing constant irrigation to supply which there are no water-courses, and very few natural springs; so that the water has to be obtained from wells, at the depth of about 100 feet. The soil is impregnated with saline matter, serving as a manure for the date-palms, which are the chief vegetable products of the country: a little grain is also grown at the present day.

The country of the Garamantes was known to Herodotus, who mentions the people twice: first, as dwelling S. of the Nasamones, and E. of the Macae, in the "Country of Wild Beasts," that is, the second of the three belts into which he divides N. Libya (iv. 174). In the second passage (iv. 183) he says that the Garamantes are a very great nation, inhabiting one of those oases formed by salt-hills, which he places at intervals of 10 days' journeys along the interior of N. Africa. (Comp. ATARANTES; ATLANTES; AUGILA.) This one lies between Augila and the Atarantes; but here arises a difficulty, inasmuch as the regular allowance for the caravans from *Aujelah* to *Zuila* on the E. border of *Fezzan* is 20 days, and it took Hornemann 16 days' very rapid travelling to accomplish the distance. The best solution of the difficulty appears to be the supposition that one station has been omitted by Herodotus (or by the copyists), namely, the small oasis of *Zala*, which is just half-way between *Aujelah* and *Zuila*. Herodotus makes the distance from the Lotophagi (i. e. the coast between the Syrtes) thirty days, which corresponds exactly to the time occupied by the caravans in the journey from *Tripoli* to *Fezzan*, which appears to have been the established route in all ages. He describes the country as having many fruit-bearing palms, and as being cultivated for corn by manuring it with salt, by which some suppose him to mean the white clay which is still used for manuring the sandy soil. His story of the oxen with singularly thick hides, and with horns bending so far forward that the beasts were obliged to walk backwards as they fed (comp. Mela, i. 8; Plin. viii. 45. s. 70), is not so absurd as it may seem; for, although modern travellers have not confirmed this part, as they have the rest, of the old inquirer's story, we have evidence from the Nubian monuments (Gau, pl. xv.) that the ancient neatherds of Africa, like their successors to this day, exercised their ingenuity in giving artificial forms to the horns of their cattle. (Heeren, *African Nations*, vol. i. p. 222: for other stories about cattle walking backwards as they fed, see Alexander Myndensis, *ap. Ath.* v. p. 221, e.; Aelian. *N. A.* xvi. 33; Aristot. *de Part. Animal.* ii. 17.) In another, and a very sad part of his account, Herodotus is but too well supported by modern testimony. He tells us of a degraded negro tribe, who dwelt in caves (*τοὺς Τρωγλοδύτας Αἰθίοπας*) among or near the Garamantes, who hunted them with chariots, for these negroes were the swiftest runners known. The wretches thus, like their race in all ages, hunted after for slaves, lived on reptiles, and used a speech which resembled no other language, but was like the shrieking of bats. (Comp. Mela, i. 8; Plin. v. 5, 8.) The *Rock Tibboos*, so called from their dwelling in caves (Troglodytae), in the *Tibesti* range of mountains, are still hunted by the chieftains of *Fezzan;* though, by a kind of retribution, these *Tibboos* are the successors of the ancient Libyans, who have fled from more powerful conquerors into the former haunts of their negro *game*. (Lyon, *Narrative, &c.* pp. 250, foll.) To complete the resemblance, the people of *Aujelah* compare the language of these degraded tribes to the whistling of birds. (Hornemann, p. 143.)

The account of Herodotus contains an apparent inconsistency; for the Garamantes are described in the former passage (c. 174) in terms which would far better apply to these Aethiopian Troglodytes, as avoiding men and all society, possessing no weapons of war, and unable to defend themselves. This description corresponds exactly to what Mela (i. 8) and Pliny (v. 8) say of a people whom they call Gamphasantes; and hence some critics have proposed to alter the reading in Herodotus: but, besides the fact that there is not a shadow of variation in the MSS., the position assigned by Herodotus to this people is precisely that occupied by the Garamantes; and the same statements are repeated by later geographers, expressly on the authority of Herodotus. (Steph. B. *s. v.;* Eustath. *ad Dion. Per.* 217.) The discrepancy is, probably, one of those so often found in a writer who picks up news eagerly from all quarters; for it is evident that the one account was obtained through the Nasamones and Cyrenaeans, and the other through the merchants who traded between *Fezzan* and Egypt; and we may fairly suppose that the one class of informants repeated only what they had heard of some of the degraded tribes who lurked, as has been seen, in corners of the country. If any change be necessary, we suspect it to be, of the two, rather in the Roman compilers; for their story seems copied from Herodotus.

From the time of Herodotus to that of the Caesars, we have no further information worth mention. When the Romans had become the masters of N. Africa, they found it necessary to repress the barbarian tribes; and this office was committed, in the case of the Garamantes, to Cornelius Balbus Gaditanus the younger, who, as proconsul, defeated them in a sense sufficient to warrant his investment with triumphal insignia, B. C. 19, though, of course, conquest was out of the question. (Flor. iv. 12; Tac. *Ann.* iii. 74, iv. 26, *Hist.* iv. 50.) The results obtained from this expedition in the form of additional knowledge are recorded by Strabo (xvii. pp. 835, 838), Mela (i. 4. § 4, 8. § 7), and Pliny (v. 5, 8). Strabo places them 15 days' journey from the oases of Ammon (*Siwah*), and 10 days' journey from the Aethiopians on the Ocean; a striking proof of the scantiness of his information respecting Inner Libya: he describes their position relative to the N. coast with tolerable accuracy. Mela copies Herodotus, mixing up with his story a statement which Herodotus makes concerning the Ausenses. Pliny (v. 5) gives a good description of the position of the Garamantes, with an account of the expedition of Balbus, and a list of the cities whose images and names graced his triumph: he also speaks of the difficulty of keeping open the road, because of the predatory bands belonging to the tribe, who filled up the wells with sand. He mentions Phazania as if it were distinct from the country of the Garamantes. Ptolemy also (iv. 6. § 30) gives a list of their cities, none of which need particular mention, except the metropolis Garama (*Γαράμη: Germa*, with considerable ruins). This city has 13½ hours in its longest day, is distant 1½ hour W. of Alexandria, and has the sun vertical twice a year, 15° on each side of the summer solstice. (Ptol. viii. 16. § 7.)

The Garamantes were a Libyan (not Negro) people, of the old race called Amazergh [GAETULIA], a name perhaps preserved in that of the modern capital *Mourzouk*. The inland trade between Egypt, Cyrenaica, the Tripolis, and Carthage, on the one hand, and the interior of Africa on the other, was to a great extent carried on by them. (The *Travels* of Hornemann, Captain Lyon, Denham and Clapperton, Richardson, Barth, Overweg, &c.; Rennell, *Geog. of Herod.* vol. ii. pp. 273, foll.; Heeren, *African Nations*, vol. i. pp. 221, foll.) [P. S.]

GA'RAPHI MONTES (τὰ Γάραφα ορη), a mountain chain of Mauretania Caesariensis, forming a part of the range which separates the valleys of the Chinalaph and Savus. (Ptol. iv. 2. § 14.) [P. S.]

GARBATA MONS (Γάρβατα ἢ τὸ Γάρβατον ὄρος, Ptol. iv. 7. §§ 26, 31), was the southern portion of the ridge of mountains which separated Aethiopia from the Red Sea, and of which the most southerly and loftiest projection was Mount Elephas (*Cape Felix* or *Djebel Feel*). The entire range commenced at the eastern frontier of Egypt and Aethiopia, and extended from the 15th to the 11th degree of lat. N., running for the most part in a SE. direction. Aethiopia, or the modern *Abyssinia*, is a region of highlands which, as they advance southward, increase in altitude. Mons Garbata commenced to the S. of Axume, and was the loftiest portion of the range. It contained mines of gold and quarries of porphyry. [W.B.D]

GA'REA, GAREA'TES. [Tegea.]

GARESCUS (Γαρήσκος al. Γαρίσκος, Ptol. iii. 13. § 25; Geresci, Plin. iv. 10), a place in Macedonia, probably somewhere in the head of the valley of the river Zygactes — *Nevrócopo*. [E. B. J.]

GARGA'NUS (τὸ Γάργανον, Strab.), a mountain and promontory on the E. coast of Italy, still called *Monte Gargano*, which constitutes one of the most remarkable features in the physical geography of the Italian peninsula, being the only projecting headland of any importance that breaks the monotonous line of coast along the Adriatic from *Otranto* to *Ancona*. It is formed by a compact mass of limestone mountains, attaining in their highest point an elevation of 5120 feet above the sea, and extending not less than 35 miles from W. to E. Though consisting of the same limestone with the Apennines, and therefore geologically connected with them, this mountain group is in fact wholly isolated and detached, being separated from the nearest slopes of the Apennines by a broad strip of level country, a portion of the great plain of Apulia, which extends without interruption from the banks of the Aufidus to those of the Frento. (Swinburne's *Travels*, vol. i. pp. 151, 152; Zannoni, *Carta del Regno di Napoli*.) Its configuration is noticed by many ancient writers. Strabo speaks of it as a promontory projecting out to sea from Sipontum towards the E. for the space of 300 stadia; a distance which is nearly correct, if measured along the coast to the extreme point near *Viesti*. (Strab. vi. p. 284.) Lucan also well describes it as standing forth into the waves of the Adriatic, and exposed to the N. wind from Dalmatia, and the S. wind from Calabria. (Lucan, v. 379.) In ancient times it was covered with dense forests of oak ("Querceta Gargani," Hor. *Carm.* ii. 9. 7; "Garganum nemus," Id. *Ep.* ii. 1. 202; Sil. Ital. iv. 563), which have of late years almost entirely disappeared, though, according to Swinburne, some portions of them were still visible in his time (*Travels*, vol. i. p. 155; Giustiniani, *Diz. Geogr. del Regno di Napoli*, pt. ii. vol. iii. pp. 92—98). Strabo mentions in this neighbourhood (but without directly connecting it with the Garganus) a hill called Drium, about 100 stadia distant from the sea, on which were two shrines of heroes (ἡρῷα), the one of Calchas, with an oracle which was consulted in the same manner as that of Faunus in Latium; the other of Podaleirius, from beneath which flowed a small stream gifted with extraordinary healing powers. The same circumstances are alluded to by Lycophron, from whom it would appear that the stream was named Althaena. (Strab. vi. p. 284; Lycophr. *Alex.* 1047—1055.) The exact locality has been a subject of dispute; but as we find a similar mention of a stream of limpid water which healed all diseases, in the legend of the appearance of St. Michael that gave rise to the foundation of the modern town of *Monte S. Angelo*, — on a lofty hill forming one of the offshoots of the Garganus, about 6 miles from *Manfredonia*, — it seems very probable that this was no other than the Drium of Strabo, and that the sanctuary of the archangel has succeeded, as is so often the case, to another object of local worship. The whole range of Mt. Garganus is now frequently called *Monte S. Angelo*, from the celebrity of this spot; and the name of Drium seems to have been sometimes used with the same extension among the Greeks, as there is very little doubt that for Ἄριον in Scylax we should read Δρίον, the promontory of which he is there speaking being evidently the same as the Garganus. (Scyl. § 14; Gronov. *ad loc.*)

On the southern slope of Mt. Garganus, about 4 miles E. of *Monte S. Angelo*, a straggling village still called *Mcttinata*, with a tower and small port, has preserved the name of the Matinus of Horace, which is correctly described by an old commentator as "mons et promontorium in Apulia." The name appears to have properly belonged to this southern offshoot of the Garganus; but in one passage Horace would seem to apply the name of "Matina cacumina" to the loftiest summits of the range. All these hills are covered with aromatic herbs, and produce excellent honey, whence the well-known allusion of the same poet to the "apis Matina." (Hor. *Carm.* i. 28. 3, iv. 2. 27, *Epod.* 16. 28.) Lucan also speaks of the "calidi buxeta Matini" as adjoining and overlooking the plains of Apulia (ix. 182). There is no evidence of the existence of a town of this name, as supposed by one of the old scholiasts of Horace; and certainly no authority for the change suggested by some modern writers, that we should read in Pliny *Matinates* for "Merinates ex Gargano." Holstenius and others have clearly shown that an ancient town called Merinum stood near the NE. point of the promontory, about 5 miles from the modern *Viesti*. It continued to be a bishop's see until late in the middle ages, and the site is still marked by an ancient church called *Sta. Maria di Merino*. (Holsten. *Not. in Cluver.* p. 278; Romanelli, vol. ii. p. 214.)

The flanking ridges which extend down to the sea on both sides of the Garganus afford several coves or small harbours well adapted for sheltering small vessels. Of these the one now called *Porto Greco*, about 8 miles S. of *Viesti*, is generally supposed to be the Agasus Portus of Pliny, which he appears to place S. of the promontory. The Portus Garnae of the same author was situated between the promontory and the Lacus Pantanus (*Lago di Lesina*): it cannot be identified with certainty; but it seems probable that it was situated at the entrance of the lake now called *Lago di Varano*. [E. H. B.]

GARGA'PHIA FONS. [Plataea.]

GA'RGARA (Γάργαρα or Γάργαρον), one of the heights of Mount Ida in Troas (Hom. *Il.* viii. 48, xiv. 292), which continued to bear this name even in the time of Strabo (xiii. p. 583; comp. Plin. v. 32; Macrob. *Sat.* v. 20; Steph. B. *s. v.*). Its modern name is said to be *Kazdag*. (Walpole's *Memoirs relating to Turkey*, p. 120.) A town of the same name existed from early times upon that height, or rather on a branch of it forming a cape on the north of the bay of Adramyttium, between Antandrus and

Assus. In the earliest times it is said to have been inhabited by Leleges, but afterwards to have received Aeolian colonists from Assus, and others from Miletupolis. (Strab. *l. c.* pp. 606, 610; Mela, i. 18; Ptol. v. 2. § 5.) The name of this town is in some authors misspelt Ἰάργανον, as in Ptolemy, and Σάγαρα, as in Hierocles. The territory round Gargara was celebrated for its fertility. (Virg. *Georg.* i. 103; Senec. *Phoen.* iv. 608.) The modern village of *Iné* probably occupies the site of ancient Gargara. [L. S.]

GARGA'RIUS LOCUS, a place in Gallia Narbonensis, known only from an inscription of the time of Hadrian. D'Anville (*Notice, &c.*) received an exact copy of it from Barthélemy. This inscription records the "Pagani pagi Lucreti qui sunt finibus Arelatensium loco Gargario." The place, which is still called *Garguies*, is at the foot of a mountain called *St. Pilon;* "and the plain which extends from the foot of this mountain as far as *Aubagne*, in the direction of *Marseille*, is called *Lacrau*, and this may be the Pagus Lucretus of the inscription" (D'Anville). [G. L.]

GARGETTUS. [ATTICA, p. 327.]

GARI (Γάρι, Isid. Char. *ap. Huds.* vol. ii. p. 9), a small place in Ariana, most likely represented now by *Ghore*, to the east of Ferrah. Perhaps it is the same as *Ghirane*, which lies to the NE. from *Ferrah*. Mannert (v. 2. s. 61) has supposed that it is the same as *Greishk* to the NE. of *Bost*, on the *Elwend*, which, however, is more likely to be the Chatrisache or Chatrische of Ptolemy (vi. 17. s. 5). [V.]

GARINAEI (Γαριναῖοι and Γαρηναῖοι), mentioned by Ptolemy (vi. 16. § 5) as a population of the country of the *Seres*. [SERES.] [R. G. L.]

GARITES, a people of Aquitania (Caes. *B. G.* iii. 27), who submitted to P. Crassus, B. C 56. They are mentioned by Caesar between the Elusates and Ausci, and the position of both of these peoples is known within certain limits. [ELUSATES, AUSCI.] Some writers would connect the name Garites with the name *Gers*, a branch of the *Garonne*. But the reading Garites is not certain in Caesar's text. Schneider (ed. Caes. *Bell. Gall.*) has taken the reading Gates. [G. L.]

GARIUS (Γάριος), a place on the coast of Paphlagonia, 80 stadia to the east of Callistratia. (Marcian Heracl. *Peripl.* p. 72; Anonym. *Peripl. Pont. Eux.*) [L. S.]

GARIZIM. [GERIZIM.]

GAROCELI or GRAIOCELI, an Alpine people, who with the Centrones and Caturiges attacked Caesar (B. C. 58) in his march from Ocelum, the most western place in Gallia Cisalpina, over the Alps into the country of the Vocontii. (*B. G.* i. 10.) The reading Graioceli is said to have the best authority for it. (Schneider, ed. Caes. *B. G.* i. 10.) These people are mentioned by no other writer; but, as we know where the Centrones and Caturiges lived, we may suppose that the Garoceli were near them. D'Anville, as he often does, determines their position simply by the aid of a name. The resemblance between the names Ocelum and Garoceli, he says, fixes the place of the Garoceli in the valley of *Pragelas* and of *Cluson*, and consequently in Gallia Cisalpina. But it is clear that Caesar means that they were an Alpine people, whom he met after leaving Ocelum. Walckenaer has a conjecture about them which is ingenious; and it may also be true. He says that they occupied the *Maurienne* and the valley which is contiguous to the *Maurienne*, to the east of *Mont Cenis*, the *Val di Viù*, which contains a place called *Usseglio* and a canton of the same name. And he adds, what is more to the purpose, that in an ancient document, St. Jean de Maurienne is called Johannes Garocellius. He has other arguments also. (*Géog., &c. des Gaules*, vol. i. p. 542.) [G. L.]

GARRHUENUS, a river in Britain, mentioned by Ptolemy, =*the Yare* (or *Yar*-mouth River) both in respect to name and place. [R. G. L.]

GARRIANNONUM, in Britain, mentioned in the Notitia as a station under the *Comes Littoris Saxonici* for the *Equites Stablesiani=Burgh Castle* in Norfolk, where Roman remains are found. [R. G. L.]

GARSAURA (Γαρσάουρα), a small town in Cappadocia from which the praefectura *Garsauria* or *Garsauritis* derived its name. (Strab. xiv. p. 663; comp. xii. 534, and 568, where, perhaps Γαρσαούρων is to be read for Kramer's Γαρσαβόρων; Plin. vi. 3; Ptol. v. 6. § 14.) [L. S.]

GARSAURITIS. [GARSAURA.]

GARUMNA (ὁ Γαρουνᾶς, Γαρίνας: *Garonne*). Tibullus (i. 7, 11) calls this river "Magnus Garumna:" but Ausonius (*Mosella*, v. 483) makes the name feminine (aequoreae ... Garumnae). The forms Garumna, Garonna, and Garunda occur; the last in a letter of Symmachus to Ausonius, and it is perhaps the origin of the name *Gironde*.

The *Garonne*, the most southern of the three great rivers of France which flow into the Atlantic, rises in the Pyrenees, within the present kingdom of Spain. The river has a north and NNE. course to Tolosa (*Toulouse*), from which town it has a general NNW. course to Burdigala (*Bordeaux*). Below *Bordeaux* it forms a large aestuary, which Strabo (p. 190) calls a sea-lake (λιμνοθάλασσα). The navigation of the *Upper Garonne* as far down as the junction of the Tarnis (*Tarn*) below *Toulouse* is much impeded. At *Bordeaux* it is a fine tide river, and the tide ascends 20 miles above *Bordeaux*. This river has several large branches: on the right bank, the *Arriège*, the *Tarn*, the *Lot* (Oltis), and the *Dordogne* (Duranius), which flows into the aestuary; on the left bank, the *Gers*, the *Bayse*, and some others. The length of the *Garonne* is said to be about 360 miles, and the *Dordogne* is near 300 miles long. In fact, the *Dordogne* and *Garonne* are two distinct rivers which flow into one aestuary, now called the *Gironde*. The basin of the *Garonne* is much less than that of the *Loire*, but larger than the basin of the *Seine*. It is a country which lies within well-defined limits, the Pyrenees, the *Cévennes*, the mountains of the *Auvergne*, and the Ocean. Part of the basin of the *Garonne* was the Aquitania of Caesar, who makes the Garumna the boundary between the Aquitani and the Celtae (*B. G.* i. 1).

Strabo (p. 190) and Mela (iii. 2) describe the Garumna as rising in the Pyrenees. Strabo makes the Garumna flow parallel to the Pyrenees, and the navigable part of it he says is 2000 stadia: it is increased by three streams, and then enters the sea between the Santones and the Bituriges Iosci [BITURIGES], both Celtic nations. He speaks of the mouths of the river (*αἱ ἐκβολαί*) as forming the aestuary: he probably means the proper *Garonne* and the *Dordogne*. Mela's description is much more complete: he describes the upper part of the river as shallow for a great distance and scarcely navigable, except when it is swollen by wintry rains or melted snow; as it approaches the ocean tides it is fuller, and becomes wider as it proceeds; at last it

is like a great sea channel, carries large ships, and tosses navigators about in a furious manner, particularly when the wind and the stream are not the same way. Mela may probably have heard of the violence with which the tide enters the *Gironde*. Mela says that there is an island, Antros, in the aestuary of the *Garonne;* but there is no island now. [G. L.]

GARUMNI, an Aquitanian people mentioned by Caesar. [GARITES.] It may be inferred from the name that they were on the Garumna. A. de Valois supposes that they occupied a tract now called *Rivière* along the *Garonne*, to the north of the Convenae, or of the diocese of *St. Bertrand de Comminge*, as far as the borders of the diocese of *Rieux*. This conjecture is accepted by D'Anville and other writers; and it may be true. But there is no direct evidence that it is true. [G. L.]

GASANDES (Γασανδεῖς), an Arab tribe, mentioned by Diodorus Siculus (iii. 44), identical with the Cassanitae of Ptolemy, and the Cassandreis of Agatharchides. Diodorus places them, with the Alibaei, next to the Debae, on the south, in agreement with Ptolemy, who finds them south of the Cinaedocolpitae,—his name for the Debae,—and gives Badeo as the name of their capital (vi. 7. § 6). Diodorus and Agatharchides agree in remarking on the difference of the climate of this part of Arabia from that of the other parts. "This country," says Diodorus, "is not scorched as are the neighbouring regions, but is often covered with soft and thick clouds, from which distil snows and refreshing showers, which render even the summer temperate. The country produces all kinds of fruits, and is remarkably rich, but, owing to the ignorance of the inhabitants, it is not properly cultivated; they collect gold in large quantities, which they find in the natural fissures of the earth, not in the form of gold-dust, but in nuggets, the smallest of which equal in size the olive-stone; the largest are little inferior to the walnut. The natives wear them round their wrists and necks, alternated with transparent pebbles. Having an abundance of gold, but a scarcity of copper and iron, they are glad to barter the former with the merchants for an equal weight of the latter." An identity both of climate and name enables us to fix the Gasandes immediately to the south and south-east of Mekka, in *Mount Gazuan*, the country of Zohran, of which Burckhardt reports: "Grapes abound in the mountains. Most other fruits are cultivated in these mountains, where water is at all times abundant, and the climate temperate. Snow has sometimes fallen, and water been frozen, as far as Sadâ." (*Travels in Arabia*, vol. ii. p. 377, quoted by Forster, *Arabia*, vol. ii. p. 144.) [G. W.]

GASO'RUS, GAZO'RUS (Γάσωρος, Ptol. iii. 13. § 31; Γάζωρος, Steph. B.), a town of the Edoni in Macedonia, and, probably, the same place as the GRAERO of the Peutinger Table. Gasorus, therefore, probably stood between Tragilus and Euporia, towards the NW. end of Mons Pangaeus. (Leake, *Trav. in North. Greece*, vol. iii. p. 229.) [E. J. B.]

GATH (Γέθ, Γέττα: *Eth.* Γεθαῖος), one of the five principal cities of the Philistines (*Josh.* xi. 22; 1 *Sam.* v. 8, vi 17), the birthplace and home of Goliath and his gigantic family. (1 *Sam.* xvii. 4; 2 *Sam.* xxi. 18—22.) It was taken by Uzziah, and dismantled. (2 *Chron.* xxvi. 6.) Josephus reckons it to the tribe of Dan (*Ant.* v. 1. § 22), and says that Hezekiah took the cities of the Philistines from Gaza to Gath. (*Ant.* ix. 13. § 3.) St. Jerome speaks of it as a city of the Philistines on the confines of Judaea, between Eleutheropolis and Gaza, where a very extensive village existed in his day. (*Comment. in Mich.* i. 10). There can be little doubt that this same is intended in the *Onomasticon* (*s. v.* Γέθ), though it is there erroneously stated to be five miles from Eleutheropolis, on the road to Diospolis or Lydda. (Reland, *Palaest. s. v.*) The inhabitants of *Beit-Jebrin* (Eleutheropolis) speak of a village named *Kuryet-el-Gat*, a quarter of an hour distant from *Beit-Jebrin*, on the road to *Askelan*. It may, perhaps, be permitted to hazard the conjecture that the present *Beit-Jebrin*—the classical Betogarba and Eleutheropolis—marks the site of the ancient Gath. [BETHOGABRIS.] [G. W.]

GATH-HEPHER (Γεθχοφές, Γαιθθά, LXX.; Γεθθεφά, Euseb. *Onom.*), a town of Galilee in the tribe of Zabulon (*Josh.* xix. 13), the native place of the prophet Jonah (2 *Kings*, xiv. 25). St. Jerome places it two miles from Sepphoris, on the road to Tiberias, a small village in his day, where the tomb of the prophet was shown. (*Proem. in Jonam.*) The tomb was shown to Benjamin of Tudela, in the mountains near Sepphoris, in the twelfth century (*Travels*, vol. i. p. 80, ed. *Ashar*); and in the village of *El-Meshhad*, situated two miles east of the ruins of Sepphoris, the Moslems show at this day the tomb of the prophet Jonah. (Robinson, *Bib. Res.* vol. iii. p. 209, note 1.) [G. W.]

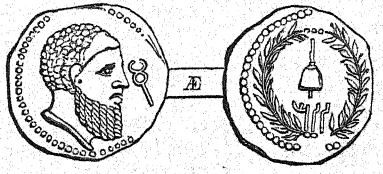
GATH-RIMMON (Γεθρεμμών), a city of the tribe of Dan (*Josh.* xix. 45), assigned to the Levites (xxi. 24; 1 *Chron.* vi. 69), is described by Eusebius and St. Jerome as situated 12 miles from Diospolis, towards Eleutheropolis (*Onomast. s. v.*); but this can scarcely be, as Dr. Robinson conjectures, identical with that which they place 5 miles from Eleutheropolis, on the way to Diospolis, as the distance between the two termini is much more than 17 miles. (Robinson, *Bib. Res.* vol. ii. p. 421.) Neither can it be that large village then named Githha, which the *Onomasticon* supposes to be the Gath to which the ark of the covenant was carried from Azotus, and which is placed (*s. v.* Γεθθά) between Antipatris and Jamnia. (Reland, *Palaest.* p. 786.) [G. W.]

GA'THEAE (Γαθεαί: *Eth.* Γαθεάτης), a town of Arcadia in the district Cromitis, situated upon the river Gatheatas (Γαθεάτας), which rose near the place, and which, after receiving the Carnion (Καρνίων), rising in the territory of Aegys, flowed into the Alpheius. Gatheae is placed by the best modern authorities at *Kyrádhes*. (Paus. viii. 34. §§ 5, 6; Steph. B. *s. v.*; Boblaye, *Recherches, &c.* p. 169; Leake, *Peloponnesiaca*, p. 234; Curtius, *Peloponnesos*, vol. i. pp. 291, 336.)

GATHEATAS. [GATHEAE.]

GAUGAME'LA (τὰ Γαυγαμήλα, Ptol. vi. 1. § 5; Steph. B. *s. v.*), a small village of Assyria, about 12 miles on the other side of the Lycus, at no great distance from the river Bumadus. It was the actual scene of the last great battle between Dareius and Alexander the Great, which is sometimes called that of Arbela, though this place was at some distance from the real battle-field. [ARBELA.] Strabo states that the word Gaugamela means "Camel's house," and that it was so called because Dareius gave the place for the support and nourishment of one of his camels which was much wearied with the march (xvi. p. 737). Pliny places the town to the west of the Orontes (vi. 26. 8. 30). Each of the two forms Gangamela and Gaugamela admits of explana-

tion from the Persian; the first might be derived from *Kháneh* (the house-home), the second from *Gâh* (Zend, Gâ), (the place). Arrian, on the authority of Ptolemy and Aristobulus, has corrected the mistake about the place where the battle was really fought, stating that it was at Gaugamela, and not at Arbela; he adds the conjecture, that Arbela, being a well-known place, while Gaugamela, on the other hand, was one little known, obtained the credit of having been the exact site of the conflict; he suggests that the two places are as far apart as Salamis from the Isthmus of Corinth, or Artemisia from Aegina or Sunium (*Anab.* vi. 12). Plutarch agrees with Arrian. (*Alex.* c. 31.) Ammianus follows the same opinion (xxiii. 6). Curtius, on the other hand, calls the field of battle Arbela (iv. c. 9). Stephanus calls it a place of Persis, probably because, in his time, all that part of Mesopotamia was subject to the Persian Empire. It is, perhaps, represented by a small place now called *Karmelis;* yet it can hardly be the one marked in Niebuhr's Map (ii. p. 284, tab. 45), as that is too near to Mosul and too far from Arbela; Niebuhr himself is inclined to place the scene of action on the banks of the *Khauser*, which he calls a small tributary of the *Greater Zab*. [ARBELA.] [V.]



GAULANI'TIS (Γαυλανῖτις), the name of a division of Palaestine, the limits of which are not very accurately defined by Josephus. He assigns Galadena and Gaulanitis to the dominion of Og, king of Bashan (*Ant.* iv. 5. § 3), and extends these districts (the former he now calls Galaaditis) to Mount Lebanon (viii. 2. § 3), making them identical with what is described in Scripture as Ramoth Gilead, the cities of Jair, the regions of Argob, which is Bashan, sixty large cities, &c. (1 *Kings*, iv. 13.) He makes it, with Hippene and Gadaris, the eastern limit of Galilee, and therefore the westernmost of the districts which he assigns as the dominions of king Agrippa, viz., Gamalitica, Gaulanitis, Batanaea, and Trachonitis. (*B. J.* iii. 3. §§ 1, 5.) These divisions, however, are not always observed, even by the Jewish historian himself; for Gamala, which in the last-cited passage gives its name to a district, is elsewhere reckoned to Gaulanitis (*Ant.* xviii. 1. § 1); and Judas, who is in this passage called a Gaulanite, is usually designated a Galilaean (Ib. § 6, xx. 5. § 2, *B. J.* ii. 8. § 1, and 17. § 8), as he is also in *Acts* (v. 37). For the solution of this difficulty, it is not necessary to resort, as Reland and others have done, to the hypothesis of two Gamalas, but to suppose that Galilee is sometimes used in a wider sense, to include the eastern side of the sea of Tiberias. From these scattered notices, the district of Gaulanitis Proper may be safely fixed to the eastern side of the river Jordan, from the northern extremity of the sea of Galilee (for Bethsaida Julias was situated in Lower Gaulanitis, *B. J.* ii. 9. § 1) to the sources of the Jordan and the roots of Lebanon and Hermon. Its extent in width it is impossible to define with any accuracy, as there is no well-defined natural boundary to the mountain region and high table-land of the country east of the Jordan, until it sinks into the great plain of the Hauran. [BATANAEA.] It is supposed to have derived its name from the town of Gaulan, the Scripture GOLAN. (Reland, *Palaest.* p. 317.) [G. W.]

GAULOPES, an Arab tribe, mentioned only by Pliny (vi. 28), who places them, with the CHATENI, at the Sinus Capeus, on the west of the Persian gulf, in the vicinity of the modern *Chat* or *Katiff* bay. (Forster, *Arabia*, vol. ii. p. 216.) [G. W.]

GAULOS (Γαῦλος: *Eth.* Γαυλίτης, Gaulitanus: *Gozo*), an island in the Mediterranean Sea, between Sicily and the coast of Africa, separated only by a narrow strait from the much larger and more important island of Melita or *Malta*. Gaulos is itself, however, of considerable extent, being 10 miles in length by about 5½ in breadth, and the soil is fertile: hence the island appears to have been inhabited from a very early period; and Scylax, the most ancient author by whom it is noticed, already mentions it as containing a town of the same name. (Scyl. § 110, p. 50; Mela, ii. 7. § 18; Strab. vi. p. 277; Plin. iii. 8. s. 14; Diod. v. 12; Steph. B. *s. v.*) Gaulos must at all times have followed the fortunes of its more powerful neighbour Melita; hence it is seldom mentioned separately in history. But we learn that it was first visited and colonised by the Phoenicians, and subsequently passed into the hands of the Carthaginians, in whose power it remained for the most part till the conquest of Sicily by the Romans. At what period, or how, it fell into the hands of the Greeks, we know not; but that it must have done so may be inferred from the circumstance that there exist coins of the island with the inscription, in Greek characters, ΓΑΥΛΙΤΩΝ. Nor have we any account of its conquest by the Romans, which doubtless took place at the same time with that of Melita, at the beginning of the Second Punic War. (Liv. xxi. 51.) Under the Roman government Gaulos appears to have enjoyed separate municipal rights, as we learn from an inscription still extant there. (Cluver. *Sicil.* p. 444.) It is mentioned, together with Melita, by Procopius (*B. V.* i. 14), who tells us that the fleet of Belisarius touched there on its way to Africa.

The island of *Gozo* is at present a dependency of that of *Malta*. It contains about 8000 inhabitants, but has no port, being bounded on all sides by steep or perpendicular cliffs, though of no great elevation. It is strange, therefore, that Diodorus should especially mention it as "adorned with advantageous ports" (λιμέσιν εὐκαίροις κεκοσμημένη, v. 12), the want of which convenience so strikingly distinguishes it from the neighbouring island of *Malta*. Besides several inscriptions of Roman date, *Gozo* contains a remarkable monument of antiquity called the Giant's Tower (*Torre dei Giganti*); it is of circular form and built of massive blocks of stone in an irregular manner, resembling the Cyclopian style. Near it are the remains of other buildings, constructed in the same rude and massive style of architecture, which appear to have formed part of an edifice of considerable extent consisting of several chambers. These remains, which are wholly distinct in character from anything found in Sicily, are generally ascribed to the Phoenicians; but this rests wholly on conjecture. Their nearest analogies are found in the buildings called *Nuraghe*, in Sardinia. (Hoare, *Class. Tour*, vol. ii. p. 293: *Bullett. d. Inst. Arch.* 1833, pp. 86, 87.)

The view, adopted by some ancient as well as

COIN OF GAULOS.

modern authors, which identified Gaulos with the Homeric island of Calypso, is discussed under the article OGYGIA. [E. H. B.]

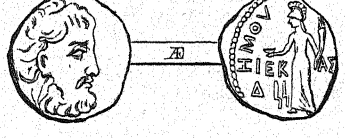
GAURA MONS. Part of the Jerusalem Itin. contains a route from Civitas Valentia (*Valence*), on the Rhone, to Mansio Vapincum (*Gap*). After leaving Mansio Lucus (*Luc*), 9 Roman miles bring us to Mutatio Vologatis, which is perhaps *Vaugelas;* and the Itin. adds, "inde ascenditur Gaura Mons." The next station, 8 Roman miles from Vologatis, is Mutatio Cambonum. [CAMBONUM.] D'Anville found, in a manuscript map of the *Dauphiné*, a hill called *Col de Cabre*, which, as he supposes, preserves the name Gaura. Walckenaer supposes the Gaura to be the chain of mountains which extends from *Serre*, on a branch of the Durance, to Rimusa, at the foot of which is the place named *Le Ga.* Probably D'Anville and Walckenaer mean the same range of hills. [G. L.]

GAURE'LEON. [ANDROS.]

GAU'RION. [ANDROS.]

GAURUS MONS, a mountain of Campania, now called *Monte Barbaro*, in the immediate neighbourhood of Puteoli, and about 3 miles NE. of Cumae. It is in fact the central and most elevated summit of a range of volcanic hills which extend from the promontory of Misenum to Neapolis [CAMPANIA, p. 491], and is itself unquestionably an extinct volcano, presenting a distinct and tolerably regular crater. (Daubeny *on Volcanoes*, p. 200.) Its sloping sides, composed of volcanic sand and ashes, were very favourable to the growth of vines: hence the wines which it produced were in ancient times among the most celebrated in Italy, and were considered to vie with those of the Falernian and Massican hills. (Plin. iii. 5. s. 9, xiv. 6. s. 8; Flor. i. 16. § 5; Athen. i. p. 26; Stat. *Silv.* iv. 3. 64; Sil. Ital. xii. 160.) The position of Mt. Gaurus, towering over the lower hills which encircled the lakes Avernus and Lucrinus, is distinctly pointed out by Lucan (ii. 667) and by Sidonius Apollinaris (*Carm.* v. 345), and is implied also by Silius Italicus (*l. c.*), who places it in the immediate neighbourhood of Puteoli. Aurelius Symmachus also, in a poetic description of Bauli (*Anthol. Lat.* 268, ed. Meyer), distinctly points to the vine-covered flanks of Mt. Gaurus as rising above the hot springs of Puteoli and the lovely bay of Baiae; but there is a confusion in the passage of Pliny where he speaks of the wines of Mt. Gaurus and Massicus, which has led some writers to assume that the two hills must have been near together, and has thus given rise to much confusion. The Mons Gaurus was celebrated in Roman history as the scene of a great victory gained by the Romans under M. Valerius Corvus over the Samnites, B. C. 340. (Liv. vii. 32, 33.) This was the first in the long series of conflicts between those two nations, and on that account (as Niebuhr remarks) "is one of the most memorable in the history of the world: it decided, like the *praerogativa*, upon the great contest which had now begun between the Sabellians and the Latins for the sovereignty of the world" (vol. iii. p. 119). The exact scene of the battle is not indicated; we are only told that it was fought at the foot of Mt. Gaurus. At a later period Cicero mentions this hill among the fertile districts of Campania which the agrarian law of Rullus proposed to sell for the benefit of the Roman people (*de Leg. Agr.* ii. 14). [E. H. B.]

GAUZACA or GAZACA (Γαύζακα ἢ Γαζάκη, Ptol. vi. 18. § 4), a town seated in the district of the Paropamisadae. It is no doubt the same as Agazaca, one of the three cities of this tribe mentioned by Ammianus (xxiii. 6). It is conjectured by Forbiger that it may be the same as the modern *Ghazni*. The name is probably connected with Gaza, a word of Persian origin, signifying a treasure-house. [V.]



GAZA (Γάζα: *Eth.* Γαζαῖος), a very ancient and important city of Palestine Proper, first mentioned in the southern border of the Canaanites (*Gen.* x. 19), but originally inhabited by the Avims, who were dispossessed by the Caphtorims. (*Deut.* ii. 23.) It was included in the tribe of Judah (*Josh.* xv. 47), but remained in possession of the Philistines (1 *Sam.* vi. 17), whose capital it apparently was (*Judges*, xvi. 21). Josephus says that it was taken by Hezekiah. (*Ant.* ix. 13. § 3.) It is celebrated in secular, as in sacred history. Arrian, in his *Expedition of Alexander* (ii. 27), describes it as a large city, distant 20 stadia from the sea, situated on a lofty mound, and fortified by a strong wall. It was well provisioned, and garrisoned by a force of Arab mercenaries under the command of an eunuch named Batis (or, according to Josephus, Babemeses), and its high walls baffled the engineers of Alexander (B. C. 332), who declared themselves unable to invent engines powerful enough to batter such massive walls. Mounds were raised on the south side of the town, which was most assailable, and the engines were erected on this artificial foundation. They were fired by the besieged, in a spirited sally, and the rout of the Macedonians was checked by the king in person, who was severely wounded in the shoulder during the skirmish. During his slow recovery the engines that had been used at Tyre were sent for, and the mound was proceeded with until it reached the height of 250 feet, and the width of a quarter of a mile. The besiegers were thrice repulsed from the wall; and when a breach had been effected, in the third assault, and the city carried by escalade, its brave garrison still fought with desperate resolution, until they were all killed. The women and children were reduced to slavery. The siege had apparently occupied three or four months; and the conqueror introduced a new population into the place from the neighbouring towns, and used it as a fortress. (Arrian, ii. 27, followed by Bp. Thirlwall, *Greece*, vol. vi. pp. 354—357.) If this be true, the statement of Strabo, that it was destroyed by Alexander, and remained desert, must be taken with some qualification (p. 759). Indeed, the figure which it makes in the intermediate period discredits the assertion of Strabo in its literal sense. Only twenty years after its capture by Alexander, a great battle was fought in its neighbourhood, between Ptolemy and Demetrius, wherein the latter was defeated, with the loss of 5000 slain and 8000 prisoners. "Gaza, where he had left his baggage, while it opened its gates to his cavalry on his retreat, fell into the hands of the pursuing enemy." (Thirlwall, vol. vii. p. 340.) Again, in the wars between Ptolemy Philopator and Antiochus the Great (B. C. 217), it was used as a depôt of military stores by the Egyptian king (Polyb. v. 68); and when the tide of fortune turned, it retained its fidelity to its old masters, and was destroyed by Antiochus (B. C. 198). And it is mentioned, to the credit of its inhabitants, by Polybius, that, although they in no way excelled in courage the other inhabitants of Coelosyria, yet they far surpassed them in liberality and fidelity and invincible hardihood, which had shown itself in two former instances, viz., in first resisting the Persian invaders

and then in maintaining their allegiance to the Persians against Alexander (xvi. 40). It was evidently a strong place in the time of the Asmonean princes, for it stood a siege from Jonathan (1 *Maccab.* xi. 61, 62; Joseph. *Ant.* xiii. 5. § 5); and having been taken by Simon, not without resistance, he cast out its idolatrous inhabitants, peopled it with Jews, "made it stronger than it was before, and built therein a dwelling-place for himself" (xiii. 43—48). Only a little later, Alexander Jannaeus besieged it in vain for twelve months, when it was betrayed into his hands. Its importance at this period is attested by its senate of 500, whom the conqueror slew, and utterly overthrew their city. (Joseph. *Ant.* xiii. 13. § 3.) It did not long continue in ruins, for it was one of the many cities rebuilt by the command of Gabinius (xiv. 5. § 3). It was given to Herod the Great by Augustus (*B. J.* i. 20. § 3), but not included in the dominions of his son Archelaus, as being a Grecian city (ii. 6. § 3). These notices sufficiently expose the error of Strabo's statement above cited; nor does there seem to be any authority for the theory of the transference of the site, by which it has been attempted to reconcile his statement with these historical notices. It is true that Strabo places the city 7 stadia from the harbour (p. 759); whereas Arrian (*l. c.*) states it to be 20 stadia at the most; but this discrepancy concerning the site of a town of which neither of them could have any very accurate knowledge, cannot justify the conclusion that the ancient city had been deserted, and another city of the same name erected in its vicinity. Another and a decisive argument against this theory is, that while the modern city occupies an eminence corresponding with that described by Arrian, and is covered with ancient ruins, no vestiges have been discovered in the neighbourhood which could mark the site of an earlier city. A succession of coins, struck at Gaza, some few prior to the emperors, but many more from Hadrian downwards, attest the importance of the city subsequently to the Christian aera, and present some peculiarities worthy of observation. The cypher, or characteristic sign of the city, impressed on almost all the coins, has been variously explained, but by no one satisfactorily: all that is intelligible clearly attests it to have been a pagan city, in accordance with the historical notices above cited. The city itself is represented by a woman's head; and the Greek deities, Zeus, Artemis, Apollo, Hercules, which figure in the coins, with the absence of the local deity, Astarte, by far the most common in the coins of other maritime cities of Syria, prove the city to have been, as Josephus asserts (*Ant.* xvii. 13. § 4), a Grecian city, probably a colony, which may account for its inveterate adhesion to the exploded superstition in the reign of Constantine (Sozomen, *H. E.* v. 3). The legends of the various coins serve no less to elucidate the history of the city. The earliest (probably A. U. C. 693) proves the city to have been *autonomus;* and as history bears witness to its senate (*Βουλή*) of 500, so does this coin to its ΔHMOC. IEP. ACT. further prove it to have enjoyed the privileges of a sacred city and an asylum. The name EIΩ serves to connect this city with the mythic Io; and the name MEINΩ, applied to an armed warrior with a sceptre in his hand, connects it also with the Cretan hero Minos, and suggests the idea that it may have been colonised from that island; which idea is confirmed by another inscription, MAPNA, the signification of which is furnished by early Christian writers, who tell us that the most magnificent temple in Gaza (afterwards converted into a Christian church) was dedicated to Marna, and thence called Marnion. This Marna, they add, was identical with the Cretan Jove. (Eckhel, vol. iii. pp. 448—454.) Many of the Jewish captives taken by Hadrian (A. D. 119) were sold at a fair instituted at Gaza, which was called, from this fact, the fair of Hadrian for many centuries after. (*Chron. Paschale in ann*). The town is frequently noticed in Christian and Moslem annals. It early became an episcopal see, and the names of its bishops are found in many councils. (Le Quien, *Oriens Christ.*, vol. iii. pp. 603—622). It was a frontier town of great importance in the middle ages; and the historical notices have been collected by Quatremère (*Les Sultans Mamlouks de Macrisi*, tom. i. liv. 2. pp. 228—239).

The modern town, still called by its ancient name, *'Azzah*, signifying "the strong," "is situated on a low round hill of considerable extent, not elevated more than 50 or 60 feet above the plain. This hill may be regarded as the nucleus of the city, although only its southern half is now covered with houses. The greater part of the modern city has sprung up on the plain below; a sort of suburbs stretching far out on the eastern and northern sides. The ancient city lay obviously chiefly on the hill. The present town has no gates; yet the places of the former ones remain, and are pointed out around the hill." (Robinson, *Bib. Res.* vol. ii. pp. 374, 375.) "It contains, with the two villages or suburbs adjoining, about 10,000 inhabitants. It is situated a short league from the coast, which is here an open beach, and the landing difficult, excepting in very calm weather. It is surrounded by gardens, which produce fruit in abundance." (Alderson, *Notes on Acre*, p. 7, note 6.)

The port of Gaza was called "Majuma Gazae;" the Arabic word "Majuma," signifying *portus* or *navale*, being applied alike to Ascalon, Jamnia, Azotus, and Gaza. (Le Quien, *Oriens Christ.* vol. iii. p. 622.) It was situated, according to Strabo, only seven stadia from the city (*l. c.*). Arrian, in agreement with Sozomen, makes the interval 20 stadia. (Sozomen, *H. E.* ii. 5, p. 450, ed. *Vales.*) All that we know of it we learn from the last-mentioned historian. Having been formerly strongly addicted to pagan superstition, it was converted to the faith of Christ in the reign of Constantine, who consequently honoured it with special privileges, erected it into an independent civitas, and called it *Constantia*, exempting it from its subjection to Gaza, whose inhabitants still retained their attachment to the pagan superstition. (Sozomen, *l. c.*) Under the emperor Julian the people of Gaza reasserted their supremacy, and the emperor decided in favour of their claim. Its new name was withdrawn, and it was comprehended again within the name and municipal jurisdiction of Gaza.

The ecclesiastical position of Gaza still continued distinct, with a bishop and usages of its own; and when an attempt was made by a bishop of Gaza

COIN OF GAZA.

in the fifth century to unite the two churches, the provincial synod confirmed it in its former independence of that see. (Sozomen, *H. E.* v. 3, p. 597). Several of its bishops are mentioned in the ecclesiastical annals. (Le Quien, *Oriens Christ. l. c.*) [G. W.]

GAZA. 1. (Γάζα, Arrian, *Anab.* iv. 2), a city or strongly fortified place in Sogdiana, taken by Alexander the Great in person, on his advance beyond the Jaxartes or *Sihun*. Bishop Thirlwall (*Hist. of Greece*, vol. vi. p. 286), and others, conjecture that this place may be recognised at *Ghaz* near *Urtappeh*, in the desert between that place and the river. Ibn Haukil (p. 270) describes *Ghaz* as the summer residence of the rulers of this district. It seems, however, probable that this and other cities taken at this time by Alexander the Great were more to the eastward, in the hilly country. (Wilson, *Ariana*, p. 165, &c.; *Mem. of Emp. Baber*, Introd. p. xii.)

2. In Media. [GAZACA.] [V.]

GAZACA (Γάζακα, Strab. xi. p. 523), the Palace of the Parthians, situated in a plain in Atropatene. The name in the earlier editions of Strabo was always written Gaza, but Groskurd detected the error in the MS., and proposed the reading Γάζακα for Γάζα καὶ, which has been adopted by Kramer, and is doubtless the correct one. The name is connected with Gaza, and is, perhaps, a modification of it. It is probably connected with the Persian Ghaz, a place of treasure. (For the name, see Ptol. vi. 18; Ammian. xxiii. 6, where it is written Agazaca; Theoph. Chronogr. pp. 257, 270; Cedren. p. 412; Niceph. Patriarch. ep. 12; *Hist. Misc.* xviii. 16; Theoph. Simocatt. *Hist. Maur.* v. 8, 10; and GAUZACA). Pliny speaks of a place he calls Gazae, at a distance of 450 M. P. from Artaxata; this should probably be corrected to Gazaca (vi. 13, 16).

If Colonel Rawlinson be right, as we think he is, in his theory with respect to Ecbatana, this town underwent many curious changes of name, according to the rulers who successively occupied it. [ECBATANA.] [V.]

GAZELON or GADILON (Γαδιλών), a town in the north-west of Pontus, in a fertile plain between the river Halys and Amisus. (Strab. xii. 547; Plin. vi. 2.)

From this town the whole district received the name of Gadilonitis, which is probably the right form, which must, perhaps, be restored in two passages of Strabo, in one of which (p. 553) the common reading is Γαλαυΐτις, and in the other (p. 560) Γαζηλωτός. [L. S.]

GAZIU'RA (Γαζίουρα: *Azurnis?*), a town in Pontus, on the river Iris, near the point where its course turns northwards. It was the ancient residence of the kings of Pontus, but in Strabo's time it was deserted. (Strab. xii. p. 547.) Dion Cassius (xxxv. 12) notices it as a place where Mithridates took up his position against the Roman Triarius. (Comp. Plin. vi. 2.) [L. S.]

GAZO'RUM, the same as *Zagorum*, *Zagorus*, or *Zagora* (Ζάγωρα, Ζάγωρον, Ζάγωρος), a town of Paphlagonia, on the Euxine, between Sinope and the river Halys. (Arrian, *Peripl. P. Eux.* p. 15; Marcian Heracl. p. 73; Ptol. v. 4. § 5, where it is called Ζάγειρα.) [L. S.]

GAZO'RUS. [GASORUS.]

GEBAL, GEBALE'NE (Γεβαληνή, Γαβαληνή), a people and district of that part of Arabia Petraea to which Josephus gives the name of Idumaea. (*Antiq.* iv. 8. § 1.) Eusebius and S. Jerome properly regard it as identical with Mount Sier (*Onomast. s. v.* Σηειρ), the habitation of Esau and his descendants. (*Genes.* xxxvi. 8, 31.) The name describes the mountainous character of the country situated around Petra. (*Onomast. s. v.* Ἰδουμαία.) [IDUMAEA.] [G. W.]

GE'BAL, GEBALAECA. [VARDULI.]

GEDERAH, GEDEROTH (Γάδηρα, Γαδηρώθ: *Eth.* Γαδαραθίμ). There can be no doubt that the same place is intended under these various forms. It has also been identified with Gedor (*Josh.* xv. 58), which likewise belonged to the tribe of Judah; but see below. Geder is reckoned as one of the cities presided over by a king or sheikh of the Canaanitish tribes (*Josh.* xii. 13) reduced by Joshua. Gederah or Gederothaim is reckoned to that part of the tribe of Judah situated in the valley or plain (xv. 36); in conformity with which notice it is said in 2 *Chron.* xxviii. 18: "The Philistines also had invaded the cities of the low country, and of the south of Judah, and had taken Beth-shemesh and Ajalon, and Gederoth, and Shocho with the villages thereof, and Timnah with the villages thereof," &c. [G. W.]

GEDOR (Γεδώρ), one of the towns of Judah situated in the hill country. (*Josh.* xv. 58; 1 *Chron.* iv. 39.) Eusebius mentions a village named Κέδους, 10 miles distant from Diospolis (Lydda), on the road to Eleutheropolis (*Onomast. s. v.*), which may possibly be identical with "a place with ruins on the brow of the high mountain ridge . . called *Jedûr*, which is doubtless the same as the Gedor of the mountains of Judah." (*Biblical Res.* vol. ii. p. 338.) [G. W.]

GEDRO'SIA (Γεδρωσία, Strab. xv. pp. 721, 722, Ptol. vi. 21. § 1, &c.; Κεδρωσία, Diod. xvii. 105: *Eth.* Γεδρώσιοι, Strab. xv. pp. 723, 724; Γεδρωσοί, Dionys. v. 1086; Γαδρώσιοι, Arrian, vi. 26, 27; Γαδρωσόι, Arrian, vi. 23; Gedrosi, Plin. vi. 20. s. 23; Gedrusi, Plin. vi. 23, 24; Gedrosii, Curt. ix. 10), an extensive district of Asia, which is washed on the S. by the Indian Ocean, and bounded on the E. by the Indus, which separates it from India, on the N. by the Montes Baetii (now *Washáti Mountains*), Drangiana, and Carmania Deserta, and on the W. by Carmania. It comprehended probably nearly the same district which is now known by the name of *Mekrán*. Little was known of this province in ancient times, and its existence was most likely not heard of till Alexander's return from India, when he and Craterus marched across it by two separate routes, while the fleet under Nearchus coasted along its shore. Arrian has given some description of it, as it appeared to Nearchus; and there is a later and fuller account, as far as the names of places, in Ptolemy and Marcian, from which we may infer that after the foundation of Alexandria some trade existed between that part of Asia and that city. Strabo differs from Ptolemy, by interposing between Gedrosia and the sea-coast some maritime tribes, as the Arabii or Arbii, between the Indus and the Arabis, and the Oreitae, between them and the Persian Gulf. The probability is that Gedrosia did include the whole district between the sea and the borders of Seistan and the kingdom of *Kábul*. Sir Alexander Burnes, in his Map, gives the whole country the name of *Beluchistán*, and makes *Mekrán* its sea-board. The Beluchis, from their language, must be comparatively modern colonists from Persia.

The northern part of Gedrosia was hilly, and comprehended the Baetii Montes (now *Washáti*). Towards the middle ran another chain connected with the river Arabis, and called the Arbiti Montes,

— these are probably the *Bala* or *Brahul Mountains;* and to the W. an extensive range, which was the boundary of the province in the direction of Caramania, the Persici Montes (now *Bushkurd* or *Burkind Mountains*). There were few rivers in Gedrosia, and these chiefly mountain torrents, or little better, which in the summer were almost dry or lost in the sands. The best known appears to be the Arabis (now *Purali*) (Arrian, *Ind.* cc. 22, 23) [ARABIS], which enters the Indian Ocean about 90 miles to the W. of the mouths of the Indus: there are two smaller streams mentioned in ancient authors, one the Nabrus, which Pliny calls a navigable river (vi. 23, 26), and which may, perhaps, be the modern *Dustee* or *Bhugwur* (Burnes' Map), and Tomerus (Arrian, *Ind.* c. 24), or Tuberum flumen (Plin. vi. 23, 26), probably the modern *Bhusul*. Marcian and Ptolemy mention several other rivers; but these are probably only small streams, and nothing is known of them but their names.

The character of Gedrosia seems to have been for the most part unfruitful, owing to the heat of the climate and the scarcity of water for irrigation. Arrian, however, and Strabo mention that it produced many rare plants, such as myrrh, spikenard, and different kinds of palms. Aristobulus (*ap. Arrian*, vi. c. 22) speaks of the vast quantities of the Arabian myrtle (*μύρρα*) which the soldiers of Alexander met with, and states that the Phoenician merchants came thither to collect the gum of this shrub, which grew there to a great size. Besides this, were some species of spikenard and laurels, from which the Phoenicians also procured sweet-scented gums, and a plant armed with thorns so sharp that hares running through them are often caught by them (cactus). The inhabitants of the country constructed their huts of shells, and covered them (for roofs) with the bones of fish (Arrian, vi. c. 23), and probably subsisted, like their neighbours the Icthyophagi, chiefly upon fish. There was a current story there that Semiramis, on her return from India, lost all her army, except twenty, in traversing Gedrosia, and that Cyrus escaped through the same district with seven only. (Arrian, vi. 24.) Arrian has described with much minuteness the difficulties under which Alexander himself laboured.

The Gedrosii appear to have been an Arianian race, akin to the Arachosii, Arii, and Drangiani. They are first known to us by Alexander's invasion; but they do not seem to have been completely subdued by him: hence it is that very little is known of their political state. At the same time, it must be borne in mind, that between the time of Alexander and Ptolemy many changes may have taken place in the country, and that a district which Alexander and his generals found nearly devoid of towns may, in later times, have had all the cities which Ptolemy enumerates, but which we are not now able to identify. A considerable number of the places along the coast have been satisfactorily made out by Dr. Vincent (*Voyage of Nearchus*), with the aid of some modern surveys. At the time of Nearchus's voyage and Alexander's march, the people were apparently under the government of a number of petty chieftains, who ruled the different districts which are mentioned in the accounts we have of those expeditions. Along the coast we find (to proceed from E. to W.) the districts named Saranga, Sacala, and Morontobaca, between the Indus and the Arabis (Arrian, *Ind.* xxii.), with a harbour in the last called Γυναικῶν λιμήν, mentioned also by Marcian (p. 24) and Ptolemy (vi. 21. § 2). Then follow the Arabitae, along the banks of the Arabis; and Oreitae, Orae, Ori, or Horitae, like the last, a people said to be of Indian extraction. (Strab. xv. p. 720; Arrian, *Ind.* 23, *Anab.* vi. 22; Curt. ix. 10.) The land of the last tribe produced corn, wine, rice, and dates. Nearchus founded, at the mouth of the Tomerus (*Bhusul*), a town which bore in after-times the name of Oraea (Ὠραία),—now *Urmara* (*Peripl. M. Er.* p. 21), to serve as a port of export for the surrounding country. D'Anville has suggested *Haúr* as its representative. Vincent rejects the position of Oraia as given by the author of the Periplus altogether. (*Voy. of Nearchus*, vol. i. p. 218.) At no great distance from, and perhaps within the limits of, the same tribe was Rhambacia (Ῥαμβακία), which Alexander considered so well placed that he ordered Hephaestion to establish a colony there. (Arrian, vi. 21, 22.) Mannert supposes this is now *Haúr* (v. 2. § 13); others, that it is represented by *Ramghur*. To the W. commenced the territories of another tribe, the Ichthyophagi (Arrian, *Ind.* c. 26), who lived, as their name indicates, along the seaboard of the land. Their territory was probably a long narrow strip of land (Strab. xv. p. 720), and containing a few places, for the most part only small fishing villages (Arrian, *Ind.* 26; Plin. vi. 23. s. 26). Still further to the W. are several towns enumerated by Arrian, and indicative of a more fruitful and habitable soil; as, Balomum, Dendrobosa, Cyiza, Canasis or Canasida, Troesa, and Dagasiris. The author of the Periplus (p. 18) adds another town, which appears to have had some importance in his time as an emporium, Omana (τὰ Ὄμανα), mentioned also by Marcian (p. 22), and perhaps the same which Ptolemy mentions under the name of Commana (vi. 8. § 7). In the interior of Gedrosia Alexander met with a large place, which, from the description, would seem to have been a sort of metropolis, called Pura (Πούρα, Arrian, vi. 24). Forbiger supposes that this town is represented by the modern *Bun-pur*: Wilson (*Ariana*, p. 158), that it may be *Pukra*—a place visited by Major Pottinger in his journey through this country. Major Pottinger's town would, however, seem to be too far inland to answer the description in Arrian. Pura, as a word of Sanscrit origin, signifying "town, may, after all, have only meant "the city," as the chief place of the neighbourhood. [V.]

GEIDUNI or GEIDUMNI, a people mentioned by Caesar as dependent on the Belgian nation of the Nervii. The reading of the name is not quite certain (Caes. *B. G.* v. 39., ed. Schneid.), and the position of the people is unknown. [G. L.]

GEIR or GIR FL. [LIBYA.]

GELA (Γέλα: *Eth.* Γελῷος, Gelensis: *Terranova*), one of the most important Greek cities of Sicily, situated on the S. coast of the island, between Agrigentum and Camarina, and at the mouth of the river of the same name. It was founded, as we learn from Thucydides, forty-four years after the foundation of Syracuse, or B. C. 690, by a joint colony of Cretans and Rhodians under the guidance of Antiphemus of Rhodes and Entimus of Crete. The Rhodian colonists came, for the most part, from Lindus; hence the spot on which the new city was first built obtained the name of Lindii, by which it continued to be known in the days of Thucydides, though the city itself acquired that of Gela, from the river of that name on the banks of which it was situated. (Thuc. vi. 4; Herod. vii. 153; Schol. *ad Pind. Ol.* ii. 16; Diod.

viii. 25. Exc. Vat. p. 11; Callim. *ap. Schol. Pind. l. c.*; Virg. *Aen.* iii. 702; Sil. Ital. xiv. 218.) Like most of the Greek colonies in Sicily, we have very little information as to its history for nearly two centuries after its foundation. Some obscure notices of its struggles with the barbarians of the interior (Paus. viii. 46. § 2; Schol. Pind. *l. c.*), and of internal dissensions between conflicting factions, in one of which Telines, the ancestor of Gelon, bore a conspicuous part (Herod. vii. 153), are all that we hear of it during this period. But the fact that in B. C. 582 the Geloans were able to found the powerful colony of Agrigentum, may be taken as a proof that they themselves, at that period, were in a flourishing condition. The new colony, indeed, rapidly outstripped its parent city, and rose for a time, under Phalaris, to be the most powerful state in Sicily [AGRIGENTUM]: but Gela subsequently obtained its turn of prosperity, if not of supremacy, under the rule of Hippocrates. The form of government at Gela had at first been oligarchical, as was the case with most of the Greek cities in Sicily (Arist. *Pol.* v. 12); and this constitution continued till it was subverted by Cleander, who raised himself to despotic power. We have scarcely any information concerning the circumstances of his reign; but we know that he ruled seven years (B. C. 505—498), and transmitted the sovereign power, without opposition, to his brother Hippocrates, who, during a reign of about the same duration (B. C. 498—491), raised Gela to a pitch of power and prosperity far surpassing what it had previously attained, and even extended his dominion over a great part of Sicily. He successively reduced Leontini, Callipolis, and Naxos under his yoke, took the city of Zancle, which he made over to the Samians [MESSANA], and waged successful war against the Syracusans themselves, who were compelled to purchase peace by the cession of Camarina. (Herod. vii. 153, 154.) At the death of Hippocrates (B. C. 491) Gelon succeeded to the sovereign power, and rapidly followed in the same career of successful aggrandisement; till, in B. C. 485, he succeeded in making himself master of Syracuse itself. [GELON, *Biogr. Dict.*] But this event, which seemed likely to raise Gela to the position of the first city in Sicily, became, on the contrary, the cause of its decline. Gelon from this time despised his native city, and directed all his efforts to the aggrandisement of his new capital, with which object he even compelled half of the inhabitants of Gela to migrate to Syracuse. (Herod. vii. 156.) His successor Hieron also appears to have driven a large number of the citizens of Gela into exile: but after the expulsion of Thrasybulus (B. C. 466) all these returned to their native city, and Gela not only became itself repeopled, but was able to settle a fresh colony at Camarina, which had been rendered desolate by Gelon. (Diod. xi. 76.) The period which followed, from the restoration of its liberty to the Carthaginian invasion (B. C. 466—406), seems to have been one of great prosperity for Gela, as well as for the rest of Sicily. The Geloans appear to have adhered uniformly to the same line of policy with the other Doric cities in the island: and hence they were among the first to promise their support to the Syracusans on the approach of the Athenian expedition (B. C. 415). Immediately after the arrival of Gylippus, the Geloans sent a small body of troops to his support, and, after the first successes of the Syracusan arms, they furnished a more considerable force of 600 troops, with a squadron of five ships. (Thuc. vii. 33, 58; Diod. xiii. 4, 12.)

A few years later the great Carthaginian invasion brought destruction on Gela, as it had previously done on Himera, Selinus, and Agrigentum. After the capture of the last city (B. C. 406), the Geloans afforded a temporary refuge to its inhabitants, and treated them with the utmost kindness: at the same time they urgently applied to the Syracusans for assistance; but Dionysius, who was at that time just rising to power, though he visited Gela, and brought about a democratic revolution in the city, took no further steps for its protection. (Diod. xiii. 89, 93.) The next spring (B. C. 405) the Carthaginians appeared before Gela, and laid siege to the city, which was a place of no natural strength, and not well fortified; notwithstanding which, the inhabitants made a gallant resistance, and were able to repulse all the attacks of the enemy till the arrival of Dionysius at the head of a large army to their relief. But that general, having been defeated in his first attack on the Carthaginian camp, renounced all further efforts, and compelled the Geloans to follow the example of the Agrigentines, and abandon their city with their wives and families. The unhappy exiles withdrew to Leontini, while Gela itself was plundered and laid waste by the Carthaginians. (Diod. xiii. 108—111, 113.)

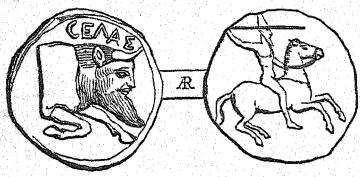
By the peace which Dionysius soon after concluded with Himilco, the Geloans were permitted to return to their own city, on condition of not restoring its fortifications, and of paying tribute to Carthage (Diod. xiii. 114), and there is no doubt that they availed themselves of these terms; but Gela, though repeopled, never rose again to its former prosperity. In B. C. 397 the citizens gladly declared themselves free from the Carthaginian yoke, and joined Dionysius in his expedition against the western cities of Sicily (Id. xiv. 47): and, notwithstanding the various vicissitudes of fortune that marked the wars between the Syracusan despot and the Carthaginians, they succeeded in maintaining their independence of the latter people, which was secured to them by the treaty of B. C. 383 (Id. xv. 17). Of their subsequent fortunes we hear nothing for some time; but they are mentioned as among the first to join the standard of Dion, when he landed in Sicily, B. C. 357 (Plut. *Dion.* 26), and, after the victory of Timoleon (B. C. 338), Gela, which was at that time in a very decayed state, was replenished with a fresh body of colonists, composed in part of her old inhabitants, with the addition of new settlers from the island of Ceos. (Plut. *Timol.* 35.) This colony appears, for a time, to have restored Gela to a tolerable degree of prosperity; and it figures in the wars of Agathocles as an independent city, possessing considerable resources. But a severe blow was again inflicted on it by that tyrant, who, in B. C. 311, being apprehensive of its defection to the Carthaginians, contrived to introduce a body of troops into the city, and massacred above 4000 of the principal citizens. (Diod. xix. 71, 107.) By this means he established his power there for the time, and after his great defeat at Ecnomus he took refuge with the remains of his army at Gela, where he was able to defy the arms of the Carthaginians. (Id. xix. 110.) But in B. C. 309, when the Agrigentines, under Xenodicus, raised the standard of independence, and proclaimed the freedom of the separate cities, the Geloans were the first to join them, and took an active part in their enterprise. (Id. xx. 31.) Gela appears to have, at this time, recovered a considerable degree of power and prosperity, but we hear nothing more of it during

the time of Agathocles, and when its name next occurs we find it subject to the rule of Phintias, the despot of Agrigentum, who, with the view of augmenting the city that he had lately founded near the mouth of the Himera and called after his own name [PHINTIAS], not only removed thither the inhabitants of Gela, but demolished the walls and houses of the older city. (Diod. xxii. 2. Exc. Hoesch. p. 495.)

It is evident that Gela never recovered from this blow: we find, indeed, incidental mention of its being again devastated soon after by the Mamertines (Diod. xxiii. 1. Exc. H. p. 501); but in the First Punic War no notice occurs of the city, though the territory is mentioned on one occasion in connection with Phintias (Diod. xxiv. 1. Exc. H. p. 508). Under the Roman rule, however, the "Gelenses" certainly existed as a separate community (Cic. *Verr.* iii. 43), and the statement of Cicero, that after the capture of Carthage Scipio restored to them the statues that had been carried off from their city (*Verr.* iv. 33), would seem to prove that the latter was then still in existence. Strabo, indeed, tells us that Gela was in his day uninhabited (vi. p. 272), and associates its name with those of Callipolis and Naxos, as cities that had wholly disappeared; but his expressions must not be construed too literally, and the name is still found both in Pliny and Ptolemy. (Plin. iii. 8. s. 14; Ptol. iii. 4. § 15.) But it was probably at this period a poor and decayed place, and no subsequent trace of it is found

The site of Gela has been the subject of much controversy in modern times, many local writers contending for its position at the modern *Alicata*, at the mouth of the river *Salso*, while Cluverius, who has been generally followed by the most recent authorities, places it at *Terranova*, about 18 miles further E., and at the mouth of the river now known as the *Fiume di Terranova*. All arguments derived from the statements of ancient writers are in favour of the latter view, which may, indeed, be considered as clearly established: the only evidence in favour of *Alicata* is the fact (in general, certainly a strong one) that an honorary inscription with the name of the Geloans has been found there. But as the ruins still visible near *Alicata* are in all probability those of Phintias, a city which was peopled with the inhabitants of Gela, it is easy to understand how such an inscription (which is of small dimensions) may have been transported thither. No doubt exists that *Terranova* occupies an ancient site; we learn from a writer of the 13th century, that it was founded by the Emperor Frederic II., "super ruinis deletae atque obrutae urbis" (Guido Columna, cited by Fazello): and the remains of an ancient temple are still visible there, of which the massive basement was preserved in the days of Fazello; and one column remained standing as late as the visit of D'Orville (1727), but is now fallen and half buried in the sand. Numerous coins and painted vases have been brought to light by excavations on the site. (Fazell. *de Reb. Sic.* v. 2. p. 232; Cluver. *Sicil.* pp. 199, 200; D'Orville, *Sicula*, pp. 111—132; Smyth, *Sicily*, p. 196; Biscari, *Viaggio in Sicilia*, p. 111; Siefert, *Akragas u. s. Gebiet.*, pp. 47, 48.)

The situation of *Terranova*, on a slight eminence, a little more than a mile from the sea, precisely corresponds with the account given by Diodorus of the operations of Dionysius when he attacked the Carthaginian camp, from which it is evident that, although situated near the sea-coast, it was sufficiently distant from it to admit of the passage of one division of the army between the walls and the sea. (Diod. xiii. 109, 110.) No importance can be attached to the circumstance that Ptolemy reckons Gela among the *inland* towns of Sicily, as he includes in the same category Phintias and Camarina, both of which were situated almost close to the coast.



The position of the city of Gela being ascertained, that of the river follows it. This can be no other than the one now called *Fiume di Terranova*, from its flowing by the walls of that town, which rises in the neighbourhood of *Piazza*, about 25 miles N. of *Terranova*. It still retains the character of a violent and impetuous torrent, alluded to by Ovid (*Fast.* iv. 470); but has little water in the dry season. Ancient grammarians derive the name of the river (from which that of the city was taken) from a Siculian word, γέλα, signifying cold or frost, evidently connected with the Latin *gelu*. (Steph. B. *s. v.*; Suid. *s. v.*; *Etym. Magn. s. v.*) An absurd story is, however, related by the same authorities, which would derive the name of the city from γελάω. The river-god Gelas is represented on most of the coins of the city, under the usual form of a bull with a human head: on one of them he bears the title of ΣΩΣΙΠΟΛΙΣ, a strong instance of that veneration for rivers which appears to have particularly characterised the Greeks of Sicily.

To the west of Gela extended a broad tract of plain, between the mountains and the sea, but separated from the last by an intervening range of hills. This is the Γελῷον πέδιον of Diodorus and the CAMPI GELOI of Virgil (*Aen.* iii. 701). It is still, as in ancient times, one of the most fertile corn-growing tracts in the whole of Sicily; whence Gela is termed, by the author of an ancient epigram, πυρόφορος, "the wheat-bearing" (*Epigr. ap. Anon. Vit. Aesch.*). According to an earlier writer (Amphis, *ap. Athen.* ii. p. 67), it was renowned for the excellence of its lentils (φακῆ). We learn also from Pliny (xxxi. 7. s. 39, 41), that its territory produced abundance of salt.

Gela was the birth-place of Apollodorus, a comic poet of some note, who is frequently confounded with his more celebrated namesake of Carystus. (Suid. *s. v.* Ἀπολλόδωρος; Athen. iii. p. 125.) It was also the place to which Aeschylus retired when driven from Athens, and where he was soon after killed by a singular accident (B. C. 456). The Geloans paid great respect to his memory, and his tomb was still visible there in after-ages. [AESCHYLUS, *Biogr. Dict.*] We learn from Pausanias that they had a treasury at Olympia, in which they dedicated valuable offerings. (Paus. vi. 19. § 15.) The same author alludes to some statues, the reputed work of Daedalus, which had formerly existed at Gela, but had disappeared in the time of the historian. (Id. ix. 40. § 4.) A colossal statue of Apollo, which stood outside the town, was carried off by the Carthaginians, in B. C. 405, and sent to Tyre, where it still remained when that city was taken by Alexander the Great. (Diod. xiii. 108.)

It is certain that Gela, in the days of its power and prosperity, possessed an extensive territory; though we have no means of fixing its exact limits. It was probably separated from that of Agrigentum on the W. by the river Himera: of its extent towards the interior we have no account; but the name of a station given in the Itineraries as "Gelasium Philosophianis," seems to prove that this point (which apparently coincided with the modern town of *Piazza*,

about 24 miles from *Terranova*) must have been comprised in the territory of Gela. [E. H. B]

COIN OF GELA.

GELAE (Γῆλαι, Strab. xi. pp. 508, 510; Γέλαι, Plut. *Pomp.* c. 35; Γέλοι, Ptol.), a warlike tribe who lived along the shores of the Caspian sea, in the district now called *Gilan*, which not impossibly derives its name from them. They were probably allied to, and an offshoot of, the still greater tribe of Cadusii, who occupied nearly the same localities. [CADUSII.] Strabo divides the territory along the S. shores of the Caspian between the Gelae, Cadusii, Amardi, Witii, and Anariacae (xi. p. 508). If, as is likely, this order from W. to E. is correct, the Gelae would be the tribe next to Armenia, and immediately to the E. of the Araxes or *Kur*. Their land is said to have been poor and unfruitful. Little is known of their history as distinct from that of the Cadusii. Pliny considers the Cadusii to be a Greek, and Gelae an Oriental name (vi. 16. s. 18), which would favour the hypothesis that the modern *Gilan* is connected with the ancient Gelae. [V.]

GELBIS, a branch of the *Mosel*, mentioned by Ausonius in his poem (*Mosella*, v. 359):—

"Te rapidus Gelbis, te marmore clarus Erubrus,—
Nobilibus Gelbis celebratus piscibus."

The Gelb may be the *Kill*, which joins the *Mosel* on the left bank, below Augusta Trevirorum (*Trier, Trèves*). [G. L.]

GE'LDUBA, is described by Pliny (xix. 5) as a "castellum Rheno impositum." It is mentioned by Tacitus several times (*Hist.* iv. 26, 32, 36, &c.), from whom we may collect that it was near Novesium. The Antonine Itin. places it on the left bank of the Rhine, on the road from *Cologne* to *Leiden*, between Novesium (*Neuss*) and Calo [CALO]. The distances and the modern name, *Gellep* or *Gelb*, determine the position of Gelduba. [G. L.]

GELLA. [VACCAEI.]

GELO'NI (Γελωνοί, Herod. iv. 108; Plin. iv. 12; Amm. Marc. xxxi. 2. § 14), a people associated with the Budini [BUDINI] by Herodotus (*l. c.*).

Schafarik (*Slav. Alt.* vol. i. p. 186) remarks that, beyond the mention in Herodotus, nothing is known about the Geloni. The later writers appear to have misunderstood his statement while repeating it. It is possible that the name Geloni might be formed out of that of Hellenes among the Slaves and Fins. Such Μιξέλληνες were common enough in the towns upon the Euxine. Schafarik, who believes the Budini to belong to the Slavic family, asserts that the wooden town GELONUS, described as being in the middle of the Budini, is an exact representation of the primitive Slavic towns down even to the twelfth century. (Comp. Grote, *Hist. of Greece*, vol. iii. p. 327.) [E. B. J.]

GEMELLA. [ACCI, TUCCI.]

GEMINAE. [GALLAECIA.]

GEMINAE, in Gallia Narbonensis, a station in the Table on the road from Lucus (*Luc*) over the Cottian Alps. It is an uncertain position. (Walckenaer, *Géog., &c.* vol. iii. p. 45.) [G. L.]

GEMINIACUM, a place in North Gallia, on a route in the Antonine Itin. from Castellum (*Cassel*) to Colonia (*Cologne*). The Table has a route from Teruanna (*Thérouenne*) also to *Cologne*. The two roads unite at Nemetacum (*Arras*), whence the road ran through Camaracum (*Cambray*) and Bagacum (*Bavay*) to Vodgoriacum (Voroborgiacum in the Table), and thence to Geminiacum. The distances in the Itin. and the Table do not agree, though they seem to differ less than D'Anville makes them differ. The next station after Geminiacum is Perniciacum, and the next is Aduatuca Tungrorum (*Tongern*), a certain position. The road from *Bavay* to *Tongern* is straight. D'Anville identifies the Geminiacum with *Gemblou*, and he adds that in later times Geminiacum was written Gemmelacum and Gembla-cum. Walckenaer makes the place *Vieuville*. It was probably within the limits of Caesar's Nervii. A great number of places in this part of Gallia have the termination *acum*. De Valois (quoted by D'Anville) supposes that the Roman troops mentioned in the Notitia under the name Geminiasences, and placed "intra Gallias," derived the name from the place. [G. L.]

GENABUM (Κήναβον: *Orléans*), a city of the Carnutes, a Celtic people. Ptolemy (ii. 8. § 13) places the Carnutae along the *Seine;* and he names two cities in their country, Autricum and Cenabum. The latitude in which he places Cenabum is pretty near the truth: and he places Autricum (*Chartres*) correctly, both north and west of *Orléans*. Strabo (p. 191) states, that Genabum (Γήναβον) is on the Liger (*Loire*), about half way between the source and the outlet, or, perhaps, about the middle of the navigable part; a description which agrees very well with the position of *Orléans*. He calls it the emporium of the Carnutes. The Roman Itineraries fix the position of Genabum at *Orléans*. One road runs from Nevirnum (*Nevers*), on the east side of the *Loire*, to Genabum, and thence direct to Lutetia. The distance from Genabum to Lutetia does not quite agree in the Table and in the Antonine Itin.; but both are near enough to show that, if we assume Lutetia to be *Paris*, Genabum must be *Orléans*.

Caesar (*B. G.* vii. 3) mentions Genabum as a town of the Carnutes, in which the great insurrection began in B. C. 52. He describes it (*B. G.* vii. 11) as situated on the *Loire*. The true reading in the passage is— "oppidum Genabum pons fluminis Ligeris contingebat" (not "continebat.") The narrative of Caesar shows that the town was on the north side of the *Loire*, as *Orléans* is; and there was a bridge from it to the south side. Caesar broke into Genabum (B. C. 52) after the insurrection there, set it on fire, and crossed the *Loire* to besiege Avaricum. [AVARICUM.] In his winter campaign against the Carnutes in the next year, he quartered his men amidst the ruins of the town and in the huts.

Under the later empire this town had the name of Aureliani, of which word the name *Orléans* is a corruption. The name "Civitas Aurelianorum" occurs in the Notitia Imp., and *Orléans* was then the chief town of a diocese, distinct from that of the Carnutes. Aimoin, a writer of the sixth century, (quoted by Walckenaer), distinctly states that "Genabus," as he calls it, is Aureliani. Walckenaer also says that a faubourg of *Orléans* "has long had the name of *Génabie*." There are some traces of the Roman walls of *Orléans*, which may have been built as late as the time of the emperor Aurelian,

from whom it is conjectured that the place took its new name. [G. L.]

GENAUNI (Hor.; Γεναῦνοι, Strab.) or GENAUNES (Plin.), a fierce and warlike tribe (implacidum genus) of Rhaetia, subdued by Tiberius and Drusus in the reign of Augustus. They lay between the lakes *Maggiore* and *Como* in the modern *Valle di Non*. (Hor. iv. 14. 10; Strab. iv. p. 206; Plin. iii. 20. s. 24.) It has been conjectured that, instead of Βενλαῦνοι in Ptolemy (ii. 13. § 1), we ought to read Γεναῦνοι; and in Florus (iv. 12), instead of "Breunos, Senones," we ought to read "Breunos, Genaunos." (Forbiger, *Geographie*, vol. iii. p. 444.)

GENE'SIUM (Γενέσιον), a place in the Argeia upon the Argolic gulf, S. of Lerna, and N. of the mountain pass, called Anigraea, leading into the Thyreatis. (Paus. ii. 38. § 4.) Pausanias, in another passage (viii. 7. § 2), calls the place Genethlium (Γενέθλιον), and says less correctly that near it was the spring of fresh water rising in the sea, called Dine; whereas this spring of fresh water is to the S. of the Anigraea. [ARGOS, p. 202, b.] Near this place Danaus is said to have landed. [APOBATHMI.] No remains of Genesium have been found, but it must have stood near the village of *Kyvéri*. (Leake, *Morea*, vol. ii. pp. 477, 480; Boblaye, *Recherches*, &c. p. 48; Ross, *Reisen im Peloponnes*, p. 152; Curtius, *Peloponnesos*, vol. ii p. 371.)

GENE'TES (Γενήτης), the name of a small river and harbour on the coast of Pontus, near Cotyora. (Strab. xii. p. 548; Steph. B. *s. v.*; Scylax, who calls it Γενέσιντις.) Some authors also mention a promontory (ἄκρα Γενηταία) in that neighbourhood (Steph. B. *l. c.*; Apollon. Rhod. ii. 1009; Val. Flacc. v. 148); and Pliny (vi. 4) speaks of a people *Genetae* in the same district. [L. S.]

GENE'THLIUM (Γενέθλιον). 1. A place near Troezen, where Theseus is said to have been born. (Paus. ii. 32. § 9.)

2. In the Argeia, also written Genesium. [GENESIUM.]

GENEVA. Caesar (*B. G.* i. 6) describes Geneva as the furthest town of the Allobroges, and nearest to the borders of the Helvetii. The Rhodanus was the boundary between the Allobroges and the Helvetii; and a bridge over the Rhone at Geneva connected the two territories.

Since the time of Aldus the editors have kept the reading "Geneva" in Caesar's text; but there is hardly any good MSS. authority for it. The best MSS. have "Genua," which reading Schneider has in his edition of the Gallic War. The authority for Geneva is an inscription of doubtful age, which has GENEVENS. PROVINCIA: but two other inscriptions have GENAVENSIBVS. The Greek version of Caesar has Γενοῦα and Γενουΐα. (Schneid. ed. Caesar.) In the Antonine Itin. the form Cenava occurs. and Cennava or Gennava in the Table. Neither Strabo nor Ptolemy mentions Geneva. The French form of the name is *Genève*, and the German is *Genf*. After Caesar's time we hear no more of Geneva for about 400 years. There is no authority for naming it Colonia Allobrogum.

The operations of Caesar in the neighbourhood of Geneva are described under the article HELVETII. [G. L.]

GENNESARET. [PALAESTINA; TIBERIAS MARE.]

GE'NUA (Γένουα, Strab., Ptol.: *Eth.* Genuensis: *Genoa*), the chief maritime city of Liguria, situated on the coast of the Mediterranean Sea, at the bight of the extensive bay now known as the *Gulf of Genoa*, but in ancient times called the Sinus Ligusticus. It appears to have been from a very early period the chief city on the coast of Liguria, and the principal emporium of trade in this part of the Mediterranean; an advantage which it naturally owed to the excellence of its port, combined with the facility of communication with the inferior by the valley of the Porcifera. Its name, indeed, is not mentioned in history until the Second Punic War; but it then appears at once as a place of considerable importance. Hence, when the consul P. Scipio abandoned the intention of pursuing Hannibal up the valley of the Rhone, he at once returned with his fleet to Genua, with the view of proceeding from thence to oppose the Carthaginian general in the valley of the Padus. (Liv. xxi. 32.) And at a later period of the war (B. C. 205), when Mago sought to renew the contest in Liguria and Cisalpine Gaul, it was at Genua that he landed, and made himself master of that city in the first instance; though he subsequently transferred his head-quarters to Savo, for the purpose of carrying on operations against the Ingauni. (Liv. xxviii. 46, xxix. 5.) He appears to have destroyed the town before he quitted the country; on which account we find (in B. C. 203) the Roman praetor Sp. Lucretius charged with the duty of rebuilding it. (Id. xxx. 1.) From this time Genua is rarely mentioned in history, and its name only occurs incidentally during the wars of the Romans with the Ligurians and Spaniards. (Liv. xxxii. 29; Val. Max. i. 6. § 7.) It afterwards became a Roman municipium, and Strabo speaks of it as a flourishing town and the chief emporium of the commerce of the Ligurians; but it is evident that it never attained in ancient times anything like the same importance to which it rose in the middle ages, and retains at the present day. (Strab. iv. p. 202, v. p. 211; Plin. iii. 5. s. 7; Ptol. iii. 1. § 3; Mel. ii. 4. § 9.) It was from thence, however, that a road was carried inland across the Apennines, proceeding by Libarna to Dertona; and thus opening out a direct communication between the Mediterranean and the plains of the *Po* (Strab. v. p. 217; *Itin. Ant.* p. 294; *Tab. Peut.*), a circumstance that must have tended to increase its commercial prosperity. The period of the construction of this road is uncertain. Strabo ascribes it to Aemilius Scaurus; but from an inscription we learn that it was called the Via Postumia.

A curious monument, illustrative of the municipal relations of Genua under the Roman government, is preserved in an inscription on a bronze tablet, discovered in the year 1506, and still preserved in the *Palazzo del Comune* at *Genoa*. It records that, a dispute having arisen between the Genuates and a neighbouring people called the Veiturii, concerning the limits of their respective territories, the question was referred to the senate of Rome, who appointed two brothers of the family of Minucius Rufus to decide it; and their award is given in detail in the inscription in question. This record, which dates from the year of Rome 637 (B. C. 117), is of much interest as a specimen of early Latin; and would also be an important contribution to our topographical knowledge, but that the local names of the rivers (or rather streamlets) and mountains therein mentioned are almost without exception wholly unknown. Even the position of the two tribes, or "populi," most frequently mentioned in it, the Veturii, and Langenses or Langates, cannot be determined with any certainty;

but the name of the latter is thought to be preserved in that of *Langareo*, a castle in the valley of the *Polcevera*; and it is evident that both tribes must have bordered on that valley, the most considerable in the neighbourhood of *Genoa*, and opening out to the sea immediately to the W. of that city. The name of this river, which is called Porcifera by Pliny (iii. 5. s. 7), is variously written PORCOBERA and PROCOBERA in the inscription, which was itself found in the valley of the *Polcevera*, about 10 miles from *Genoa*. The orthography of that document is throughout very irregular; and the ethnic forms Genuates and Genuenses, as well as Langates and Langenses, are used without any distinction. (The inscription itself is published by Gruter, vol. i. p. 204, and Orelli, *Inscr.*, 3121; and from a more accurate copy by Rudorff, 4to., Berlin, 1842; and Egger, *Reliq. Latini Sermonis*, p. 185.)

On the E. of Genua flows the river now called the *Bisagno*, which must be the same with the FERITOR of Pliny (*l. c.*); it is a less considerable stream than the *Polcevera*, and is always dry in summer.

No ancient authority affords any countenance to the orthography of Janua for Genua, which appears to have come into fashion in the middle ages, for the purpose of supporting the fabulous tradition that ascribed the foundation of the city to Janus. This form of the name is first found in Liutprand, a Lombard writer of the tenth century. (Cluver. *Ital.* p. 70). [E. H. B.]

GENU'NII (Γενουνία μοῖρα), in Britain, mentioned only by Pausanias, who states that Antoninus "deprived the Brigantes in Britain of a great portion of their land, because with arms they had overrun the territory of the Genunii, who were tributary to the Romans" (viii. 43. § 4.) [R. G. L.]

GENU'SIUM (*Eth.* Genusinus: *Ginosa*), a town of Apulia, not far from the frontiers of Lucania. It is mentioned by Pliny (iii. 11. s. 16), and by the author of the Liber de Coloniis (p. 262), of whom the latter reckons it among the towns of Calabria; but Pliny is correct in assigning it to Apulia. The site is marked by the modern town of *Ginosa*, which retains the name. It is about 15 miles from the gulf of Tarentum, and 10 from *Matera*. [E. H. B.]

GE'NUSUS (Vib. Seq. p. 10; *Peut. Tab.*: GENESIS, Geog. Rav.), a river of Illyricum, upon the lines of which Appius Claudius had his camp when he was employed against Gentius, at the same time that the consul Aemilius was carrying on the war against Perseus in Macedonia, B. C. 168. (Liv xliv. 30.) Caesar (*B. C.* 75, 76; Lucan, v. 462), while attempting to effect a junction with the division of Calvinus, on the frontiers of Epirus and Thessaly, crossed this river.

It is the river now called *Tjerma*, or *Skumbi*. The latter is obviously a corruption of Scampis, at or near *Elbasán*. The branch of the Genusus, upon which that town is situated, may have been named Scampis as well as the town, and by a common kind of change may have superseded the name of Genusus as that of the entire course of the stream below the junction. (Leake, *Trav. in North. Greece*, vol. iii. p. 280.) [E. B. J.]

GEPHY'RA (Γέφυρα, Γεφυρεῖς), a place in Attica at the bridge over the Cephissus, on the sacred road from Athens to Eleusis, where the initiated assailed passengers with vulgar abuse and raillery, hence called γεφυρισμοί. (Strab. ix. p. 404; Suid. *s. v.* Γεφυρίζων; Hesych. *s. v.* Γεφυρισταί.)

GE'PIDAE, GEPIDI (Γήπαιδες), one of the principal tribes of the Goths. They are first mentioned by Vopiscus (*Prob.* 18). After their first migration, they are said to have settled in the country between the Oder and the Vistula, from which they expelled the Burgundiones. In the fifth century we find them, under their king Ardaric, joining the hosts of Attila, with whom they traversed Gaul, and afterwards settled in Dacia, on the banks of the Danube. As they were regarded as dangerous neighbours to the Eastern Empire, Justinian invoked the aid of the Langobardi against them. The consequence of this was that the Gepidae and their kingdom were destroyed. (Paul. Diac. i. 27; *Excerpt. e Menand. Historia*, pp. 303, 310, 340, 387, ed. Bekker and Niebuhr; Procop. *B. G.* iv. 5; comp. Latham, *Epileg. to Tac. Germ.* p. lxxxvi.) [L. S.]

GERAE. [ERAE.]

GERAEA. [LUSITANIA.]

GERAESTICUS. [ERAE.]

GERAESTUS (Γεραιστός: *Eth.* Γεραίστιος), a promontory of Euboea, forming the south-west extremity of the island, now called Cape *Mandili*. There was a town on this cape, with a celebrated temple of Poseidon, and at its foot there was a well-frequented port, which seems to have been small, though Livy, as Leake observes, calls it "nobilis Euboeae portus." (Hom. *Od.* iii. 177; Herod. viii. 7, ix. 105; Thuc. v. 3; Xen. *Hell.* iii. 4. § 4, v. 4. § 61; Strab. x. p. 446; Steph. B. *s. v.*; Liv. xxxi. 45; Plin. iv. 12. s. 21; Mela, ii. 7; Leake, *Northern Greece*, vol. ii. p. 423.)

GERANDRUS (Γέρανδρος), a town of Cyprus near Soli, where a peculiar kind of marble was found. (Apoll. Dysc. *Hist. Mirab.* xxxvi.; Engel, *Kypros*, vol. i. p. 157.) [E. B. J.]

GERANEIA. [MEGARIS.]

GERANTHRAE. [GERONTHRAE.]

GERAR (Γέραρα), a town and country of the Philistines, situated between Cadesh and Shur, where Abraham and Isaac sojourned for many years. (*Gen.* xx. 1, &c., xxvi. 1, &c.) According to S. Jerome it was situated 25 miles south of Eleutheropolis (Betogabra). (*Onomast. s. v.*; Reland, *Palaest.* p. 804.) Its site was recovered by Mr. Rowlands in 1843, and is thus described: "From Gaza our course was to *Khalasa*; on our way we discovered ancient Gerar. We had heard of it at Gaza under the name of *Joorf-el-Gerâr* (the 'Rush' or 'Rapid of Gerâr'), which we found to lie three hours SSE. of Gaza, within *Wady-Gaza*, a deep and broad channel, coming down from the SE., and receiving, a little higher up than this spot, *Wady-es-Sheriah*, from the ENE. Near *Joorf-el-Gerâr* are traces of an ancient city, called *Khirbet-el-Gerâr* ('The ruins of Gerar'). Our road beyond to *Khalasa* lay along a plain slightly undulated. This plain must be the land of Gerar." (Williams, *Holy City*, vol. i. appendix, p. 464.) [G. W.]

GERASA (Γέρασα: *Eth.* Γερασηνός), a city of Coelesyria, according to Ptolemy (v. 15); reckoned to the Decapolis by Pliny, for it is clear that Gerasa must be substituted for Galasa, as by Harduin. (Plin. v. 18.) It is associated with Philadelphia, as the eastern boundary of Peraea, by Josephus (*B. J.* iii. 3. § 3), and mentioned in conjunction with Pella and Scythopolis (i. 4, ii. 19). But, according to Ptolemy, it was 35 miles from Pella. Its site is marked by the very extensive ruins of *Gerash*, about 35 miles east of the Jordan, at the eastern extremity of the land of Bashan, and on the borders of the great desert of the *Hauran*. It is remarkable, con-

sidering the importance of the ruins, that the historical notices are so scanty; but it appears to have attained its celebrity posterior to the classical geographers, as all the fragments of the inscriptions to be found among the ruins bear the name of the emperor Antoninus. It is much to be regretted that the results of the careful survey of this interesting city by Captains Irby and Mangles, in company with Mr. Bankes, have never yet been given to the world. It was first discovered by Seetzen, in 1805—1806, and afterwards described by the enterprising Burckhardt; since which time it has been frequently visited and described by European travellers. The summary description of those most accurate observers Captains Irby and Mangles must suffice in this place; but for fuller particulars the reader may consult Burckhardt (*Syria*, pp. 252—264) and Buckingham (*Travels in Palestine*, caps. xx. xxi.), the former of whom has furnished a general plan of the city, and the latter a more accurate plan, with details of the principal buildings. But the best idea of the extent and grandeur of the ruins may be obtained from its wonderfully accurate reproduction in three engravings from Daguerreotype drawings by Dr. Keith, published in illustration of the 36th edition of his father's work on "The Evidence of Prophecy," in which the principal streets and buildings are clearly to be distinguished. The summary description above alluded to is as follows:—

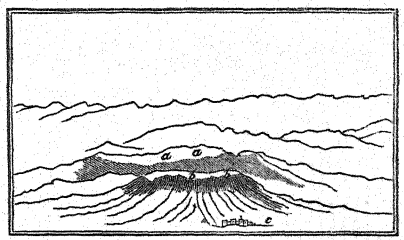
"It has been a splendid city, built on two sides of a valley, with a fine stream running through it; the situation is beautiful. The town has been principally composed of two main streets, crossing each other in the centre at right angles, like Antinoe. The streets have been lined with a double row of columns, some of which are Ionic and some Corinthian; the pavement is exceedingly good, and there is an elevated space on each side for foot passengers; the marks of the chariot wheels are visible in many parts of the streets. *Djerash*, supposed to be either Pella or Gerasa, but in some respects answering to neither, can boast of more public edifices than any city we have seen. There are two theatres, two grand temples, one, as appears by a Greek inscription, dedicated to the sun, like that at Palmyra, and not unlike that edifice, being constructed in the centre of an immense double peristyle court. The diameter of the columns of the temple is five feet, and the height of just proportions; the capitals are Corinthian and well executed. One singularity in this edifice is a chamber under ground, below the principal hall of the temple, with a bath in the centre. Five or six inferior temples are scattered about the town, and a magnificent Ionic oval space, of 309 feet long, adds greatly to the beauty of the ruins. The scene of the larger theatre is nearly perfect, presenting a singularity very rarely to be met with. There are two grand baths, and also two bridges crossing the valley and river. The temples, and both theatres, are built of marble, but not of a very fine sort. Three hundred yards from SW. gate is the Circus or Stadium, and near it is the triumphal arch. The cemetery surrounds the city, but the sarcophagi are not very highly finished; upwards of 230 columns are now standing in the city. There is to the NE., about 200' yards distance, a very large reservoir for water, and a picturesque tomb fronted by 4 Corinthian columns; near it also is an aqueduct. These ruins, being overgrown with wood, are objects of considerable interest. There are numerous inscriptions in all directions, chiefly of the time of Antoninus Pius; most of them are much mutilated; but the one I allude to about the Temple of the Sun, was on the propyleum of that edifice, which has been a grand piece of architecture. On the whole, we hold Djerash to be a much finer mass of ruins than Palmyra; the city has three entrances of richly ornamented gateways, and the remains of the wall, with its occasional towers, are in wonderful preservation." (Irby and Mangles, pp. 317, 318.) [G. W.]

GERASUS, a river of Dacia (Amm. Marc. xxxi. 3. § 7), which Jornandes (*de Get.* 22) calls GRISSIA, and the Geographer of Ravenna GRESIA. Schafarik (*Slav. Alt.* vol. i. p. 507), who makes it out to be the same as the CUSUS of Tacitus (*Ann.* ii. 63), identifies it with the *Körös*, an affluent of the *Theiss*. [E. B. J.]

GERE'NIA (Γερηνία, Paus., Steph. B. *s. v.*; τὰ Γέρηνα, Strab.; Γέρηνος, Hes. *Fragm.* 22: *Eth.* Γερήνιος), a town of Messenia, where Nestor was said to have been brought up after the destruction of Pylos, and whence he derived the surname Gerenian, which occurs so frequently in Homer. There is, however, no town of this name in Homer, and many of the ancient critics identified the later Gerenia with the Homeric Enope. (*Il.* i. 150; Paus. iii. 26. § 9; Strab. viii. p. 360.) Under the Roman empire Gerenia was the most northerly of the Eleuthero-Laconian towns, and was situated on the eastern side of the Messenian gulf, upon the mountainous promontory now called Cape *Kephâli*. It possessed a celebrated sanctuary of Machaon, which bore the name of Rhodon. Pausanias says that in the district of Gerenia there was a mountain called Calathium, upon which there was a sanctuary of Claea, and close to the latter a cavern, of which the entrance was narrow, though within there were many things worthy to be seen. (Paus. iii. 26. § 11.) This cavern is undoubtedly the one noticed by Leake, which is situated at the head of a little valley behind the beach of *Kitriés*, and immediately under a rocky gorge in the mountains: at present the entrance is not narrow, but it appears to have been widened to make it more convenient for a sheep-fold, for which purpose it is at present used. Leake observed two or three sepulchral niches in the side of the cliffs about the valley. Two very ancient inscriptions discovered at Gerenia are published by Böckh. (*Corp. Inscr.* no. 13, 42.)

Gerenia is placed by the French Commission at *Zarnáta*, about three miles from the coast, where a castle built by the Franks rests upon very ancient foundations. But Leake observes that the words of Pausanias (iii. 26. § 11)—Γερηνίας δὲ ὡς ἐς μεσόγαιαν ἄνω τριάκοντα ἀπέχει σταδίους Ἀλαγονία—leave little or no doubt that Gerenia was a maritime town, and that it is now represented by *Kitriés* on the coast. He further supposes that *Zarnáta* is the site of Alagonia. But since the most ancient towns in Greece were almost universally built at some distance from the coast, it is not improbable that the acropolis and the original town of Gerenia stood at *Zarnáta*, but that the town itself was afterwards removed to the coast. (Leake, *Morea*, vol. i. p. 323, *Peloponnesiaca*, p. 180; Boblaye, *Recherches, &c.* p. 93; Curtius, *Peloponnesos*, vol. ii. p. 286.)

GERGIS, GERGI'THUS, GERGI'THES (Γέργις, Γέργιθος, Γέργιθες: *Eth.* Γεργίθιος), a town in Troas, on the north of the river Scamander, was inhabited, according to Herodotus (v. 122, vii. 43), by descendants of the ancient Teucrians. In the



time of Xenophon (*Hell.* iii. 1. § 15) Gergis is called a strong place; it had an acropolis and strong walls, and was one of the chief towns of the Dardanian princess Mania. (Comp. Plut. *Phoc.* 18; Liv. xxxviii. 39; Strab. xiii. p. 589; Plin. v. 32; Steph. B. *s. v.*; Athen. vi. p. 256, xii. p. 524.) King Attalus of Pergamus transplanted the inhabitants of Gergis to a place near the sources of the Caicus, whence we afterwards find a place called *Gergetha* or *Gergithion*, near Larissa, in the territory of Cyme. (Strab. *l. c.* 616.) The old town of Gergis was believed by some to have been the birthplace of the Sibyl, whence coins found there have the image of the prophetess impressed upon them. [L. S.]

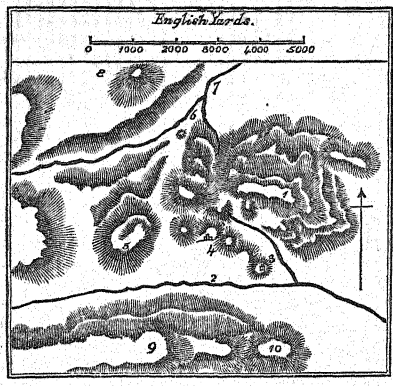
GERGO'VIA. In most texts of Caesar's Gallic War (*B. G.* vii. 9) there is mention made of "Gergovia, a town of the Boii, whom Caesar planted there after their defeat in the Helvetic War, and made dependent on the Aedui." But the name of the town in this passage of Caesar is uncertain, though it may be something like Gergovia. And if Gergovia is the right name, we do not know where the place was.

The Gergovia which Caesar tried to take was a city of the Arverni (*B. G.* vii. 34), the position of which may be determined with tolerable accuracy from Caesar's narrative. After the capture of Avaricum, Caesar went to Decetia (*Décise*) on the *Loire* to settle the differences of the Aedui, after which, taking six legions and some of his cavalry, he set out for the country of the Arverni, and of course he must march southward. His course was along the river Elaver (*Allier*). But before he could reach Gergovia he had to cross the *Allier*. Gergovia, therefore, is south of Decetia, and west of the *Allier*. Vercingetorix, who was on the west side of the *Allier*, broke down all the bridges on the river; and, while Caesar was marching along the east bank, he marched along the left, and kept him in sight. Caesar could not make a bridge over the river in face of his enemy; and the *Allier*, he observes (*B. G.* vii. 35), is generally not fordable before the autumn. Caesar got out of the difficulty in this way. He encamped in a wooded place opposite to one of the bridges which Vercingetorix had broken down, and on the following day he remained there with two legions. He sent forward the other four legions with all his heavy material, distributing these troops in such a way as to present to Vercingetorix the appearance of six complete legions. The four legions had orders to make a long march; and when Caesar judged from the time of the day that they were at their camping ground, he began to repair the broken bridge, of which the lower part of the piles remained entire. This was soon done; the two legions were taken over, and orders sent to the four legions to return. Vercingetorix, discovering what had happened, and not choosing to risk fighting a battle against his will, marched ahead of Caesar as hard as he could, and reached Gergovia (*B. G.* vii. 35). From the place where he crossed the *Allier* Caesar reached Gergovia in five days' march. We neither know where he crossed the river, nor the length of his marches, nor the precise direction; but it was south.

He describes Gergovia as situated on a very high mountain, difficult of access on all sides. (*B. G.* vii. 36.) The camp of Vercingetorix was near the town on the mountain, and around him were encamped, at moderate distances and separately, the forces of the several states under his command.

The Gallic troops occupied all the heights which commanded a view into the plain below, and presented a terrible appearance. Opposite to the town and close to the foot of the mountain was a hill, excellent for defence, and with a steep face all round. This hill was held by the Galli, but Caesar saw that if he could take it, his men would be able to cut off the enemy from a large part of their water and prevent them from foraging so freely. The force that the Galli had on this hill was not very great; and Caesar, attacking it in the dead of the night, before any aid could come from the town, got the place and put two legions in it. He also cut two ditches, twelve feet wide, from this hill to his principal encampment, which was in the plain. The road between the two ditches was the communication between the two camps. The mountain of Gergovia is marked *a, a* in the view; the hill in front of it, marked *b, b*, is the small hill which Caesar took, now called *Puy de Jussat*. This view is from Scrope's *Central France*.

PANORAMIC VIEW OF THE GERGOVIAN HILLS.



From this hill that he had occupied, the *Puy de Jussat*, Caesar attempted to surprise Gergovia. He moved his men, a few at a time, from the large camp to the *Puy de Jussat*, while he diverted the attention of the enemy by a feint of attacking the mountain of Gergovia on the north-west side. When all was ready, he ordered his allies, the Aedui, to get up the mountain of Gergovia on the south-east side, while he with his men climbed up the steep side of the mountain which is opposite to the *Puy de Jussat*. The movement was successful, and he got on the plateau of Gergovia and took three of the Gallic camps. But the impetuosity of the Roman soldiers marred all.

They pursued the enemy up to the town wall and the gates, in full confidence that they should take the place at once. One of the centurions with the help of three of his men climbed up the wall, and helped them up after him. The noise brought up the rest of the Galli, who were busy in fortifying that part of the approaches to the city on which they supposed that Caesar had a design, and a fierce fight took place under the walls, to the great disadvantage of the Romans, who were not a match for the enemy in numbers, were on unfavourable ground, and were also exhausted by running and fighting. Caesar sent to T. Sextius, whom he had left on the *Puy de Jussat*, to bring up some cohorts and place them at the foot of the hill on the enemy's right, that, if the Romans were driven down the mountain, he might check the pursuit. While the fight was going on the Aedui made their appearance, whom Caesar had ordered to climb the mountain on the right, that is, on Caesar's right, or the south-east side of the mountain. The resemblance of their armour to that of the enemy made the Romans take them for the troops of Vercingetorix, though the Aedui gave

the usual signal of being friends. The Romans being now hard pressed, and, having lost forty-six centurions, were driven down the mountain. The tenth, Caesar's favourite legion, checked the hot pursuit of the enemy, and the cohorts of T. Sextius also came to the relief. When the Romans got down to the plain they faced about, and stood ready to renew the fight; but Vercingetorix led his men back to their entrenchments. Caesar lost near 700 men in this affair. Shortly after he left the place for the country of the Aedui, and again crossed the *Allier*, which confirms the fact, if it needs confirmation, that Gergovia was in the hill country on the west side of the *Allier*. (*B. G.* vii. 53.)

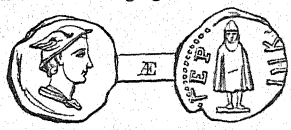
There is nothing to be got from the other ancient writers who mention Gergovia. (Strab. p. 191; Dion Cass. xl. 35.) D'Anville (*Notice, &c.*) gave some good reasons for fixing on this part as the site of Gergovia. The place still keeps its name *Gergoie*. It is about 4 miles south of *Clermont*, in the *Auvergne*. The summit of the mountain is a flat, somewhat more than an English mile in length from east to west, and about one-third of a mile in width. Excavations have laid open the foundations of walls strongly built, wells lined with cement, and pavements. Broken utensils, medals, and red pottery have also been found. Gallic medals, some gold and silver, but most of bronze, are picked up there, when the earth is stirred for cultivation. Undoubtedly there was once a town here, and it was probably inhabited after the Roman conquest; though Augustonemetum, or *Clermont*, was the capital of the Arverni in the Roman period. [AUGUSTONEMETUM.]

The plan of Gergovia is from Caylus (*Recueil d'Antiquités*, tom. v. pl. 101). There is also a plan of the place in Pasumot (*Mémoires Géog. sur quelques Antiquités de la Gaule*, i. p. 216). Walckenaer (*Géog., &c.* vol. i. p. 341, note) says that the plan of Pasumot is copied from that of Caylus, but with the addition of two or three names. He adds

PLAN OF THE MOUNTAIN OF GERGOVIA AND ITS ENVIRONS.

1. Plateau of Gergovia.
2. Roman Camp.
3. *La Roche.*
4. *Jussat.*
5. *Puy de Jussat.*
6. *Romagnat.*
7. A stream north of Gergovia.
8. *Mont Rognon.*
9. *Montagne de la Serre.*
10. *Puy de Monton.*

that the commentary of Caylus and that of Pasumot on the plan of Gergovia are both very good; but the researches, and probably the opinions contained in them, are the property of Masson, prior of St. André, who read a *Mémoire* on this subject to the literary society of *Clermont*. The plan shows the *Puy de Jussat*, separated from the hill of Gergovia by a depression. The hill to the west of the *Puy de Jussat* is that from which Scrope's view is taken. On the south is a stream which flows into the *Allier*, and Caesar's camp must have been near it. Another stream flows on the north side of the *Puy de Jussat* and of the mountain of Gergovia; which will explain Caesar's remark about the chance of cutting off part of the enemy's water. The plan shows a descent from the mountain of Gergovia on the NW., near *Romagnat*, and another on the SE., near *Merdogne*. The high ground above *Romagnat* seems to be the point of Caesar's feigned attack. D'Anville says that the mountain of Gergovia is called Podium Mardoniae in a document of the fourteenth century, and there is now a place called *Merdogne* or *Mardogne*, at the foot of the mountain of Gergovia, between it and *La Roche*. He takes the *Puy de Monton*, due south of Gergovia, to be the hill which Caesar got possession of before he attempted to surprise Gergovia.



Ukert (*Gallien*, p. 399) concluded that Gergovia was SW. of the *Allier;* but that is all that he has done. It would hardly be worth while noticing Reichard's absurd attempt to fix the position of Gergovia, if it had not been accepted by one editor of Caesar (Herzog), who, knowing nothing of geography, has added to his edition of Caesar's Gallic War a map by Reichard, in which Gergovia is placed on the *Loire*, east of *Orléans*. [G. L.]

GERIZIM or GARIZIM (Γαριζίν, Γαριζείν). The general situation and appearance of Mount Gerizim are described, and its position identified, in the article EBAL. Josephus calls it the highest of all the mountains of Samaria (*Ant.* xi. 8. § 2), and uniformly places it in the immediate vicinity of Shechem, in agreement with holy Scripture (e. g. *Ant.* v. 1. § 19, xi. 8. § 6, xiii. 9. § 1), so that the observation of St. Jerome, "Samaritani arbitrantur hos duo montes juxta Neapolim esse, sed vehementer errant," —as though only the Samaritans assigned them that position, — is inexplicable. That Gerizim was regarded with special veneration by the Samaritans prior to the erection of the temple, by which the schism was perpetuated, cannot be doubted. The circumstances which led to the erection of the temple are mentioned by Josephus (*Ant.* xi. 8. § 2). Manasseh, the brother of Jaddua the high priest, having married Nicaso, the daughter of Sanballat, was required by the Jews either to divorce his wife, or to withdraw from the priestly office. His father-in-law persuaded him to retain his wife, on the promise that he would procure permission to erect on Mount Gerizim a temple similar to that at Jerusalem. This permission he obtained from Alexander the Great, while engaged in the siege of Tyre, and its erection could scarcely have been completed when Sanballat died (§ 4). From this time forward sacrifices were offered at this temple to the Most High God, until the Samaritans, in order to escape a participation in the persecutions of the Jews under Antiochus Epiphanes, requested of him that their temple might be dedicated to Jupiter Hellenius, according to Josephus (*Ant.* xii. 5. § 5), but, according to the author of the second book of *Maccabees* (vi. 2), followed by

Eusebius (*Chron.*), to Jupiter Xenius. Shortly after, in the debate before Ptolemy Philometor (*Ant.* xiii. 3. § 4), the Samaritan advocates ignore its Pagan dedication, and claim Mosaic authority for its erection; failing to establish which, they were put to death. The temple of Sanballat was destroyed by Hyrcanus, the Jewish high priest, after it had stood 200 years (*Ant.* xiii. 9. § 1); and we have no notice of its restoration. Indeed, the allusion of the Samaritan woman (*John*, iv. 20) would seem to intimate that "this mountain" was no longer the seat of their worship; but a temple was afterwards erected, probably over the ruins of the former, — whether for the Samaritans or the Pagans is not clear, as Διὸς ὑψίστου ἀγιώτατον ἱερὸν, in a heathen author, may mean either. (Damasc. *ap.* Phot. *Bibl.* cod. 242. p. 1055.) But there can be no doubt that this is the temple represented on the reverse of the coins of Flavia Neapolis from the time of Titus to Volusianus. The temple is situated on the summit of a mountain, with numerous steps leading to it. (Eckhel, vol. iii. pp. 433, 434; Williams, *Holy City*, vol. i. p. 241, n. 4.) It was in the possession of the Samaritans in the fifth century, when, in A. D. 474, it was transferred to the Christians by the emperor Zeno, in reprisals for the ruin and desecration of five churches, by the Samaritans, in the city of Neapolis. The church dedicated to the Virgin was slightly fortified, and guarded by a small detachment of the large garrison of the city. In the reign of Anastasius it was recovered for a short time by the Samaritans, who were finally ejected by the emperor Justinian, when the mountain was more strongly fortified. (Procop. *de Aedif.* v. 7; Robinson, *Bib. Res.* vol iii. pp. 123—125.) From that time to the present the Samaritans have had no edifice on the site, but for a very long period have been in the habit of sacrificing on the mountain at their three great festivals; a practice which is continued to the present day. "The spot where they sacrifice the passover, seven lambs among them all, is pointed out just below the highest point, and before coming to the last slight acclivity. It is marked by two parallel rows of rough stone laid upon the ground; and a small round pit, roughly stoned up, in which the flesh is roasted." A little beyond this, and higher up the mountain, "are the ruins of an immense structure, bearing every appearance of having once been a large and strong fortress." They are called *El-Kŭl'ah* (the castle) by the Samaritans, and are probably the remains of the fortress erected by Justinian. (Robinson, *Bib. Res.* vol. iii. p. 99.) Round a large naked rock, a little to the south of the castle, which is reputed the most sacred place of all, are traces of walls, which may possibly indicate the position of the temple, particularly as the Samaritans profess that this is the place where the ark formerly rested in the tabernacle. Further south, and indeed all around upon this eminence, are extensive foundations, apparently of dwellings, as if ruins of a former city There are also many cisterns; but all now dry. [G. W.]

GERMA (Γέρμη: *Eth.* Γερμηνός), also called Ἱερὰ Γέρμη, a town of Mysia, situated between the rivers Macestus and Rhyndacus. (Ptol. v. 2. § 14; Steph. B. *s. v.*; Hierocl.) Ruins of this town are still found in the neighbourhood of *Germasloo*. Another town of the name of Germa is mentioned in Mysia, between Pergamus and Thyatira. (*Itin. Anton.*; comp. Arundell, *Seven Churches*, p. 278.)

The following coin belongs probably to the former of these two places. The letters on the obverse on the right of the standing figure ought to be MHN.

COIN OF GERMA IN MYSIA.

The third and most celebrated place of this name was situated in Galatia, on the site of the modern *Yerma*, between Pessinus and Ancyra. Ptolemy (v. 4. § 7) calls it a Roman colony, which title is confirmed by the coins found there, and which seems to have been conferred upon it by Vespasian or his sons, for none of these coins are older than Domitian. From ecclesiastical writers we learn that Germa was an episcopal see of Galatia Salutaris, and a Byzantine writer (Theophan. *Chron.* p. 203) informs us that at a later period Germa took the name of *Myriangeli*. (Comp. Hamilton's *Researches*, i. p. 442.) [L. S.]

GERMA'NIA (ἡ Γερμανία: *Eth.* Germanus, Γερμανός: *Adj.* Germanicus, Γερμανικός: Germany; *French*, Allemagne; *Ital.* Alemagna; *Germ.* Deutschland or Teutschland), one of the great divisions of continental Europe, acts no very prominent part in the history of antiquity until the period of the Roman empire; but during the last period of the Western empire it attracted the attention of the civilised countries of Southern Europe, by sending forth hosts of barbarians, who, in the end, overthrew the empire, established new dynasties in the conquered countries, and infused a better blood into the effete inhabitants of the south-west of Europe.

I. *Name.* — Tacitus (*Germ.* 2) states: "Germaniae vocabulum recens et nuper additum, quoniam qui primum Rhenum transgressi Gallos expulerint, et nunc Tungri tunc Germani vocati sint. Ita nationis nomen, non gentis, evaluisse paulatim, ut omnes primum a victore ob metum, mox a se ipsis, invento nomine Germani vocarentur." According to this passage, the name Germania had been recently given to the whole country; the name itself had been known long before his time (Cic. *in Pis.* 33, *Phil.* xi. 6; Vell. Pat. ii. 67), though we are, perhaps, not quite warranted in assuming that it occurred in the Capitoline Fasti as early as the year B. C. 220. (Niebuhr, *Lect. on Rom. Hist.* vol. ii. p. 65, note 16.) Tacitus further regards *Germani* as a proper name of the tribe afterwards called Tungri, and not as an appellative, and intimates that from this one tribe it was afterwards transferred to the whole nation. But others among the ancients (Strab. vii. p. 290, iv. p. 195; Vell. Pat. *l. c.*; Eustath. *ad Dionys. Per.* 285) believed that *Germani* was the well-known Latin appellative which was given to the Germans to describe them as "brothers" of the Gauls or Celts. This latter view, which has been adopted by some eminent Germans of modern times, was probably the reason which often led the ancients to confound Germans and Celts, whence Virgil calls the Arar a river of Germany (*Eclog.* i. 63); and the Germans on the east of the Rhine are sometimes called Celts. (Dion Cass. liii. 12, lxxi. 3; Diod. Sic. v. 31.) The French and Italian names (*Allemagne* and *Alemagna*) are derived from the German tribes of the *Alemanni*, *Alamani*, or *Alamanni*, who, as their name indicates (*Alle Männer*), formed a confederation of several tribes on the upper Rhine and Danube, and

from whom the Gauls transferred the name to the whole German nation; for these Alemanni made frequent inroads into the Roman dominion in Gaul. They are first mentioned by Dion Cassius (xxvii. 14: Ἀλαμαννοι) on the occasion of a war which Caracalla had to carry on against them. Some modern inquirers derive the name Germani from the Persian, referring to the Persian tribe called Germani (Herod. i. 125), and to the Persian *Kerman* (Caramania), that is, hospitality; their view is supported by the resemblance existing between the manners and customs of the ancient Germans and those of the Persians. But if it were true that the Germans brought the name with them from Asia, it would have been indigenous among them; but down to the present day, neither any German tribe, nor the whole nation, ever called itself German, but always *Deutsch* or *Teutsch* (Gothic *Thiudiskô*, old High German *Diutisc*, and Anglo-Saxon *Theodisc*). The same remark applies to the derivation of the name from the German *Ger*, *Gwer*, *Heer*, or *Wehr*, which has been proposed by some. Surely the Romans would not have called the nation by a name derived from a German root that was unknown to them, seeing that the Germans themselves did not use that name. The probability is that the name *Germani* is of Celtic origin, and that it had come into general use among the Celts in Gaul before the time of Caesar, who there heard it applied to the whole nation dwelling on the east of the Rhine. In Haupt's *Zeitschrift für Deutsche Alterthümer* (vol. v. p. 514), H. Leo has proposed a very probable etymology from the Celtic, laying great stress upon Tacitus's expression, *ob metum*. He derives the name from the Gaelic *goir* or *gair* (to cry out), and *gaire*, *gairm*, *gairmean* (a cry); so that Germanus would signify something like the Homeric *βοὴν ἀγαθός*, a fierce, terrible warrior. Thus much, then, is certain, that *Germani* was the name given to the people by their neighbours, and for a time the Germans themselves may have used it in their intercourse with Celts and Romans; but it never was adopted by the Germans so as to supersede their own name. *Teutones*, the name of the German hosts invading the south of Europe in the time of Marius, contains indeed the same root as *Deutsch* or *Teutsch*, but it does not follow that this was originally the common name for the whole German nation; it is, on the contrary, almost certain that, in the earliest times, the Germans had no name comprising all their different tribes. Our view of the Celtic origin of the name Germani is confirmed by the fact that the Belgae (Celts) applied it even to the inhabitants of Mt. Arduenna, and that the Celtiberians in Spain designated by it the Oretani in Spain (Caes. *B. G.* ii. 3, 4, 6; Plin. iii. 4), neither of which belonged to the German stock.

II. *Boundaries, Extent, and Divisions.* — The ancients are pretty well agreed in fixing the boundaries of Germany. In the west, it was bounded by the Rhine; in the north-east, by the Vistula (*Weichsel*) and the Sarmatian mountains, or the Carpathians; in the south, by the river Danubius; and in the north, by the ocean (Mare Germanicum, Oceanus Septentrionalis) and the Baltic (Mare Suevicum). Tacitus (*Germ.* 1) and others are of opinion that the eastern frontier towards Sarmatia and Dacia cannot be accurately fixed. In the north, ancient Germany extended much farther than at present, as it comprised the countries now called Denmark, Sweden, and Norway. In the south, the frontier was not the same at all times; for, according to Pliny (iii. 23; comp. Plin. *Paneg.* 14), Germania extended as far as the foot of the Alps, which separated it from Italy; but it is well known that in Caesar's time the country from the Alps to the Danube, and even further north, was still inhabited by Celts, who must afterwards have been subdued or expelled by the Germans. On the west, the Rhine is distinctly said by Caesar to form the boundary between Gaul and Germany; but from his own account, it is clear that this is only a very loose statement. The Belgae in the north of Gaul (Belgium and Holland) were a mixed race of Cymri (not Gauls, as Caesar states) and Germans; but the frontier between the Belgae and Germans is extremely uncertain, and in regard to some tribes, such as the Menapii, it is even doubtful as to whether they were Germans or Cymri. The Treviri, moreover, were ambitious to be regarded as Germans, and modern Alsatia was occupied by Germans. Hence we are probably justified in assuming that, about the time of Augustus, the western bank of the Rhine was as much occupied by Germans as it is at present. This view is also confirmed by the fact that the Romans applied the name *Germania* to the western banks of the Rhine, calling the southern part *Germania Superior*, and the northern *Germania Inferior*. Hence Tacitus divides Gaul into six provinces, two of which are formed by the two Germaniae just mentioned. [GALLIA, p. 967.] This part of Germany, which was conquered by the Romans during the reigns of Augustus and Tiberius, was distinguished from Germany on the east of the Rhine, which bore the name of *Germania Magna* (Γερμανία ἡ μεγάλη, Ptol. ii. 11. § 6), and *Germania Transrhenana*, or *Barbara* (Caes. *B. G.* iv. 16, v. 11; Tac. *Hist.* ii. 76; Capitol. *Maximin.* 12; Eutrop. vii. 5; Vopisc. *Prob.* 13; Am. Marc. xviii. 4). Regarding the extent and magnitude of ancient Germany, we have the following statements, which, however, greatly differ from one another, and cannot be accepted without caution. According to Strabo (iv. p. 193), the breadth of the country along the Rhine amounted to 3000 stadia; according to Agrippa (ap. Plin. iv. 25), the distance from the Danube to the coast of the ocean was 1200 Roman miles; while, according to another statement in Pliny (xxxvii. 11), the distance from Carnuntum on the Danube to the seacoast amounted only to 600 Roman miles; and the length along the southern frontier (including Rhaetia and Noricum) was computed at 696 miles (Plin. iv. 28). Along the northern frontier, the distance from Asciburgium to the mouth of the Vistula was estimated at 1350 stadia (Marcian. Heracl. p. 99); while, according to the same authority, the coast from the mouth of the Rhine to that of the Vistula amounted to from 10,000 to 13,000 stadia. Ptolemy, the principal authority on the topography of Germany, places the country between 28° and 44° of longitude, and between 47° and 59° of northern latitude, and enumerates within this extent 68 tribes, 94 towns, 7 chains of mountains, and 14 rivers.

III. *Physical Aspect of the Country.* — Although at a very early time Phoenician merchants sailed through the German ocean into the Baltic for the purpose of obtaining amber, still no information about the country was communicated to the inhabitants of Southern Europe, all the useful geographical discoveries made by the Phoenicians being kept secret, from commercial jealousy. The voyage of Pytheas of Marseilles (about B. C. 330), who likewise visited the Baltic, yielded little information

about Germany, and it was not till the time of Caesar, when the Romans commenced their military operations against the Germans, that the nature of their country became better known. The Romans describe Germany as a wild and inhospitable country, covered with forests and marshes, and of a melancholy aspect (Tac. *Germ.* 2; Mela, iii. 3); cold winds are said to blow constantly, and the barren soil to be covered during the greater part of the year with snow and ice (Senec. *de Prov.* 4; Herodian, vi. 7). The country was reported to produce little corn and luxuriant grass (Plin. xvii. 3), but no fruit-trees. The immense forests were the abodes of a great variety of wild beasts, some of which appear to have since become extinct. (Caes. *B. G.* vi. 25.) There can be no doubt that these statements contain much that is true; but it seems equally certain that they are in many points a little exaggerated, the Romans being anxious to account in some honourable way for their repeated failures in attempting to make themselves masters of the country. At present, the draining of marshes, the clearing away of extensive forests, and the improved cultivation of the land, have produced changes in the climate which have led some modern writers unjustly to charge the ancients with monstrous exaggeration. The north of Germany, as Tacitus correctly remarks, is flat and marshy, and mountains exist only in the south. (*Germ.* 5, 30.) Almost all the mountains are called by the name *Silvae*, showing that they must have been thickly wooded. The most celebrated of these mountains, which are discussed in separate articles, are the HERCYNIA SILVA, ABNOBA, ALPII MONTES, BACENIS SILVA, MELIBOCUS MONS, GABRETA SILVA, ASCIBURGIUS MONS, TAUNUS, SEVO, LUCUS BADUHENNAE, NAHARVALORUM SILVA, SEMNONUM SILVA. The principal rivers of Germany are the RHENUS, DANUBIUS (Ister), VISTULA, AMISIA, VISURGIS, ALBIS, VIADUS. Among the lakes, the most remarkable is the BRIGANTINUS LACUS; besides which, many lakes are mentioned near the mouth of the Rhine, between this river and the Amisia, and several extensive marshes are noticed by Pomponius Mela (iii. 3).

IV. *Productions.* — Among the wild beasts inhabiting the forests, none appeared so formidable to the Romans as the *alces* and *uri*; but besides them, we hear of bears, wolves, lynxes, wild cats, wild boars, stags, and deers: the oxen were of small size, and had small horns, but the cows, especially in the south, yielded great quantities of milk. The horses also were small, and not handsome, but strong, and capable of undergoing great hardships. The dogs, especially those of the Sigambri, were thought well suited for the chase. Pigs were bred in great quantities, and hams formed a considerable article of commerce for exportation. (Strab. iv. p. 301.) Sheep and goats were bred for food and clothing. The most common of the feathered tribes were eagles and geese; bees and fishes abounded in the forests and rivers. The extensive forests furnished plenty of wood, especially oak and beach-wood; but notwithstanding this, the inhabitants also used peat as fuel. Many of the trees were of gigantic size; fruit-trees existed, indeed, but had not yet been improved by cultivation, which seems to be the meaning of *poma agrestia* in Tacitus (*Germ.* 23; comp. with 10). Although the country is described as, on the whole, not fertile, still we are informed that it produced wheat, barley, oats, flax, turnips, large radishes, asparagus, and beans Oatmeal, prepared, as in Scotland, into a sort of porridge, was an article of food very extensively used; and Tacitus (*Germ.* 23) informs us that a beverage (beer) was prepared from wheat and barley. Among the metals, we hear of silver, iron, copper, and calamine; crystals, onyxes, turquoises, opals, and even diamonds, were found in the mountains of Germany. The north coast was rich in salt; but none of the products of the north was so celebrated in antiquity as the amber (*electrum*), and it was this substance which first drew the attention of the Greeks and Romans to the coasts of the Baltic. The cultivation of the vine is said to have been introduced into Germany by the Franks during the 6th century of our era; but on the left bank of the Rhine, on the Moselle, and in Rhaetia, the vine had been cultivated at a much earlier period. (Vopisc. *Prob.* 18; Aur. Vict. *Caes.* 37; Suet. *Aug.* 77; Strab. iv. p. 206.)

V. *Population and Inhabitants.* — Although Germany was covered with extensive marshes and forests, still there is good evidence that the country was thickly peopled; though, owing to the constant wars and migrations, the population was in many parts very fluctuating. The tribe of the Suevi sent every year into the field an army of 100,000 men (Caes. *B. G.* i. 37, iv. 1), and Ariovistus, their king, crossed the Rhine with an army of 120,000 men (Caes. *B. G.* iv. 2). The Usipetes and Tencteri together amounted to 430,000. (Ib. iv. 15.) Maroboduus kept an army of 74,000 men (Vell. i. 109); in their war with the Sigambri, the Romans carried off 40,000 men (Suet. *Tib.* 9); and in the war of the Chamavi and Angrivarii against the Bructeri, 60,000 men are said to have been slain. (Tac. *Germ.* 39.) But all these facts do not enable us to form even an approximate idea of the exact population of Germany in ancient times. It would seem, however, that in consequence of the mountains and forests in the south, the population of that part was less numerous than in the north and east.

The Germans considered themselves as autochthones, that is, as the offspring of the land they inhabited (Tac. *Germ.* 2, 4); but there can be no doubt that they, like all the nations of Europe, had immigrated from Asia, though neither history nor the national legends of the Germans contain the slightest allusion to such an immigration. But what history conceals from us is revealed in the language of the people, which bears the strongest organic resemblance to the languages spoken in India and Persia. The German language belongs to what is now generally termed the Indo-European family of languages. Hence we must infer that at some remote and unknown period the Germans issued from a country of Upper Asia, and passed by Mount Caucasus, and through the countries in the north of the Euxine and the Caspian sea, into Europe. They accordingly belonged to the same great stock of nations as the Greeks, Romans, and Celts, to the last of which they are said to have borne a very marked resemblance in stature, character, and manners. (Strab. iv. p. 290.) The Germans are universally described as very tall and handsome men, of a white complexion, with blue eyes, and fair or red hair, which they took great care of, and the colour of which they rendered still more bright by a peculiar kind of soap. The red hair of the Germans formed a considerable article of commerce with the Romans during the imperial period, for it was a fashion with the Roman ladies to wear peruques or curls of red hair. Men as well as women wore long hair; but they shaved their beards, though

some let their moustaches grow. The blue eyes peculiar to the Germans, which generally have a soft expression, are nevertheless described as full of defiance. The women were almost equal to the men, both in strength and in size; a fact which is confirmed by skeletons found in tombs of ancient Germans. As regards the classification of the inhabitants of Germany, even the ancients divided them into several groups. Tacitus (*Germ.* 2) mentions three great groups, viz., the *Ingaevones*, on the ocean; the *Hermiones*, in the interior; and the *Istaevones*, in the east and south of Germany. These three names are said to have been derived from the three sons of Mannus, the ancestor of all the Germans. Pliny (iv. 28) indeed mentions five groups of German tribes, adding to those just mentioned the *Vindili* as the fourth, and the *Peucini* and *Bastarnae* as the fifth; but this classification seems to have arisen from a mistake: for Zeuss, in his work to be referred to hereafter, has shown that the Vindili belonged to the Hermiones, and that Peucini and Basternae are only names of individual tribes, and not of groups of tribes. But how the numerous tribes of Germany are to be arranged under these three groups is a question which it is impossible ever to answer with any degree of certainty: and Tacitus himself appears to have felt the difficulty; for, in his account of the several tribes, he omits to mention to which group they belonged. As the Scandinavian peninsula is regarded as a part of Germany, its inhabitants, bearing the general name of *Hilleviones*, and again divided into *Suiones* and *Sitones*, must be added as a fourth group.

VI. *Mode of Life and Character of the People.* — The physical constitution of the Germans was, no doubt, in a great measure the result of their way of living. Their commerce was inconsiderable, and they depended chiefly on the breeding of cattle, the chase, and war, pursuits which created in the people an unquenchable love of freedom, and made them impatient of foreign sway. Tacitus (*Germ.* 14) speaks of the faithfulness and trustworthiness of the Germans; but other statements lead to a somewhat opposite opinion, and we are probably not far wrong in assuming that the ancient Germans, like all other barbarians, had a considerable degree of honesty, combined with cunning and falsehood.

The dress of the Germans, in early times, was extremely simple, and almost the same for both sexes; children up to the time of maturity are said to have worn no dress at all, not even in winter. The chief article of dress of men was a cloak, sometimes made of woollen cloth, and sometimes consisting of the skin of an animal. The women wore close-fitting garments of linen, which they spun and wove themselves, and which were sometimes adorned with purple stripes; the arms and part of the bosom were generally uncovered. In later times, men also, especially nobles, wore similar close-fitting garments, cloaks adorned with gold, shoes, and a kind of coat reaching down to the knee. But the German attached much more importance to his arms, which he even took with him into the grave. The defensive armour was at first very simple and defective, for few only had helmets and breast-plates; the place of the former was often supplied by the skin of the head of some animal, on which the horns were left standing: most men had no other defensive armour but a long shield, made of wood or wicker-work, covered with leather. The most ancient weapon of attack was a kind of hammer or axe made of stone; for which, at a later period, brass was substituted. Next in importance to the axe were the spear (*framea*), club, sword, slings, and bows and arrows. The habitations of the Germans were equally simple, forming shapeless masses, probably of clay, covered with straw or turf; caverns covered with dunghills served as store-houses, and also as places of refuge in winter. Such houses generally stood isolated in the fields and forests, near a spring or brook, and were very rarely united into villages or hamlets. Some tribes, which led a half nomadic life, appear to have had no regular houses at all.

The principal article of food consisted of flesh which was cooked or roasted, but often prepared only by being beaten or kneaded, or dried and smoked; besides this, the Germans lived on milk, butter, cheese, eggs, fishes, and especially porridge made of oatmeal, and beer. Generally speaking, the Germans were moderate in their diet, but they were particularly fond of social meals, and no other nation ever was more hospitable to strangers; but it is at the same time well attested that they were given to excessive drinking, and no festival of a public or private character passed without great excesses in drinking (generally beer, rarely wine), which very often led to quarrelling, fighting, and even murder. For this reason, the women seem to have withdrawn as soon as the drinking commenced. The ancient Germans were as fond of singing as their modern descendants; for we are told that they sang at weddings and funerals, as well as on going out to battle. They were also much given to gambling, in which they would sometimes go so far as to stake their personal freedom, when all their property was lost; in such a case, the loser became the slave of the winner. Marriages were not contracted till a very mature age, and required the sanction not only of the parents, but of all the kinsmen, and, instead of receiving a dowry, the bridegroom had to present one to his bride. Women were probably nowhere so much honoured as among the Germanic nations; and it is owing to the influence exercised by the Germans upon all the nations of Europe, combined with that of Christianity, that women, during the middle ages, enjoyed the respect and esteem with which they are still regarded by all truly civilised nations. The ancient Germans entertained the greatest reverence for women, for they believed them to possess a certain divine and prophetic power; the women not only conducted all the domestic affairs, but also accompanied the armies on their military expeditions, attended to the wounded, cheered on the wavering to fresh deeds of valour, and sometimes even took an active part in the battles. The children grew up without much care on the part of their parents, and thus became accustomed to endure all kinds of hardship from their very infancy. Young men at the age of 20 received their armour from their father or some kinsman in the public assembly, and from that moment they enjoyed all the rights of a citizen.

In times of peace the Germans generally indulged in ease and laziness, leaving the care of domestic concerns and of their fields to the women, old men, and slaves. All the cultivated land was regarded as public property, and was annually distributed anew by the magistrates among the families, or was let out to farm. In regard to other occupations, the Germans were distinguished for their potteries, and also worked as carpenters, masons, and smiths, while the women were engaged in spinning and weaving. In the interior of the country commerce was insignificant; but on the Rhine and the Danube it was

rather active, the more important articles for exportation being amber, goose-quills, furs, hides, hams, red hair, soap for dyeing the hair, and slaves. In return for these they received wine, trinkets, and probably also arms. The Germans had no coinage of their own; but a vast quantity of Roman silver coins was in circulation among them. Navigation was carried on by sea as well as on the lakes and rivers, and their vessels consisted of simple canoes, or boats covered with leather, or regular ships. But of all the occupations none was in greater favour with the Germans than war, in which all men capable of bearing arms took part. A regular system of tactics was unknown; but their battle order was generally formed by the men arranging themselves according to their tribes, families, or clans. Their cavalry was not numerous. The first attack upon an enemy was generally very ferocious; but when a war was protracted, the men generally lacked perseverance, and became desponding. The booty made in war, and sometimes the prisoners also, were sacrificed to the gods. No kind of death was considered more desirable than that on the field of battle; to die on a sick bed was so much dreaded, that, among some tribes, sick persons and old men caused themselves to be killed rather than wait for their natural dissolution.

VII. *Religion.* — On this subject the Greeks and Romans have left us no connected information, and what they do state is not always trustworthy: for sometimes they only give the name of a German divinity, and endeavour to identify the same with some one of their own gods; or they call the German divinities at once by names of their own gods, without mentioning the names they bore among the Germans. The ancients, however, are agreed in stating that the Germans worshipped several divinities, among whom they mention the sun, the moon, the stars, Tuisco the ancestor of their whole race, and his son Mannus. Besides these, we hear of Mercury (probably Wodan or Odin), who is said to have been the most revered among all their divinities; of Isis (probably Freia, the wife of Wodan); Mars (no doubt the German Tyr or Zio); Nerthus, the mother of the gods; and the two Alces (compared with Castor and Pollux). Jupiter (i. e. Thunar, Thor, the god of thunder) is not mentioned by any earlier writer than Gregory of Tours (ii. 29). Besides these principal divinities, which, however, do not appear to have been equally worshipped among all the tribes of Germany, they believed in a variety of secondary and inferior deities, partly of a kind and partly of a malignant nature, and almost every tribe had its own peculiar divinities of this sort. The form of worship was very simple; and both Caesar and Tacitus assert that the Germans had neither statues nor temples. But this statement is opposed to facts which come out at the conversion of the Germans to Christianity, when the destruction of pagan idols is frequently spoken of. In regard to temples also, the statement must not be taken in too strict a sense; for Tacitus himself (*Ann.* i. 51) expressly mentions a temple of a goddess Tanfana among the Marsians, and the Christian missionaries of a later period called upon the Germans to change their heathen temples into Christian churches. But it is nevertheless true that many of their gods were worshipped in the open air, in groves and forests, on mountains and rocks. Priests are indeed mentioned among the Germans; but a father was always entitled in the circle of his family to assume the functions of a priest. The priests were at the same time the highest civil functionaries next to the king: they ascertained the pleasure of the deity in all public undertakings, and executed the sentence of death upon all persons guilty of high treason; they moreover presided at the popular assemblies, and kept the national standards. There also existed prophetic priestesses, who foretold the future from the intestines of victims, from the blood of the slain prisoners of war, from the murmuring of the waves, and the like. The sacrifices offered to the gods were often extremely splendid, but we likewise hear of human sacrifices. Respecting their religious festivals little is known, and the little that is known belongs to a period beyond the limits of this work.

VIII. *Political Institutions.* — The various tribes inhabiting Germany were free and independent of one another, and the territory inhabited by each was divided, apparently for military purposes, into districts or *pagi*. Each separate tribe was governed by a king, who was elected from among the nobles in an assembly of all the free people: this king, however, was in the earliest period only the highest magistrate in times of peace; for, in case of war, special commanders were chosen, to whom the supreme civil power was likewise entrusted. The kingly power was altogether very much limited by the nobles and the popular assembly, the latter having the power even of deposing the king. Each *pagus* had its own magistrate (*princeps*), who at the same time administered justice, in which he was assisted by a college of 100 men. There were also tribes which had no kings or central government at all, but in which the pagi were governed by the *principes* alone.

The whole body of the German nations was generally divided into four classes or ranks. 1. The *nobles* (*nobiles, proceres, optimates*), probably consisting of families whose ancestors had particularly distinguished themselves by their valour, or had acquired great influence from their possession of extensive estates. The kings, and probably also the *principes* of the *pagi*, were chosen from these nobles exclusively. Clients of the nobles are also mentioned. 2. The *freemen* (*ingenui*) formed the real strength of the nation; freemen and nobles alone had the right to possess hereditary landed property, and to change their place of residence according to their own pleasure; they were obliged to attend the popular assembly, and serve in the national armies. 3. The *freedmen* (*liberti* or *libertini*) formed a kind of middle class between the freemen and the slaves: they might, however, purchase their freedom, and were obliged to perform military service, but were not allowed to take part in the popular assemblies; they had no landed property, but tilled the lands of others as farmers. 4. The *slaves* (*servi*) had no rights at all, but were mere tools in the hands of their masters, without whose consent they could not even marry, and who might even put them to death without fear of punishment. It would appear, however, that the slaves were, on the whole, treated very mildly, and lived under far more advantageous circumstances than the slaves of the Romans. (Tac. *Germ.* 25.) They had their hair cut short, were not allowed to bear arms or to serve in the armies, but were employed as domestic servants, field-labourers, or herdsmen. All slaves were either born in the house of their master, or were prisoners of war, or they had been degraded to their position by judicial verdict, or, lastly, they had been purchased.

The popular assembly, consisting of the nobles and freemen, deliberated upon all the more important national affairs; in it the kings and other magistrates were elected, capital offences were tried, &c. The meetings were either regular and stated, especially at the seasons of the new moon and full moon, or they were extraordinary meetings convened for certain emergencies. A considerable time often elapsed before all the men arrived at the place of meeting, which was generally near some sacred grove, or on a mountain. The men appeared in full armour, and a priest conducted the business; such a meeting seldom separated without a symposium. Justice also was administered in the open air, both on stated and on extraordinary occasions. All trials were carried on publicly and *vivâ voce:* the judges tried the cases; but the verdict was given by juries. In doubtful cases a question was sometimes decided by lot, or by a judicial single combat. Priests were generally present at all the trials, which commonly ended with a drinking bout. In the earlier times the Germans had no written laws; and it was not till after the migration of nations, when all relations had become changed, that various codes of laws, such as the Salian, Ripuarian, Thuringian, Burgundian, and others, were drawn up. The punishments inflicted were intended as a compensation to the injured party, and consisted of money, horses, cattle, and other fines, even in case of murder; it was only in cases where the condemned was unable to pay or make amends that he was put to death. No freeman could be subjected to corporal punishment, except when it was inflicted by a priest in the name of the deity. Persons guilty of high treason against their country, however, cowards, and such as were guilty of unnatural lust, were hanged or drowned in marshes. Exile and captivity are mentioned only as punishments for political offences. The right of a family to take bloody vengeance, if one of its members had been murdered, is clear from Tacitus (*Germ.* 21).

IX. *Language and Literature.*—It has already been remarked that the language of the Germans belongs to the Indo-European family, and accordingly is a sister of the Greek, Latin, and Celtic. Its sound to the ear of the Romans was harsh and terrible: it was of course little cultivated; and the art of writing can scarcely have been known to the Germans at the time of Augustus, except, perhaps, among the tribes occupying the left bank of the Rhine. The laws, legends, and history were propagated only as traditions from mouth to mouth. National songs in praise of Tuisco, Mannus, and of the glorious deeds of ancient heroes, are expressly mentioned; and the last were termed *barritus* or *barditus*, and were generally sung before the commencement of a battle. Writing, as was said before, was little practised by the Germans. Tacitus (*Germ.* 3) indeed speaks of German monuments with inscriptions in Greek characters on the frontiers of Rhaetia; but as Rhaetia was inhabited by Celts, the inscriptions were in all probability Celtic. Certain it is that the Germans had no alphabet of their own; when they began to write at all, they unquestionably adopted the Celtic characters, and especially the secret symbols of the Druids, called *runic*. At a later period they adopted the Latin alphabet, ornamented in the Gothic fashion, which may still be seen in the old English black letter, and in the modern German alphabet. [Comp. GOTHI.]

X. *History.*—If we set aside the doubtful reading of the Capitoline Fasti for the year B. C. 220, the first authentic record of events connected with German tribes is met with in the accounts of the war against the Cimbri and Teutones or Teutoni, for the latter were as decidedly Germans as the Cimbri were Celts or Cymri. But we have no connected history of the German nations until the time of Julius Caesar, from whom we learn that in B. C. 72 the aid of king Ariovistus was called in by the Arverni and Sequani against the Aedui in Gaul. On that occasion Ariovistus crossed the Rhine with an army of 120,000 Germans, and subdued the greater part of Eastern Gaul. But he was defeated by Caesar in the country of the Sequani, and driven back across the Rhine. Caesar himself crossed the same river twice, in B. C. 55 and 54, by means of bridges but he was not able to maintain himself in Germany In B. C. 37, Agrippa transplanted the Ubii, who were hard pressed by the Suevi, to the western bank of the Rhine, that they might serve there as a bulwark against the attacks of the other Germans upon Gaul: this plan, however, was not always successful; whence Nero Claudius Drusus, the step-son of Augustus, in B. C. 12, commenced his expeditions against the Germans from the insula Batavorum. During these undertakings Drusus advanced as far as the river Albis (*Elbe*); but he was killed by a fall from his horse in B. C. 9. The command of his forces was then undertaken by his brother Tiberius (afterwards emperor), who, as well as Domitius Ahenobarbus, was on the whole more successful than Drusus; for he actually compelled the part of Germany between the Rhenus and the Visurgis for a time to submit to the dominion of Rome, until after some years, A. D. 9, Arminius, prince of the Cherusci, who had lived at Rome and was acquainted with the Roman mode of warfare, defeated the Romans in the Teutoburg forest, and put an end to the Roman dominion in that part of Germany. About the same time Maroboduus, the Marcomannian, held out manfully against the Romans, until disturbances in the south obliged them to conclude peace. Germanicus, the son of Drusus, who was then sent out to wipe off the disgrace of the Roman arms, succeeded in gaining some advantages over the barbarians, but he was unable to regain the ascendancy in Western Germany. Scarcely, however, had the wars with the Romans terminated, than a violent commotion broke out among the Germans themselves, in which they lost their ablest chiefs, and which caused several German tribes to be transplanted into the Roman dominion. The consequence of these things was, that the Romans now established themselves in the south-western parts of Germany. During this period, from A. D. 16 to 68, the AGRI DECUMATES were formed on the east of the Upper Rhine, and on the north of the Upper Danube. This Roman part of Germany was then separated from and protected against the rest of the country in the north by a wall and a ditch running from the Rhine near Cologne to Mount Taunus and the Odenwald, and from Lorch to Ratisbon. The great revolt of the Batavi in A. D. 70 and 71, in which the Western Germans also took part, was followed by repeated wars with several German tribes, until at last, in the reign of M. Antoninus the philosopher, the great Marcomannian war broke out on the Danube; many other German tribes joined the Marcomanni, and the enemy even advanced into Italy, where they laid siege to Aquileia. M. Antoninus had to carry on the war until the end of his reign, and his suc-

cessor Commodus, in A. D. 180, purchased a peace of the Germans, and gave up the forts which had been built along the Danube. Soon afterwards it was found that the Roman dominion on the western bank of the Rhine also was not safe; for several German tribes, especially the Alemanni and Franks, harassed Gaul by frequent invasions, until in the end Germany poured forth its hosts across the Rhine, the Danube, and the Alps, conquering Gaul, Italy, Spain, and even crossing over into Africa, and establishing a new kingdom on the ruins of ancient Carthage. This happened towards the end of the 5th century; while somewhat earlier other tribes, such as the Angli, Saxons, and Frisians, had crossed over into Britain, and, partly subduing and partly expelling the Celtic population, established in this island a new order of things, which lasted for upwards of five centuries. Nearly the whole of the west of Europe was thus governed by German tribes.

Our chief authorities among the ancients concerning the ethnography and geography of Germany are Tacitus, especially in his *Germania*, and Ptolemy. Pliny, too, who himself served in Germany (xvi. 1), furnishes much valuable information, although his great work in 20 books on the wars of the Romans with the Germans is lost. Besides these, Strabo, Pytheas, Eratosthenes, Dion Cassius, Velleius Paterculus, Suetonius, and others must be consulted. The works of moderns, especially Germans, are almost countless; but the principal ones are Cluverius, *Germania Antiqua*, Lugd. Bat. 1616, fol.; A. B. Wilhelm, *Germanien u. seine Bewohner*, &c. Naumburg, 1823; Von Wersebe, *Uber die Völker u. Völkerbündnisse des alten Deutschlands*, Hanover, 1825; Zeuss, *Die Deutschen u. die Nachbarstämme;* Grimm's *Deutsche Mythologie;* Latham's *Prolegomena* and *Epilegomena*, in his edition of Tacitus's *Germania*. An able statement of the results at which these and other inquirers have arrived is contained in the 3rd vol. of Forbiger's *Handbuch der alten Geographie*, Leipzig, 1848. [L. S.]

GERMA'NIA INFE'RIOR. [GALLIA, p. 967.]

GERMA'NIA SUPE'RIOR. [GALLIA, p. 967.]

GERMANICO'POLIS (Γερμανικόπολις), a town in Bithynia, not far from Prusa, was in earlier times called *Helgas* or *Booscoete* (i. e. *βοὸς κοίτη*, Plin. v. 40). A second town of the same name (though Ptol., v. 4. § 5, calls it Γερμανόπολις) is mentioned in Paphlagonia, not far from Gangra. (*Novell.* 29.) This town, like the one in Bithynia, appears to have been named after Germanicus, but none of the coins found on its site are older than the reign of M. Aurelius. A third Germanicopolis was a town in Isauria. (Hierocl. p. 709; Concil. Chalced. p. 659; Const. Porphyr. *de Them.* i. 13.) [L. S.]

GERMA'NICUM MARE (Γερμανικὸς Ὠκεανός), the German Ocean, the sea between Great Britain in the west, and Belgium, Holland, Germany, Denmark, and Sweden in the east. (Plin. iv. 30; Ptol. ii. 3. § 5, viii. 3. § 2, 6. § 2.) [L. S.]

GERMA'NII (Γερμάνιοι, Herod. i. 125), one of the three agricultural tribes of the ancient Persians, according to Herodotus. There has been much dispute among the learned who these people were. The probability seems to be, that they were connected with Carmania, now *Kirman*. Agatharchides, indeed, calls the Carmania of Diodorus (xviii. 6) and Strabo (xiv. 723) by the name of Germania (*Perip. M. E.* p. 27). Others, with less probability, have connected the Germanii with a people N. of the Oxus, which was sometimes called Erman, and now bears the name *Khawarezm*, and have supposed that they are the real ancestors of the modern Germans, but this is fanciful. (Hammer, *Wien Jahrb.* ii. p. 319; Krusii *Archiv.* i. 2. p. 124; Adelung *Mith.* i. p. 278.) [V.]

GERMIHERA, a place in Dacia which, from its position in the Peutinger Table, must be sought for in the valley of the *Maros*, possibly at *Szasvaros*, where there are ruins. It is the same as the Germigera of the Geographer of Ravenna, and the Ζερμίζιργα of Ptolemy (iii. 8. § 8). [E. B. J.]

GERONTHRAE or GERANTHRAE (Γερόνθραι, Paus. iii. 21. § 7, 22. § 6; Γεράνθραι, Paus. iii. 2. § 6; Steph. B. *s. v.*; Γερένθραι, Hierocl. 392, 14: *Eth.* Γερονθρήτης), an ancient town of Laconia, situated in a commanding position upon the south-western face of the mountain above the plain of the Eurotas. It is represented by *Gheráki*, a ruined town of the middle ages, the name of which is a corruption of Geronthrae, while its distance from the site of Acriae upon the coast corresponds to the 120 stadia mentioned by Pausanias. We learn from the same writer that Geronthrae possessed a temple and grove of Ares, to whom a yearly festival was celebrated, from which women were excluded. Around the agora there were fountains of potable water. On the acropolis stood a temple of Apollo. (Paus. iii. 22. §§ 6, 7; *στάλα πετρίνα ἐν τῷ ἱερῷ τῷ τοῦ Ἀπόλλωνος*, Böckh, *Inscr.* no. 1334.) On the northern side of the summit of the citadel are the remains of a very ancient wall: the position of the agora is indicated by the fountains of water lower down the hill.

Geronthrae was one of the ancient Achaean cities which resisted for a long time the Dorian conquerors. It was at length taken and colonised by the Spartans, along with Amyclae and Pharis. In the time of the Roman empire it belonged to the Eleutherolacones. (Paus. iii. 2. § 6, 21. § 7, 22. § 6.) At the beginning of the fourth century of the Christian era it must have been a market-town of some importance, since a Greek translation of the edict of Diocletian, "De Pretiis Rerum Venalium," has been discovered at *Gheráki*. In the middle ages it was the seat of a bishopric, and one of the most important places in the valley of the Eurotas. (Leake, *Morea*, vol. iii. p. 7, *Peloponnesiaca*, pp. 149, 362; Boblaye, *Recherches, &c.* p. 95; Curtius, *Peloponnesos*, vol. ii. p. 302.)

GERONTIS ARX. [CAEPIONIS TURRIS.]

GERRHA, GERRHAEI (Γέρα, Γέρρα: *Eth.* Γερραῖος), a town and people of Arabia Felix, on the Persian gulf (Ptol. vi. 7), between the Aetaces on the south, and the Themi on the north. Strabo's description is more full and satisfactory than usual. "When you have sailed along the coast of Arabia 2300 stadia (apparently from the mouth of the Persian gulf, to which he assigns a length of 10,000 stadia), the city of Gerrha lies in a deep gulf, where Chaldaean exiles from Babylon inhabit a salt country, having houses built of salt, the walls of which, when they are wasted by the heat of the sun, are repaired by copious applications of sea-water. The city is distant 200 stadia from the sea. The land-carriage of goods, especially of spicery, is conducted by the Gerrhaeans; Aristobulus, on the contrary, says that they traffic with Babylon by barges, and then sail up the Euphrates to Thapsacus, whence they commence the land-carriage in all directions." (Strab. xvi. p. 766.) Pliny (vi. 32) describes it as a city of 5 miles in circumference, with a tower

built of square blocks of salt. D'Anville first identified it with the modern *El-Katif;* Niebuhr finds its site in the modern *Koneit* of the Arabs, called *Gran* by the Persians (*Description de l'Arabie*, p. 295). Lastly, Mr. Forster thinks that he has discovered the ruins of this once important city "in the East India Company's Chart, seated where all the ancient authorities had placed it, at the end of the deep and narrow bay at the mouth of which are situated the islands of Bahrein." (*Arabia*, vol. ii. p. 209.) His proofs of this identification are fully given (pp. 216—221), and are interesting and plausible; but exception may be taken to the following assertion: "From Strabo we learn that the city of Gerrha lay at the bottom of a deep bay; the depth of this bay and its geographical position are defined by Pliny: from the shore or extreme recess of the Sinus Gerraicus on which the city stood, the Regio Attene (manifestly a peninsular district) projected at a distance of 50 Roman miles from the opposite shore into the Persian gulf." Now, as Strabo is the only authority for the site of the city, and his description is contained in the words διέχει δὲ τῆς θαλάττης διακοσίους σταδίους ἡ πόλις, it must be admitted that "the bottom of a deep bay," "or 25 Roman miles *from the open sea*," is a wide deduction from this statement; and the position of "the extensive ruins of an ancient city," marked in the Company's Chart *on the coast*, is perhaps the strongest argument against their identity with the ancient Gerrha, which, however, seems to be sufficiently confirmed by the other evidence cited by Mr. Forster. (See also vol. i. p. 197.) [G. W.]

GERRHAICUS SINUS, mentioned in connection with Gerrha only by Pliny (vi. 32), between the Sinus Capeus on the north and the Regio Attene on the south. [Atta Vicus.] Identified by Mr. Forster with the modern *Gulf of Bahrein* in the passages referred to under the last article. [G. W.]

GERRHUS (Γέρρος, Ptol. iii. 5. § 12; Plin. iv. 12; Steph. B. *s. v.*), a river of Scythia, and region bearing the same name, where the tombs of the Scythian kings were. (Herod. iv. 19.) This region must have been at a considerable distance up the Borysthenes, as we are told that forty days' navigation on that river were required before it was arrived at. (Herod. iv. 53.) Potocki (*Voyage dans les Steps d'Astrakhan et du Caucase*, Paris, 1829, vol. i. pp. 145, 163, 172, 388) has identified this with the district below the cataracts of the *Dnieper*, where the river becomes navigable, and where there are now in fact a number of ancient tombs or "tumuli" in the neighbourhood of *Takmak*. (Comp. Schafarik, *Slav. Alt.* vol. i. p. 516.) It is difficult to reconcile the description of the courses and confluence of the Gerrhus, Panticapes, and Hippacyris with modern geography.

Beyond the Panticapes (*Koúskawoda*) was the country of the nomad Scythians. It is a steppe destitute of wood, and comprehending a space of 14 days' journey, in an eastern direction, as far as the river Gerrhus, or the steppe of the *Nogaï*. Beyond the river Gerrhus the ruling horde of the Scythians who were named "royal," first appear. (Herod. iv. 19.) The Hypacyris is generally considered to be the same as the *Kalantchak*. According to Herodotus, the Gerrhus fell into the Hypacyris; by which must be understood, not the *Kalantchak*, but the *Outlouk*. The course of this river appears clear enough in Pliny and Ptolemy (*l. c.*). Pliny agrees with Herodotus in making it the boundary between the Nomad and Royal Scythians, and with Ptolemy in conducting it finally into the Palus Maeotis; the difference only is, that Pliny leads it into the lake Buges, whi h communicates with the gulf Coretus and the Palus Maeotis, while Ptolemy discharges it considerably to the E. of the lake Buges or Byce (Βύκη λίμνη). The Gerrhus is probably represented by the *Moloschnija-woda*, which forms still a shallow lake or marsh at its embouchure. (Comp. Schafarik, *Slav. Alt.* vol. i. p. 270; Rennell, *Geog. of Herod.* vol. i. pp. 75, 88, 93, 94.) [E. B. J.]

GERRHUS, GERRHI. [Albania.]

GERRU'NIUM, a fortress of Phaebates, a district of the Dassaretii on the Illyrian border of Macedonia, which was taken and sacked by L. Apustius, a Roman officer, detached by Sulpicius, to ravage the territory of Philip, in the breaking out of the war against that prince. (Liv. xxxi. 27.) Gerrunium (Gertunium ?) is the same place as the Gertus (Γερτοῦς), a place on the frontier of Dassaretia, which Scerdelaïdas had taken from Philip, and which the latter retook in the second year of the Social War (Polyb. v. 108). Gerus (Γερούς), mentioned in the same chapter of Polybius, is a different place from Gerrunium, which was, probably, lower down on the valley of the *Uzumi* than Antipatria (*Berát*), perhaps near the junction of the *Uzúmi* and *Devól*. (Leake, *Trav. in North. Greece*, vol. iii. p. 327.) [E. B. J.]

GERULA'TA or GERULA'TIS, a town in Pannonia, where a Roman frontier garrison was stationed. (*It. Ant.* p. 247; *Not. Imp.*) It is identified with the modern *Carlburg* or *Oroszvar*, and some believe it to be the same as the town Χερτόβαλος, mentioned by Ptolemy (ii. 15. § 3). [L. S.]

GERUNDA (Γερούνδα, Ptol. ii. 6. § 70: *Eth.* Gerundenses, Plin. iii. 3. s. 4), a small inland town of the Ausetani, in the NE. corner of Hispania Tarraconensis, on the S. side of the river Alba (*Ter*), and on the high road from Tarraco to Narbo Martius. Under the Romans it was a *civitas Latinorum*, belonging to the conventus of Tarraco. It stood on a hill near Gerona. (Plin., Ptol., *ll. cc.*; *Itin. Ant.* p. 390; *Tab. Peut.*; Geog. Rav. iv. 42; Prudent. Peisteph. iv. 29, where it is called *parva;* Ukert, vol. ii. pt. 1. p. 426.) [P. S.]

GERU'NIUM (Γερούνιον), a small town or fortress of Apulia, not far from Larinum, in which Hannibal established his winter-quarters after the campaign against Fabius, B. C. 217. The Roman general encamped at Calela in the territory of Larinum, and it was between these two places that the action took place in which Minucius was defeated by the Carthaginian general, and saved only by the timely assistance of Fabius. (Pol. iii. 100—102, 105, 107; Liv. xxii. 18, 24—28.) No subsequent mention of Gerunium is found in ancient writers; it is termed by Livy a "castellum inops Apuliae" (xxii. 39), and was probably always a small place. But its name (written Geronum) is found in the Tab. Peut., which places it 8 M. P. from Larinum, on a road leading from thence to Bovianum; and this distance accords with the statement of Polybius (iii. 100), that it was 200 stadia (25 M. P.) from Luceria. Its site is fixed by local antiquarians at a place still called *Gerione* or *Girone*, between *Casa Calenda* and *Montorio*, where a town or village still existed down to a late period, and where some ancient remains have been found. This position would appear to be rather too near Larinum (from which it is only 4

miles); but the evidence of the name is certainly strong in its favour. Cluverius is undoubtedly wrong in transferring it to *Dragonara* on the right bank of the *Fortore*, which is above 16 Roman miles from Larinum, and about the same distance from Luceria. (Cluver. *Ital.* p. 1213; Romanelli, vol. iii. pp. 12—15; Tria, *Mem. di Larino*, pp. 18—23; Biondo, *Ital. Illustr.* p. 421.) [E. H. B.]

GESDAO or GESDAONE, as it appears in the oblique case in the Itin. Jerusalem; Gascido in the Table, which D'Anville read Gadao. The Jerusalem Itin. places it on a road from Brigantio (*Briançon*) to *Susa:* and it makes 10 M. P. from Brigantium to Gesdao, and 9 from Gesdao to Mutatio ad Marte. The Antonine Itin. makes 18 M. P. from Brigantio to Ad Martis, and omits Gesdao. The Table makes 6 M. P. from Brigantio to Alpis Cottia (*Mont Genèvre*), and then 5 M. P. to Gascido, and 8 from Gascido to Ad Martis. All these numbers agree pretty well, and by following the road from *Briançon* the position thus determined seems to be *Cesano* or *Sezano*. [G. L.]

GESHUR. 1. A people of the south of Palestine, reckoned with the Philistines and Canaanites (*Josh.* xiii. 3), apparently contiguous to the Amalekites, against whom David made hostile incursions from Zildag in the country of the Philistines. (1 *Sam.* xxvii. 8.)

2. Another Bedouin tribe, on the east of Jordan, in the borders of the country occupied by the half-tribe of Manasseh, in the land of Bashan (*Deut.* iii. 14; *Josh.* xii. 5, xiii. 11, 13), in all which passages they are joined with the Maachathites. They were not dispossessed by the Israelites.

3. Geshur in Syria was apparently distinct from the last named. It was governed by a petty king of its own, to whose protection Absalom fled after the murder of his brother Amnon (2 *Sam.* xiii. 37, 38, xiv. 23), his mother Maacah being daughter to Talmai, king of Geshur. [G. W.]

GESOCRIBATE, a place in Gallia, which appears in the Table as the termination of a road from Juliomagus (*Angers*) through *Nantes*, *Vannes*, Sulim, and Vorgium. Walckenaer takes it to be *Brest*. [BRIVATES.] The first part of this name is the same as the first part of Gesoriacum. [G. L.]

GESONIA. Florus (iv. 12) says that Drusus established more than fifty forts along the banks of the Rhine; and in the next sentence he says, "Bonnam et Gesoniam cum pontibus junxit, classibusque firmavit." Those who think it worth the trouble to see what has been said on this corrupt passage may consult Duker's note. The reading Gesonia is very doubtful; and it is equally doubtful what the true reading is: probably some name ending in *cum*, so that it would be "Bonnam et G.... cum pontibus junxit." Cluverius put Moguntiacum in place of "Gesoniam cum." D'Anville is here misled by trusting, after his fashion, to resemblance of names. He saw on the map a place called *Zons*, as he has it, below *Cologne;* and "it seems that the name *Zons* preserves some analogy to that of Gesonia." [GESORIACUM.] [G. L.]

GESORIACUM or BONO'NIA (*Boulogne*), a place on the NW. coast of Gallia. Mela says (iii. 2): "From the Osismii the face of the Gallic shore looks to the north, and reaches to the Morini, the remotest of the Gallic nations, and it contains nothing that is better known than the port Gesoriacum." This was the port from which the emperor Claudius embarked for Britain. (Suet. *Claud.* c. 17.) A road in the Antonine Itin. passes from Bagacum (*Bavay*), through Castellum (*Cassel*) and Taruenna (*Therouenne*), to Gesoriacum. The Table has the same road, with the remark that Gesogiacum (Gesoriacum) was then called Bononia. Ptolemy (ii. 8. § 3) has "Gesoriacum, a naval place of the Morini," between Portus Itius and the river Tabudas or Tabullas. But *Boulogne* is south of the Itius. Pliny (iv. 16) makes the shortest passage from Gesoriacum to Britain to be 50 M. P.; which is too much, as D'Anville remarks, whether we measure to *Dover* or to *Hythe*, where he erroneously supposed that Caesar landed. But Pliny's measurement is probably made to Rutupiae (*Richborough*), near *Sandwich*, where the Romans had a fortified post, and which was their landing-place from Gallia. This would make Pliny's distance nearer the truth, though still too much. Gesoriacum is also the "Portus Morinorum Britannicum" of Pliny (iv. 23), as appears from his giving the length of Gallia to the Ocean along a line from the Alpes "per Lugdunum ad portum Morinorum Britannicum." There was a district (pagus) round Gesoriacum, named from the town.

Dion Cassius (lx. 21) states that the Roman senate voted that a triumphal arch should be erected in honour of the emperor Claudius on the spot from which he sailed to Britain; and if this is true, it was erected at *Boulogne*, or that was the place where it was intended to be erected. D'Anville follows other writers in supposing that the Pharos or tower which Caligula erected on this coast, whence he menaced an invasion of Britain, was at *Boulogne*. (Suet. *Calig.* c. 45.) But there is no proof of this, except the fact of there having been an old tower at *Boulogne* near the sea up to the end of the seventeenth century. Eginhard, the biographer of Charlemagne, speaks of the emperor repairing this tower, and of its being an ancient construction.

Walckenaer (*Géog., &c.* vol. i. p. 454) observes that there is no historical record of the name Gesoriacum being changed to Bononia; and he presumes that Bononia was the name of another part of the town, or of a town built on the other side of the port. This conjecture "is confirmed by a passage of Florus (iv. 12) which no commentator or editor has understood, and which has often been spoiled by corruptions more or less improbable." He reads the passage thus: "Bononiam et Gessoriacum pontibus junxit, classibusque firmavit." But he does not say what authority he has for "Bononia;" and we have observed [GESONIA] that the other name is uncertain. Any person may see that Florus in this passage is speaking of the Rhine, and not of the coast. Besides, the notion of enumerating among the great exploits of Drusus the making bridges over the *Liane*, the small river of Boulogne, is rather ridiculous. This is not the only instance in which this laborious geographer has discovered what never existed. He adds that in the little place called *Portel*, at the foot of the hill of *Boulogne*, and half a league from the town, there were discovered, at the beginning of the 17th century, a large wall exceedingly hard, three pieces of marble seven feet long, and a sarcophagus of a single piece, well worked; all which he supposes to confirm his conjecture.

Bononia is named Oceanensis on a medal of Constans, to distinguish it from the Bononia of Italy. At this time the name Bononia was probably the only name used; and so Ammianus calls it (xx. 9), and Zosimus (vi. 2), who, however, speaks of it as a city of Lower Germania, though he knew it was on the

coast. Constantine passed over from Britain to Bononia, and this was probably the regular landing-place from Britain since the time of Claudius. It appears, indeed, as the naval station on this coast, for Carausius was set over the fleet at Bononia to protect the Belgic and Armoric shore against the Franks and Saxons. (Eutrop. ix. 21.)

There are no Roman buildings at *Boulogne*. The tower, already mentioned, is entirely gone. It was no doubt a Roman work. Within the present century Roman medals and tombs have been discovered at *Boulogne*, and other remains. [G. L.]

GESSORIENSES, a *civitas Latina*, in the conventus of Tarraco and the province of Hispania Tarraconensis. (Plin. iii. 3. s. 4.) Ukert conjectures that their city stood in the district between the Sicoris and Nucaria, where inscriptions and coins have been found bearing the names AESONENSIS and JESSONENSIS. (Muratori, *Nov. Thes.* p. 1021, nos. 2, 3; Spon. *Misc. Erud. Ant.* p. 188; Cellar. *Not. Orb.* vol. i. pp. 118, 119; Ukert, vol. ii. pt. 1. p. 452.) [P. S.]

GETAE. [DACIA.]

GETHSE'MANE. [JERUSALEM.]

GEVI'NI (Γηουινοί), mentioned by Ptolemy as a population of European Sarmatia (iii. 5. § 24) lying to the north of the Carpiani, and the south of the Bodini (Βωδινοί). *Buchowinia* is as likely a place as any for these Gevini. The name of this locality is generally deduced from *Buch*=*Beech-tree*, so that it=*the land of the beeches*. But the word *Buch* is German; whereas Buchowinia is Slavonic. Now if we allow ourselves to suppose the root *gevin* to be a *geographical* term (i. e. the name of a tract of land), we have a better derivation. No habit is commoner with the Slavic populations than to prefix to a noun denoting a locality the preposition *po* (*bo*)=*on*. Hence *Po-moranía* is the country *on the sea:* a population on the Elbe (in Slavonic, *Laba*) was called the *Po-labingi*. As examples of this kind may be multiplied, the hypothesis that the *Buchowinia* is the country of the population on the *Gevin* (*po-gevin*) becomes allowable. [R. G. L.]

GEZER (Γαζέρ), mentioned in *Josh.* xvi. 10 as a city of the Philistines, tributary to the Israelites of the tribe of Ephraim. (Comp. *Judges*, i. 29.) It was taken and burnt by Pharaoh, king of Egypt, and given to his son-in-law Solomon, who rebuilt it. (1 *Kings*, ix. 15—17.) In the last passage it is joined with Bethoron the nether, with which it also occurs in *Josh.* xvi. 3, where the order shows that it was situated between Bethoron and the coast. Consistently with this, Gazer or Gazara is placed by Eusebius and St. Jerome 4 miles north of Nicopolis [EMMAUS, 2.] (*Onomast. s. v.*) It is probably identical with the Gadaris of Strabo, in the neighbourhood of Jamnia, otherwise called Gadara. (Reland, *Palaest.* pp. 434. 678—680.) [G. W.]

GIBEAH (LXX. Γαβαά: *Eth.* Γαβαθιτης), called also Gibeah of Benjamin (1 *Sam.* xiii. 2) and Gibeah of Saul (1 *Sam.* xi. 4), Γαβαθσαούλη by Josephus, who in one place states its distance 30 stadia from Jerusalem (*B. J.* v. 2. § 1) and in another only 20 (*Ant.* v. 2. § 8). It obtained a bad notoriety in very early times, in the matter recorded in *Judges*, xix. xx., which resulted in its entire destruction. It was the native place of Saul. (1 *Sam.* x. 26, xi. 4.) It was obviously nigh to Ramah (*Judges*, xix. 13), and on the high road to Nablouse between Jerusalem and Ramah. (Comp. Joseph. *B. J. l. c.*) This makes against its identity with the modern village of *Jeba'*, which no doubt marks the site of the ancient Geba, situated as it is on the direct road between Michmash and Jerusalem. (See *Isaiah*, x. 28, 29.) Ramah and Gibeah of Saul were not in the line of march of the invading army from the north, but from their contiguity to it naturally shared in the panic. Gibeah then must be sought to the west of the modern *Jeba'*, and on the direct Nablouse road; and there is a remarkable conical hill, conspicuous from Jerusalem, close to the high road, about the stated distance from the city, which appears to have been occupied by an ancient city, as its modern name indicates. Accordingly, in consistency with the above notices, though inconsistently with himself, Dr. Robinson decides for *Tuleil-el-Fúll* (more properly *Tell-el-Fúll*) as the representative of Gibeah of Saul. (*Theological Review*, vol. iii. p. 645.) [G. W.]

GIBEON (LXX. Γαβαών: *Eth.* Γαβαωνείτης), the metropolis and royal city of the Hivites, strongly fortified; whose inhabitants, having deceived the Israelites under Joshua, were allowed to live under bondage, with their fellow-citizens in Chephirah, Beeroth, and Jirjath-jearim: together with which, it was assigned to the tribe of Benjamin. (*Josh.* ix., x. 2, xviii. 25.) It was a priestly city (*Josh.* xxi. 17), which may account for the tabernacle being placed there, prior to its removal to the temple prepared for it at Jerusalem. (1 *Chron.* xvi. 1. 37—40, xxi. 29; 2 *Chron.* i. 2—6; 1 *Kings*, viii. 4, &c.) "Josephus, in one place, gives the distance of Gabaon from Jerusalem at 50 stadia, and in another at 40 stadia. (*B. J.* ii. 19. § 1, *Ant.* vii. 11. § 7.) Eusebius places Gibeon 4 Roman miles west of Bethel, while the corresponding article of Jerome sets it at the same distance on the east. (*Onomast. s. v.* Γαβαών.) The text of Jerome is here probably corrupted." (Robinson, *Bib. Res.* vol. ii. p. 137. n. 2.) Its site is fixed by *Josh.* x. 10, 11, where the Philistines, on their rout at Gibeon, retreat to the plain by Bethoron. (Comp. Joseph. *B.J.* ii. 19. § 1.) Accordingly, on the camel-road between Jaffa and Jerusalem, by way of Lydda and the two Bethorons, we find a modern village named *el-Jib*, situated on a rocky eminence, and exhibiting traces of an ancient city. It is distant from Jerusalem about 2½ hours, by the nearest route, which would equal 60 stadia. It has a fine fountain of water, which discharges itself into a cave excavated so as to form a large subterranean reservoir, near which are the remains of another open reservoir, about 120 feet in length by 100 in breadth, doubtless intended to receive the superfluous waters of the cavern. (Robinson, *Bib. Res.* vol. ii. pp. 136—138.) This may be the Pool of Gibeon (2 *Sam.* ii. 13), called in *Jeremiah* "the great waters in Gibeon" (xli. 12). [G. W.]

GIBLITES. [BYBLOS.]

GIFIL (Jornand. *de Get.* 22; Gilpit, *Geog. Rav.*), a river of Dacia, which has not at present been identified. [E. B. J.]

GIGLIUS (τὸ Γίγλιον ὄρος, vulgo Γίγιον), a mountain in the interior of Cyrenaica. (Ptol. iv. 3. § 20.) [P. S.]

GIGO'NIS PROM. (Γίγωνις ἄκρα, *Etym. Mag. s. v.* Ἠγωνίς, Ptol. iii. 13. § 23), a promontory on the coast of the Crossaea, in Macedonia, with a town GIGONUS (Γίγωνος, Steph. B.), to which the Athenian force, which had been employed against Perdiccas, marched in three days from Beraea. (Thuc. i. 61.) It appears, from the order of the names in Herodotus (vii. 123), that it was to the S. of Cape Aeneium, the great *Karaburnú;* hence its situation

was nearly that of Cape *Apanomi*. (Leake, *Northern Greece*, vol. iii. p. 452.) [E. B. J.]

GIGONUS. [GIGONIS PROM.]

GIGURRI. [ASTURES.]

GIHON. [JERUSALEM.]

GILBOA MONS (Γελβουὲ ὄρος), a low mountain district to the south-east of the plain of Esdraelon, situated in the tribe of Issachar, infamous for the defeat of the Israelites under Saul and Jonathan, by the Philistine hosts. (1 *Sam.* xxviii. 4, xxxi.) From this fact they are called ὄρη ἀλλοφύλων (alienigenarum montes) by Eusebius, who places them six miles from Scythopolis, where a large village named Gelbus (Γελβοῦς) existed in his day. This village still exists, under the name of *Jelbôn*, and serves to identify the mountain tract which it occupies as the Mount Gilboa of Scripture. The road from *Beisan* (Scythopolis) to *Jenîn* passes near this village, and over the mountains. (Robinson, *Bib. Res.* vol. iii. pp. 157, 170.) The village of *Jelbûn*, however, "lies south of Takooah, on the western declivity of Mount Gilboa, and not on the east side, as it is marked in Robinson's map." (Dr. Schultz, in Williams, *Holy City*, vol. i. p. 469.) [G. W.]

GILEAD. [PALAESTINA.]

GILGAL (Γάλγαλα, LXX.; Γολγών and Γαλγάν, Euseb.), the first station of the Israelites after crossing the Jordan, and, therefore, between Jericho and that river, "in the east border of Jericho." (*Josh.* iv. 19.) It was here that the twelve stones taken out of the bed of the Jordan were deposited, that the first passover was celebrated in the promised land, and the ordinance of circumcision renewed, from which last circumstance the place derived its name. "This day have I rolled away the reproach of Egypt from off you; wherefore, the name of the place is called Gilgal (i. e. *rolling*) unto this day." (v. 9.) It seems to have been the head-quarters of Joshua during the subjugation of the land (ix. 6, x. 6. 43), and was probably invested with a sacred character from that time forward: for there Samuel judged, in his annual circuit (1 *Sam.* vii. 16); there he publicly inaugurated the kingdom (xi. 14, 15); and there he commanded Saul to await his arrival, when he should come to offer sacrifice (x. 8. xiii. 4, &c.). According to Eusebius, it was 2 miles from Jericho (*Onomast. s. v.*); but Josephus, with greater show of accuracy, places it 10 stadia from Jericho, and 50 from the Jordan (*Ant.* v. 1. § 4). It was a desert place in the time of Eusebius, but regarded with great veneration by the inhabitants of the country. No traces of an ancient city can now be discovered between the site of Jericho, which is clearly identified, and the river. It may be doubted whether the Gilgal mentioned in 2 *Kings*, ii. 1, where there was a school of the prophets (iv. 38), is identical with the one above noticed. Eusebius alludes to another in the vicinity of Bethel (*s. v.*), whose site is still marked by the large modern village of *Jilgîlia*, to the left of the *Nablûs* road, about 2 hours north of Bethel. (Robinson, *Bib. Res.* vol. iii. 81, 82.) This is possibly the Gilgal mentioned in *Deut.* xi. 29, 30, in the vicinity of Mounts Ebal and Gerizim; a notable difficulty, which Eusebius and St. Jerome propose to solve by transferring these mountains to the banks of the Jordan. Another modern village of the same name near the coast, a little south of Antipatris, seems to indicate the site of a third town of the same name. Dr. Robinson thinks that "the Gilgal of *Nehemiah*, xii. 29 and of 1 *Macc.* ix. 2 may be referred to the place so called in the western plain, near Antipatris. (*Bib. Res.* vol. ii. p. 287. n. 3.) [G. W.]

GILIGAMMAE (Γιλιγάμμαι, Herod. iv. 169; Γιλιγάμβαι, Steph. B. *s. v.*), a Libyan people, who dwelt originally on the N. coast of Libya, W. of the ADYRMACHIDAE, as far as the island of Aphrodisias, W. of the port of Cyrene; but were afterwards pushed back by the Greek settlers to the inner parts of Marmarica and Cyrenaica. [P. S.]

GINDANES (Γίνδανες or Γινδᾶνες), a Libyan people, who dwelt W. of the MACAE, and S. of the Tripolis in the Regio Syrtica; and of whose customs some curious particulars are given by Herodotus (iv. 176; Steph. B. *s. v.*). [P. S.]

GINDARUS (Γίνδαρος), a city of the Syrian district of CYRRHESTICA; an acropolis, and resort of robbers, according to Strabo (p. 751.) Ptolemy, however, places a city of this name in the district of Seleucis (v. 15). [G. W.]

GIR FL.; GIRA METROPOLIS. [LIBYA.]

GIRBA. [MENINX.]

GIRGASHITES (Γεργεσαῖοι), one of the seven idolatrous nations descended from Canaan (*Gen.* x. 16), and dispossessed by the children of Israel (*Josh.* xxiv. 11). They do not occur in the lists in *Exodus*, iii. 8, 17, or *Deuteronomy*, xx. 17; nor is there any indication of their position in Palaestine. Dr. Wells supposes them to have been a family of the tribe of the Hivites; as in nine out of ten places where the nations of Canaan are reckoned they are omitted, while in the tenth, where they are inserted, the Hivites are omitted. [G. W.]

GIRGIRI M. (τὸ Γίργιρι ἢ Γίργυρις ὄρος), a mountain of Libya Interior, above the Regio Syrtica, containing the sources of the river CINYPS. (Ptol. iv. 6. §§ 11, 17.) It is probably the Mons Gyri of Pliny (v. 5) and the GRATIARUM COLLIS of Herodotus. [P. S.]

GITANAE, a town of Epirus, described by Livy as being near Corcyra, and about 10 miles from the coast. (Liv. xlii. 38.) It is not mentioned by any other ancient writer, and it has therefore been conjectured that the word is a corrupt form of Chyton, which Ephorus spoke of as a place in Epirus colonised by the Clazomenii. (Steph. B. *s. v.* Χυτόν; Leake, *Northern Greece*, vol. i. p. 76.)

GITTITES (Γεθαῖος), the ethnic of Gath. (2 *Sam.* vi. 10, 11, xxi. 19.) [GATH.]

GLANDIMA'RIUM. [GALLAECIA.]

GLANIS. [CLANIS.]

GLANNIBANTA, in Britain, the form in the Notitia of Clanoventum. [CLANOVENTUM.] [R.G.L.]

GLANUM (Γλανόν: *Eth.* Glanicus), is one of the five towns which Ptolemy (ii. 10. § 15) mentions in the country of the Salyes in Gallia Narbonensis. Pliny (iii. 4) enumerates it among the Oppida Latina of Narbonensis, and calls it Glanum Livii, a name due, as it is supposed, to Livius Drusus, who settled a colony here about B. C. 4. Glanum is placed in the Antonine Itin. on a road from Cabellio (*Cavaillon*) to Arelate (*Arles*): it is 16 M. P. from Cabellio to Glanum, and 12 from Glanum to Ernaginum. [ERNAGINUM.] The Table has the same route and the same names,—but it makes 12 M P. from Cabellio to Glanum, and 8 from Glanum to Ernaginum; and these distances appear to be correct. Glanum is the village of *St. Remi*, which is proved by an inscription found there with the words "Reipublicae Glanicorum" on it. The exact site of Glanum is above a mile south of *St. Remi*, near which there are at present, in a good state of

preservation, a Roman mausoleum, and also a Roman triumphal arch, which are engraved in several works. (*Mém. de l'Acad.* tom. vii. p. 263; Millin, *Voyage dans les Départ. Méridionaux*, tom. iii. p. 394. pl. 63. fig. 1.)

The triumphal arch is much damaged. The lower part contains eight columns, two on each side of the arch, or four on each front; and four bas-reliefs without inscriptions: the figures, which are above six feet high, represent captives chained, men and women; only two heads are entire. A garland of leaves and fruits, sculptured with great skill, ornaments the archivolt. In the intercolumniations there are the remains of consoles, which, it is supposed, supported statues. The building, which is called a mausoleum, is about 60 feet high, resting on a square base formed of large stones, and consisting of three stories or stages. The lowest is a quadrangular stylobate, on the upper part of each face of which is a bas-relief. The next stage, which is also square in the plan, has four open faces, and fluted pillars engaged, with Corinthian capitals. The third stage rests on a circular basement, above which are ten fluted columns with Corinthian capitals, surmounted by an entablature, above which is a kind of dome. This third stage is a kind of little temple, with open spaces between the columns. The friezes and the archivolts are ornamented with bas-reliefs. There were two male figures in this little temple clothed with the toga, which used to rest against the columns, where they had fallen or been thrown down. They have been set again on their base, and the heads have been restored; but, as generally happens, the heads make a miserable contrast with the rest of the figures. It is generally supposed that this building is a tomb, though some writers deny it. But it has the following inscription, as reported in a recent work: SEX. L. M. IVLIEI C. F. PARENTIBVS. SVEIS. The three names appear to be Sextus, Lucius, and Marcus named Julii; and the C. F. signify "curaverunt faciendum." It is, therefore, clearly a monumental building. On Italian sepulchral inscriptions "fecerunt" or "fecit" is the common expression; but "faciendum curaverunt" also occurs. (Fabretti, *Inscr. Ant., &c.*, Romae, 1699, p. 358, &c.) Perhaps some careless copier of the inscription has put the C. before the F. It is a conclusion of some French writers, which must be rejected, that the Julii who erected this monument were connected by blood or alliance with the Roman Julii. Some even conclude that it was erected in honour of the dictator Caesar and of Augustus. They further conclude, without their premises, that it was erected in the first century of the Christian aera, and that the bas-reliefs represent the conquests of Caesar in Gallia. It was usual for Galli to take the names of their Roman patrons; and these Julii may be Galli whose ancestors had received some favour from the dictator, and probably the Roman citizenship. The style of the edifice certainly shows that it does not belong to a late period of the empire; and that is all that we can say.

A silver coin of Glanum is mentioned, with the stamp of Massilia and the legend Γλανικων, from which we may conclude that this place was at some time dependent on Massilia. (D'Anville, *Notice, &c.*; Walckenaer, *Géog., &c.* vol. ii. p. 214; Ukert, *Gallien*, p. 435; Richard et Hocquart, *Guide du Voyageur, &c.*) [G. L.]

GLA'PHYRAE (Γλαφυραί), a town of Thessaly, mentioned by Homer along with Boebe and Iolcos (*Il.* ii. 712; comp. Steph. B. *s. v.*), but of which the name does not subsequently occur. Leake conjectures that it is represented by the Hellenic ruins situated upon one of the hills above the modern village of *Káprena*, between Boebe and Iolcos. The entire circuit of the citadel on the summit of the hill may be traced, and on its lower side part of the wall is still standing. (Leake, *Northern Greece*, vol. iv. p. 432.)

GLAUCANITAE, or GLAUSAE (Γλαυκανῖται, or Γλαῦσαι, Arrian, v. 20), the name of a people conquered by Alexander during his Indian expedition. They appear to have lived near the banks of the Hydaspes. Alexander gave their country to Porus. Arrian says that the name is written Glaucanicae by Aristobulus, and Glausae by Ptolemy. [V.]

GLAUCONNE'SUS. [EUBOEA, p. 872, a.]

GLAUCUS (Γλαῦκος). There are no less than four rivers of this name in Asia Minor: 1. A tributary of the Phasis in Colchis, now called *Tchorocsou*. (Strab. xi. p. 498; Plin. vi. 4.) 2. One of the two small rivers by the union of which the Apsorrhus or Acampsis, in Pontus, is formed. (Ptol. v. 6. § 7.) 3. A tributary of the Maeander in Phrygia, not far from Eumeneia. (Plin. v. 29.) There are coins with the name of this river. (Leake, *Asia Minor*, p. 157.) 4. A river in Lycia, on the frontier of Caria, which empties itself into the bay of Telmissus, whence that bay is sometimes called *Sinus Glaucus*. (Plin. vi. 29; Quint. Smyrn. *Posthom.* iv. 6, foll.; Strab. xiv. p. 651.) The modern name of the bay is *Makri*. Steph. B. mentions a δῆμος Γλαύκου, which was probably a place on the banks of the river. [L. S.]

GLAUCUS, a river of Achaia. [ACHAIA, p. 13, b.]

GLESSARIA INSULA. [AUSTERAVIA.]

GLINDITIONES, a people or town of Illyricum (Plin. iii. 22), probably represented by *Ljubinje* in the *Herzegowina*. [E. B. J.]

GLISAS (Γλίσας or Γλίσσας: *Eth.* Γλισάντιος), an ancient town of Boeotia, mentioned by Homer in the same line with Plataea (*Il.* ii. 504), and celebrated in mythology as the place where the Epigoni fought against the Thebans, and where the Argive chiefs were buried who fell in the battle. (Paus. i. 44. § 4, ix. 5. § 13, ix. 8. § 6, ix. 9. § 4, ix. 19. § 2.) Pausanias, in his description of the road from Thebes to Chalcis, says that Glisas was situated beyond Teumessus, at the distance of seven stadia from the latter place; that above Glisas rose Mount Hypatus, from which flowed the torrent Thermodon. (Paus. ix. 19. § 2.) Strabo (ix. p. 412) places it on Mt. Hypatus, and Herodotus (ix. 43) describes the Thermodon as flowing between Glisas and Tanagra. Leake identifies Glisas with the ruins on the bank of the torrent of *Platanáki*, above which rises the mountain of *Siamatá*, the ancient Hypatus. (Leake, *Northern Greece*, vol. ii. p. 250.)

GLOTA. [CLOTA.]

GLYCYS LIMEN. [ACHERON, p. 19, a.]

GLY'PPIA or GLY'MPIA (Γλυπτία, Paus. iii. 22. § 8), a village of Laconia, situated near the frontiers of Argolis. Glyppia is the name in Pausanias, who simply describes it as situated in the interior above Marius. It appears to be the same place as the fortress called Γλυμπεῖς by Polybius, who places it near the borders of the Argeia and Laconia, and who relates that the Messenians were defeated here in B. C. 218 by the Spartans, when they were endeavouring, by a round-about march

from Tegea, to penetrate into the southern valley of the Eurotas. (Polyb. v. 20.) It is also mentioned on another occasion by Polybius (iv. 36). The ancient town is probably represented by the Hellenic remains at *Lympiáda*, which is probably a corruption of the ancient name. The district south of *Lympiáda* is called *O'lympo-khória*, which name would seem to indicate that one of the mountains in the neighbourhood bore the name of Olympus in ancient times. Leake indeed conjectures that Γλυμπία was the ancient local form of 'Ολυμπία, and consequently that *Lympiáda* and *O'lympo-khória* may both originate in the same ancient name Olympia having the local form of Glympia. (Boblaye, *Recherches, &c.* p. 362; Leake, *Peloponnesiaca*, p. 362; Curtius, *Peloponnesos*, vol. ii. p. 303.)

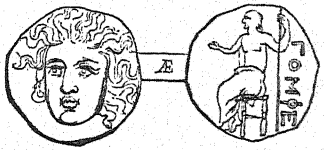
GNOSUS, GNOSSUS. [CNOSUS.]

GOBAEUM (Γόβαιον ἄκρον), is placed by Ptolemy (ii. 8. § 1) in Gallia Lugdunensis, and it is the most western part of Gallia. D'Anville concludes that it is *Finistère* or *Mahé*, commonly called *Pointe St. Mathieu*. It is certainly some point between the *Pointe de Penmarche* and the place where the French coast turns east. Gossellin and others make it the cape on which stands the light of *Audierne*, and which terminates on the east the road of *Gob-estan*. In such a case as this the name helps to a probable conclusion. [G. L.]

GOBANNIO, in Britain, mentioned in the 12th Itinerary, probably=Aber-*gavenny* in Wales. [R.G.L.]

GOGANA (Γώγανα, Arrian, *Ind.* c. 38), a small place on the coast of Persis, to which the fleet of Nearchus came, at the mouth of a small stream or torrent called the Areon. It is now called *Konkún*. (Vincent, *Voy. of Nearchus*, vol. i. p. 385.) [V.]

GOGARE'NE (Γωγαρηνή), a canton of Armenia, which Strabo (xi p. 528) places to the N. of the Cyrus. It is the same as the Armenian *Koukar* or *Kowkark'h*, and is represented by the modern *Akhalskhaï*, lying between *Guria*, *Imiretia*, *Georgia*, and the river *Jorák*. St. Martin (*Mém. sur l'Armenie*, vol. i. p. 81) corrects the reading 'Ωθαρηνοί in Stephanus of Byzantium (*s. v.*) into Γωγαρηνοί. [E. B. J.]



GOLGI (Γολγοί: *Eth.* Γόλγιος, Γολγία, Γολγηΐς, Steph. B.), a town of Cyprus, famous for the worship of Aphrodite (Theocr. xv. 100; Lycophr. 589; Catull. xxxvi. 15, *Nupt. Pel. et Thet.* 96), which, according to legend, had existed here even before its introduction at Paphos by Agapenor. (Pausan. viii. 5. § 2.) The town is mentioned by Pliny (v. 35); but its position is not known. (Engel, *Kypros*, vol. i. p. 145, vol. ii. p. 81.) [E.B.J.]

GOLGOTHA MONS. [JERUSALEM.]

GOLOE. [CABYLE.]

GOMPHI (Γόμφοι, Strab. ix. p. 437; Steph. B. *s. v.*: *Eth.* Γομφός, Γομφεύς, Gomphensis), a town of Histiaeotis in Thessaly, situated upon a tributary of the Peneius, and near the frontiers of Athamania and Dolopia. Its position made it a place of historical importance, since it guarded two of the chief passes into the Thessalian plains: "that of *Musáki*, distant two miles, which was the exit from Dolopia, and the pass of *Portes*, at a distance of four miles, which led into Athamania, and through that province to Ambracia." (Leake, *Northern Greece*, vol. iv. p. 521.) In the war against Philip, Amynander, king of the Athamanes, in co-operation with the Roman consul Flamininus, having descended from the latter pass ("Fauces angustae, quae ab Athamania Thessaliam dirimunt"), first took Pheca, a town lying between the pass and Gomphi, and then Gomphi itself, B. C. 198. The possession of this place was of great importance to Flamininus, since it secured him a communication with the Ambracian gulf, from which he derived his supplies. The route from Gomphi to Ambracia is described by Livy as very short but extremely difficult. The capture of Gomphi was followed by the surrender of the towns named Argenta, Pherinum, Thimarum, Lisinae, Stimo, and Lampsus, the position of which is quite uncertain. (Liv. xxxii. 14, 15.) When Athamania revolted from Philip in B. C. 189, he marched into their country by the above-mentioned pass, but was obliged to retire with heavy loss. (Liv. xxxviii. 2.) There can be no doubt that it was by the same route that the Roman consul Q. Marcius Philippus marched from Ambracia into Thessaly in B. C. 169. (Liv. xliv. 1.) In the campaign between Caesar and Pompey in B. C. 48, the inhabitants of Gomphi, having heard of Caesar's repulse at Dyrrhachium, shut their gates against him, when he arrived at the place from Aeginium; but he took the place by assault in a few hours. Caesar, in his account of these events, describes Gomphi as the "first town in Thessaly to those coming from Epirus." (Caes. *B. C.* iii. 80; Appian, *B. C.* ii. 64; Dion Cass. xli. 51.)

The Greek geographer Meletius placed Gomphi at *Stagús*, but, from an inscription found at *Stagús*, it is clear that this is the site of Aeginium. [AEGINIUM.] Leake, however, has shown that Gomphi is represented by *Episkopí*, which is the name of an uncultivated height lying along the left bank of the *Bliúri*, at a distance of two or three miles from the mountains. On this height there are still some remains of the ancient town. The modern name is owing to the fact of Gomphi having been a bishopric in later times. (Hierocl. p. 642.) Leake places Pheca at a small village called *Bletzi*, midway between the hill of *Episkopí* and the pass of *Portes*. (Leake, *Northern Greece*, vol. iv. p. 519. seq.)

COIN OF GOMPHI.

GO'NGALAE. [LIBYA.]

GO'NGYLUS. [SELLASIA.]

GONNO-CONDYLON. [CONDYLON.]

GONNUS or GONNI (Γόννος, Herod., Strab., Γόννοι, Polyb., Steph. B.: *Eth.* Γόννιος, also Γούνιος, Γονατᾶς, Steph. B. *s. v.*), an ancient town of the Perrhaebi in Thessaly, which derived its name, according to the later Greek critics, from Gonneus, mentioned in the Iliad. (*Il.* ii. 748; Steph. B. *s. v.* Γοννοί.) Its position made it one of the most important places in the north of Thessaly. It stood on the northern side of the Peneius, near the entrance of the only two passes by which an enemy can penetrate into Thessaly from the north. The celebrated vale of Tempe begins to narrow at Gonni; and the pass across Mt. Olympus a little to the west of Tempe leads into Thessaly at Gonni. It was by the latter route that the army of Xerxes entered Thessaly. (Herod. vii. 128, 173.) The position of Gonni with respect to Tempe is clearly shown by

the numerous passages in which it is mentioned by Livy. After the battle of Cynoscephalae, in B. C. 197, Philip fled in haste to Tempe, but halted a day at Gonni, to receive such of his troops as might have survived the battle. (Liv. xxxiii. 10; Polyb. xviii. 10.) In the war against Antiochus, in B. C. 191, when the king, having marched from Demetrias, had advanced as far north as Larissa, a portion of the Roman army under the command of App. Claudius marched through the pass across Mt. Olympus, and thus arrived at Gonni. On this occasion Livy says that Gonni was 20 miles from Larissa, and describes it as situated "in ipsis faucibus saltus quæ Tempe appellantur." (Liv. xxxvi. 10.) In B. C. 171 it was strongly fortified by Perseus; and when this monarch retired into Macedonia, the Roman consul Licinius advanced against the town, but found it impregnable. (Liv. xlii. 54, 67.) Gonni does not occur in history after the wars of the Romans in Greece, but it is mentioned by Strabo (ix. p. 440; Ptol. iii. 13. § 42).

The site of Gonni is fixed by Leake at a place called *Lykóstomo*, or the "Wolf's Mouth," in the vale of *Dereli*, at the foot of a point of Mt. Olympus, about a mile from the Peneius. Here are some remains of a Hellenic city, mixed with other ruins of a later date. It would therefore appear that the town of LYCOSTOMIUM (Λυκοστόμιον), which occurs in Byzantine history as early as the eleventh century (Cantacuz. ii. 28, iv. 19), was built upon the site of Gonni. (Leake, *Northern Greece*, vol. iv. p. 388.)

GONOESSA, GONUSSA. [PALLENE.]

GOPHNA (Γόφνα, Joseph.; Γούφνα, Ptol.), a town of Palaestine, situated in the country of Benjamin. It gave its name to one of the ten toparchies (Γοφνιτικὴ τοπαρχία, Joseph. *B. J.* iii. 3. § 5; "toparchia Gophnitica," Plin. v. 14). Josephus reckons it second in importance to Jerusalem, and usually joins it with Arcabatta. It was one of four cities taken by Cassius and reduced to slavery (*Ant.* xiv. 11. § 2), but restored to freedom by a decree of Marcus Antonius, after the battle of Philippi (12. §§ 2, 3). It was taken by Vespasian in his last campaign in Palaestine (*B. J.* iv. 9. § 9), and, as Titus marched on Jerusalem by way of Caesareia and Samaria, he passed through Gophna (v. 2. § 1). Eusebius makes it the Φάραγξ Βότρυος, Vallis Botri, or Eshcol of Holy Scripture,—its name being identical in signification,—(from אֶשְׁכֹּל, *a vine*), which proves the fertility of the place in his days. He places it 15 miles from Jerusalem, on the road to Neapolis (*Nablouse*), in near agreement with the Peutinger Tables, which state the distance at 16 miles. The site is still marked by an inconsiderable Christian village, retaining its ancient name unchanged, pronounced by the natives *Jufna*. It is situated in a deep basin formed by the concurrence of several valleys, and surrounded on all sides by hills. Considerable traces of the Roman road between this town and Jerusalem, are to be seen to the south of the village. The soil around is remarkably fertile, and its grapes are celebrated throughout the country. (Robinson, *Bib. Res.* vol. iii. pp. 77—79.) [G. W.]

GORDIUM (Γόρδιον), a town of Bithynia, a little to the north of the river Sangarius, was in later times called Juliopolis. This city must have been of considerable antiquity, having been the residence of the ancient Phrygian kings; but in the time of Strabo (xii. p. 568) it had sunk to the condition of a mere village it appears, however, that it was rebuilt and enlarged in the time of Augustus under the name of Juliopolis, and thenceforth it continued to flourish for several centuries. (Strab. *l. c.* p. 574; Polyb. xxii. 20; Liv. xxxviii. 18; Plin. v. 42; Ptol. v. 1. § 14.) In the time of Justinian it had suffered from the inundations of the river Scopas, and was therefore repaired by that emperor. (Procop. *de Aed.* v. 4.) Gordium is celebrated in history as the scene of Alexander's cutting the famous Gordian knot. This adventure took place in the acropolis of the town, which had been the palace of king Gordius. (Arrian, *Anab.* i. 29, ii. 3; Q. Curt. iii. 1, 12; Justin, xi. 7.) [L. S.]

GORDIUTI'CHOS (Γορδίου τεῖχος), a town in Caria, one day's march from Antioch. (Liv. xxxviii. 13.) Steph. B. says that it was founded by Gordius, a son of Midas, whence it must once have belonged to Phrygia. [L. S.]

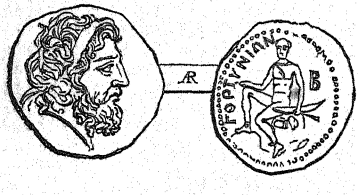
GORDYE'NE, GORDYE'NI. [CORDYENE.]

GORGON or URGO (Γοργόνη, Ptol. iii. 1. § 78: *Gorgona*), a small island in the Tyrrhenian sea, between the coast of Etruria and Corsica, and distant about 20 miles from the mainland. Its name is written Urgo by Pliny and Mela; but Rutilius, who describes it in his poetical itinerary, calls it Gorgon, and this form is confirmed by the authority of Ptolemy (*l. c.*), as well as by its modern name of *Gorgona*. (Plin. iii. 6. s. 12; Mel. ii. 7. § 19; Rutil. *Itin.* i. 515.) It is a small island, only about 8 miles in circumference, but elevated and rocky, rising abruptly out of the sea, which renders it a conspicuous object from a distance. Between it and the port of *Livorno* is the islet of *Meloria*, a mere rock, which is supposed to be the Maenaria of Pliny. [E. H. B.]

GO'RGYLUS. [LACONIA.]

GORNEAS, a fortress in the north of Armenia (Tac. *Ann.* xii. 45), which D'Anville identifies with *Khorien*. [E. B. J.]

GORTYN, GORTYNA (Γορτύν, Γόρτυνα: *Eth.* Γορτύνιος), a town of Crete which appears in the Homeric poems, under the form of Γορτύν (*Il.* ii. 646, *Od.* iii. 294); but afterwards became usually Γόρτυνα (comp. Tzchuck *ad Pomp. Melam*, vol. iii. pt. ii. p. 811), according to Steph. B. (*s. v.*) it was originally called Larissa (Λάρισσα) and Cremnia (Κρήμνια).



This important city was next to Cnossus in importance and splendour; in early times these two great towns had entered into a league which enabled them to reduce the whole of Crete under their power; in after-times when dissensions arose among them they were engaged in continual hostilities (Strab. x. p. 478). It was originally of very considerable size, since Strabo (*l. c.*) reckons its circuit at 50 stadia; but when he wrote it was very much diminished. He adds that Ptolemy Philopator had begun to enclose it with fresh walls; but the work was not carried on for more than 8 stadia. In the Peloponnesian War, Gortyna seems to have had relations with Athens. (Thuc. ii. 85). In B. C. 201, Philopoemen, who had been invited over by the inhabitants, assumed the command of the forces of Gortyna. (Plut. *Philop.* 13.) In B. C. 197, five hundred of the Gortynians, under their commander, Cydas, which seems to have been a common name at Gortyna, joined Quinctius Flamininus in Thessaly (Liv. xxxiii. 3.)

Gortyna stood on a plain watered by the river Lethaeus, and at a distance of 90 stadia from the Libyan Sea, on which were situated its two harbours, Lebena and Metallum (Strab. *l. c.*), and is men-

tioned by Pliny (iv. 20), Scylax (p. 19), Ptolemy (iii. 17. § 10), and Hierocles, who commenced his tour of the island with this place.

In the neighbourhood of Gortyna, the fountain of Sauros is said to have been surrounded by poplars which bore fruits (Theophrast. *H. P.* iii. 5); and on the banks of the Lethaeus was another famous spring, which the naturalists said was shaded by a plane-tree, which retained its foliage through the winter, and which the people believed to have covered the marriage-bed of Europa and the metamorphosed Zeus. (Theophrast. *H. P.* i. 15; Varr. *de Re Rustic.* i. 7; Plin. xii. 1.)

The ruins of Gortyna, as they existed previously, have been described more or less diffusely by various writers (Belon, *Les Observ. des plus Singul.* p. 8; Tournefort, *Voyage du Lévant*, pp. 58—64; Pococke, *Trav.* vol. ii. pt. i. pp. 252—255; Savary, *Lettres sur la Grèce*, xxiii.); their statements, along with the full account of the Venetian MS. of the 16th century, will be found in the *Museum of Classical Antiquities*, vol. ii. pp. 277–286. The site of Gortyna cannot, till the survey of the island is completed, be made out, but Mr. Pashley (*Trav.* vol. i. p. 295) has placed it near the modern *Haghius Dhéka*, where the ten Saints of Gortyna, according to tradition, suffered martyrdom in the reign of Decius (comp. Cornelius, *Creta Sacra*, vol. i. pp. 156—166). In this neighbourhood is the cavern which Mr. Cockerell (Walpole, *Memoirs*, vol. ii. pp. 402—406) has conjectured to be the far-famed labyrinth; but as the ancients, with the exception of Claudian (*Sext. Cons. Hon.* 634), who, probably, used the name of the town as equivalent to Cretan, are unanimous in fixing the legend of the Minotaur at Cnossus, the identification must be presumed to be purely fanciful. The coins of Gortyna are of very ancient workmanship. Besides the autonomous, there are numerous imperial coins, ranging from Augustus to Hadrian. (Eckhel, vol. ii. p. 312; Sestini, p. 82.) [E. B. J.]

COIN OF GORTYNA.

GORTY'NIA (Γορτυνία, Γορδονία: *Eth.* Γορδυνιάτης, Steph. B.; Γορδηνία, Γορδουνία, Ptol. iii. 13. § 39), a place in Macedonia which the host of Sitalces passed in their march between Idomene and the plains of Cyrrhus and Pella (Thuc. ii. 100). Hence its position must be looked for in the upper valley of the river Axius. (Leake, *Northern Greece*, vol. iii. p. 444.) [E. B. J.]

GORTY'NIUS. [Gortys.]

GORTYS, or GORTYNA (Γόρτυς, Paus, viii. 27. § 4; Γόρτυνα, Paus. v. 7. § 1, Pol. iv. 60. § 3, Plin. iv. 6. s. 10), a town of Arcadia in the district Cynuria, situated near the river Gortynius (Γορτύνιος), also called Lusius (Λούσιος) nearer its sources, which was a tributary of the Alpheius, and was remarkable for the coldness of its waters. The town is said to have been founded by Gortys, a son of Stymphalus, and is described by Pausanias as a village in his time, though it had formerly been a considerable city. Most of its inhabitants were removed to Megalopolis upon the foundation of the latter city in B. C. 371; but it must have continued to be a place of some importance, since Polybius says that it was taken by Euripidas, the general of the Eleians, in the Social War, B. C. 219. At that time it was subject to Thelpusa. It contained a celebrated temple of Asclepius, built of Pentelic marble, and containing statues of Asclepius and Hygieia by Scopas. Cicero alludes to this temple, when he says (*de Nat. Deor.* iii. 22) that near the river Lusius was the sepulchre of one of the Aeculapii, of whom he reckoned three. Its ruins are seen upon a height near the village of *Atzi'kolo*. There are still remains of its principal gate and of its walls, consisting of polygonal masonry. (Paus. v. 7. § 1, viii. 4. § 8, viii. 27. § 4, 28. §§ 1, 2; Pol., Plin. *ll. cc.*; Leake, *Morea*, vol. ii. p. 24, *Peloponnesiaca*, p. 233; Curtius, *Peloponnesos*, vol. i. p. 349, seq.)

GORYA (Γώρυα, Ptol. vii. 1. § 43), the capital of the small district of Goryaea (Γωρυαία, Ptol. vii. 1. § 42), in the country at the foot of the *Hindu-Kush*, to the N. of the *Panjáb*, on the banks of the Suastus, one of the tributaries of the Cophes, or River of Cábul. The Suastus is, doubtless, the *Suvastu*, or *Suwad* (Lassen's *Karte v. Alt-Indien*). There is a manifest connection between this place and its territory and the Guraei and Guraeus, and there can be hardly any doubt that they refer to the same people and localities. In Arrian (iv. 25), Alexander crosses the Guraeus (Γουραῖος) with some difficulty, and passes through the country of the Guraei (Γουραῖοι), on his way to attack the Assaceni or Aspasii (*Açvaka.*) Here the Suastus and Guraeus are probably the same, and, as Forbiger suggests, only other names for the Choaspes or *Khonár*, one of the tributaries of the Cophes or *Cábul* river from the north. In another place, Arrian distinguishes the two rivers; stating that the Cophes flowed into Peucelaotis, carrying with it its tributaries, the Malamantus, Soastus, and Garoea (Γαρόια, Arrian, *Ind.* c. 4). In Lassen's Map appears a stream called the *Gauri*, to the W. of the *Súvastú*, which probably represents the position of this stream and people. In the Mahábhárata are found Súvastú, Gâuri, and Campaná—rivers of this part of the country; the second is no doubt the Greek Guraeus. Pott suggests another derivation, which seems much less probable (*Etym. Forsch.* p. xlvi.) [V.]

GORYAEA [Gorya].

GORYS (Γώρυς, Strab. xv. p. 697), a small town of Bactriana, near the junction of the Choaspes and Cophes. The passage in Strabo in which the name occurs is very corrupt, and has led to various readings. The older editions read παρὰ Γωρυδάλην πόλιν, and hence made Gorydale the name of the place. The later ones of Coray, Groskurd, and Kramer have παρὰ Γώρυδι ἄλλην πόλιν, which seems to be a preferable reading, and gives Gorys for the name of the place. The similarity of the sound, and the neighbourhood of the place, suggest a connection between it and Gorya. [V.]

GOTHI, GOTONES, GOTHONES, GUTAE, GUTTONES (Γόθοι, Γόττοι, Γοῦθοι, Γύθωνες), a tribe of Germans, noticed even by Pytheas of Marseilles, in his account of the coasts of the Baltic. (Plin. xxxvii. 2.) According to him, they dwelt about the Aestuarium Oceani Mentonomon

(the *Frische Haff*). Tacitus (*Germ.* 43), who places them beyond the Lygii, that is, on the north-east of them, points to the same district, though he does not intimate that they were inhabitants of the coast. Ptolemy (iii. 5. § 20) mentions them under the name of Γόθωνες as a Sarmatian tribe, and as dwelling on the east of the Vistula, and in the south of the Venedae or Wends; so that he, too, does not place them on the sea-coast. Strabo (vii. p. 290) speaks of the *Butones* (Βούτωνες) as a tribe subject to king Maroboduus, which agrees with the story of young Catualda, the Goth, in Tacitus (*Ann.* ii. 62). The later form of the name of this people, *Gothi*, does not occur until the time of Caracalla (Spartian. *Carac.* 10. *Antonin. Get.* 6), and approaches the native name of the people, *Gutthiuda*, which is preserved in the Fragments of Bishop Ulphilas.

From the statements above referred to, it is manifest that in the earliest times the Gothi, or Goths, as we shall henceforth call them, inhabited the coast of modern Prussia from the Vistula as far as Braunsberg or Heiligenbeil, where the country of the Venedae commenced. After the time of Tacitus we hear no more of the Goths until the beginning of the third century, when, simultaneously with the appearance of the Alemanni in the west, the Goths are spoken of as a powerful nation on the coasts of the Black Sea. The emperor Caracalla, on an expedition to the East, is said to have conquered the Goths in several engagements (Spartian. *Carac.* 10); Alexander Severus soon discovered that they were most dangerous neighbours of the province of Dacia; for those German tribes on the Lower Danube showed as determined a hostility against the Romans as their brethren on the Rhine. The most formidable of these tribes were the Goths, who now occupied the countries once inhabited by the Sarmatian Getae and Scythians. whence they themselves are sometimes called Getae or Scythians, as, for example, in Procopius, Capitolinus, Trebellius Pollio, and even by their own historian Jornandes. In the reign of the emperor Philippus (A. D. 244—249) they took possession of Dacia, and laid siege to Marcianopolis, the capital of Moesia Secunda, which purchased peace for a large sum of money. (Jornand. *de Reb. Goth.* 16.) Afterwards, however, they again ravaged Moesia: in A. D. 250 they indeed retreated before the army of Decius in the neighbourhood of Nicopolis, on the Danube; but not long afterwards they annihilated the whole Roman army near Philippopolis at the foot of Mount Haemus. (Jornand. *l. c.* 18; Amm. Marc. xxxi. 5.) The Goths now poured down upon Macedonia and Greece, and advanced as far as Thermopylae; but the pass was well guarded, and the invaders were obliged to return northward: in Moesia, however, they defeated Decius a second time, and destroyed his whole army near Abrutum or Forum Trebonii. (Zosim. i. 23; Aurel. Vict. *de Caes.* 29, *Epit.* 29; Syncell. p. 375; Zonar. xii. 20, foll.; Amm. Marc. xxxi. 13.) Meantime the Goths extended more and more on the coast of the Euxine; and having become possessed of a fleet, they sailed in A. D. 253 with a large number of boats against Pityus. Meeting with a powerful resistance there, they raised the siege; but they afterwards returned and took the town. Trapezus experienced the same fate; and in its harbour the barbarians captured a large fleet, with which they sailed away, in A. D. 258. In the following year they undertook a fresh expedition against the Thracian Bosporus, in which they conquered Chalcedon, Nicomedeia, Nicaea, Prusa, Apamea, and Cius. A third expedition, undertaken with a fleet of 500 ships, was still more terrible for the Roman empire. They landed at Cyzicus, which they destroyed; then sailed down the Aegean, and made a descent upon Attica: the whole coast, from the south of Peloponnesus as far as Epirus and Thessaly, was ravaged in a fearful manner, and Illyricum was literally ransacked. At length, apparently tired of their roving expeditions, a portion of the Goths returned through Moesia and across the Danube into their own country, on the north-west of the Euxine: the remainder continued their devastations on the coast of Asia Minor; but afterwards they also returned home. (Zosim. i. 32, foll.; Trebell. Poll. *Gallien.* 5, 6, 13; Jornand. 20; Zonar. xii. 26; Oros. vii. 22; Syncell. p. 382.) But they did not remain quiet for any length of time; for in A. D. 269 they undertook another vast maritime expedition, in which, notwithstanding many reverses in Thrace and on the coast of Asia Minor, they ravaged Crete and Cyprus, and laid siege to Cassandreia and Thessalonica. At length, however, the emperor Claudius, in A. D. 269, gained a brilliant victory over the Goths in three great battles, from which he derived the surname *Gothicus*. (Trebell. Poll. *Claud.* 8, foll.; Zosim. i. 43, foll.; Zonar. xii. 29, foll.) Although only few returned to their own country after these battles, the Gothic tribes still continued to harass the frontiers of the Roman empire under the two successors of Claudius; and Aurelian was even obliged, in A. D. 272, to cede to them the large province of Dacia. (Zosim. i. 48, foll.; Eutrop. ix. 15; S. Ruf. 9; Amm. Marc. xxxi. 6.) There now followed a period of about 50 years, during which the Goths appear to have remained quiet, except that in the reign of Tacitus they made an unsuccessful expedition into Colchis and Asia Minor. (Zosim. i. 53; Vopisc. *Tacit.* 13.) At the time when Constantine had overcome all his enemies, the Goths again came forward against the Romans, but soon concluded peace. (Zosim. ii. 21; Jornand. 21.) In A. D. 332 their king Araric crossed the Danube: in his first encounter with Constantine he was successful; but in a second engagement he was worsted, and, as his own dominion was invaded by the inhabitants of the Crimea, he concluded a peace. The consequence was, that henceforth, so long as the family of Constantine occupied the imperial throne, that is, till A. D. 363, the Goths never made any attack upon the frontiers of the empire. Their great king Hermanric never made war against the Romans. In the reign of Valens the western portion of the Goths carried on a war against the Romans, which lasted three years (from A. D. 367—369), but in which no decisive battle was fought, and which was terminated by a peace, in which the Goths acted the part of victors. (Amm. Marc. xxxvii. 4, 5; Themist. *Orat.* x. p. 129, foll.) At the time when the Huns invaded Europe from the east, the southern portion of the branch of the Goths, called Visigoths, took refuge in the country on the right of the Danube, imploring the emperor of Constantinople to admit them and protect them against the barbarians; in A. D. 375 they accordingly crossed the Danube under their chiefs, Fridigern and Alavivus, amounting to 200,000. The Ostrogoths, another part of the nation, being refused admission into the Roman empire, took refuge in the mountains with their king Atha-

naric. The Visigoths, when settled in Moesia, were insolently treated by their protectors, in consequence of which they attacked and defeated the Roman general Lupicinus, traversed the neighbouring countries, and, conjointly with the bands of Goths that served in the Roman armies and with others of the Ostrogoths, defeated the Roman army near Adrianople, where the emperor Valens himself lost his life, A. D. 378. The Visigoths then appeared before Constantinople, but without being able to take it, and advanced westward as far as the Julian Alps. In the reign of Theodosius they spread devastation both in the south and in the north; and their hosts, though reduced by many reverses, remained masters of Thrace and Dacia (Jornand. 26), for their numbers were constantly increased by fresh reinforcements from the north, and the court of Constantinople saw no other way of securing itself against their attacks than by forming friendly relations with them, and making them an integral part of the empire. (Oros. vii. 34; Socrat. v. 10; Themist. *Orat.* xvi. p. 252, foll.; Zosim. iv. 56.) Henceforth the Goths were regularly engaged in the service of the Roman empire; but after the death of Theodosius, swarms of Goths, under the command of Alaric, quitted Thrace, advanced unmolested through the pass of Thermopylae towards Thebes and Athens, plundered Argos, Corinth, and Sparta, and then returned to Epirus, where they remained. (Zosim. v. 5, foll. 26.) In the meantime Gaina, another chief in the east, attempted to make himself master of Constantinople and put himself at the head of the empire, but was compelled to withdraw with his army across the Danube. (Zosim. v. 13, foll.; Socrat. vi. 6.) After this Alaric again appears in the service of the empire with the title of *Dux Illyrici*, whence he made an invasion into Italy, but was obliged to withdraw, about A. D. 400. (Claudian, *de Bell. Get.* 535; Jornand. 29; Oros. vii. 37.) His example, however, was followed by Radagaisus, who, in A. D. 405, crossed the Alps with a numerous army of Goths, though apparently without producing any results. Alaric himself then again poured down his hosts upon Italy, and thrice advanced to Rome, which had not seen an army of northern barbarians within its walls since its capture by the Gauls. From Rome Alaric turned to the south of Italy, where death cut short his victorious career. In A.D. 412 the Goths quitted Italy, the south of Gaul being given up to them; after having remained there for a short time, they crossed the Pyrenees and took possession of a large part of Spain, where Athaulf, the successor of Alaric, was assassinated. His successor, Wallia, assisted the Romans against the Vandals and Alani in Spain, and was rewarded by a portion of Western Gaul, from Tolosa to the ocean. The succeeding kings of the Goths extended their empire on both sides of the Pyrenees, and the kingdom reached its highest point of prosperity during the latter half of the fifth century under Euric. The empire of the Visigoths then embraced the greater part of Spain and a large portion of Gaul, and the kings resided at Tolosa, Arelate, or Burdigala; but after Euric's death the Goths in Gaul were compelled to retreat before the Franks, while in Spain their empire was overthrown about two centuries later by the Saracens.

At the time when the Visigoths were received by the emperor Valens within the Roman dominion, the application of the Ostrogoths, as already stated, was rejected; but they took the first opportunity of crossing the Danube notwithstanding, and joined Fridigern, during whose expedition to the south, however, they marched into Pannonia. (Amm. Marc. xxxi. 5, 12; Jornand. 27.) In the reign of Theodosius, when the Visigoths had become reconciled with the Romans, there appeared a new host of Ostrogoths about the mouth of the Danube, but in attempting to cross the river they were completely defeated by the Romans. (Zosim. iv. 35; Claudian, *de IV. Cons. Hon.* 623, foll.) During the ascendancy of the Huns, the Ostrogoths did not by themselves commit any act of hostility against the Romans, but joined Attila in his expedition into Gaul. (Jornand. 38.) After the overthrow of the Huns the Ostrogoths appear again in Pannonia, which was ceded to them, and the Eastern empire was in fact obliged to purchase their peace with large sums of money. But after some time the Ostrogothic king Widemir led his hosts into Italy; but his son, being prevailed upon by the emperor Glycerius by presents, quitted the country to join the Visigoths in the west. In the meantime other hosts under different leaders traversed the Eastern empire, and finally received settlements in the country between the Lower Danube and Mount Haemus, in the very heart of the empire. The town of Nova in Moesia is said to have been the residence of their king Theodoric, who, in A. D. 489, on the instigation of the emperor Zeno, entered on his grand expedition, the object of which was the conquest of Italy. He was successful, and established the kingdom of the Ostrogoths in the heart of Italy, upon the ruins of the kingdom of Odoacer. The new empire was so powerful that during the lifetime of Theodoric no one ventured to attack it. But his death involved the downfall of his kingdom; for while the members of his family were embroiled in domestic feuds, the kingdom was attacked by foreign enemies, and, though it was bravely defended, became a prey of the Eastern empire, and the Ostrogoths ceased to be an independent people.

Such is a sketch of the history of the Goths and their two chief branches down to their disappearance from history. The part which they acted in the history of the Roman empire was so important and conspicuous, that down to the present day their name is often used as synonymous with Germans, although they were only a branch of the great German nation. Having traced their history, we shall now subjoin a brief account of the various tribes of which the nation of the Goths consisted, and of their sub-divisions. Pliny (iv. 28) describes the Goths as belonging to the groups of tribes which he calls *Vindili*, while some modern critics regard them as a part of the *Istaevones*. Thus much, however, is certain, that ever since the beginning of the third century the name Goths embraced the German tribes occupying the south-eastern part of the country. The different branches making up the Gothic group are the following: —

1. The *Gothi minores*, also called *Moesogothi*, were the branch of the Western Goths who, after having received permission to settle in Moesia, remained there in fixed habitations, applying themselves to the peaceful pursuits of agriculture. (Jornand. 51, 52.)

2. *Gothi Tetraxitae*, belonging to the Eastern Goths on the Palus Maeotis (Procop. *Bell. Goth.* iv. 4, 5, 18): they maintained their national peculiarities for a long period.

3 The *Taifalae*, on the Danube in Dacia, were

a part of the Western Goths. (Amm. Marc. xvii. 13, xxxi. 3; Eutrop. viii. 2.)

4. The *Gepidae.* [GEPIDAE.]
5. The *Rugii.* [RUGII.]
6. The *Sciri* and *Turcilingi*; see these articles.
7. The *Heruli* [HERULI], and
8. The *Juthungi.* [JUTHUNGI.]

Some writers also include the Alani and Vandali among the Goths; but see ALANI and VANDALI. The whole nation of the Goths, in the strict sense of the name, was divided into two main groups or tribes, the *Ostrogoths*, occupying the sandy steppes in the east, and the *Visigoths*, inhabiting the more fertile and woody countries in the west. The former occur under the names of *Austrogothi* (Pollio, *Claud.* 6) and *Ostrogothi* (Claudian, *in Eutrop.* ii. 153). The earliest traces of the name of the Visigoths (*Visigothi*), which occurs only in very late writers, are found in Sidonius Apollinaris (*Carm.* vii. 399, 431, v. 476) in the form *Vesus*; and in Cassiodorus (*Varr.* iii. 1, 3) we find *Vuisigothi* and *Vuisigothae*; while Jornandes has *Wesegothae* and *Wesigothae.* As to the meaning of these names, there can be no doubt that they were derived from the countries occupied by the two branches of the nation, the one signifying the Eastern, and the other the Western Goths. Zosimus and Ammianus Marcellinus know neither of these two names, which do not appear to have been used until the time when the Goths were in possession of a large extent of country in the north of the Black Sea. The two writers just named frequently mention the *Greutungi* or *Grutungi* and the *Tervingi* or *Thervingi*, where they are evidently speaking of Goths. In regard to these names, different opinions are entertained by modern writers, some believing them to be merely local names, which accordingly disappeared after the migration of the Goths from the country north of the Euxine, whence they are not mentioned by Jornandes; others think that Grutungi is only another name for the whole of the Ostrogoths; but it is most probable that the Grutungi were the most illustrious tribe among the Ostrogoths, and that the Tervingi occupied the same rank among the Visigoths.

As the Goths were a thoroughly German race, their religion must, on the whole, have been that common to all the Germans; but ever since the time of Constantine the Great, Christianity appears to have gradually struck root among the Goths settled in Moesia (the Moeso-Goths), whence a Gothic bishop is mentioned as present at the council of Nicaea in A. D. 325. Their form of Christianity was probably Arianism, which was patronised by their protector Valens, and which was certainly the form of Christianity adopted by their celebrated bishop Ulphilas. Athanaric, one of their chiefs, however, made great efforts to destroy Christianity among his people, and punished those who resisted his attempts in a most cruel manner; but he did not succeed. The introduction of Christianity among these Goths, and the circumstance of their dwelling near and even among civilised subjects of the Roman empire, greatly contributed to raising them, in point of civilisation, above the other German tribes. Their bishop Ulphilas, in the fourth century, formed a new alphabet out of those of the Greeks and Romans, which in the course of time was adopted by all the German tribes, and is essentially the same as that still in general use in Germany, and is known in this country by the name of "black letter." (Socrat. *Hist. Eccl.* iv. 27; Sozom. vi. 36; Jornand. 51; Philostorg. ii. 5.) The same bishop also translated the Scriptures into the Gothic language, and this translation is the most ancient document of the German language now extant. Unfortunately, the translation has not come down to us complete; but the fragments are still quite sufficient to enable us to form an opinion of the language at that time. It contains many words which the Goths in their intercourse with Greeks and Latins borrowed from them, and a few others may have been derived from the Sarmatians or Dacians. Besides this translation of the Scriptures, we possess a few other monuments of the Gothic language, which, however, are of less importance. It may be observed here, by the way, that of all the Germanic dialects the Swedish is least like the Gothic, though there is a tradition according to which Scandinavia (Scandia) was the original home of the Goths. (Jornand. 4, 5.) The fact that Goths once did dwell in Scandinavia is indeed attested by a vast amount of evidence, among which the names of places are not the least important; but the probability is, that the Goths migrated to Scandinavia from the country east of the Vistula, even before they proceeded southward: at least Ptolemy (ii. 11. § 35) mentions *Gutae* (Γοῦται) in Scandia. The Visigoths, lastly, appear to have been the first of all the German tribes that had a written code of laws, the drawing up of which is ascribed to their king Euric in the fifth century. (Comp. Eisenschmidt, *de Origine Ostrogothorum et Visigothorum*, Jena, 1835; Zahn, Ulfilas's *Gothische Bibelübersetzung, &c.*, Weissenfels, 1805; Aschbach, *Geschichte der Westgothen*; Manso, *Gesch. der Ostgothen in Italien*, 1824, together with the works referred to at the end of the article GERMANIA, and Dr. Latham on Tacit. *Germ.* p. 162, and *Epilegom.* p. xxxviii., foll.) [L. S.]

GOTHI'NI or GOTI'NI, a tribe on the east of the Quadi and Marcomanni, that is, in the extreme south-east of ancient Germany, who, according to the express testimony of Tacitus (*Germ.* 43), spoke the Celtic language. Some believe that the Cotini, mentioned by Dion Cassius (lxxi. 12), and the Κῶγνοι of Ptolemy (ii. 11. § 21), are identical with the Gothini. Tacitus's description of their habitations, "Terga Marcomannorum Guadorumque claudunt," is somewhat ambiguous, whence some have placed them on the Vistula, in the neighbourhood of Cracow, while others understand Tacitus to refer to the south-east of the Quadi and Marcomanni, that is, the country now called Styria. Others again regard the country about the river March as the original seats of the Gothini: and this view derives some support from the fact that the names about the Lunawald are Celtic, and that the mountain contains ancient iron mines; for Tacitus expressly states that the Gothini were employed in iron mines. (Comp. Wilhelm, *Germanien*, p. 231, fol.; Duncker, *Orig. German.* i. p. 55, foll.; Latham, on Tacit. *Germ.* p. 156.) [L. S.]

GOTHONES. [GOTHI.]

GRAAEI (Γρααῖοι), a Paeonian tribe, situated on the Strymon. (Thuc. ii. 96.) [E. B. J.]

GRABAEI, a people and place in Illyricum (Plin. iii. 22. s. 26), perhaps *Grahovo* in the S. of the *Herzegowina.* [E. B. J.]

GRACCURRIS (*Eth.* Graccuritanus: near *Corella*), a town of the Vascones, in Hispania Tarraconensis, on the great road from Asturica to Tarraco, 64 M. P. west of Caesaraugusta. Its former name, Ilurcis, was changed in honour of Sempronius Grac-

chus, who placed new settlers in it, after his conquest of Celtiberia. It belonged to the *conventus* of Caesaraugusta, and was a *municipium*, with the *civitas Romana*. (Liv. *Fr.* xii., *Epit.* xii., comp. Freinsh. *Suppl.*, Liv. xii. 4: Festus, *s. v.*; Plin. iii. 3. s. 4; *Itin. Ant.* p. 450; Coins *ap.* Florez, *Med. de Esp.* vol. ii. p. 448; Mionnet, vol. i. p. 44, Suppl. vol. i, p. 88; Sestini, p. 52; Eckhel, vol. i. p. 50; Ukert. vol. ii. pt. 1. p. 448.) [P. S.]

GRADUM, AD, or GRADUS, AD. The Maritime Itin. of the south coast of Gallia makes it a distance of 16 M. P., "a fossis ad gradum Massilitanorum fluvius Rhodanus;" and then 30 M. P. "a gradu per fluvium Rhodanum Arelatum." The Fossae are the Fossae Marianae (*Foz-les-Martigues*), and "ad gradum" must be one of the old mouths of the Rhone. The site of "ad gradum" is supposed by some French writers to be *Galejon*. Ammianus Marcellinus (xv. 11) describes the Rhone as entering the sea "per patulum sinum quem vocant Ad Gradus." There may have been several Gradus at the mouths of the Rhone, for "gradus" is a landing-place, or steps for getting in and out of ships (Valer. Max. iii. 6); and D'Anville observes that the name Gradus is not limited to the mouths of the Rhone, but occurs on the coasts of Spain and Italy, where it is pronounced *Grao* and *Grado*. Ammianus places this "sinus" 18 miles from *Arles*, which is a great deal too little. The word "scala," a Latin word of the same meaning, adopted by the Greeks, is also used to signify a landing-place or maritime town in the eastern part of the Mediterranean. [G.L.]

GRAE'CIA, the name given by the Romans to the country called HELLAS (Ἑλλάς: *Eth.* Ἕλλην, pl. Ἕλληνες) by the inhabitants themselves. It is proposed in the following article to give a brief outline of the physical peculiarities of the country, and to make a few general remarks upon the characteristic features of its geography. The following sketch must be filled up by referring to the names of the political divisions of Greece, under which the reader will find a detailed account of the geography of the country. The general political history of the country, and discussions respecting its early inhabitants, are purposely omitted, as these subjects more properly belong to a history of Greece, and could not be treated here at sufficient length to be of real value to the student.

I. NAME.

The word *Hellas* was used originally to signify a small district of Phthiotis in Thessaly, containing a town of the same name. (Hom. *Il.* ii. 683; Thuc. i. 3; Strab. ix. p. 431; Dicaearch. p. 21, ed. Hudson; Steph. B. *s. v.* Ἑλλάς.) From this district the Hellenes gradually spread over the rest of Greece; but even in the time of Homer their name had not become common to the whole Greek nation. The poet usually calls the Greeks by the names of Danai, Achaei, or Argeii; and the only passage (*Il.* ii. 530) in which the name of Pan-Hellenes occurs was rejected by Aristarchus and other ancient commentators, as spurious. But at the commencement of Grecian history we find all the members of the Hellenic race distinguished by this name, and glorying in their descent from a common ancestor, Hellen. And not only so, but they gave to every district in which they were settled the name of Hellas, which was thus the land of the Hellenes, and did not indicate any particular country, bounded by certain geographical limits. In this general sense the most distant Hellenic colonies belonged to Hellas; and accordingly we read that the cities of Cyrene in Africa, of Syracuse in Sicily, and of Tarentum in Italy, formed as essential parts of Hellas as the cities of Athens, Sparta, and Corinth. (Comp. Herod. ii. 182, iii. 136, vii. 157; Thuc. i. 12.)

Besides this extensive use of the word, as the land of the Hellenes, Hellas was also employed in a more restricted sense to signify all the country south of the Ambracian gulf and the mouth of the river Peneius, as far as the isthmus of Corinth. In this signification it is called by Dicaearchus and Scylax *Continuous Hellas* (ἡ Ἑλλὰς συνεχής), by modern writers *Hellas Proper*. The two former writers stated that Continuous Hellas commenced with the town and gulf of Ambracia on the Ionian sea, and extended as far as Mount Homole and the mouth of the Peneius, on the opposite side. Ephorus, in like manner, makes Hellas commence at Acarnania. (Scylax, p. 12, ed. Hudson; Dicaearch. 31, p. 3; Ephor. *ap. Strab.* viii. p. 334.) According to these accounts, the northern frontier of Hellas was a line drawn from the Ambracian gulf upwards along Mt. Pindus, and then at right angles to the latter, along the Cambunian mountains, to the mouth of the Peneius. Epeirus consequently formed no part of Hellas; for, though there was a mixture of Hellenic blood among the Epeirot tribes, they differed too widely in their habits and general character from the great body of the Hellenes, to be entitled to a place among the latter. The same remark would apply, with even still greater force, to some of the mountaineers of Aetolia, who are described by Thucydides as eating raw meat and speaking a language which was unintelligible. (Thuc. iii. 102.)

There seems to have been some discrepancy respecting the exact boundaries of Hellas Proper. When the Aetolians called upon the last Philip of Macedon to withdraw from Hellas, he retorted by asking them where they would fix its boundaries? and by reminding them that the greater part of their own body were not Hellenes, adding, "The tribes of the Agraeans, of the Apodoti, and of the Amphilochi, are not Hellas." (Polyb. xvii. 5; quoted by Thirlwall, vol. i. p. 4.)

Herodotus, in opposition to the preceding accounts, appears to have extended the boundaries of Hellas north of the Ambracian gulf, and to have regarded the Thesprotians as Hellenes. (Herod. ii. 56.) On the other hand, some ancient writers would even exclude Thessaly from Hellas, and would make as its northern boundary a line drawn from the Ambracian to the Malic gulf; but Dicaearchus justly argues that the country in which the original Hellas was situated ought surely to be included under this name (p. 21, seq.).

Peloponnesus, or the Island of Pelops, formed no part of Hellas Proper, although it was of course inhabited by Hellenes (Dicaearch. p. 20; Plin. iv. 4. s. 5); but sometimes Peloponnesus and the Greek islands were included under the general name of Hellas, in opposition to the land of the barbarians. (Dem. *Phil.* iii. p. 118; Diod. xi. 39; comp. Strab. viii. p. 334.) At a later period, when the Macedonian monarchs had become masters of Hellas, and had extended the Hellenic language and civilisation over a great part of Asia, Macedonia and the southern part of Illyria were included in Hellas. Thus we find that Strabo (vii. p. 332) calls Macedonia Hellas; but he immediately adds, *νυνὶ μέντοι τῇ φύσει τῶν τόπων ἀκολουθοῦντες καὶ τῷ σχήματι χωρὶς ἔγνωμεν αὐτὴν ἀπὸ τῆς ἄλλης Ἑλλάδος τάξαι*, &c.

The reason why the Romans gave to Hellas the name of *Graecia*, and to the Hellenes the name of *Graeci*, cannot be ascertained; but it is a well-known fact that a people are frequently called by foreigners by a name different from the one in use among themselves. Thus, the people called Etruscans or Tuscans by the Romans, and Tyrrhenians or Tyrsenians by the Greeks, bore the name of Rasena among themselves; and the different names given to the Germans in their own country and among foreigners supplies a parallel instance in modern times. The word *Graeci* first occurs in Aristotle, who states that the most ancient Hellas lay about Dodona and the Achelous, and that this district was inhabited by the Selli, and by the people then called Graeci but now Hellenes. (Aristot. *Meteor.* i. 14.) The Selli are mentioned in the Iliad as the ministers of the Dodonaean Zeus. (Hom. *Il.* xvi. 234.) By Pindar they were called Helli; and Hesiod spoke of the country about Dodona under the name of Hellopia. (Strab. vii. p. 328.) We do not know what authority Aristotle had for his statement; but it was in opposition to the general opinion of the Greeks, who supposed the original abode of the Achaeans to have been in the Achaean Phthiotis, between Mounts Othrys and Oeta. According to another authority, Graecus was a son of Thessalus. (Steph. B. *s. v.* Γραικός.) In consequence of the statement of Aristotle it has been inferred that the name of Graeci was at one period widely spread on the western coast, and hence became the one by which the inhabitants were first known to the Italians on the opposite side of the Ionian sea. (Thirlwall, vol. i. p. 82.) After the conquest of Greece by the Romans the country was reduced into the form of a province, under the name of *Achaia*, and did not bear the name of Graecia in official language. [ACHAIA, p. 17.]

II. SITUATION, BOUNDARIES, AND SIZE.

Hellas is the southern portion of the most easterly of the three great peninsulas which extend from the south of Europe into the Mediterranean sea. These peninsulas are very different in form. Spain is an irregular quadrangle, possessing very little of the character of a peninsula, except in its northern part, where it is united by an isthmus to the rest of Europe. Italy does not commence with an isthmus, but projects from the continent in the shape of a long tongue of land, down which runs from north to south the back-bone of the Apennines, dividing it into two nearly equal parts. The most easterly of the three peninsulas commences with so large a breadth of country that one is hardly disposed to recognise at first its peninsular shape; but as it proceeds to the south it gradually assumes the form of a triangle. The base extends from the top of the Adriatic to the mouths of the Danube; and the two sides of the triangle are broken into a number of bays and gulfs, which form a series of peninsulas, the last and most perfect being the peninsula of Peloponnesus.

The great peninsula to which Hellas belongs is shut off from the rest of Europe by the lofty range of the *Balkan Mountains*, known in ancient times by the names of Haemus, Scomius, and the Illyrian Alps, which extend along the base of the triangle from the Euxine to the Adriatic. South of these mountains dwelt the various Thracian, Macedonian, and Illyrian tribes; but these formed no part of Hellas, though many modern geographers have designated their country by the name of Northern Greece, and have given to Hellas Proper the name of Middle or Central Greece. But Hellas Proper begins only at the 40th degree of latitude; and, including Epeirus under this name for the sake of convenience, is separated from Macedonia and Illyria by a well-defined boundary. At the 40th degree of latitude the peninsula is traversed from east to west by a chain of mountains, commencing at the gulf of Therma, in the Aegaean sea, and terminating at the Acroceraunian promontory, on the Adriatic. This chain was known in its eastern half by the names of Olympus and the Cambunian mountains, and in its western by that of Mount Lingon. On every other side Hellas was washed by the sea. At that period in the history of the world when the Mediterranean was the great highway of commerce and civilisation, no position could be more favourable than that of Hellas. It is separated from Asia by a sea, studded with islands within sight of one another, which even in the infancy of navigation seemed to allure the timid mariner from shore to shore, and rendered the intercourse easy between Hellas and the East. Towards the south it faces one of the most fertile portions of Africa; and on the west it is divided from Italy by a narrow channel, which in some parts does not exceed 40 geographical miles in breadth. An account of the seas which wash the Grecian coasts is given under their respective names. It is only necessary to mention here that the sea on the eastern side bore the general name of the Aegean, of which the southern portion was called the Cretan; that the sea at the southern end of the Peloponnesus was called the Libyan; and that the sea on the western side of Greece usually bore the name of the Ionian, of which the northern extremity was called the Adriatic gulf, while its southern end opposite Sicily was frequently named after that island. [AEGAEUM MARE; IONIUM MARE; ADRIATICUM MARE.]

Hellas, which commences at the fortieth degree of latitude, does not extend further than the thirty-sixth. It is well remarked by Thirlwall, that in one respect Greece stands in the same relation to the rest of Europe that Europe does to the other continents, — in the great range of its coast compared with the extent of its surface; so that, while its surface is considerably less than that of Portugal, its coast exceeds that of Spain and Portugal put together. Its greatest length, from Mount Olympus to Cape Taenarus, is not more than 250 English miles; its greatest breadth, from the western coast of Acarnania to Marathon in Attica, is about 180 miles; and the distance eastward from Ambracia across the Pindus to the mouth of the Peneius is about 120 miles. (Grote, vol. ii. p. 302.) Its area, as calculated by Clinton from Arrowsmith's map, exclusive of Epeirus, but including Euboea, is only 21,121 square English miles, of which Thessaly contains 5674 miles, the central provinces 6288 miles, Euboea 1410 miles, and Peloponnesus 7779 miles. (Clinton, *F. H.* vol. ii. p. 385.) The small extent of the surface of Greece will be more fully realised by recollecting the area of some of the smaller states of modern Europe, — Portugal containing 35,268 square English miles, the kingdom of Naples 31,350, and the kingdom of Sardinia 29,102. When it is further recollected that the small area of Hellas was subdivided among a number of independent states, — Attica, for example, containing only 720 miles, — the contrast is striking between the grandeur of the deeds of the people and the inconsiderable spot of earth on which they were performed. (Comp. A. P. Stanley, in *Classical Museum*, vol. i. p. 50.)

III. Configuration of the Surface.

The chain of Lingon and the Cambunian mountains is intersected at right angles, about midway between the Ionian and Aegaean seas, by the long and lofty range of Pindus, running from north to south, the back-bone of Greece, like the Apennines of the Italian peninsula. Mount Pindus forms the boundary between Thessaly and Epeirus. At the thirty-ninth degree of latitude, at a point in the range of Pindus called Mount Tymphrestus (now *Velukhi*), various branches radiate, as from a centre. On the east the two chains of Othrys and Oeta branch off towards the sea, the former running nearly due east, and the latter more towards the south-east. To the west of Tymphrestus there is no chain of mountains extending towards the western sea and corresponding to the gigantic twins of Othrys and Oeta, but only a continuation of the Epeirot mountains running from north to south. Southward of Tymphrestus the chain of Pindus, which here divides into two branches, no longer bears the same name. One strikes south-westward, and passes across Aetolia, under the names of Corax and Taphiassus, to the promontory of Antirrhium at the entrance to the Corinthian gulf, opposite the corresponding promontory of Rhium in Peloponnesus. The other diverges to the south-east, passing through Phocis, Boeotia, and Attica, under the names of Parnassus, Helicon, Cithaeron, and Hymettus, down to Sunium, the southernmost point of Attica; but even here it does not end, for the islands of Ceos, Cythnos, Seriphos and Siphnos may be regarded as a continuance of this chain.

Such is a brief sketch of the general direction of the mountain-ranges of Northern Greece; but it is now necessary to enter a little more into detail, referring the reader for a fuller account to the names of the political divisions of the country. Taking Mount Pindus again as our starting-point, we observe that from it two huge arms branch off towards the eastern sea, enclosing the plain of Thessaly, the richest and largest in all Greece. These two arms, which run parallel to one another at the distance of 60 miles, have been already mentioned under the names of the Cambunian mountains and Mount Othrys. The Cambunian mountains terminate upon the coast in the lofty summit of Olympus, which is the highest mountain in all Greece, being 9700 feet above the level of the sea, and scarcely ever free from snow. Mount Othrys reaches the sea between the Pagasaean and Malian gulfs. South of Olympus a range of mountains, first called Ossa and afterwards Pelion, stretches along the coast of Thessaly, parallel to Mount Pindus; Ossa is a steep conical peak, rising high into the clouds, and, like Olympus, generally covered with snow, while Pelion exhibits a broad and less abrupt outline. Thus Thessaly is enclosed between four natural ramparts, and is only accessible on the north by the celebrated vale of Tempe, between Mounts Olympus and Ossa, through which the Peneius finds its way to the sea. Towards the south, however, Thessaly was open to the sea, which here forms the extensive gulf of Pagasae, the cradle of Greek navigation, from whose shores the Argo was launched. Epeirus, the country to the west of Pindus, is of an entirely different character from Thessaly. It contains no plain of any extent, but is almost entirely covered with mountains, whose general direction, as already observed, is from north to south.

The mountains of the island of Euboea, which lies opposite to the coasts of Boeotia and Attica, may be regarded as only a continuation of the chain of Ossa and Pelion and of that of Othrys. The mountain-system of Euboea is further prolonged by the islands of Andros, Tenos, Myconos, and Naxos, belonging to the Cyclades.

At the foot of Mt. Lacmon (now *Zygo*), the point where Mount Pindus bisects the northern barrier of Hellas, four considerable rivers take their rise. Of these rivers two, the Aous and the Haliacmon, do not belong to Hellas; the former flowing through Illyria, and the latter through Macedonia: but the other two, the Peneius and the Achelous, are the most important in Northern Greece. The Peneius flows with a slow and winding course through the plain of Thessaly, and finds its way into the sea through the pass of Tempe, as mentioned above; the Achelous, which is the larger of the two, flows towards the south through the rude and mountainous country of Epeirus, then forms the boundary between Acarnania and Aetolia, and after a course of 130 miles finally falls into the Ionian sea opposite the entrance of the Corinthian gulf.

A little south of Mt. Tymphrestus, at the thirty-ninth degree of latitude, Greece is contracted into a kind of isthmus by two opposite gulfs, the Ambracian on the west and the Malian on the east. This isthmus separates the peninsula of Middle Greece from the Thessalian and Epeirot mainland.

The peninsula of Middle Greece may again be divided into two unequal halves. The western half, which bears the names of Aetolia and Acarnania, is of the same character as Epeirus, with which it is connected by the Achelous. The branch of Mount Pindus which extends from Mount Tymphrestus in a south-westerly direction, here unites with the continuation of the Epeirot mountains, and forms rugged and inaccessible highlands, which have been at all times the haunt of robber tribes. There are, however, a few broad and fertile plains, through which the Achelous flows.

The eastern half of the peninsula of midland Greece is traversed by the branch of Mount Pindus which extends from Mount Tymphrestus in a south-easterly direction. It is shut in on the north by the rugged pile of Oeta, extending from Tymphrestus to the sea at Thermopylae, and forming the barrier of this portion of the midland peninsula. The only pass through it is the celebrated one of Thermopylae, between the mountain and a morass upon the coast, which in one part is so narrow as to leave room for only a single carriage.

North of Oeta, and between this mountain and the nearly parallel range of Othrys, is a fertile valley about 60 miles in length, stretching eastward to the Malic gulf, and drained by the Spercheius, which rises at the foot of Mount Tymphrestus at the head of the valley and falls into the Malic gulf. Although this valley is usually considered a part of Thessaly, it is entirely separated from the great Thessalian plain by the range of Othrys.

It has been already remarked that the south-easterly continuation of Mount Pindus passes through Phocis, Boeotia, and Attica, under the names of Parnassus, Helicon, Cithaeron, and Hymettus, till it reaches the sea at Sunium. There is, however, another range, which takes its departure from the easterly extremity of Oeta, and extends along the coast of the Euboean sea, through the Locrian tribes and Boeotia, under the various names

of Cnemis, Ptoon, and Teumessus, till it joins Parnes, which is a lateral branch of Cithaeron extending from west to east. By means of Pentelicus, with its celebrated marble quarries to the south of Parnes, the range is further connected with the chain running from Cithaeron to Sunium.

Between Parnassus and Oeta is a narrow plain called Doris, from which the Dorians are said to have descended to the conquest of Peloponnesus. Here rises the Cephissus, which flows through the plain of Phocis and Boeotia, and falls into the lake Copais. Phocis possesses some fertile plains on the Cephissus, lying between Parnassus and the Locrian mountains. Boeotia is a large hollow basin shut in on every side by mountains, and containing a considerable quantity of very fertile land. Attica is another peninsula, resembling in shape the great peninsula to which Greece itself belongs. It is in the form of a triangle, having two of its sides washed by the sea, and its base united to the land. As the Cambunian range forms the outer, and Mount Oeta the inner barrier of Greece, so the chain of Cithaeron and Parnes, extending along the base of Attica, is a natural rampart protecting this country.

It has been already seen that the range of Cithaeron is continued towards the east under the name of Parnes. In like manner it is prolonged towards the south-west, skirting the shores of the Corinthian gulf and forming the mountainous country of Megaris. Here it rises into a new chain, between four and five thousand feet in height, under the name of the Geraneian mountains, which stretch across Megaris from west to east parallel to Cithaeron. It is highest on the western side, and gradually sinks down towards the Saronic gulf. The island of Salamis and its surrounding rocks are only a continuation of this chain. Southwards the Geraneian mountains sink down still more towards the isthmus which separates Hellas Proper from Peloponnesus. Here the Corinthian gulf on the west and the Saronic gulf on the east penetrate so far inland as to leave but a narrow neck of land between them, only four miles across at its narrowest part. The isthmus is comparatively level, being in its highest point not more than 246 feet above the level of the sea, but immediately to the south rise the lofty range of the Oneian hills, parallel to the Geraneian, with which they have often been confounded. Here stood the city of Corinth, with its impregnable fortress the Acrocorinthus, and here the isthmus opened out into the Peloponnesus.

Before proceeding to the description of Peloponnesus, it deserves remark that Strabo divides Greece into five peninsulas. The first is the Peloponnesus, separated by an isthmus of 40 stadia. The second is the one of which the isthmus extends from the Megarian Pagae to Nisaea, the harbour of Megara, being 120 stadia from sea to sea. The third is the one of which the isthmus extends from the recess of the Crissaean gulf to Thermopylae, an imaginary straight line, 508 stadia in length, being drawn, which includes within it the whole of Boeotia, and cuts across Phocis and the Locri Epicnemidii. The fourth has an isthmus of about 800 stadia, extending from the Ambracian gulf to the Malian gulf. The fifth isthmus is more than 1000 stadia, extending from the same Ambracian gulf through Thessaly and Macedonia to the Thermaic gulf. (Strab. viii. p. 334.)

The mountain-system of Peloponnesus has no connection with the rest of Greece. The mountains in Hellas Proper form an uninterrupted series of chains, running out from the mountains in the countries to the north of Greece. The mountains of Peloponnesus on the contrary, have their roots in Arcadia, the central district of the country, where they rise to a great height. Hence Arcadia has been aptly called the Switzerland of Peloponnesus, to which it stands in the same relation as Switzerland does to the rest of Europe. Upon closer inspection it will be seen that this Alpine district is encircled by an irregular ring of mountains, forming a kind of natural wall, from which lateral branches extend in all directions towards the sea.

The mountains forming the northern boundary of Arcadia are the loftiest and most massive. They extend from west to east, terminating in the magnificent height of Mount Cyllene (*Zýria*), 7788 feet above the level of the sea, the first of the Peloponnesian mountains seen by a person coming over the isthmus from Northern Greece. The most westerly point of this northern barrier is Erymanthus (*Olonos*), 7297 feet high; and between it and Cyllene are the Aroanian mountains (*Khelmós*), 7726 feet in height. The eastern boundary is also formed by a continuous series of mountains, stretching from Mount Cyllene towards the south. Those bearing a special name in this range are Artemisium (*Turnáki*), 5814 feet in height; and Parthenium (*Róino*), 3993 feet in height, south of the former. The range terminates in Parnon. On the southern frontier of Arcadia there is no clearly defined chain of mountains, but only a series of heights forming the water-shed between the tributaries of the Alpheius and those of the Eurotas. It is not till reaching the south-west frontier that the highlands again rise into a lofty and continuous chain, under the name of Lycaeus (*Dhioförti*), 4659 feet high. From Lycaeus a range of mountains, running south till it joins Erymanthus, constitutes the western boundary of Arcadia; but it bears no special name, except in its northern half, where it is called Pholoë. The northern, eastern, and southern barriers of Arcadia are unbroken; but the western wall is divided by the Alpheius, which finds its way through an opening on this side, and thence descends to the western sea.

The other chief divisions of Peloponnesus are Laconia and Messenia, on the south; Argolis, on the east; Elis, on the west; and Achaia, on the north. From the southern frontier of Arcadia a lofty chain of mountains, under the name of Taygetus, runs from north to south, forming the boundary between Messenia and Laconia, and terminating in the promontory of Taenarum, the southernmost point of Greece and Europe. The chain of Taygetus is the longest and highest in all Peloponnesus, being in one part 7902 feet above the level of the sea, or more than 100 feet above Cyllene. From Mount Parnon, at the south-eastern corner of Arcadia, another range of mountains extends from north to south along the coast, parallel to the range of Taenarus, and terminating in the promontory of Malea. Between this range, which may be called by the general name of Parnon, and that of Taygetus, was the valley of the Eurotas, in which Sparta lay, and which to the south of Sparta opened out into a plain of considerable extent. Messenia, in like manner, was drained by the Pamisus, whose plain was still more extensive than that of the Eurotas; for Messenia contained no continuous chain of mountains to the west of the Pamisus, answering to the range of Parnon in Laconia. Both the Pamisus and the Eurotas flow into gulfs

running a considerable distance into the land, and separated from one another by the range of Taygetus.

The river Neda separated Messenia from Elis. This country is covered, to a greater or a less extent, with the offshoots of the Arcadian mountains; but contains many plains of considerable size and fertility. Of these the two most important are the one in the centre of the country drained by the Alpheius, in which Pisa stood, and the one in the north through which the Peneius flows.

Achaia was the name of the narrow slip of country between the great northern barrier of Arcadia and the Corinthian gulf. From the Arcadian mountains there project several spurs, either running out into the sea in the form of bold promontories, or separated from it by narrow levels. The plains on the coast at the foot of these mountains, and the valleys between them, are for the most part very fertile.

Argolis, taking the name in its most extended sense, was used to signify the whole peninsula between the Saronic and Argolic gulfs; but during the times of Grecian independence it contained several independent states. The Argolic peninsula was united to the mainland by a broad base, at one extremity of which stood the cities of Corinth and Sicyon, and at the other the city of Argos. Corinth and Sicyon possessed a level track of country along the coast, and Argos was situated in a plain, 10 or 12 miles in length and from 4 to 5 in breadth; but the peninsula itself was nearly covered with a lofty range of hills.

The shape of Peloponnesus was compared by the ancients to the leaf of the plane tree or the vine. (Strab. viii. p. 335; Dionys. Per. 403; Agathem. i. p. 15; Plin. iv. 4. s. 5.) The isthmus is so small in comparison with the outspread form of the peninsula, that it was regarded by the ancients as an island, and was accordingly called the island of Pelops, from the mythical hero of this name. It has all the advantages of an insular situation without its disadvantages. It was sufficiently protected by the mountains at the foot of the isthmus to secure the inhabitants from all attacks from the mainland, and to allow them to develop their own character and institutions without any disturbing influences from without. At the same time, it was so closely connected with the mainland by the isthmus as to possess at all times an uninterrupted communication with the rest of Greece. From its position, approachable only by a narrow access easily guarded, the Peloponnesus was called by the ancients the acropolis of Greece. (Eustath. *ad Dionys. Per.* 403.)

IV. Rivers and Lakes.

Most of the Grecian rivers are entirely dependent upon the atmosphere for their supply of water. During five months of the year, in the autumn and winter, rain falls in large quantities, which fills the crevices in the limestone of the hills, and is carried off by torrents. In summer hardly any rain falls; and these torrents, so full of water in the winter, are then perfectly dry. Even many of the rivers, which are partly supplied by springs, dwindle in the summer into very insignificant streams. Most of the Grecian rivers, which give to the country upon the map the appearance of a well-watered district, are nothing but winter torrents, to which the Greeks gave the expressive name of χειμαῤῥοῦς. None of the rivers of Greece are navigable. The most considerable in Northern Greece are the Peneius and the Achelous, already spoken of. To these may be added the Evenus, which flows through Aetolia, parallel to the Achelous; the Spercheius, which drains the valley between Oeta and Othrys; the Cephisus and Asopus in Boeotia; and the Cephisus and Ilissus in Attica, the last of which is dry in summer, and only deserves mention on account of its poetical celebrity. The chief river of Peloponnesus is the Alpheius in Arcadia and Elis; next come the Eurotas in Laconia, the Pamisus in Messenia, and the Peneius in Northern Elis.

Though there are few perennial rivers in Greece, the nature of the country is favourable to the formation of marshes and lakes. Many of the plains and valleys are so entirely encircled by mountains that the heavy rains which descend in the autumnal and winter months find no outlet, and remain as lakes in the winter and as marshes in the summer. In Thessaly are the lakes Nessonis and Boebeis; in Aetolia, Trichonis; in Boeotia, Copais; and in Arcadia, Stymphalis and others. The waters of some of these lakes find their way through natural cavities in the limestone mountains, called *katavóthra* by the modern Greeks, and after flowing under ground rise again after a greater or less interval. This is the case with the waters of the Copais [BOEOTIA], and of several of the lakes of Arcadia, in which country this phaenomenon is very frequent [ARCADIA].

V. General Remarks upon Grecian Topography.

The two most striking features in Grecian topography are the mountainous character of the country and the great extent of its sea-coast. Next to Switzerland, Greece is the most mountainous country of Europe; but this general description conveys no correct idea of its peculiar nature. In the preceding account we have attempted to give a sketch of the direction of the mountain-ranges or chains, but from these project in all directions innumerable branches, having very few valleys or plains of any extent. These plains, whether large or small, are for the most part either entirely surrounded by mountains or open on one side to the sea. At all times mountains have proved the greatest barriers to intercourse between neighbouring tribes. Each of the Grecian cities, situated in a plain, and separated from its neighbours by lofty mountains, always difficult, and often impossible to surmount, grew up in perfect isolation. They had the less temptation to try to scale the lofty barriers which surrounded them, since the sea afforded them an easy communication with the rest of the world. Almost all the Grecian states had ready and easy access to the sea; and Arcadia was the only political division which did not possess some territory on the coast.

The mountainous nature of the country exercised an important influence upon the political destinies of the people. The chain of Lingon and the Cambunian mountains defended Hellas from foreign invasion; and the mountains in the country itself rendered it difficult for one section of the race to attack another. The pass of Thermopylae, the passes over Cithaeron, and those over the Geraneian and Oneian mountains at the isthmus, could easily be defended by a handful of resolute men against vastly superior numbers. The same causes produced a large number of independent states, politically distinct from each other, and always disinclined to form any kind of federal union even for the purpose of resisting foreign invasion. This political separation led to disputes and hostilities; and their

intestine wars eventually proved their ruin by opening their country to Philip of Macedonia. (Comp. Grote, *History of Greece*, vol. ii. p. 300, seq.)

VI. Chief Productions.

The most fertile districts in Greece, according to Thucydides (i. 2), were Thessaly, Boeotia, and a great part of Peloponnesus: the least fertile were Arcadia and Attica. Wheat, barley, flax, wine, and oil, were the chief productions; but more careful attention seems to have been bestowed upon the culture of the vine and of the olive than upon the cereal crops. Bread seems to have been more generally made of barley than of wheat. We are told that by one of Solon's laws barley-cakes were provided on ordinary days, and wheaten loaves on festivals, for those who dined in the Prytaneium. (Athen. iv. 137.) The hills afforded excellent pasture for cattle, and in antiquity supplied plenty of timber, though they are at present nearly destitute of woods. The disappearance of these forests has been one of the causes of the diminished fertility of Greece as compared with ancient times. By losing the shade which they afforded, the springs have been burnt up; and, in consequence of less moisture, vegetation has become poorer.

Among the domestic animals we find horses, asses, mules, oxen, swine, sheep, goats, and dogs. Horses were not numerous in Greece, since the country is too mountainous to rear any number. Hence the Greek cavalry was always insignificant. Mules were extensively used in Peloponnesus, where they were found more useful than horses in traversing the mountains. Swine were very numerous, and pork was a favourite article of food, especially among the Arcadians. The milk of sheep and goats was preferred to that of cows. (Aristot. *Hist. An.* iii. 15. § 5, seq.)

Among the wild animals we find mention of bears, wolves, and boars. Bears seem to have been common in the forests of the Arcadian mountains. Herodotus relates that lions were found between the Nestus in Thrace and the Achelous in Aetolia (Herod. vii. 126); and the existence of lions in Greece, at least at an early period, is rendered probable by the legend of the Nemean lion.

The mountains of Greece consist for the most part of hard limestone, of which were built those massive Cyclopian walls and fortifications the remains of which still exist upon the summits of the hills. In almost every part of Greece there were rich and varied veins of marble, affording abundant and beautiful materials to the architect and the sculptor. The best marble-quarries were at Carystus in Euboea, at Pentelicus and Hymettus in Attica, and in the island of Paros.

In the precious metals Greece was poor. Gold and silver were found in the island of Siphnos; but the most productive silver-mines were at Laurium, in the south of Attica. Both copper and iron were found near Chalcis in Euboea; and there were also iron-mines in the mountains of Taygetus in Laconia.

VII. Climate.

The climate of Greece was probably more healthy in ancient than in modern times. The malaria, which now poisons the atmosphere during the summer months, probably did not exist to the same extent when the land was more thickly populated and better cultivated. Herodotus remarks that of all countries in the world Greece possessed the most happily tempered seasons (Herod. iii. 106); and Hippocrates and Aristotle considered the climate as highly favourable to the intellectual energy of the inhabitants, since it was equally removed from the extremities of heat and cold. (Hippocrat. *de Aëre*, 12, 13; Aristot. *Pol.* vii. 6. § 1.) But owing to the inequalities of its surface, to its lofty mountains and depressed valleys, the climate varies greatly in different districts. In the highlands in the interior the winter is often long and rigorous, the snow lying upon the ground till late in the spring; while in the lowlands open to the sea there is hardly ever any severe weather, and snow is almost entirely unknown. Modern travellers who have suffered from excessive cold and snow-storms passing through Boeotia in the middle of February, have found upon arriving in Attica warm and genial weather. In like manner, in the month of March, travellers find midwinter on the highlands of Mantineia and Tegea in Arcadia, spring in Argos and Laconia, and almost the heat of summer in the plain of *Kalamáta*, at the head of the Messenian gulf. To a native of the northern latitudes of Europe one of the most striking phaenomena of the Grecian climate is the transparent purity of the atmosphere and the brilliant colouring of the sky: though even in this point there was a great difference between the various parts of Greece; and the Athenian writers frequently contrast the thick and damp air of Boeotia with the light and dry atmosphere of Athens.

VIII. Volcanic Changes.

Traces of volcanic agency are visible in many parts of Greece, although no volcanoes, either in activity or extinct, are found in the country. There were hot-springs at Thermopylae, Aedepsus in Euboea, and other places; but the peninsula of Methana in the Peloponnesus, opposite Aegina, and the island of Thera in the Aegaean are the two spots which exhibit the clearest traces of volcanic agency. The greater part of Methana consists of trachyte; and here in historical times a volcanic eruption took place, of which the particulars are recorded both by Strabo and Ovid. (Strab. i. p. 59; Ov. *Met.* xv. 296, seq.) In this peninsula there are still two hot sulphureous springs, near one of which exist vestiges of volcanic eruption. The island of Thera is covered with pumice-stone; and it is related by Strabo (*l. c.*) that on one occasion flames burst out from the sea between Thera and the neighbouring island of Therasia, and that an island was thrown up four stadia in circumference. In modern times there have been eruptions of the same kind at Thera and its neighbourhood: of one of the most terrible, which occurred in 1650, we possess a circumstantial account by an eye-witness. (Ross, *Reisen auf den Griech. Inseln*, vol. i. p. 194.)

Earthquakes have in all ages been of frequent occurrence in Greece, especially in Peloponnesus. Laconia was called a land "easily shaken" (εὔσεισ τος ἡ Λακωνική, Strab. viii. p. 367); and in the terrible earthquake which happened in B. C. 464, not more than five houses are said to have been left standing at Sparta; more than 20,000 persons were believed to have perished, and huge masses of rock were rolled down from the highest peaks of Taygetus. (Thuc. iii. 89; Diod. xi. 63; Plut. *Cim.* 16.) On the Peloponnesian shores of the Corinthian gulf the earthquakes have been still more destructive. In consequence of the waves having no outlet into a wide-spread and open sea, they have in these convulsions

rushed upon the land and swallowed up whole cities. This was the fate of Helice and Bura, which in one day (B. C. 373) disappeared from Achaia. [HELICE.] Similar disasters have occurred in the same neighbourhood in subsequent times. In the reign of Tiberius the inhabitants were relieved from taxation in consequence of their suffering from an earthquake (Tac. *Ann.* iv. 13); and in 1817 the town of *Vostitza* (the ancient Aegium) narrowly escaped the fate of Helice and Bura, since the sea rushed inland with great force and inundated all the level immediately below the town (Leake, *Morea*, vol. iii. p. 402).

IX. Modern Works.

Greece was, down to the middle of the 16th century, almost an unknown country to the western nations of Europe. In 1573, soon after Greek had begun to be studied in Germany, Martin Kraus, or Crusius, professor at Tübingen, contrived to open a correspondence with some learned Greeks in Constantinople; and, in one of his letters addressed to Theodore Zygomalas, he states that it was the general opinion in Germany that Athens was totally destroyed, and wishes to know from his correspondent whether this is the truth. Zygomalas answers that he had frequently visited Athens; but in his attempt to describe the antiquities of Athens he commits many blunders, among other things, calling the Pantheon the Parthenon. The information, thus obtained, Crusius published in his *Turco-Graecia*, of which the first book contained the political history, the second the ecclesiastical, and the remaining six his correspondence with the learned Greeks. Deshayes, who was French ambassador to the Porte in 1621, visited Athens in 1621, and wrote some *Observations*, which, though of little value, are interesting as the first account of any part of Greece from the personal observation of a native of Western Europe. Deshayes supposed the Parthenon to be the Church of the Unknown God. Some years afterwards, Palmerius (Paulmier de Grentemesnil), a French nobleman of Normandy and a scholar, who died at Caen in 1670, undertook a voyage into Greece for the purpose of illustrating its ancient geography. His work, entitled *Graeciae Descriptio*, of which a second edition was published in 1678, Lugd. Batav., was the first of any value upon Grecian geography, but it gave an account of only Illyricum, Macedonia, Epirus, and Acarnania. In 1674, Nointel, who was sent as French ambassador to the Porte, carried with him a young artist, named Carrey, who for about five weeks was employed in making drawings, which are now in the National Library of Paris, and are of great interest, as among them are the architectural decorations of the Parthenon, which was then almost entire.

A new era in the knowledge of Grecian geography commenced with Spon, a French physician at Lyons, and Sir George Wheler, an Englishman, who travelled together through Attica, Boeotia, Phocis, and Locris, in 1675 and 1676. Spon published his account of their travels under the title of *Voyage d'Italie, de Delmatie, de Grèce, et du Lévant, fait en* 1676 *par Jacob Spon, D. M., et George Wheler, Gentilhomme Anglois*, Lyon, 1678. Wheler, who was a more careful observer than Spon, gave his account of their travels four years later, under the title of *Journey into Greece in company of Doctor Spon*, London, 1682. The learned Greek, Meletios, wrote at Naupactus, in 1682, a work upon general geography, in which he gives some valuable information upon many places in Greece, which he had visited in person, and in which he has also preserved many inscriptions that have been subsequently lost. This work was first published at Venice, in 1728, under the title of *Γεωγραφία παλαιὰ καὶ νέα συλλεχθεῖσα ἐκ διαφόρων Συγγραφέων παλαιῶν τε καὶ νέων*, and of which a second edition appeared at the same place in 1807. The next work of importance was by the French botanist, Tournefort, who travelled through the islands of the Levant, and other countries on the coasts of the Levant, in 1700—1703. Though his journey was undertaken chiefly with a scientific object, he gives us an interesting account of the antiquities of the countries which he visited. His work was published after his death, in 1717, 2 vols. 4to., under the title of *Relation d'un Voyage du Lévant fait par ordre du Roi:* it was translated into English, and published in London, 1718, 2 vols. 4to. Fourmont, who travelled in Greece in 1729, by order of Louis XV., copied a large number of inscriptions, which he deposited in the Royal Library of Paris. He boasted of having defaced the inscriptions which he copied, and also of having destroyed the remains of several Grecian cities; but he greatly exaggerated his barbarous proceedings, and his chief object in making the boast was that he might palm upon the world a number of forged inscriptions: for, though Raoul Rochette defended the genuineness of these inscriptions (*Lettre sur l'Authenticité des Inscriptions de Fourmont*, Paris, 1819), it is now admitted that many of them are forgeries.

In 1751 Stuart, an English artist at Rome, accompanied by Revett, another artist, travelled to Greece, and spent the greater part of three years at Athens. The result of their labours was the celebrated *Antiquities of Athens*, of which the first volume appeared in London in 1762. The second volume was published after Stuart's death, edited by Newton, in 1790; the third, by Reveley, in 1794; and the fourth, by Woods, in 1816. Revett had no connection with this work after the publication of the first volume; and in the same year in which it appeared the Society of Dilettanti engaged him, together with Mr. Pars and Dr. Chandler, to undertake an antiquarian journey to Greece. Chandler published the results of their researches in Greece and Asia Minor, of which the volume relating to Greece appeared at Oxford in 1776. Chandler was a man of learning, and did much to illustrate the geography of Greece; but he has been justly censured by Leake for having omitted to cite the ancient authorities when he had recourse to them, in consequence of which it is often difficult to test the accuracy of his conclusions. Choiseul-Gouffier published, in 1782, his *Voyage pittoresque de la Grèce*, vol. i. fol., which is a handsome book, but of no critical value. In 1784 he was sent, as French ambassador, to Constantinople; and in 1809 he published the first part of the second volume of his *Voyage pittoresque*, which is much more carefully executed than the first volume. The second part of the second volume appeared in 1820, after the author's death.

Sibthorp and Hawkins visited Greece together in 1786; and Sibthorp undertook another journey to the country in 1794. His object was to form a complete Flora of Greece; and on his death, in 1796, he bequeathed, by his will, to the University of Oxford, an estate of 200*l.* a-year for the purpose of publish-

ing a *Flora Graeca* in 10 folio volumes, with 100 plates in each, and a *Prodromus* of the work, without plates. These works afterwards appeared; and extracts from the Journal of his Travels were given by Walpole in *Memoirs relating to European and Asiatic Turkey*, Lond. 1817, 4to., and in *Travels to various Countries of the East*, Lond. 1820, 4to. In both of these works there are also some valuable papers by Hawkins.

Of the numerous books of travels in Greece which have appeared in the present century, the following require mention:—POUQUEVILLE, *Voyage en Morée à Constantinople, en Albanie, et dans plusieurs autres Parties de l'Empire Othoman, pendant les années* 1798 *et* 1801: but this well-known work is full of great inaccuracies; and the author, probably, did not visit many of the places which he describes. In 1805 he was appointed French consul at Janina, where he resided several years, and from whence he visited the adjoining countries, Thessaly, Epirus, &c. The results of these travels appeared in a new work —*Voyage dans la Grèce*, Paris, 1820—1821, 5 vols. 8vo. This work is of more value than the former one, but still must be used with caution. HOBHOUSE, *Journey through Albania, and other Provinces of Turkey in Europe and Asia, to Constantinople, during the years* 1809 *and* 1810, London, 1813. H. HOLLAND, *Travels in the Ionian Islands, Albania, Thessaly, Macedonia, &c., during the years* 1812 *and* 1813, London, 1815; and, 2nd ed., 2 vols. 8vo. 1819. DODWELL, *A Classical and Topographical Tour through Greece, during the years* 1801, 1805, & 1806, London, 1819, 2 vols. 4to.,—the most valuable work on Grecian geography that had hitherto appeared, and one which may still be consulted with advantage. SIR W. GELL travelled in Greece at the same time as Dodwell, and partly in company with him; and his works are of still more value than the Travels of the latter. They are:—1. *Itinerary of the Morea*, Lond. 1817; 2nd ed. 1827: 2. *Itinerary of Greece, with a Commentary of Pausanias and Strabo*, Lond. 1818 (containing only *Argolis*): 3. *Itinerary of Greece*, Lond. 1819: 4. *Narrative of a Journey in the Morea*, Lond. 1823. But it is to COLONEL LEAKE that we are indebted for the most valuable information which we yet possess respecting many parts of Greece. A first-rate observer, a good scholar, and a man of sound judgment and great sagacity, he combined qualities rarely found in the same individual, and may safely be pronounced the first geographer of the age. He travelled in Greece for several years at the commencement of the present century; but it was long before he published detailed accounts of these travels. His works are:—*The Topography of Athens, with some Remarks on its Antiquities*, Lond. 1821, 8vo.; of this work, a second edition appeared in 1841, accompanied by a second volume, on *The Demi of Attica*, which had originally appeared in the Transactions of the Royal Society of Literature: *Travels in the Morea, with a Map and Plans*, Lond. 1830, 3 vols. 8vo.: *Travels in Northern Greece*, Lond. 1835, 4 vols. 8vo.: *Peloponnesiaca; a Supplement to Travels in the Morea*, Lond. 1846, 8vo. This last work was written in consequence of the researches of the French Commission in the Morea, spoken of below, and is accompanied by a large map of the Peloponnesus, reduced from the French map, on a scale of something more than a third, but not without some variations. We may close our notice of the works of English travellers in Greece with COLONEL MURE'S valuable, though unpretending, volumes, entitled, *Journal of a Tour in Greece and the Ionian Islands*, Edinburgh, 1842, 2 vols., which we have frequently consulted, in the course of this work, with great advantage.

Of the modern French and German works, we must mention first the publications of the FRENCH COMMISSION of Geography, Natural History, and Archaeology, which was sent to the Peloponnesus in 1829, and remained there two years. These publications are:—*Expédition Scientifique de Morée, ordonnée par le Gouvernement Français*, par Abel Blouet, Amable Ravoisié, Achille Poirot, Félix Trézel, et Fréd. de Gournay, Paris, 1831—1838, 3 vols. fo.: *Travaux de la Section des Sciences Physiques, sous la direction de M. Bory de St. Vincent*, Paris, 1831, fo.: *Recherches Géographiques sur les Ruines de la Morée*, par M. E. Pouillon Boblaye, Paris, 1836, 4to.: also, Bory de St. Vincent, *Relation du Voyage de la Commission Scientifique de Morée*, Paris et Strassb., 1837, 2 vols. 8vo. This Commission also constructed a map of the Peloponnesus, on a scale of the two hundred-thousandth part of a degree of latitude, or twenty-one English inches and three-fifths.

ROSS, who resided several years at Athens, where he held the post of professor in the university, and who travelled through various parts of Greece, has published several valuable works:—*Reisen und Reiserouten durch Griechenland*, Berlin, 1841; vol. i., containing travels in Peloponnesus, is all that has appeared of this work: *Reisen auf den Griechischen Inseln des Aegäischen Meeres*, Stuttgart & Tübingen, 1840, 2 vols. 8vo.; the third volume appeared in 1845, and the fourth at Halle in 1852: *Wanderungen in Griechenland*, Halle, 2 vols. 8vo. 1851. One of the most important of all the modern German works is by CURTIUS, *Peloponnesos, eine historisch-geographische Beschreibung der Halbinsel*, Goth. 2 vols. 8vo. 1851—1852. Besides these, the following works all deserve mention, of which the two first are particularly valuable. FORCHHAMMER, *Hellenika Griechenland im Neuen das Alte*, Berlin, 1837. ULRICHS, *Reisen und Forschungen in Griechenland.* Erster Theil, *Reise über Delphi durch Phocis und Boeotien bis Theben*, Bremen, 1840. BUCHON, *La Grèce continentale et la Morée; Voyage, Séjour, et Etudes Historiques en* 1840—41, Paris, 1843. FIEDLER, *Reise durch alle Theile des Königreiches Griechenland*, Leipzig, 2 vols. 8vo. 1840—41. ALDENHOVEN, *Itinéraire descriptif de l'Attique et du Péloponnese, avec cartes et plans topographiques*, Athens, 1841, taken almost entirely from the publications of the French Commission. BRANDIS, *Mittheilungen über Griechenland*, 3 vols. 1842. STEPHANI, *Reise durch einige Gegenden des nördlichen Griechenlandes*, Leipz. 1843.

The following are the chief systematic works on the geography of Greece:—MANNERT, *Geographie*, of which the volume containing Thessaly and Epirus appeared in 1812, and the one containing Northern Greece, Peloponnesus, and the islands of the Archipelago in 1822; but neither is of much value. KRUSE, *Hellas, oder geographisch-antiquarische Darstellung des alten Griechenlandes*, Leipz. 3 vols. 8vo. 1825—1827, which, besides the general introduction, contains only an account of Attica, Megaris, Boeotia, Phocis, Doris, Locris, Aetolia, and Acarnania. CRAMER, *A Geographical and Historical Description of Ancient Greece, with a Map and a Plan of Athens*, 3 vols. 8vo. Oxf. 1828. HOFFMANN, *Griechenland und die Griechen im Alterthum*, Leipzig,

1841, 2 vols. 8vo.; FORBIGER, *Handbuch der alten Geographie*, 3 vols. 8vo. Leip. 1842—48: but the part relating to Greece contains little more than mere references to ancient authors and modern works. The numerous monographs on separate countries and islands are given under their respective names. A good general account is given by K. O. MÜLLER, in his work on the *Dorians;* by THIRLWALL and GROTE, in their *Histories of Greece;* and by WORDSWORTH, in his *Greece, Pictorial, Descriptive, and Historical.* The best collection of Maps of Greece is by KIEPERT, *Topographisch-Historischer Atlas von Hellas und den Hellenischen Colonien in 24 Blättern*, Berlin, 1846.

GRAE'CIA MAGNA. [MAGNA GRAECIA.]

GRAIOCELI. [GAROCELI.]

GRAMATUM, a place in Gallia between Epamandurum and Larga [EPAMANDURUM]; but it is not certain that the name ought to appear in the Itin.: and if it should, we have no evidence where it is; though Ukert says that it is *Giromagny*. D'Anville has his usual kind of guess: he makes it *Granvillars*. [G. L.]

GRAMMIUM (Γράμμιον, Steph. B.), a town of Crete, which Coronelli (Höck, *Kreta*, vol. i. p. 434) has placed to the SW. of *Kavo-sidhero*, but on Pashley's map it is identified with *Eremopoli*, on the E. coast. [E. B. J.]

GRA'MPIUS MONS, in Britain, the scene of Galgacus's resistance to the Roman arms = *the Grampian Hills*. (Tac. *Agric.* 29.) [R. G. L.]

GRANDE, a station which the Jerusalem Itinerary places on the Egnatian Way, 14 M. P. from Cellae. (Comp. Tafel, *de Viae Egnat. Part. Occid.* p. 42.) [E. B. J.]

GRANDIMI'RUM. [GALLAECIA.]

GRANI'CUS (Γράνικος), a river in Troas which had its source in Mount Cotylus, a branch of Ida, and flowing through the Adrastian plain emptied itself into the Propontis. (Hom. *Il.* xii. 21; Strab. xiii. pp. 582, 587, 602; Mela, i. 19; Plin. v. 40; Ptol. v. 2. § 2.) This little stream is celebrated in history on account of the signal victory gained on its banks by Alexander the Great over the Persians in B. C. 334, and another gained by Lucullus over Mithridates (Arrian, *Anab.* i. 13; Diod. Sic. xvii. 19; Plut. *Alex.* 24, *Lucull.* 11; Flor. iii. 5.) Some travellers identify the Granicus with the *Dimotico* (Chishull, *Travels in Turkey*, p. 60), and others with the *Kodsha-su*. [L. S.]

GRANIS (Γράνις, Arrian, *Ind.* c. 39), a small river of Persis, to which the fleet of Nearchus came. There seems no reason to doubt that it is the same stream as that called by D'Anville and Thevenot the *Boschavir*. It is, in fact, the river of *Abushir*. Niebuhr speaks of a stream which passes *Grá* and flows into the Persian Gulf (*Travels*, vol. ii. p. 91). Can *Grá* be considered as preserving part of the ancient name? (Vincent, *Voy. of Nearchus*, vol. i. p. 400.) [V.]

GRANNONUM, in Gallia, "in Littore Saxonico," according to the Notitia Imp. Sanson supposed it to be *Granville*. D'Anville and others guess other names; and D'Anville finds places both for Grannona and Grannonum. [G. L.]

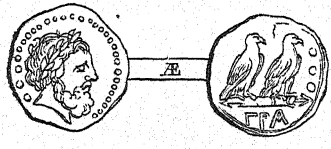
GRANUA (Γρανούα), a river in the extreme south-east of Germany, in the country of the Quadi, and emptying itself into the Danube. Its modern name is *Graan*. (Anton. *Meditat.* i. 17.) [L.S.]

GRATIA'NA (Γρατιανά), a town on the frontier of Illyricum, not far from Moesia. (Procop. *Bell. Goth.* i. 3, *de Aed.* iv. 11; Hierocl. p. 657.) The modern town of *Graczanicza*, on the left bank of the river Drina, is said to occupy the site of the ancient Gratiana. [L. S.]

GRATIANO'POLIS. [CULARO.]

GRATIA'RUM COLLIS (ὁ λόφος ὁ Χαρίτων: *M. Ghuriano*), a well-wooded range of hills, in the Regio Syrtica of N. Africa, 200 stadia from the sea, containing the sources of the river CINYPS. (Herod. iv. 175; Callim. *ap. Schol.* Pind. *Pyth.* v. 32; Della Cella, *Viaggio*, p. 29.) [P. S.]

GRA'VII. [GALLAECIA.]



GRAVINUM, a station in Gallia, placed in the Table on a road from Juliobona (*Lillebonne*), which joins another road, the termination of which is Gesoriacum (*Boulogne*). As to this obscure and unknown place, see D'Anville, *Notice, &c.*; Ukert, *Gallien*, p. 547. [G. L.]

GRAVISCAE (Γραυΐσκαι, Ptol.; Γραυΐσκοι, Strab.), a town on the coast of Etruria, between Cosa and Castrum Novum. We have no account of its existence previous to the establishment there of a Roman colony in B. C. 181 (Liv. xl. 29; Vell. Pat. i. 15), and we know that its site had originally formed part of the territory of Tarquinii. It is not impossible, indeed, that Graviscae may, during the independence of that city, have served as its port, just as Pyrgi did to the neighbouring Caere, but we have no authority for the fact. The mention of Graviscae, by Virgil (*Aen.* x. 184), in conjunction with Pyrgi, among the places supposed to have taken part in the wars of Aeneas, is the only argument in favour of its remote antiquity; for the authority of Silius Italicus, who calls it "veteres Graviscae" (viii. 475), is on such a point of no value. The colony sent thither was a "colonia maritima civium," but seems, like most settlements of a similar class established on the coast of Etruria, to have enjoyed but little prosperity; which—in the case of Graviscae at least—may be ascribed to the extreme unhealthiness of its situation, alluded to both by Virgil and Rutilius. ("Intempestaeque Graviscae," Virg. *Aen. l. c.*; Rutil. *Itin.* i. 282.) It is, however, noticed as a subsisting town by Strabo, Pliny, and Ptolemy, as well as in the Itineraries; but in the time of Rutilius (A. D. 416) it had sunk into complete decay, and retained only a few scattered houses. (Strab. v. p. 225; Plin. iii. 5. s. 8; Ptol. iii. 1. § 4; Rutil. *l. c.*; *Itin. Marit.* p. 498; *Tab. Peut.*)

The exact site of Graviscae has been a subject of much discussion, though the data afforded by ancient authorities would appear sufficiently precise. Strabo says it was 300 stadia from Cossa, and rather less than 180 from Pyrgi: but the former distance is certainly too great, as it would carry us to a point beyond the river Minio; and it is certain, from Rutilius, as well as the Itineraries, that Graviscae lay to the N. of that river. On the other hand, the distance from Pyrgi would coincide with a position at or near the mouth of the river *Marta*, and there seems on the whole to be little doubt that Graviscae was situated in the neighbourhood of that stream. Two localities have been pointed out as its exact site, at both of which there are some ancient remains: the one on the right bank of the *Marta*, about a mile from its mouth, which is adopted by Westphal and Dennis; the other on the sea-coast, at a spot called *S. Clementino* or *Le Saline*, about a mile S. from the mouth of the *Marta*. The latter must, according to Dennis's own admission, have certainly been a Roman station, and seems to have the best

claim to represent the Roman colony of Graviscae. If there ever existed an Etruscan town of the name, it is highly probable that it may have occupied a somewhat different site. (Dennis, *Etruria*, vol. i. pp. 387—395.)

The annexed coin, with the Greek legend ΓΡΑ, is commonly assigned to Graviscae; but this attribution, though admitted by Eckhel (vol. i. p. 92), is certainly erroneous. It belongs to some town of Apulia or Calabria, but its correct attribution has not yet been determined. (Millingen, *Numismatique de l'Italie*, pp. 148, 172.) [E. H. B.]

COIN ASSIGNED TO GRAVISCAE.

GRINNES, a place in Northern Gallia, mentioned by Tacitus (*Hist.* v. 20) in his history of the insurrection of Civilis. The Table places Grinnes on a road between Noviomagus (*Nymegen*) and Lugdunum (*Leiden*). It is 18 M. P. from Noviomagus to Ad Duodecimum [DUODECIMUM, AD], and 9 M. P. from Ad Duodecimum to Grinnes. The next station after Grinnes is Caspingium, 18 M. P. It seems that hardly any two geographers agree about the site of Grinnes. Walckenaer has no doubt that it is *Warich* and *Bochstein*, as he writes the names. The only thing that is certain is, that we do not know where Grinnes is. [G. L.]

GRION (Γρίον), a chain of mountains running parallel to Mount Latmos, on the western side of the Latmic bay, and extending from the neighbourhood of Miletus to Euromus in Caria. (Strab. xiv. p. 635.) Some identified this range with that of PHTHIRA. (Hom. *Il.* ii. 868; Steph. B. *s. v.* Φθίρα.) [L. S.]

GRISELUM (*Eth.* Griselicus), a place in Gallia Narbonensis. Spon published an inscription found at the baths of *Greoulx*, near *Riez*, in the department of *Basses Alpes*. *Greoulx* is near the right bank of the *Verdon*, a little above its junction with the *Durance*. The inscription is "Nymphis xi. Griselicis." Papon made the ridiculous mistake of supposing that the numerals marked the number of these water nymphs. Walckenaer observes that XI. M. P. is the exact distance between *Greoulx* and Reii (*Riez*). [G. L.]

GRISSIA. [GERASUS.]

GROVII. [GALLAECIA.]

GRU'DII, a people of North Gallia enumerated by Caesar (*B. G.* v. 39) as dependent on the Nervii, and mentioned nowhere else. D'Anville finds the name in *Groede* or *Gronde*, the name of a small place and canton in *Cadsant*, in Zeeland. [G. L.]

GRUII. [GALLAECIA.]

GRUMENTUM (Γρούμεντον: *Eth.* Grumentinus: *Saponara*), a city of Lucania, and one of the chief towns situated in the interior of that province. From its inland position it is evident that it was never a Greek settlement, and there is little doubt that it was a native Lucanian town; but no mention occurs of it in history previous to the Second Punic War. Its name is first found in B. C. 215, when the Carthaginian general Hanno was defeated under its walls by Tib. Sempronius Longus (Liv. xxiii. 37): and again in B. C. 207, when Hannibal himself, having broken up from his winter quarters in Bruttium and marched into Lucania, established his camp at Grumentum, where he was encountered by the consul C. Claudius Nero, and sustained a slight defeat (Id. xxvii. 41, 42). Grumentum appears to have been at this time one of the Lucanian cities that had espoused the Carthaginian cause, and was therefore at this time in the possession of Hannibal, but must have been lost or abandoned immediately after. We hear no more of it till the period of the Social War (B. C. 90), when it appears as a strong and important town, in which the Roman praetor Licinius Crassus took refuge when defeated by M. Lamponius, the Lucanian general. (Appian, *B. C.* i. 41.) But it would seem from an anecdote related by Seneca and Macrobius that it subsequently fell into the hands of the allies, and withstood a long siege on the part of the Romans. (Senec. *de Benef.* iii. 23; Macrob. i. 11.)

It now became a Roman municipium, but seems to have continued to be one of the few flourishing or considerable towns in the interior of Lucania. Strabo, indeed, terms it a small place (μικρὰ κατοικία, vi. p. 254), and the Liber Coloniarum includes it among the towns of Lucania which held the rank of Praefecturae only. (*Lib. Col.* p. 209.) But we learn from an inscription that it certainly at one time enjoyed the rank of a colony; and other inscriptions, in which mention is made of its local senate and various magistrates, as well as the ruins of buildings still remaining, sufficiently prove that it must have been a place of consideration under the Roman Empire. (Mommsen, *Inscr. R. N.* pp. 19—22; Plin. iii. 11. s. 15; Ptol. iii. 1. § 70.) The Itineraries attest its existence down to the fourth century, and we learn from ecclesiastical records that it was an episcopal see as late as the time of Gregory the Great; but the time of its destruction is unknown.

The site of Grumentum, which was erroneously placed by Cluverius at *Chiaromonte*, on the left bank of the *Sinno* or Siris, was first pointed out by Holstenius. Its ruins are still visible on the right bank of the river *Agri* (Aciris), about half a mile below the modern town of *Saponara*: they include the remains of an amphitheatre, with many walls and portions of buildings of reticulated masonry, and the ancient paved street running through the midst of them. Numerous inscriptions have also been discovered on the site, as well as coins, gems, and other minor objects of antiquity. (Cluver. *Ital.* p. 1279; Holsten. *Not. ad Cluver.* p. 288; Romanelli, vol. i. pp. 399, 400; Mommsen, *l. c.* p. 19.) The position thus assigned to Grumentum — which is clearly identified by early ecclesiastical records — agrees well with the distances given in the Itineraries, especially the Tabula, which reckons 15 M. P. from Potentia to Anxia (still called *Anzi*), and 18 from thence to Grumentum. (*Itin. Ant.* p. 104; *Tab. Peut.*) Many of the other distances and stations in this part of the country being corrupt or uncertain, the point thus gained is of the highest importance for the topography of Lucania. [LUCANIA.] At the same time its central position, near the head of the valley of the Aciris, sufficiently accounts for its importance in a military point of view. [E. H. B.]

GRUMUM (*Eth.* Grumbestinus: *Grumo*), a town of Apulia, in the Peucetian territory, the name of which is preserved only in that of the modern village of *Grumo*, about 9 miles S. of *Bitonto* (Butuntum), and 14 SW. of *Bari* (Barium), where ancient remains have been found. But there is no doubt

that the "Grumbestini" of Pliny (iii. 11. s. 16) are no other than the inhabitants of Grumum, though the ethnic form is singular. Many numismatists assign to Grumum the coins with the legend ΓΡΥ, which other authorities refer to Grumentum in Lucania. (Romanelli, vol. ii. p. 174; Sestini, *Class. Gen.* p. 15.) [E. H. B.]

GRUNAEI (Γρυναῖοι and Γρινᾶοι), mentioned by Ptolemy (vi. 13. § 3) as a population of Scythia. [SCYTHIA.] [R. G. L.]

GRYNIUM or GRYNIA (Γρύνιον, Γρύνεια: *Eth.* Γρυνεύς), one of the Aeolian cities in Asia Minor, 40 stadia from Myrina, and 70 from Elaea. In the early times the town was independent, but afterwards became subject to Myrina. It contained a sanctuary of Apollo with an ancient oracle and a splendid temple of white marble. (Herod. i. 149; Strab. xiii. p. 622; Virg. *Ecl.* vi. 72, *Aen.* iv. 345; Plin. v. 32, xxxii. 21; Steph. B. *s. v.* Γρῖνοι; Paus. i. 21. § 9; Scylax, p. 37.) Xenophon (*Hell.* iii. 1. § 6) mentions Grynium as belonging to Gongylus of Eretria; and it is possible that the *castrum Grunium* in Phrygia, from which Alcibiades derived an income of 50 talents was the town of Grynium. (Nep. *Alcib.* 9.) Parmenio took the town by assault, and sold its inhabitants as slaves, after which the place seems to have decayed. (Diod. Sic. xvii. 7.) [L. S.]

GUGERNI. Tacitus (*Hist.* iv. 28), in his history of the insurrection of Civilis, speaks of the Roman commander Vocula encamping at Gelduba, and thence attacking the nearest districts of the Gugerni, who had joined Civilis. They were Germans who lived on the west side of the Rhine, in the Lower Germania, as appears from Tacitus (iv. 28, v. 16). They are mentioned by Pliny (iv. 17) in this order: "Ubii, Colonia Agrippinensis, Gugerni, Batavi," which shows that they were between *Cologne* and the Batavorum Insula. We may infer from Tacitus (*Hist.* iv. 28) that Gelduba [GELDUBA] was south of the boundary of the Gugerni, but not far from it. There is no record of these Germans passing the Rhine, and they are not mentioned by Caesar. Suetonius (*August.* c. 21; *Tiber.* c. 9) speaks of Ubii and Sicambri submitting to the Romans, and being transplanted to the west side of the Rhine. In the first passage of Suetonius some read "Suevos et Sicambros," in place of "Ubios et Sicambros." It is an old conjecture that these Gugerni were transplanted Sicambri; which may be true, or it may not. More probably not true; for why should they change their name, when the Ubii did not? If the true reading in Suetonius is "Suevos," the Gugerni may be one of the pagi of the Suevi. But the true reading is probably "Ubios." We may suppose then that other tribes may have been transplanted besides Ubii and Sicambri, for a great many Germans were settled on the left bank of the Rhine in the time of Augustus. [G. L.]

GUJUNTA. [BALEARES, p. 374, b.]

GULUS (Γούλου ποταμοῦ ἐκβολαί, Ptol. iv. 2. § 11: *Wad Daab* or *Kammeil*), a river of Mauretania Sitifensis, falling into the sea between Igilgilis and the mouth of the Ampsaga. [P. S.]

GUMI'GI (Καυουκίς, Ptol.: *Bereshk*), a city on the coast of Mauretania Caesariensis, 12 M. P. west of Caesarea Iol; made a colony by Augustus. (Plin. v. 1; *Itin. Ant.* p. 15; Ptol. iv. 2. § 2; Geog. Rav.; *Not. Afr.*) [P. S.]

GUNTIA. 1. A town in Vindelicia, on the road leading from Campodunum to Augusta Vindelicorum. (*Itin. Ant.* p. 250; Orelli, *Inscript.* no. 2054.) It is identified with the modern *Ober-Günzburg*, near the sources of the river Günz.

2. (*Günz*), a river in Vindelicia, and a tributary of the Danube; near its source the town of Guntia was situated. This river is not expressly mentioned by the ancients; but the town of the same name, and the expression, "Danubii transitus Guntiensis" (Eumen. *Paneg. Const.* 2), show that its name was known to them. [L. S.]

GURAEI. [GORYA.]

GURAEUS. [GORYA.]

GURGURES MONTES, a range of mountains in Central Italy, known only from a passage in Varro, who tells us that it was the custom to drive the mules which were fed in large herds in the Rosei Campi near Reate, into these lofty mountains ("in Gurgures altos montes," Varr. *R. R.* ii. 1. § 16) for their summer pasturage. It is evident that they were a portion of the central and highest ranges of the Apennines, but the particular mountains meant cannot be identified. [E. H. B.]

GURU'LIS (Γουρουλίς), is the name given by Ptolemy (iii. 3. § 7) to two cities of Sardinia which he distinguishes as Gurulis Vetus (Γουρουλὶς παλαιά) and Gurulis Nova (Γουρουλὶς νέα). The latter, according to De la Marmora, is represented by the modern town of *Cuglieri*, about 6 miles from the W. coast of the island, and 12 NE. of the ancient Cornus: there still exist Roman remains on this spot. Gurulis Vetus is supposed by the same author to have occupied the site of *Padria*, a village in the interior, NE. of *Bosa;* but this is a mere conjecture. (De la Marmora, *Voy. en Sardaigne*, vol. ii. pp. 366, 403.) Ptolemy again mentions Gurulis Nova in the 8th book (viii. 9. § 3) among the places at which he records astronomical observations, whence we are led to infer that it must have been a place of some importance, but its name is not found in the Itineraries. [E. H. B.]

GURZUBITAE (Γουρζουβῖται, Procop. *de Aed.* iii. 7), a fortress erected by Justinian in the Tauric Chersonese, the ruins of which are still seen at *Oursuf*, to the W. of *Lambat*. (Comp. Clarke, *Trav.* vol. ii. p. 258.) [E. B. J.]

GUTAE. [GOTHI.]

GUTTALUS, a small river on the coast of the Baltic, which, according to Solinus (20), existed on the west of the Vistula, and would therefore belong to Germany; but Pliny (iv. 28) places it on the east of the Vistula, whence it must be regarded as a Sarmatian river, and is perhaps the same as the modern *Pregel*. [L. S.]

GY'AROS, or GY'ARA (Γύαρος, Strab., Steph. B.; Gyarus, Tac.; τὰ Γύαρα, Arrian, *Diss.* iv. 4; Gyara, Juv., Plin.: *Eth.* Γυαρεύς), a small island in the Aegaean sea, reckoned one of the Cyclades, and situated SW. of Andros. According to Pliny, it was 62 (Roman) from Andros and 12 miles in circumference. (Plin. iv. 12. s. 23.) It was little better than a barren rock, though inhabited in antiquity. It was one of the few spots in Greece visited by Strabo, who relates that he landed in the island and saw there a little village inhabited by fishermen, who deputed one of their number to go to Augustus, then at Corinth after the battle of Actium, to beg him to reduce their yearly tribute of 150 drachmae, since they could scarcely pay one hundred. (Strab. x. p. 485.) So notorious was it for its poverty that it was said, in joke, that the mice in this island gnawed through iron. (Antig. Carys. 21; Plin. viii. 43. s. 82; Steph. B. *s. v.*

Γύαρος). Under the Roman empire it was used as a place of banishment, and was one of the most dreaded spots employed for that purpose:—

"Aude aliquid brevibus Gyaris et carcere dignum." (Juv. i. 73; comp. Tac. *Ann.* iii. 68, 69, iv. 30; Plut. *de Exsil.* 8.) Among others, the philosopher Musonius was banished to Gyaros, in the reign of Nero. (Philostr. *Vit. Apoll.* vii. 16.) In the time of the Antonines a purple fishery was carried on here by divers. (Lucian, *Toxar.* 18.) The island is now uninhabited, except in the summer time by a few shepherds who take care of the flocks sent there by some of the inhabitants of Syros, to whom the island now belongs. It is called τὰ Γιούρα, pronounced *Jura*. (Tournefort, *Voyage, &c.* vol. i. p. 263, Engl. Transl.; Ross, *Reisen auf den Griech. Inseln*, vol. i. p. 5, vol. ii. p. 170, seq.; Fiedler, *Reise durch Griechenland*, vol. ii. p. 158, seq.)

GYENUS. [CYANEUS.]

GYGAEUS LACUS (Γυγαία λίμνη: *Mermere*), a lake in Phrygia, on the road from Thyatira to Sardes, between the rivers Hermus and Hyllus. (Hom. *Il.* ii. 864, xx. 391; Herod. i. 93; Strab. xiii. p. 626; Plin. v. 30.) This lake was afterwards called *Coloë*, and near it was the necropolis of Sardes. It was said to have been made by human hands, to receive the waters which inundated the plain. (Comp. Hamilton's *Researches*, vol. i. p. 145.) [L. S.]

GYMNE'SIAE. [BALEARES.]

GY'MNIAS (Γυμνίας, Xen. *Anab.* iv. 7. § 19; called Gymnasia by Diod. Sic. xiv. 29), "a great, flourishing, and inhabited city," which the Ten Thousand reached, in seven marches, after they had made the passage of the Harpasus. (Xen. *l. c.*) Colonel Chesney (*Exped. Euphrat.* vol. ii. p. 232) thinks that it may be represented by the small town of *Gemeri*, on the *Karâ Sû*, an affluent of the river *Frât*. But Mr. Grote (*Hist. of Greece*, vol. ix. p. 161), with reason, thinks it is more probably the same as *Gûmisch-Khâna*, on the road from *Trebizond* to *Erzerum*, "celebrated as the site of the most ancient and considerable silver mines in the Ottoman dominions." (Hamilton, *Asia Minor*, vol. i. pp. 168, 234.) The existence of these mines, as Mr. Grote observes, furnishes a plausible explanation of that which would be otherwise surprising, the existence of so important a city in the midst of such barbarians as the Chalybes, Scythini, and Macrones. [E. B. J.]

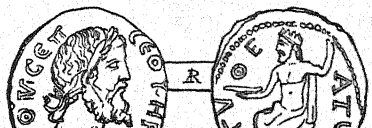
GYNAECO'POLIS (Γυναικόπολις, Strab. xvii. p. 803; Steph. B. *s. v.*; Plin. v. 9. § : *Eth.* Γυναικοπολίτης), was, according to the ancient geographers, the chief town of the Gynaecopolite nome, and coins bearing its impress in the age of Hadrian are still extant. Many writers doubt, however, whether there was such a nome or such a city. The name seems rather allusive to circumstances unknown than to the proper appellation of a place, and Stephanus of Byzantium relates no less than three legends by way of accounting for it:—(1) The women maintained the town against a hostile inroad, during the absence of their husbands and male relatives. (2) A woman whose sons had been maltreated by a king, took up arms and expelled him. (3) The men of Naucratis were afflicted with the plague; and while all other of the Aegyptian cities kept them at bay, the Gynaecopolites, through cowardice, admitted them, and were named *women* for their pains. Each of these stories is palpably an attempt to explain the name. D'Anville conjectures that Gynaecopolis is but another name for Anthylla in the Delta. That city, as Herodotus (ii. 97, 98) relates, was appointed by the Pharaohs to furnish the Egyptian queens with sandals or some articles of female attire. The tribute of pin-money procured for the place the appellation of Gynaecopolis, or "Woman-ton:" but see ANTHYLLA. [W. B. D.]

GYNDES (Γύνδης, Herod. i. 189; v. 52), a river which has been considered to belong in part to both Assyria and Susiana; as the upper course of its stream, from the mountains of Matiene, in which it takes its rise, passes through part of the former country, while the latter part belongs to Susiana, if its identification with the *Kerkhah* is admissible. Herodotus is not clear in his account of the river: in one place (i. 189), where he speaks of Cyrus's crossing it, his account would answer best with the position of the modern *Diala*, which enters the Tigris near the ancient Ctesiphon: in another place (v. 52), he seems to imply a river at no great distance from the Choaspes and Susa. Hence the most contradictory views of geographers. Rennell (*Geogr. of Herod.* vol. i. p. 266) has, in one place, conjectured that the Gyndes is the present *Diala*; in another, the *Mendeli*. Larcher has thought that Herodotus means only one and the same river, and that the *Mendeli* best represents it. D'Anville appears to have thought there were three rivers of the name. On the whole, it is probable that the *Mendeli* was the ancient Gyndes; while it can hardly have been the *Kerkhah*, as Forbiger has supposed. It is clear that Herodotus had himself a very indistinct notion of it, as he makes the Gyndes and Araxes (the *Aras*) both flow from the mountains of Matiene (i. 202). [V.]

GYRISOENI (Γυρισοῖνοι), a people of Hispania Baetica, in the neighbourhood of Castulo. (Plut. *Sertor.* 3; Ukert, vol. ii. pt. 1. p. 410.) [P. S.]

GYRTON, or GYRTONA (Γυρτών, Thuc., Polyb., Strab.; Γυρτώνη, Hom.: *Eth.* Γυρτώνιος: *Tatâri*), a town of Perrhaebia in Thessaly, situated in a fertile plain between the rivers Titaresius and Peneius. Its site is represented by the modern village of *Tatâri*. Strabo, indeed, connects Gyrton with the mouth of the Peneius (ix. pp. 439, 441), and the Epitomiser of the seventh book (p. 329) places it near the foot of Mt. Olympus; but it is evident from the description of Livy, whose account has been derived from Polybius, that it stood in some part of those plains in which Phalanna, Atrax, and Larissa were situated. (Liv. xxxvi. 10, xlii. 54.) It was only one day's march from Phalanna to Gyrton (Liv. xlii. 54); and the Scholiast on Apollonius (i. 40) says that Gyrton was near Larissa. (Leake, *Northern Greece*, vol. iii. p. 382, vol. iv. p. 534.) It was an ancient town, mentioned by Homer (*Il.* ii. 738), and continued to be a place of importance till later times, when it is called opulent by Apollonius Rhodius (i. 57). It was said to have been the original abode of the Phlegyae, and to have been founded by Gyrton, the brother of Phlegyas. (Strab. ix. p. 442; Steph. B. *s. v.* Γυρτών.)

COIN OF GYRTON.



The Gyrtonians are mentioned among the Thessalians who sent aid to the Athenians at the commencement of the Peloponnesian War. (Thuc. ii. 22.) The name of the city frequently occurs at a later period. (Liv. *ll. cc.*; Polyb. xviii. 5; Mela, ii. 3; Plin. iv. 9. s. 16; Ptol. iii. 13. § 43.)

GYTHIUM (Γύθιον, Strab., Polyb., Plut.; Gythium, Liv.; Γυθεῖον, Steph. B. *s. v.*; Gytheum, Cic.: *Eth.* Γυθεάτης), an ancient Achaean town in Laconia, situated near the head of the Laconian gulf, south-west of the mouth of the Eurotas, at the distance of 240 stadia from Sparta according to Strabo (viii. p. 363), and 30 Roman miles according to the Table. This distance agrees with the 43 kilometres which the French commission found to be the distance by the road from the ruins of Gythium to the theatre of Sparta. In Polybius Gythium is said to be 30 stadia from Sparta; but this number is evidently corrupt. and for περὶ τριάκοντα we ought to read with Müller περὶ τριακόσια. (Polyb. v. 19.) Gythium stood upon the small stream Gythius (Mela, ii. 3), in a fertile and well-cultivated plain. (Polyb. v. 19.) Its cheeses are celebrated in one of Lucian's dialogues. (*Dial. Meretr.* 14.) After the Dorian conquest it became the chief maritime town in Laconia, and was therefore regarded as the port of Sparta. It was also the ordinary station of their ships of war. Accordingly, when war broke out between Athens and Sparta, Gythium was one of the first places which the Athenians attacked with their superior fleet; and in B. C. 455 it was burnt by Tolmidas, the Athenian commander. (Thuc. i. 102; Diod. xi. 84.) On the invasion of Laconia by Epaminondas in B. C. 370, after the battle of Leuctra, he advanced as far south as Gythium, but was unable to take it, though he laid siege to it for three days. (Xen. *Hell.* vi. 5. § 32.) Even then it must have been well fortified, but its fortifications appear to have been still further increased by the tyrant Nabis; and when it was taken by the Romans in 195 it is described by Livy as "valida urbs, et multitudine civium incolarumque et omni bellico apparatu instructa" (xxxiv. 29). Augustus made it one of the Eleuthero-Laconian towns; and under the Roman empire it again became a place of importance, as is shown by its ruins, which belong almost exclusively to the Roman period. Its port, according to the information received by Strabo, was artificial (ἔχει δ', ὅς φασι, τὸ ναύσταθμον ὀρυκτόν, Strab. viii. p. 363).

Pausanias saw in the market-place of Gythium statues of Apollo and Hercules, who were reputed to be the founders of the city; near them a statue of Dionysus; and on the other side of the market-place a statue of Apollo Carneius, a temple of Ammon, a brazen statue of Asclepius, the temple of which had no roof, a fountain sacred to this god, a sanctuary of Demeter, and a statue of Poseidon Gaeaochus. A fountain still flowing between the shore and the Acropolis seems to have been the above-mentioned fountain of Asclepius, and thus indicates the site of the Agora. On the Acropolis was a temple of Athena; and the gates of Castor mentioned by Pausanias appear to have led from the lower city to the citadel. (Paus. iii. 21. §§ 8, 9.) Opposite Gythium was the island Cranaë, whither Paris was said to have carried off Helen from Sparta. [CRANAE.]

The coast on the mainland south of Gythium was said to have derived its name of Migonium (Μιγώνιον) from the union of Paris and Helen on the opposite island. On this coast was a temple of Aphrodite Migonitis, and above it a mountain sacred to Dionysus called Larysium (Λαρύσιον), where a festival was celebrated to this god in the beginning of spring. (Paus. iii. 22. § 1.) Pausanias further describes, at the distance of three stadia from Gythium, a stone on which Orestes is said to have been relieved from his madness. This stone was called Ζεύς (according to Sylburg, Λεύς) καπτώτας, i. e. καταπαύτης, the Reliever. The town *Marathonisi*, which was built at the beginning of the present century, and is the chief port of the district *Mani*, occupies the site of Migonium; and the hill above it, called *Kúmaro*, is the ancient Larysium. The remains of Gythium, called *Paleópoli*, are situated a little north of *Marathonisi*. They lie upon the slope of some small hills, and in the plain between them and the sea. These remains, which are considerable, belong chiefly to the Roman period, as has been already stated. Near the edge of the shore are the remains of two large buildings, probably Roman baths, consisting of several small rooms and divisions. The foundations of buildings may also be seen under water. Ninety yards inland from the shore, on the slope of the larger hill, are the remains of the theatre, built of white marble. Some of the marble seats still remain in their places, but most of them have disappeared, as the space enclosed by the theatre has been converted into a vineyard. The diameter appears to have been about 150 feet. From 50 to 100 feet from the theatre, in a slight hollow between the hills, are the ruins of a Roman building of considerable size. The Acropolis was on the top of the hill above the theatre, but of its walls there are only a few fragments. All round the town, and especially on the hills, are twenty or thirty ruins of small buildings of tiles and mortar, in the Roman style, containing niches in the walls. These were Roman sepulchres: one of them was excavated by Ross, who found there some sepulchral lamps.

On the left of the road from *Paleópoli* to *Marathonisi* is an inscription on the rock, which has not yet been deciphered (Böckh, *Inscr.* 1469); and close to it, hewn in the rock, is a chair with a foot-step, which appears to be the spot where Orestes was said to have been relieved from his madness. Most of the inscriptions found at *Paleópoli* are of the Roman period. (Böckh, *Inscr.* 1325, 1326, 1391, 1392, 1469.) (Weber, *de Gytheo et Lacedaemoniorum Rebus Navalibus*, Heidelberg, 1833; Leake, *Morea*, vol. i. p. 244; Boblaye, *Recherches*, &c. p. 86; Ross, *Wanderungen in Griechenland*, vol. ii. p. 232, seq.; Curtius, *Peloponnesos*, vol. ii. p. 270.)

COIN OF GYTHIUM.

GYTHO'NES (Γύθωνες, Ptol. iii. 5. § 20), a Sarmatian people, situated to the W. of the Venedi, whose position must be sought for in the eastern parts of Prussia. (Comp. Schafarik, *Slav. Alt.* vol. i. pp. 121, 204, 301.) [E.B.J.]

H.

HABESSUS, the ancient name of the town of Antiphellus in Lycia. (Plin. v. 28; comp. ANTIPHELLUS.) [L. S.]

HABITANCUM, in Britain. The following inscription is the authority for the name, which occurs in neither the Notitia nor the Itineraries: —

MOGONT CAD
ET N. D. N. AVG
M. G. SECUNDINVS
BF. COS. HABITA
NCI PRIMA STA
PRO SE ET SVIS POS.
(*Monum. Brit.* 130.)

This was found near *Risingham* in Durham.

Another from the same locality (*Monum. Britann.* 102) runs —

DEO INVICTO
HERCVLI SACR
L ÆMIL. SALVIANVS
TRIB COH I VANGI
V. S. P. M.

A third (*Mon. Brit* 102*a*) is —

* * * * * * *
* * ICO MAXI
COS III ET M AVREL ANTONINO PIO
COS II AVG . . . . .
PORTAM CVM MVRIS VETVSTATE DI-
LAPSIS IVSSV ALFEN SENECINIS VO
COS CVRANTE COL ANITI ADVENTO PRO
AVG NN.C*I VANGON O PF S
CVM AEMI SALVIAN TRIB
SVO A SOLO RESTI.

Many important remains have been found here: e. g., altars, and traces of the walls of the station; so that the identification of Habitancum with *Risingham* has been generally sanctioned. The inscriptions inform us of important restorations, and also of its being the station for a cohort of the Vangiones: "The rude but celebrated figure of Rob of Risingham, sculptured upon the face of the natural rock, is to the south of the station. A portion of the rock was rent off by gunpowder some years ago, carrying the upper part of the figure with it. He carries a bow in one hand, and what appears to be a hare or rabbit in the other." (Bruce's *Roman Wall*, p. 308.)

To the ethnographical philologist the termination *-nc-* is important. Its presence in such a word as *Habitancum* shows it to be British, and, as such, Keltic. It is well known, however, that the name by which the river *Po* was known to the Ligurians was *Bodencus;* a gloss which, even in the classical times, was translated *fundo carens.* Seeing this, Prichard suggested the reading *Boden-los*, and from it the Germanic character of the Ligurians. His doctrine has been taken up by others. It is clear, however, that the more we find other forms in *-nc-*, the less the reason for refining on the current form *Bodencus.* The more, too, such forms are Keltic, the less the probability of the inference that the *Ligurians* were German, and the greater that of their being Kelts. [R. G. L.]

HADRANUM. [ADRANUM.]

HADRIA. [ADRIA.]

HADRIA'NI (Ἀδριάνοι: *Eth.* Ἀδριανεύς), a town in Bithynia, not far from the western bank of the river Rhyndacus. It was built, as its name indicates, by the emperor Hadrian, and for this reason did not exist in the time of Ptolemy; it was situated on a spur of Mount Olympus, and 160 stadia to the south-east of Poemanenus. (Aristid. i. p. 596.) Hamilton (*Researches*, i. pp. 90, foll.) thinks that he discovered its ruins near the village of *Beyjik*, on the road from *Brusa* to *Bergamo;* but this does not quite agree with the above-mentioned distance from Poemanenus, according to which it ought to be looked for much further westward. Adriani was the birthplace of the rhetorician Aelius Aristides, who was born in A. D. 117. In the ecclesiastical writers the town is known as the see of a bishop in the Hellespontine province. (Hierocl. p. 693; Socrat. *Hist. Eccles.* vii. 25; Concil. Nicaen. ii. pp. 51, 572; Concil. Chalced. p. 176; comp. Sestini *Geo. Num.* p. 35.) [L. S.]

HADRIANO'POLIS (Ἀδριανούπολις). 1. (*Adrianople* or *Edrene*), the most important of the many towns founded by the emperor Hadrian, was situated in Thrace, at the point where the river Tonzus joins the Hebrus, and where the latter river, having been fed in its upper course by numerous tributaries, becomes navigable. From Ammianus Marcellinus (xiv. 11, xxvii. 4) it would appear that Hadrianopolis was not an entirely new town, but that there had existed before on the same spot a place called Uscudama, which is mentioned also by Eutropius (vi. 8). But as Uscudama is not noticed by earlier writers, some modern critics have inferred that Marcellinus was mistaken, and that Uscudama was situated in another part of the country. Such criticism, however, is quite arbitrary, and ought not to be listened to. At one time Hadrianopolis was designated by the name of Orestias or Odrysus (Lamprid. *Heliog.* 7; Nicet. pp. 360, 830; Aposp. Geog. *ap. Hudson*, iv. p. 42); but this name seems afterwards to have been dropped. The country around Hadrianople was very fertile, and the site altogether very fortunate, in consequence of which its inhabitants soon rose to a high degree of prosperity. They carried on extensive commerce and were distinguished for their manufactures, especially of arms. The city was strongly fortified, and had to sustain a siege by the Goths in A. D. 378, on which occasion the workmen in the manufactories of arms formed a distinct corps. Next to Constantinople, Hadrianopolis was the first city of the Eastern empire, and this rank it maintained throughout the middle ages; the Byzantine emperors, as well as the Turkish sultans, often resided at Hadrianopolis. (Spart. *Hadr.* 20; Amm. Marc. xxxi. 6, 12, 15; *It. Ant.* 137, 175, 322; Procop. *B. G.* iii. 40; Ann. Comn. x. p. 277; Zosim. ii. 22; Cedren. ii. pp. 184, 284, 302, 454; Hierocl. p. 635; Nicet. p. 830.)

COIN OF HADRIANOPOLIS IN THRACE.

2. A town built by Hadrian in the northern part of Bithynia, which was little known in consequence of its distance from the high roads, for which reason the place is not noticed in the Itineraries. (Hierocl. p. 695; Novell. 29; Concil. Nicean. ii. p. 52.) We possess coins of this town from the time of Hadrian to the reign of Philip. (Sestini, p. 68.) Leake (*Asia*

Min. p. 309) identifies it with the Turkish town *Boli* near the Filbas.

3. A town built by the emperor Hadrian in Phrygia, between Philomelium and Tyriaeum. (Hierocl. p. 672; Concil. Chalced. p. 670; Concil. Const. ii. p. 241.) Kiepert is inclined to identify this town with the ruins of *Arkutchan*. [L. S.]

HADRIANO'POLIS (Ἁδριανούπολις), a town of Illyricum, founded by Hadrian, and situated on the road from Apollonia to Nicopolis, about midway between those two towns. (*Peut. Tab.*) It was repaired by Justinian, and called JUSTINIANOPOLIS (Procop. *de Aed.* iv. 1), and became one of the cities of the government of old Epeirus and the see of a bishop (Hierocles). The small theatre and other vestiges in the plain below *Libókhovo* mark the position of this city. Ten or twelve miles lower down the river are the ruins of a fortress or small town of the Byzantine age, called *Drynópoli*, which name has been taken for a corruption of the old city, though it really is derived from the river on which the place is situated, still called *Dhrýno* or *Drýno*. These remains are of a later age than the theatre, which belongs to Paganism.

The probability is, that when Hadrianopolis fell in ruins Drynopolis was built on a different site, and became the see of the bishop. (Leake, *Northern Greece*, vol. i. p. 76.) [E.B.J.]

HADRIANŪTHE'RAE (Ἁδριάνου θήραι), a town of Mysia, on the road from Ergasteria to Miletopolis, was built by the emperor Hadrian to commemorate a successful hunt which he had had in the neighbourhood. (Dion Cass. lxix. 10; Spartian. *Hadr.* 20.) This town, of which we possess coins from the reign of Hadrian onwards, is identified by Sestini (*Viaggi Diversi*, p. 135) with the village of *Trikala*, one hour and a half from Soma. (Comp. G. Cedren. i. p. 437, ed. Bonn; Aristid. i. p. 500.) It seems to have been a place of some note; for it was the see of a bishop, and on its coins a senate is mentioned. (Hierocl. p. 6.) [L. S.]

HADRIA'TICUM MARE. [ADRIATICUM MARE.]

HADRUME'TUM or ADRUME'TUM, and in late writers (Mart. Cap. vi. 216) ADRUME'TUS (ἡ Ἁδρύμη, ὁ Ἁδρύμης, -ητος, Strab. xiii. p. 834, Polyb. xv. 5. § 3, 15. § 3, Steph. B. *s. v.*; ἡ Ἁδρύμητος, Scyl. p. 49, Steph. B.; Ἁδρυμητός, Appian, *Pun.* 33, 47; Ἁδρούμητος or Ἁδρούμιττος, Ptol. iv. 3. §§ 9, 37, viii. 14. § 6; Ἁδρούμητον, *Stadiasm.*, &c.; Ἁδράμητος, Procop. *B. V.* i. 17, ii. 23; see, on the various forms of the name, Groskurd's note to his translation of Strabo, vol. iii. p. 435; *Eth.* Ἁδρυμητινός, and sometimes also Ἁδρυμήσιος and Ἁδρυμήτιος, Steph. B.; Hadrumetinus: *Susa*, Ru.), one of the chief cities of Africa Propria, and, after the division of the province, the capital of Byzacena, stood on the sea-coast, a little within the S. extremity of the Sinus Neapolitanus (*Gulf of Hammamet*). It was a Phoenician colony, older than Carthage (Sall. *Jug.* 19), under the dominion of which city it fell to the extent described under CARTHAGO. Pliny mentions it among the *oppida libera* of Byzacium (v. 4. s. 3; comp. Mela, i. 7. § 2). Trajan made it a colony, and its full name is found on inscriptions as COL. CONCORDIA ULPIA TRAJANA AUGUSTA FRUGIFERA HADRUMETINA, and on coins as COLONIA CONCORDIA JULIA HADRUMETINA PIA. (Gruter, p. 362; Eckhel, vol. iv. p. 134.) It stood in a very fertile district, as one of the above titles denotes, and was one of the chief sea-ports for the great corn-producing country of Byzacium. Its site formed an amphitheatre overlooking the sea, and surrounded by strong walls, which did not, however, enclose its harbour (Cothon), which lay immediately below it. (*Bell. Afr.* 3, 5, 62, 63; Ruins; the statement of the *Periplus*, that it was ἀλίμενος, does not prove that its harbour was at a distance, but simply that it had been choked up by the sands which are always encroaching on this coast.) It is often mentioned in the Punic and Civil Wars. (Polyb., Appian, *ll. cc.*; Liv. xxx. 29; Nep. *Hann.* 6; Caes. *B. C.* ii. 28; *Bell. Afr. ll. cc.*) Having shared the fate which so many other cities of Africa suffered from the Vandals, it was restored by Justinian, and named JUSTINIANA or JUSTINIANOPOLIS. (Procop. *l. c.*: Forbiger, vol. ii. p. 845, asserts, without giving his authority, that it was afterwards named HERACLEA, after the emperor Heraclius, and on this ground he follows Shaw in placing it at *Herklah*, 10 miles higher up along the coast; but the distances in the Itinerary, pp. 52, 53, 56, clearly show the identity of *Susa* with Hadrumetum, and of *Herklah* with HORREA CAELIA: the name of the latter place suggests that it was a great depôt for the agricultural produce which formed the staple of the commerce of Hadrumetum. The conjecture of Barth deserves notice, that the name *Susa* may be the representative of ἡ σώζουσα, as we know to be the case with Apollonia on the Cyrenaic coast.) This city was the native place of the Caesar Clodius Albinus. (Capitolin. Clod. *Alb.* 1.) It is one of Ptolemy's points of recorded astronomical observations, having 14 hrs. 12 min. in its longest day, and being 1 hr. 35 min. W. of Alexandria (viii. 14. § 6).

Extensive ruins were still to be seen at *Susa* in the time of the Arabian geographer Abou Obeyd Bekri of Cordova, who describes, among the remains of many other great ancient buildings, two in particular: the one, which he calls *Mela'b*, an immense building of light volcanic stone from Etna, with arched galleries, appears to have been a theatre or amphitheatre; and the other, which he calls *El Kubtas*, was a temple on an enormous basement four steps high, of which a quadrangular mass of masonry still in existence, and called the *Makluba*, i. e. *fallen*, is supposed by Barth to be the remains. At the present time, however, the ruins are of little magnitude; consisting of some remains of a mole which formed a part of the ancient harbour, some traces of the walls, chiefly on the SW., eight great reservoirs lying parallel to one another, scattered fragments of pillars, a few inscriptions, and, at a short distance from the city, a few mosaics, which seem to mark the site of the villas of the wealthy citizens. (Shaw, *Travels in Barbary*, &c. p. 105, 2nd ed.; Barth, *Wanderungen durch das Punische und Kyrenäische Küstenland*, pp. 152, foll.: it seems worth while to correct Dr. Barth's extraordinary error in making the ship of Adramyttium in which St. Paul sailed, *Acts*, xxvii. 2, a ship of Hadrumetum; for the position, see the map on p. 532.) [P. S.]

HAEBRIDES. [HEBUDES.]

HAEMIMONTUS, the name of a province comprising the country about mount Haemus, from which it derived its name. This province, of which Adrianopolis and Anchialus were the principal towns, is not mentioned until a late period of the Roman empire, when it is described by Ammianus Marcellinus as a distinct province in the north-east of Thrace. (Comp. Hierocl. p. 635; *Notit. Imper. Or.* c. 1, with Boecking's note, 145.) [L. S.]

HAEMODAE. [HEBUDES.]

HAEMUS or AEMUS (ὁ Αἷμος, τὸ Αἷμον ὄρος, or Αἶμος: *Balkan*), a large range of mountains in the north of Thrace, which in its widest sense is said to extend from the Adriatic in the west to the Euxine in the east. (Anonym. *Peripl. Pont. Eux.* p. 13); Amm. Marc. xxi. 10.) Herodotus (iv. 49) does not describe the extent of the range, though he applies the name to heights west of mount Rhodope, where the river Cius, a tributary of the Ister, is represented as dividing mount Haemus into two halves. But most other writers apply the name Haemus, like the modern Balkan, only to the eastern part of this range from mount Scomius in the west to the Euxine, where it terminated between the towns of Naulochus and Mesembria. Its western beginning is about the sources of the rivers Isker and Maritza. (Strab. vii. pp. 319, 320; Arrian, *Peripl.* p. 24; Plin. iv. 18.) The range of Haemus is in no part particularly high, although there was a notion among the ancients, that from its highest peak both the Adriatic and the Euxine could be seen. (Pomp. Mel. ii. 2.) But even Strabo (vii. pp. 313 and 317) has refuted this error, which apparently originated with Theopompus and Polybius, though the last author admitted that a person might ascend the mountain in one day. Pliny (iv. 18), who estimates its height at 6000 paces, states that on its summit there existed a town called Aristaeum. The highest parts of the mountain are described as covered with snow during the greater part of the year. (Hom. *Il.* xiv. 227; Theocrit. vii. 76.) Modern travellers estimate the height of the great Balkan, between Sofia and Keczanlik, at 3000 feet, and that of the little Balkan at 2000. The northern side of mount Haemus is less precipitous than the southern one. (Amm. Marc. xxi. 10.) The mountain has altogether six passes by which it may be crossed without much difficulty, but the principal one, which was best known to the ancients, is the westernmost, between Philippopolis and Serdica, and is called by Amm. Marcellinus the pass of *Succi* or *Succorum angustiae* (xxi. 10, xxii. 2, xxvi. 10, xxvii. 4, xxxi. 16); it now bears the name of *Ssulu Derbend*, and is sometimes called Porta Trajani.

The people dwelling on and about mount Haemus are generally called Thracians, but the following tribes are particularly mentioned: the *Crobyzi* (Herod. *l. c.*; Strab. vii. p. 318), the *Coralli* (Strab. vii. p. 301), the *Bessi*, and some less known tribes. All of them were regarded by the Romans as robbers, and the *Asti* in particular are described as pirates infesting the coasts of the Euxine, until they were transplanted by Philip of Macedonia. The name Haemus seems to be connected with the Greek χεῖμα, χειμών, and the Sanscrit *himan* and *hêman*, according to which it would signify the cold or stormy mountain; but it is possible also that the name is of Thracian origin. (Comp. Boué in Berghaus, *Geogr. Almanach*, 1838, pp. 26, foll., and by the same author *La Turquie d'Europe*, Paris, 1840, in 4 vols. 8vo.) [L. S.]

HAGNUS. [ATTICA, p. 327.]

HALAE (Ἅλαι), a town situated upon the Opuntian gulf, but belonging to Boeotia in the time of Strabo and Pausanias. It is described by Pausanias as situated to the right of the river Platanius, and as the last town of Boeotia. It probably derived its name from some salt springs which are still found in its neighbourhood. Leake places it on the cape which projects to the northward beyond *Malesina* and *Proskynâ*, where some ruins are said to exist at a church of St. John Theologus. (Strab. ix. pp. 405, 425; Paus. ix. 24. § 5; Steph. B. *s. v.*; Leake, *Northern Greece*, vol. ii. p. 288.)

HALAE ARAPHE'NIDES. [ATTICA, p. 332, a.]

HALAE AXO'NIDES. [ATTICA, p. 327, b.]

HALAESA. [ALAESA.]

HALES or HALE'SUS (Ἅλης, gen. Ἄλεντος), a small river of Ionia in Asia Minor, descending from Mount Cercaphus, and emptying itself, after a short course, into the Aegean near Colophon. (Plin. v. 31; Liv. xxxvii. 36.) Its water is said to have been colder than that of any river in Asia Minor. (Paus. vii. 5. § 5, viii. 28. § 2; Tzetz. *ad Lycoph.* 424.) Some suppose that this river is spoken of in a fragment of Mimnermus, quoted by Strabo (xiv. p. 634), where, however, the common reading is Ἀστήεντος (see Cramer's note). Arundell (*Visit to the Seven Churches*, p. 306) believes this river to be the same as the *Havagichay*, while others identify it with the *Tartalu*. [L. S.]

HALE'SION (Ἁλήσιον πεδίον) "the salt-plain," a small district in the south-west of Troas, south of the river Satinoeis. (Strab. xiii. p. 605.) It derived its name from the circumstance that, during a part of the year, the country was overflown by the sea, which, on withdrawing, left behind a sediment of salt. Salt-works accordingly existed there at a place called the Tragasaean Salines (τὸ Τραγασαῖον ἁλοπήγιον). There was a story that Lysimachus levied a duty on the collectors of the salt, and that thereupon the salt disappeared altogether, but reappeared on the withdrawal of the tax. (Athen. iii. p. 73; comp. Pollux, vi. 10; Plin. xxxi. 41; Galen, *de Temp. Med. Simpl.* ii. p. 151; Hesych. *s. v.* Τραγασαῖοι; Steph. B. *s.vv.* Ἁλήσιος and Τράγασαι, who, however, by mistake transfers the plain to Epirus.) According to Leake, the neighbouring hills are composed of salt rock; and the salt-works, which are still in existence, are called by the Turks Tuzla. (*Asia Minor*, pp. 273, foll.) [L. S.]

HALEX or ALEX (Ἅληξ or Ἄληξ: there is much discrepancy with regard to the aspirate), a small stream in the S. of Bruttium between Locri and Rhegium, which, according to Strabo (vi. p. 260), formed the boundary between the territories of the two cities. Thucydides tells us that the Locrians had a small fort or out-post (περιπόλιον) on its banks, which was taken by the Athenians under Laches (iii. 99). This has been magnified by geographers into a town of the name of Peripolium: but was evidently nothing more than a fortified post to guard the frontier. (See Arnold's note.) Strabo relates of the Halex the peculiarity assigned by other writers to the Caecinus, another river of Bruttium, that the cicadae on the one side of it were silent, and those on the other musical; and he cites from Timaeus a mythical explanation of the phenomenon. (Strab. vi. p. 260; Timaeus, *ap. Antig. Caryst.* 1; Conon. *Narrat.* 5.) Diodorus gives another version of its origin, but describes the silence as extending to both confines (iv. 22). The river Halex still retains its name with little variation as the *Alice*; its mouth is about 8 miles E. of the *Capo dell' Armi*, the ancient Leucopetra, and 15 miles W. of *Cape Spartivento*. [E. H. B.]

HALIACMON FL. (Ἁλιάκμων, Hesiod, *Th.* 341; Herod. vii. 127; Scyl. p. 26; Strab. vii. p. 330; Ptol. iii. 13. §§ 15, 18; Caesar *B. C.* iii. 36; Liv. xlii. 53; Plin. iv. 10; Claud. *B. Get.* 179: *Vistritza*; Turkish, *Inje-Kara*), a river of Macedonia,

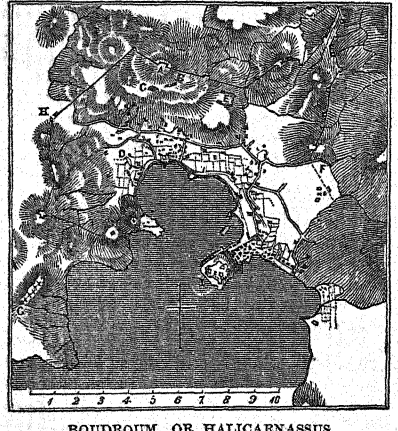
rising in the chain of mountains to which Ptolemy (*l. c.*) gave the name of Canalovii. According to Caesar (*l. c.*), it formed the line of demarcation between Macedonia and Thessaly.

In the upper part of its course it takes a SE. direction through Elymiotis, which it watered; and then, continuing to the NE., formed the boundary between Pieria, Eordaea, and Emathia, till it discharged itself into the Thermaic gulf. In the time of Herodotus the Haliacmon was joined by the Lydias, or discharge of the lake of Pella; but a change has now taken place in the course of the latter, which joins not the Haliacmon, but the Axius. The Haliacmon itself appears to have moved its lower course to the E. of late, so that, in time, perhaps all the three rivers may unite before they join the sea.

The *Vistritza*, although betraying a Slavonic modification in its termination, may possibly be a corruption of ASTRAEUS (Aelian, *H. A.* xv. 1), which was perhaps the ordinary appellation of the river below the gorges of Beraea, as Haliacmon was that above them; in the same manner as *Injékara* and *Vistritza* are used in the present day.

Its banks are now confined by artificial dykes to restrain its destructive inundations, and the river itself is noted at *Vérria* for *gulianí* of immense size: the same fish grows to enormous dimensions in the lake at *Kastoria* [CELETRUM], which is one of the sources of the *Vistritza*. (Leake, *Northern Greece*, vol. i. pp. 303, 316, vol. iii. pp. 292, 437.) [E. B. J.]

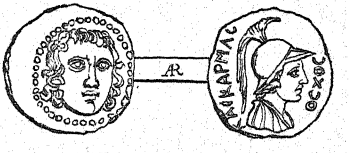
HALIARTUS (Ἅλιαρτος: *Eth.* Ἁλιάρτιος), a town of Boeotia, and one of the cities of the confederation, was situated on the southern side of the lake Copais in a pass between the mountain and the lake. (Strab. ix. p. 411.) It is mentioned by Homer, who gives it the epithet ποιήεις in consequence of its well-watered meadows. (Hom. *Il.* ii. 503, *Hymn. in Apoll.* 243.) In the invasion of Greece by Xerxes (B. C. 484) it was the only town that remained true to the cause of Greece, and was in consequence destroyed by the Persians. (Paus. ix. 32. § 5.) It was, however, soon rebuilt, and in the Peloponnesian War appears as one of the chief cities of Boeotia. (Thuc. iv. 95.) It is chiefly memorable in history on account of the battle fought under its walls between Lysander and the Thebans, in which the former was slain, B. C. 395. (Xen. *Hell.* iii. 5. § 17, seq.; Diod. xiv. 81; Plut. *Lys.* 28, 29; Paus. iii. 5. § 3, ix. 32. § 5.) In B. C. 171 Haliartus was destroyed a second time. Having espoused the cause of Perseus, it was taken by the Roman praetor Lucretius, who sold the inhabitants as slaves, carried off its statues, paintings, and other works of art, and razed it to the ground. Its territory was afterwards given to the Athenians, and it never recovered its former prosperity. (Polyb. xxx, 18; Liv. xlii. 63; Strab. ix. p. 411.) Strabo speaks of it as no longer in existence in his time, and Pausanias, in his account of the place, mentions only a heroum of Lysander, and some ruined temples which had been burnt by the Persians and had been purposely left in that state. (Paus. ix. 33. §§ 1, 3, x. 35. § 2.)



The HALIARTIA (Ἁλιαρτία), or territory of Haliartus, was a very fertile plain, watered by numerous streams flowing into the lake Copais, which in this part was hence called the Haliartian marsh. (Strab. ix. pp. 407, 411.) These streams, which bore the names of Ocalea, Lophis, Hoplites, Permessus, and Olmeius, have been spoken of elsewhere. [See p. 412, a.] The territory of Haliartus extended westward to Mt. Tilphossium, since Pausanias says that the Haliartians had a sanctuary of the goddesses called Praxidicae situated near this mountain. (Paus. ix. 33. § 3.) The towns Peteon, Medeon, Ocalea, and Onchestus were situated in the territory of Haliartus.

The remains of Haliartus are situated upon a hill about a mile from the village of *Mazi*, on the road from Thebes to Lebadeia, and at the distance of about 15 miles from either place. The hill of Haliartus is not more than 50 feet above the lake. Leake says, "that towards the lake the hill of Haliartus terminates in rocky cliffs, but on the other sides has a gradual acclivity. Some remains of the walls of the Acropolis, chiefly of polygonal masonry, are found on the summit of the hill; and there are several sepulchral crypts in the cliffs, below which, to the north, issues a copious source of water, flowing to the marsh, like all the other streams near the site of Haliartus. Although the walls of the exterior town are scarcely anywhere traceable, its extent is naturally marked to the east and west by two small rivers, of which that to the west issues from the foot of the hill of *Mazi;* the eastern, called the *Kefalári*, has its origin in Mount Helicon. Near the left bank of this stream, at a distance of 500 yards from the Acropolis, are a ruined mosque and two ruined churches, on the site of a village which, though long since abandoned, is shown by these remains to have been once inhabited by both Greeks and Turks. Here are many fragments of architecture and of inscribed stones, collected formerly from the ruins of Haliartus. From this spot there is a distance of about three-quarters of a mile to a tumulus westward of the Acropolis, where are several sarcophagi and ancient foundations near some sources of waters, marking probably the site of the western entrance of the city."

The stream which flowed on the western side of the city is the one called Hoplites by Plutarch, where Lysander fell, and is apparently the same as the Lophis of Pausanias. (Plut. *Lys.* 29; Paus. ix. 33. § 4.) The stream on the eastern side, called *Kefalári*, is formed by the union of two rivulets, which appear to be the Permessus and Olmeius, which are described by Strabo as flowing from Helicon, and after their union entering the lake Copais near Haliartus. (Strab. ix. pp. 407, 411; see BOEOTIA, p. 413, a.) The tumulus, of which Leake speaks, perhaps covers those who were killed along with Lysander, since it was near this spot that the battle was fought. (Leake, *Northern Greece*, vol. ii. p. 206, seq.)



HALICARNASSUS (Ἁλικαρνασσός: *Eth.* Ἁλικαρνασσεύς, Halicarnassensis: *Bodrum* or *Boudroum*), a Greek city on the coast of Asia Minor, on the Ceramian gulf. It was a colony of Troezene in Argolis established on the slope of a precipitous rock, and one of the six towns constituting the Doric hexapolis in Asia Minor, the five other towns being Cnidos, Cos, and the three Rhodian towns Ialysus, Lindus, and Camirus. (Herod. vii. 99, iii. 14; Strab. xiv. pp. 653, 656; Paus. ii. 30. § 8; Ptol. v. 2. § 10; Pomp. Mel. i. 16; Plin. v. 29; Steph. B. *s. v.*) The isthmus on which it was situated was called Zephyrium, whence the city at first bore the name of Zephyria. Halicarnassus was the largest and strongest city in all Caria (Diod. Sic. xv. 90), and had two or even three very impregnable *arces;* the principal one, called *Salmacis*, was situated on a precipitous rock at the northern extremity of the city

(Arrian, *Anab.* i. 23; Vitruv. ii. 8; Diod. xvii. 23, foll.), and received its name from the well Salmacis, which gushed forth near a temple of Aphrodite at the foot of the rock, and the water of which was believed to exercise an enervating influence (Ov. *Met.* iv. 302). But Strabo justly controverts this belief, intimating that the sensual enjoyments and the delicious character of the climate must rather be considered to have produced the effects ascribed to the Salmacis. Another arx was formerly believed to have been in the island of *Arconnesus* in front of the great harbour, which is now called *Orak Ada;* but this belief was founded upon an incorrect reading in Arrian. (Strab. *l. c.*; Arrian, *Anab.* i. 23; Hamilton, *Researches*, ii. p. 34.) Besides the great harbour, the entrance to which was narrowed by piers on each side, there was a smaller one to the south-east of it. Halicarnassus, as already remarked, originally belonged to the Doric hexapolis; but in consequence of some dispute which had arisen, it was excluded from the confederacy. (Herod. i. 144.) During the Persian conquests it was, like all the other Greek towns, compelled to submit to Persia, but does not appear to have been less prosperous, or to have lost its Greek character. While the city was under the dominion of the Persians, Lygdamis set himself up as tyrant, and his descendants, as vassals of the kings of Persia, gradually acquired the dominion of all Caria. Artemisia, the widow of Lygdamis, fought at Salamis in the fleet of Xerxes. The most celebrated among their successors are Mausolus and his wife and sister Artemisia, who, on the death of Mausolus, erected in his honour a sepulchral monument of such magnificence that it was regarded as one of the seven wonders of the ancient world. This Carian dynasty, though subject to Persia, had themselves adopted Greek manners and the Greek language, and had a taste for the arts of Greece. But notwithstanding this, Halicarnassus was faithful to Persia, and was one of the great strongholds of the Persians on that coast, and a chief station of the Persian forces. This, and the gallant defence with which the Halicarnassians defended themselves against Alexander, induced that conqueror, after a protracted siege, to destroy the city by fire. He was, however, unable to take the acropolis Salmacis, in which the inhabitants had taken refuge. (Strab. and Arrian, *l. c.*; Diod. Sic. xvii. 23, foll.; Curtius, ii. 9, foll.) From this blow Halicarnassus never recovered, though the town was rebuilt. (Cic. *ad Quint. Frat.* i. 1.) In the time of Tiberius it no longer boasted of its greatness, but of its safety and freedom from earthquakes. (Tac. *Ann.* iv. 55.) Afterwards the town is scarcely mentioned at all, although the Mausoleum continued to enjoy its former renown. (Const. Porph. *de Them.* i. 14; see the descriptions of it in Plin. xxxvi. 9, and Vitruv. ii. 8.) The course of the ancient walls can still be distinctly traced, and remains of the Mausoleum, situated on the slope of the rock east of Salmacis, and of the arx, as well as the spring Salmacis, still exist. (Hamilton's *Researches*, ii. pp. 34, foll.) Among the numerous temples of Halicarnassus, one of Aphrodite was particularly beautiful. (Diod.; Vitruv. *l. c.*) To us the city is especially interesting as the birthplace of two historians, Herodotus and Dionysius. Some interesting sculptures, brought from *Boudroum*, and supposed to have originally decorated the Mausoleum, are now in the British Museum. (Ross, *Reisen auf den Griech. Inseln*, vol. iv. pp. 30, foll., from which the accompanying plan is taken.) [L. S.]

I. Palace of the ancient kings.

COIN OF HALICARNASSUS.

HA'LICE. [HALIEIS.]

HALICYAE (Ἀλικύαι: *Eth.* Ἀλικυαῖος, Halicyensis: *Salemi*), a city in the west of Sicily, about midway between the two seas, and 10 miles S. of Segesta. Stephanus of Byzantium correctly describes it as situated between Entella and Lilybaeum. (Steph. B. *s. v.*) Its name frequently occurs in history, and generally in connection with the adjacent cities of Entella and Segesta, but we have no account of its origin: it was probably a Sicanian town, and followed the fortunes of its more powerful neighbours. Hence, when it first appears in history* we find it subject to, or at least dependent on, Carthage, the power of which was at that time predominant in the W. of Sicily. In B. C. 397, when the great expedition of Dionysius caused the greater part of the Carthaginian allies and subjects to revolt, Halicyae was one of the five cities which remained faithful to them, on which account its territory was ravaged by Dionysius. (Diod. xiv. 48.) But the next year the Halicyans were so alarmed at his progress that they concluded a treaty of alliance with him, which, however, they soon broke on the appearance of Himilco in Sicily at the head of a large army, and rejoined the Carthaginian alliance. (Id. xiv. 54, 55.) They are not again mentioned till B. C. 276, during the expedition of Pyrrhus to Sicily, when they followed the example of the Selinuntines and Segestans, and

* The name of the Ἀλικυαῖοι is first found in Thucydides (vii. 32) at the time of the Athenian expedition in Sicily; but is generally considered corrupt: it is certainly difficult to conceive that Halicyae is really the place there meant.

declared themselves in favour of that monarch. (Id. xxii. 10, Exc. H. p. 498.) Again, in the First Punic War they were among the first to imitate the conduct of the Segetans, and, throwing off the Carthaginian yoke, declared themselves on the side of Rome. (Id. xxiii. 5, p. 502.) For this signal service Halicyae was rewarded by the grant of peculiar privileges, which we find its citizens still enjoying in the time of Cicero, who reckons it among the five cities of Sicily which were "sine foedere immunes ac liberae." (*Verr.* iii. 7, 40.) But even this privileged condition did not preserve them from the exactions of Verres. (Ib. ii. 28, iii. 40, v. 7.) From this time we hear little of Halicyae, which appears to have lost its peculiar privileges, and had sunk in the time of Pliny into an ordinary stipendiary town. (Plin. iii. 8. s. 14.) That author is the last who mentions its name. The passage already cited from Stephanus is the only direct authority for the position of Halicyae, but agrees well with what we may gather from Diodorus; and there seems no reason to doubt that the site has been correctly identified by Fazello and Cluverius with that of the modern town of *Salemi*. It stands on a hill in a commanding position, and must have been a place of considerable strength. There are no ancient remains; but the modern, as well as the ancient name, appears to have reference to the *salt* springs in the neighbourhood. It is distant about 20 miles E. from *Marsala* (the ancient Lilybaeum) and 16 N. from the site of Selinus.

It is not improbable that we should read Ἁλικυαίων in Diodorus (xxxvi. 3. p. 531), where he speaks of a Servile outbreak taking place,—*κατὰ τὴν* Ἀγκυλίων *χώραν*,—a name otherwise unknown. In a previous passage of the same author already cited (xiv. 48) the MSS. have Ἀγκυραίων, but there seems no doubt that here the true reading, as suggested by Wesseling, is Ἁλικυαίων. Cluverius, however, contends for the correctness of the old reading, and admits the existence of a city named Ancyra, which he identifies with the Ἄγκιρινα of Ptolemy (iii. 4. § 15). [E. H. B.]

HALICYRNA (Ἁλίκυρνα: *Eth.* Ἁλικυρναῖος), a village of Aetolia, described by Strabo as situated 30 stadia below Calydon towards the sea. Pliny places it near Pleuron. Leake discovered some ruins, midway between *Kurt-aga* (the site of Calydon) and the eastern termination of the lagoon of *Mesolonghi*, which he supposes to be the remains of Halicyrna. (Strab. x. p. 459, sub fin., where the common text has the false reading Λίκυρνα; Scyl. p. 14; Plin. iv. 3; Steph. B. *s. v.*, where it is erroneously called a village in Acarnania; Leake, *Northern Greece*, vol. iii. p. 533.)

HALIEIS (Ἁλιεῖς), the name of a sea-faring people on the coast of Hermionis, who derived their name from their fisheries. (Strab. viii. p. 373.) They gave their name to a town on the coast of Hermionis, where the Tirynthians and Hermionians took refuge when they were expelled from their own cities by the Argives. (Ephor. *ap. Byz. s. v.* Ἁλιεῖς; Strab. viii. p. 373.) This town was taken about Ol. 80 by Aneristus, the son of Sperthias, and made subject to Sparta (ὃς εἶλε Ἁλιέας [not ἁλιέας] τοὺς ἐκ Τίρυνθος, Herod. vii. 137). The district was afterwards ravaged on more than one occasion by the Athenians. (Thuc. i. 105, ii. 56, iv. 45; Diod. xi. 78.) After the Peloponnesian War the Halieis are mentioned by Xenophon as an autonomous people. (Xen. *Hell.* iv. 2. § 6, vi. 2. § 3.)

The district is called ἡ Ἁλιάς by Thucydides (ii. 56, iv. 45), who also calls the people or their town Ἁλιεῖς; for, in i. 105, the true reading is ἐς Ἁλιᾶς, i. e. Ἁλιέας. (See Meineke, and Steph. B. *s. v.* Ἁλιεῖς.) In an inscription we find ἐν Ἁλιεῦσιν. (Böckh, *Inscr.* no. 165.)

Scylax (p. 20) speaks of HALIA (Ἁλία) as a port at the mouth of the Argolic gulf. Callimachus calls the town ALYCUS (Ἄλυκος, Steph. B. *s. v.*), and by Pausanias it is named HALICE (Ἁλίκη), and its inhabitants Halici. (Paus. ii. 36. § 1.) The town was no longer inhabited in the time of Pausanias, and its position is not fixed by that writer. He only says that, seven stadia from Hermione, the road from Halice separated from that to Mases, and that the former led between the mountains Pron and Coccygius, of which the ancient name was Thornax. In the peninsula of *Kranidhi*, the French Commission observed the remains of two Hellenic sites, one on the southern shore, about three miles from Hermione and the same distance from *C. Musáki*, the other on the south-western side, at the head of a deep bay called *Kheli* or *Bizáti*: the former they suppose to represent Halice, and the latter Mases, and, accordingly, these two places are so placed in Kiepert's map. But Leake, who is followed by Curtius, observes that the ruins which the French Commission have named Halice are probably some dependency of Hermione of which the name has not been recorded, since the position is too near to Hermione to have been that of Halice, and the harbour is too inconvenient for a people who were of considerable maritime importance. It is far more likely that such a people possessed the port of *Cheli*, the situation of which at the mouth of the Argolic gulf agrees exactly with the description of Scylax. Mases probably stood at the head of the bay of *Kiládhia*. [MASES.] (Leake, *Morea*, vol. ii. p. 462, *Peloponnesiaca*, p. 286, seq.; Boblaye, *Recherches*, *&c.* p. 61; Curtius, *Peloponnesos*, vol. ii. pp. 461, 579.)

HALIMUS. [ATTICA, p. 327, b.]

HALISARNA (Ἁλίσαρνα or Ἁλασάρνη), a town on the south coast of the island of Cos, near Cape Laceterium. (Strab. xiv. p. 657; comp. Ross, *Reisen auf den Griech. Inseln*, vol. iii. p. 136, and iv. p. 22.) [L. S.]

HALIUSSA (Ἁλιοῦσσα), one of the three small islands lying off the promontory Bucephala in Troezenia in Argolis. (Paus. ii. 34. § 8; Leake, *Peloponnesiaca*, p. 283.)

HALMYRIS (Ἅλμυρις), a salt-lake, south of the southernmost mouth of the Danube. It was properly a part of the Euxine, with which it communicated by a narrow channel. It extended from the town of Istrus in the south, nearly as far as Aegyssus on the Danube. On its western coast existed a town of the name of Halmyris. (Plin. iv. 24; Procop. *de Aed.* iv. 7; Philostorg. x. 10; Niceph. *Hist. Eccles.* xii. 29.) [L. S.]

HALO'NE (Ἁλόνη: *Alonì*), an island in the Propontis, south of Proconnesus. It was also called Neuris and Prochone (Steph. B. *s. v.*; Plin. v. 44), and is probably the same as the island Elaphonesus mentioned by Scylax (p. 35), who notices its excellent harbour, which still exists. [L. S.]

HALONNE'SUS (Ἁλόννησος: *Eth.* Ἁλοννήσιος), an island in the Aegaean sea, lying off the southern extremity of the Magnesian coast in Thessaly. The possession of this island gave rise to a dispute between Philip and the Athenians in B. C. 343,

and is the subject of an oration which is included among the works of Demosthenes, but which was ascribed, even by the ancients, to Hegesippus, who was the head of the embassy sent by the Athenians to Philip to demand restitution of Halonnesus. [See *Dict. of Biogr.* Vol. I. p. 989.] Halonnesus lies between Sciathus and Peparethus, and appears to be the same island as the one called SCOPELUS (Σκόπελος) by Ptolemy (iii. 13. § 47) and Hierocles (p. 643, Wessel.), which name the central one of these three islands still bears. Strabo (ix. p. 436) speaks of Sciathus, Halonnesus, and Peparethus without mentioning Scopelus; while in the lists of Ptolemy and Hierocles the names of Sciathus, Scopelus, and Peparethus occur without that of Halonnesus. Halonnesus is also mentioned by Pliny (iv. 12. s. 23), Mela (ii. 7), and Stephanus B. (*s. v.*); but they do not speak of Scopelus. The modern island of *Skopelo* is one of the most flourishing in the Aegaean, in consequence of its wines, which it exports in large quantities. (Leake, *Northern Greece*, vol. iii. p. 111, seq.; Fiedler, *Reise durch Griechenland*, vol. ii. p. 13, seq.)

HALUS or ALUS (ὁ or ἡ Ἅλος, Ἅλος: *Eth.* Ἁλεύς), a town of Phthiotis in Thessaly, mentioned by Homer. (*Il.* ii. 682.) It is described by Strabo as situated near the sea, at the extremity of Mount Othrys, above the plain called Crocium, of which the part around Halus was called Athamantium, from Athamas, the reputed founder of Halus. (Strab. ix. pp. 432, 433.) Strabo also says that the river Amphrysus, on the banks of which Apollo is said to have fed the oxen of Admetus, flowed near the walls of Halus. [AMPHRYSUS.] Halus is likewise mentioned by a few other writers. (Herod. vii. 173; Dem. *de Fals. Leg.* p. 392; Mela, ii. 3; Plin. iv. 7. s. 14.) Leake places Halus at *Kefúlosi*, which is situated at a short distance from the sea on a projecting extremity of Mt. Othrys above the Crocian plain, exactly as Strabo has described. "A Hellenic citadel occupied the summit of the projecting height; and remains of the walls are seen also on the northern slope of the hill, having short flanks at intervals, and formed of masonry which, although massive, is not so accurately united as we generally find it in the southern provinces of Greece. The walls may be traced also on the descent to the south-east, and seem to have been united at the foot of the hill to a quadrangular inclosure situated entirely in the plain, and of which the northern side followed the course of the stream, and the western the foot of the height. The walls of this lower inclosure are nine feet and a half thick, are flanked with towers, and their masonry, wherever traceable, is of the most accurate and regular kind; two or three courses of it still exist in some places." (Leake, *Northern Greece*, vol. iv. p. 336.)

HALUS, a small place in Assyria, probably in the neighbourhood of Artemita, mentioned only by Tacitus (*Ann.* vi. 41). [V.]

HALYCUS (Ἅλυκος: *Platani*), a considerable river of Sicily, which rises nearly in the centre of the island, and flows towards the SW. till it enters the sea close to the site of Heracleia Minoa. Its name was evidently derived from the salt or brackish quality of its waters, a circumstance common to those of the *Platani* and of the *Fiume Salso* (the ancient Himera), and arising from the salt springs which abound in this part of Sicily. It obtained considerable historical importance from the circumstance that it long formed the eastern boundary of the Carthaginian dominions in Sicily. This was first established by the treaty concluded, in B.C. 383, between that people and Dionysius of Syracuse (Diod. xv. 17): and the same limit was again fixed by the treaty between them and Timoleon (Id. xvi. 82). It would appear, however, that the city of Heracleia, situated at its mouth, but on the left bank, was in both instances retained by the Carthaginians. The Halycus is again mentioned by Diodorus in the First Punic War (B.C. 249), as the station to which the Carthaginian fleet under Carthalo retired after its unsuccessful attack on that of the Romans near Phintias, and where they awaited the approach of a second Roman fleet under the consul L. Junius. (Diod. xxiv. 1.; Exc. Hoesch. p. 508.) Polybius, who relates the same events, does not mention the *name* of the river (Polyb. i. 53): but there is certainly no reason to suppose (as Mannert and Forbiger have done) that the river here meant was any other than the well-known Halycus, and that there must therefore have been two rivers of the name. Heracleides Ponticus, who mentions the landing of Minos in this part of Sicily, and his alleged foundation of Minoa, writes the name Lycus, which is probably a mere false reading for Halycus. (Heracl. Pont. § 29, ed. Schneidewin.) Though a stream of considerable magnitude and importance, it is singular that its name is not mentioned by any of the geographers. [E. H. B.]

HALYS (Ἅλυς, sometimes Ἄλυς: *Kisil Irmak*, i. e. the "red river"), the principal river of Asia Minor, has its sources in the Armenian mountains which form the boundary between Pontus and Armenia Minor, that is, at the point where the heights of Scoedises and Antitaurus meet. (Herod. i. 72; Strab. xii. p. 546; Dionys. Perieg. 786; Ov. *ex Pont.* iv. 10. 48.) At first its course has a south-western direction, traversing Pontus and Cappadocia; but in the latter country it turns to the north, and, continuing in a north-eastern direction, discharges itself by several mouths into the Euxine, the latter part of its course forming the boundary between Paphlagonia in the west, and Galatia and Pontus in the east. (Strab. xii. p. 544; Ptol. v. 4. § 3; Arrian, *Peripl.* 16.) According to Strabo, the river Halys received its name from the salt-works in its vicinity (pp. 546, 561); but this is probably incorrect, as the name is often written, without the aspiration, Alys (Eustath. *ad Dionys. Per.* 784). Pliny (vi. 2), making this river come down from Mount Taurus and flow at once from south to north, appears to confound the Halys with one of its tributaries (*Iechel Irmak*). According to Xenophon (*Anab.* v. 6. § 9), the breadth of the Halys is at least 2 stadia. At the time of the greatness of the Lydian empire the Halys formed the boundary between it and Persia, and on its banks Cyrus gained the decisive victory over Croesus. (Herod. i. 53, 75, 84; Justin, i. 7; Cic. *de Div.* ii. 56; Lucan, iii. 272.) The importance of the river is attested by the fact that Asia is frequently divided by it into two parts, *Asia cis* and *Asia trans Halym*. (Strab. xii. p. 534, xvii. p. 840.) Respecting the present condition of the river, see Hamilton's *Researches*, vol. i. pp. 297, 324, 411, vol. ii. p. 240 [L. S.]

HAMAE, a place in Campania, between Capua and Cumae, where the Capuans were in the habit of assembling annually for a solemn religious festival; an occasion of which they endeavoured to make use during the Second Punic War (B.C. 215) to reduce

the Cumaeans under their subjection, but their plans were frustrated and they themselves put to the sword by the Roman consul Sempronius Gracchus. (Liv. xxiii. 35.) Livy, who is the only author that mentions Hamae, tells us that it was 3 miles from Cumae; but the exact site cannot be determined. [E. H. B.]

HAMA'XIA (Ἁμαξία), a small town in the western part of Cilicia Aspera. (Strab. xiv. p. 669.) It had a good roadstead for ships, and excellent cedars for ship-building. (Lucan, viii. 259.) Hamaxia is perhaps the same place as Anaxium (*Stadiasm. Mar. Magni*, § 188), which, however, is placed west of Coracesium, so that it would belong to Pamphylia. (Comp. Leake, *Asia Minor*, p. 197.) [L. S.]

HAMAXITUS (Ἁμαξιτός), a town on the south-western coast of Troas, 50 stadia south of Larissa, and close to the plain of Halesion. It was probably an Aeolian colony, but had ceased to exist as early as the time of Strabo. (Scyl. p. 36; Thucyd. viii. 101; Xenoph. *Hellen.* iii. 1. § 13; Strab. x. p. 473, xiii. pp. 604, 612, 613.) According to Aelian (*Hist. An.* xii. 5), its inhabitants worshipped mice, and for this reason called Apollo, their chief divinity, Smintheus (from the Aeolian σμίνθα, a mouse). Strabo relates the occasion of this as follows: When the Teucrians fled from Crete, the oracle of Apollo advised them to settle on the spot where their enemies issued from the earth. One night a number of field-mice destroyed all their shields, and, recognising in this occurrence the hint of the oracle, they established themselves there, and called Apollo Smintheus, representing him with a mouse at his feet. During the Macedonian period, the inhabitants were compelled by Lysimachus to quit their town and remove to the neighbouring Alexandria. (Comp. Steph. B. *s. v.*; Plin. v. 33.) No ruins of this town have yet been discovered (Leake, *Asia Minor*, p. 273); but Prokesch (*Denkwürdigk.* iii. p. 362) states that architectural remains are still seen near Cape Baba, which he is inclined to regard as belonging to Hamaxitus.

Another town of the same name is mentioned by Pliny (v. 29) as situated in Caria, on the north coast of the Cnidian Chersonesus. [L. S.]

HAMAXO'BII (Ἁμαξόβιοι, Ptol. iii. 5. § 19; Iamblich. *de Abstin.* iii. 15; Pomp. Mel. ii. 1. § 2; Plin. vi. 12; Steph. B. *s. v.* Ἄβιοι), a people of Sarmatia, situated to the E. of the Scythian Alauni, who wandered with their waggons along the banks of the *Volga*, and belonged to the Sarmatian stock. (Schafarik, *Slav. Alt.* vol. i. p. 204.) [E. B. J.]

HAMAXOECI (Ἁμάξοικοι, Eustath. ad *Hom. Il.* xiii. 5; Hesiod. *ap. Strab.* vii. p. 302; Herod. iv. 46; Aesch. *Prom.* 709; Strab. ii. p. 87, vii. p. 209, xi. p. 492). This name was applied by the ancients to the Nomadic hordes who roamed over the N. E. of Europe, neither sowing nor planting,—but living on food derived from animals, especially mares' milk, and cheese,—and moved from place to place, carrying their families in waggons covered with wicker and leather, in the same manner as the Tartars of the present day. [E. B. J.]

HAMMANIENTES, a Libyan tribe beyond the Macae, who dwelt 12 days' journey W. of the Greater Syrtis in an oasis of the sandy desert, and made their houses partly of stone, and partly of rock-salt cut from the hills by which they were surrounded. (Plin. v. 5.) Solinus (28) calls them AMANTES. Mannert supposes them to be the ATARANTES of Herodotus. [P. S.]

HANNIBALIS CASTRA. [CASTRA HANNIBALIS.]

HARENATIO. [ARENACUM.]

HARMA (Ἅρμα: *Eth.* Ἁρματεύς). 1. An ancient town of Boeotia, mentioned by Homer, which is said to have been so called, either because the chariot of Adrastus broke down here, or because the chariot of Amphiaraus disappeared in the earth at this place. (Didym. and Eustath. *ad Il. l. c.*; Strab. ix. p. 404; Paus. ix. 19. § 4, comp. i. 34. § 2; Steph. B. *s. v.*) Strabo describes it as a deserted village in the territory of Tanagra near Mycalessus; and Pausanias speaks of the ruins of Harma and Mycalessus as situated on the road from Thebes to Chalcis. Aelian (*V. H.* iii. 45) speaks of a lake called Harma, which is probably the one now called *Moritzi* or *Paralimni*, to the east of Hylica. [BOEOTIA, p. 413, b.] The exact site of Harma is uncertain. It is supposed by Leake to have occupied the important pass on the road from Thebes to Chalcis, leading into the maritime plain. (Leake, *Northern Greece*, vol. ii. p. 251.)

2. A fortress in Attica. [ATTICA, p. 329, b.]

HARMATE'LIA (τὰ Ἁρματήλια, Diod. xvii. 102), a place probably in the *Panjáb*, which Diodorus describes as the last of the cities of the Brachmanes which fell into the hands of Alexander the Great. The people were a very warlike race, and made a gallant stand. They made use of poisoned arrows. See also Strabo (xv. p. 723), who does not, however, mention this place by name, though he alludes to an incident which, according to Diodorus, happened there. The exact position of this place has not been determined; but it was most likely in the territory of the Malli (now *Multán*). [V.]

HARMATO'TROPHI, one of several small tribes who are mentioned by Pliny (vi. 16) as living at the foot of the Indian Caucasus between the Mardi and Bactri. [V.]

HARMATHUS (Ἁρμαθοῦς), a town on the north coast of the bay of Adramyttium, on the east of Cape Lectum; it is mentioned only by Thucydides (viii. 101) as opposite to the town of Methymna in Lesbos. It cannot have had any connection with Cape Amathus, which was situated much further south (Strab. xiii. p. 622), and is probably the same as Cape Canae. [CANAE.] [L. S.]

HARMOZEIA (Ἁρμόζεια, Arrian, *Ind.* c. 33; Armuzia, Plin. vi. 23. s. 27), the district surrounding Harmuza, the port at which Nearchus's fleet arrived on their return from India, and which was situated in the SE. corner of Carmania. There can be no doubt that the name of the district Harmozeia, of the port Harmuza, and of the promontory Harmozon at the entrance of the harbour, are all derived from the name of the Persian good spirit *Hormuzd* or Auramazda, which name has been preserved in the present *Ormuz*, the name of an island off the site of the former port. The neighbouring land is now called *Moghistán*. The Anamis or Andanis flowed through Harmozeia into the sea at Harmuza. Its present name is *Ibrahim Rúd*. [V.]

HARMOZICA. [ARAGUS.]

HARMOZON PROM. (Ἅρμοζον ἄκρον, Ptol. vi. 8. § 5; Strab. xvi. p. 765), a promontory at the entrance of the Persian gulf, on the N. or Carmanian side of it, just at the part where the sea between Arabia and Asia is most narrow. Eratosthenes (*ap.* Strab. *l. c.*) and Ammianus (xxiii. 6) both assert that the coast of Arabia can be plainly seen from this point. The promontory may perhaps be repre-

sented by the modern *C. Bombareek*, nearly opposite to *C. Mussendom*. [V.]

HARMU'ZA (Ἁρμουζα πόλις, Ptol. vi. 8. § 5), the capital of the district which Arrian has called Harmozeia. There seems to be some doubt whether there is any present representative of this place along the coast. The only place which now bears the name of Ormus is an island off the mouth of the Anamis, to which it has been conjectured by D'Anville that the inhabitants of the coast must have fled shortly after the time of Timúr. The modern history of this island is well known. It was taken by Albuquerque in 1507, and held with great commercial prosperity by the Portuguese till Shah Abbás, aided by the English, took it from them in 1622. While *Ormuz* lasted, the Portuguese had an emporium second to none but Goa. Shah Abbás built on the opposite coast *Bender-Abbassi*, and tried to win for it the commerce which *Ormuz* had possessed. In this, however, he signally failed, and both places are now utterly ruined and abandoned. (Vincent, *Voy. of Nearchus*, vol. i. pp. 324—334.) [V.]

HAROSHETH (Ἀρισώθ), mentioned only in *Judges* (iv. 2, 13, 16) as the royal garrison of Jabin king of Canaan. In all these passages it is called Harosheth of the Gentiles, and was obviously situated in the northern part of Palestine, called "Galilee of the nations." (*Is.* ix. 1.) It was probably situated in the tribe of Naphtali, between Kadesh Naphtali, and HAZOR, the capital of Jabin [HAZOR]. As the name signifies *wood* in the Aramaean, the fortress is supposed by some to have been situated in a woody district. The name is regarded as an appellative by the Chaldee paraphrast, whose translation for "Harosheth of the Gentiles" is equivalent to "in fortitudine (in munitione) arcium gentium." (Rosenmüller in Jud. iv. 2.) [G. W.]

HARPAGEIA (τὰ Ἁρπαγεῖα), a district between Priapus and Cyzicus, about the mouth of the river Granicus in Mysia, whence Ganymede is said to have been carried off. (Strab. xiii. p. 587.) Thucydides (viii. 107) also mentions a town Harpagion, which is otherwise unknown. (Comp. Steph. B. *s. v.* Ἁρπάγια.) [L. S.]

HA'RPASA (Ἅρπασα: *Eth.* Ἁρπασεύς), a town in Caria, on the eastern bank of the river Harpasus, a tributary of the Maeander. (Ptol. v. 2. § 19; Steph. B. *s. v.*; Plin. v. 29; Hierocl. p. 688.) The ruins found opposite to *Nasli*, at a place called *Arpas Kalessi*, undoubtedly belong to Harpasa. (Fellowes, *Discov. in Lyc.* p. 51; Leake, *Asia Minor*, p. 249; Richter, *Wallfahrten*, p. 540.) Pliny mentions a wonderful rock in its neighbourhood, which moved on being pressed with a finger, but did not yield to the pressure of the whole body. [L. S.]

HA'RPASUS (Ἅρπασος: *Harpa*), a river of Caria, flowing from south to north, and emptying itself into the Maeander. (Plin. v. 29; Steph. B. *s. v.* Ἅρπασα; Quint. Smyrn. *Posthom.* x. 144.) In the war against Antiochus the Romans encamped on its banks. (Liv. xxxviii. 13.) [L. S.]

HA'RPASUS (Ἅρπασος: the reading Ἅρπαγος, in Diod. Sic. xiv. 29, is faulty), a river which the Ten Thousand crossed (400 feet broad) from the territory of the Chalybes, who were separated from the Scythini by this river. (Xen. *Anab.* iv. 7. § 17.) This river, which has been identified by several writers with the *Arpa-Chái*, a northern affluent of the Araxes, and forming the E. boundary of *Kars*, is more probably represented by the *Tchórúk-Sú* (*Jorák*), as Colonel Chesney (*Exped. Euphrat.* vol. ii. p. 231) and Mr. Grote (*Hist. of Greece*, vol. ix. p. 161) suppose. [E. B. J.]

HARPINA or HARPINNA (Ἅρπινα, Ἅρπιννα: *Eth.* Ἁρπιναῖος), a town of Pisatis (Elis) situated on the right bank of the Alpheius, on the road to Heraea, at the distance of 20 stadia from the hippodrome of Olympia. (Lucian, *de Mort. Peregr.* 35.) Harpina is said to have been founded by Oenomaus, who gave it the name of his mother. The ruins of the town were seen by Pausanias. According to Strabo, Harpina stood upon the stream Parthenias; according to Pausanias, upon one called Harpinates. The ruins of the town stand upon a ridge a little northward of the village of *Miráka*: there are two small rivulets on either side of the ridge, of which the eastern one appears to be the Parthenias, and the western the Harpinates. (Strab. viii. pp. 356, 357*; Paus. vi. 20. § 8; Steph. B. *s. v.*; Leake, *Morea*, vol. ii. p. 211, *Peloponnesiaca*, p. 218.)

HARPIS FL. (Ἅρπις, Ptol. iii. 10. § 14), a river of Sarmatia Europaea, probably the same as the *Kugal'nik* in *Bessarabia*. There was a people called the HARPII (Ἅρπιοι, Ptol. iii. 10. § 13) in the district about this river. [E. B. J.]

HARPLEIA (Ἁρπλεια), a place in Laconia upon the slopes of Mt. Taygetus, but at the entrance of the plain. Leake places it at the village of *Xerokambi*. (Paus. iii. 20. § 7; Leake, *Peloponnesiaca*, p. 361.)

HARUDES, a German tribe in the army of Ariovistus in his war with Caesar, of whom 24,000 had crossed over into Gaul and established themselves there. (Caes. *B. G.* i. 31, 37, 51.) Some writers suppose that these Harudes are the same as the *Charudes* (Χαροῦδες) mentioned by Ptolemy (ii. 11. § 12) among the inhabitants of the Chersonesus Cimbrica. If this be admitted, the army of Ariovistus would have consisted of tribes from the most distant parts of Germany, and its great numbers would cease to be matter of surprise. [SUEVI.] The Harudes are also mentioned in the Monumentum Ancyranum. (Comp. Wersebe, *Die Völker u. Völkerbündnisse*, p. 230.) [L. S.]

HASSI. In Pliny (iv. 17) some texts place after the Bellovaci, a people of Belgica, another people named Hassi, or, as some editions have it, Bassi. Harduin omits the name, and he does not say that any MS. has it. D'Anville mentions a forest named *Haiz*, or *Hez*, in a canton of the diocese of *Beauvais*, or the country of the Bellovaci; and he would therefore keep Hassi in Pliny's text. [G. L.]

HASTA. [ASTA.]

HATERA, a station on the road from Dium to Beraea, 12 M. P. from the former (*Peut. Tab.*), and identified with *Katerina*, to the S. of Pydna. (Leake, *Northern Greece*, vol. iii. p. 424.) [E. B. J.]

HAURAN, AURANI'TIS (Αὐρανῖτις, Ἀβρανῖτις), the name given by Josephus to the country called Ituraea by St. Luke (iii. 1), as is evident from the fact that, neither in his description of the tetrarchy of Philip, nor elsewhere, does Josephus make any mention of Ituraea, but substitutes Auranitis. Thus he states that Augustus granted Auranitis, together with Batanaea and Trachon to Herod the Great, on whose death he assigned them to Philip. (*Ant.* xv. p. 10. § 1, xvii. 13. § 4; *B. J.* ii. 6. § 3.) It describes the great desert tract south of Damascus, still called *the Hauran*, and comprehended by Ptolemy under the names of

* Strabo in this passage confounds Φηραία with Ηραία.

Arabia Petraea and Deserta (v. 17. § 19), the Palestina Tertia of the Ecclesiastical annals (Reland, pp. 205. 212). Ptolemy, however, makes Auranitis a district of Babylonia, contiguous to the Euphrates. (Id. 20.)

The district is more correctly described by Strabo, as lying to the south of the two Trachons (*δύο λεγόμενοι Τράχωνες*), consisting of inaccessible mountains, inhabited by a mixed people of Ituraeans and Arabs, a wild and predatory race of villains, a terror to the agricultural inhabitants of the plains. They dwelt in deep caves of such extent, that one could hold 4000 men, in their incursions on the Damascenes, and in their ambuscades against the caravans of merchants from Arabia Felix. But the most formidable band under the noted chief Zenodorus, had been dispersed by the good government of the Romans, and by the security afforded by the garrisons maintained in Syria. (Strabo, xvi. p. 756.) A comparison of this description of Ituraea by the classical geographer, with Josephus's account of Trachonitis and the doings of the robber-chief Zenodorus and his Arabs (*Ant.* xv. 10. § 1, 2), exhibits many striking points of resemblance; and there is an amusing account given by William of Tyre of these very caves between Adraa and Bozra, into whose narrow mouths the thirsty travellers would let down their water-skins, in the hope of finding a supply of water; but drew back the curtailed rope, minus the skins, which had been seized and appropriated by the robbers concealed in the caves. (*Hist.* xv. 10.) The marauding inhabitants of this wild country at the present day keep up the character of their predecessors; and their daring attacks upon the caravans of pilgrims on the annual Haj, are scarcely repressed by a numerous escort of regular troops. The extent of the modern Hauran is thus described by Burckhardt: "The *Haouran* comprises part of Trachonitis and Ituraea, the whole of Auranitis, and the northern districts of Batanaea. . . . The flat country, south of *Jebel Kessoue*, east of *Jebel el Sheikh*, and west of the *Hadj* road, as far as *Kasem*, or *Nowa*, is called *Djedour*. The greater part of Ituraea appears to be comprised within the limits of *Djedour*." (*Travels in Syria.*) The whole district abounds in ruins; and the frequent Greek inscriptions, not only at Bozra, its ancient capital, but in numerous other towns and villages, prove it to have been thickly inhabited in former times, and well garrisoned by Roman soldiers; thereby illustrating and confirming the remark of Strabo above cited, concerning the greater security of the country while under imperial rule. Many of the inscriptions were copied by Burckhardt. (*Syria*, pp. 59—118. 215—234.) The name Hauran (of which Auranitis is only the classical form) is supposed to be derived from the town mentioned by the prophet Ezekiel as in the vicinity of Damascus (xlvii. 16. 18), where the LXX. write *Αὐρανίτιδος*.

The name Ituraea is supposed to be derived from the Ishmaelite patriarch Jetur, or Ittur (1 *Chron.* i. 31); and the Alexandrine version of the LXX. reads *Ἰτουραῖοι*, in 1 *Chron.* v. 19, a passage which, as Reland remarks, enables us to fix the position of Ituraea to the east of the land of Israel; for the Hagarites, to whom Jetur belonged, were dispossessed by the Reubenites who "dwelt in their tents throughout all the east of the land of Gilead" (v. 10) "unto the entering in of the wilderness from the river Euphrates" (v. 9). (Reland, *Palaestina*, p. 106.) Forster (*Arabia*, vol. i. pp. 309—311) further identifies the modern name *Jedour* with the patriarchal Jetur. [G. W.]

HAVILAH (*Εὐιλάτ*), the land encompassed by the Pison, the first-named of the four rivers of Eden, abounding in gold of a fine quality, in "bdellium and the onyx stone." (*Genes.* ii. 11, 12.) Its situation is further fixed as the eastern limit of the Ishmaelite Bedouins, as Sheer was their western limit. (*Gen.* xxv. 18.) They seem to have been subsequently dispossessed by the Amalekites, who have the same limits assigned to them in 1 *Sam.* xv. 7. [AMALEKITAE.] It doubtless derived its name from Havilah the son of Cush (*Gen.* x. 7), by whose descendants the district was first peopled, not from the later Joktanite patriarch of the same name (x. 29).

"The land of Havilah mentioned in *Genesis*, and there described as encompassed, or inclosed rather, by the river Pison, has been assigned, by consent of the learned, as the first and chief settlement of the son of Cush, and identified with the province, on the Persian Gulf, now denominated *Hagar* or *Bahrein*; a district anciently watered, as we gather from the concurrent testimonies of Pliny, and the Portuguese traveller Peneira, by a branch of the Euphrates, which, diverging from the course of its other channels, ran southward parallel with the gulf, and fell into it nearly opposite to the *Bahrein* islands. A direct proof, unnoticed by preceding writers, that this region once bore the name of Havilah, is furnished by the fact, that the principal of the *Bahrein* islands retains to this day the original name of that of *Aval*." (Forster, *Geogr. of Arabia*, vol. i. pp. 40, 41.) Mr. Forster then traces this patriarchal name through its various modifications (as Dr. Wells had done before, though not so fully) in the classical geographers, and shows clear examples of it, under its several idiomatic changes, from the head of the Persian Gulf to its mouth, both in Ptolemy and Pliny, and in the modern geography of the country; and that the great tribe or people intended under those denominations, formed in the time of those geographers, and continue to compose at the present day, a chief part of the population of the Havilah of Scripture, the modern province of *Hagar* or *Bahrein*. (Ib. pp. 41—54.) He accounts for the modern name of the district of Havilah, by the fact already noted, that the Ishmaelite Arabs had dispossessed the ancient Cushite race, and imposed on the conquered territory the name of their mother Hagar. (Vol. i. pp. 199, 200.) [G. W.]

HAZEZON-TAMAR. [ENGEDI.]

HAZOR (*Ἀσώρ*), the royal city of the most powerful Canaanitish nation in the north of Palestine at the period of the entrance of the Israelites. It was the capital of king Jabin, and head of a confederacy against Joshua; on which account he made an example of it, exterminating its inhabitants, and destroying it alone with fire. (*Josh.* xi. 1—14.) It had recovered its independence and importance at the commencement of the period of the Judges, about two centuries and a half later, when we find it still the royal residence of the Canaanite king, Jabin, —a name signifying *wise*, which seems to have been the common designation of the sheikhs of Hazor, as *righteous* was of the Jebusite kings. It does not appear that Hazor was again taken on this occasion after the defeat of Sisera by Deborah and Barak. (*Judges*, iv. v.) Nor is it all clear that the town

of that name mentioned in the later books of Holy Scripture is identical with the Canaanitish capital, the site of which was recovered by the writer in 1843, still called by the same name, and situated on a hill above Banias, a little to the east of the ruins of the Castle of Banias, commanding the Damascus road. [G. W.]

HEBOSO. [HEBUDES.]

HEBRAEI. [PALESTINA.]

HEBROMAGUS, a place in Southern Gallia, which the Jerusalem Itinerary places on the road from Tolosa (*Toulouse*) to Carcaso (*Carcassonne*), and 14 M. P. short of *Carcassonne*. The Table gives the same distance, or some critics read the same distance in the Table by changing xvii. to xiiii. D'Anville supposes Hebromagus to be a place called *Bram*. Hebromagus is mentioned in the Epistolae of Ausonius to Paullinus (xxii. 35; xxiv. 124); and if there was only one Hebromagus, it is the place mentioned in the Itineraries. [G. L.]

HEBRON (Χεβρών, LXX., Joseph.), a very ancient city of Palestine, situated in a mountainous district, 22 Roman miles south of Jerusalem. (Euseb. *s. v.* Ἀρκώ.) Its original name was Kirjath-Arba, or the city of Arba, so called from Arba, a chief of the Anakim, who dwelt in this neighbourhood. (*Gen.* xxiii. 2; *Josh.* xiv. 15; *Judg.* i. 10; Joseph. *Ant.* xiv. 15.) It was frequently the residence of Abraham, Isaac, and Jacob, who were buried here in the cave of Macpelah, which Abraham purchased of the sons of Heth. (*Gen.* xxiii. 2, seq.) Upon the conquest of Palestine by the Israelites, Hebron was given by Joshua to Caleb, who expelled the Anakim from the district. (*Josh.* xiv. 13—15, xv. 13, 14; *Judg.* i. 20.) It was afterwards appointed one of the cities of refuge. (*Josh.* xx. 7.) Hebron was the residence of David, as king of Judah, for seven years and a half. (2 *Sam.* ii. 1, v. 5.) It was fortified by Rehoboam (2 *Chron.* xi. 10); and was occupied by the Jews after their return from captivity (*Nehem.* xi. 25). It afterwards fell into the hands of the Idumaeans, from whom it was recovered by Judas Maccabaeus. (1 *Macc.* v. 65; Joseph. *Ant.* xii. 8. § 6, *B. J.* iv. 9. § 7.) It was taken and burnt by the Romans in the great Jewish War. (Joseph. *B. J.* iv. 9. § 9.) The modern town is called *El Khulil*, "the friend" of God, the name given by the Moslems to Abraham. Here are shown the tombs of the patriarchs, of which an account is given by modern travellers. Outside the town are two reservoirs for rain-water, evidently of great antiquity, one of which is probably the "pool in Hebron" mentioned in the history of David. (2 *Sam.* iv. 12.)

HEBRUS (Ἕβρος: *Maritza*), the principal river of Thrace, has its sources near the point where mount Scomius joins mount Rhodope, in the north-western corner of Thrace. Its course at first has a south-eastern direction; but below Adrianopolis it takes a south-western turn, and continues to flow in that direction until it reaches the Aegaean near Aenos. (Thucyd. ii. 96; Plin. iv. 18; Aristot. *Meteor.* i. 13.) The tributaries of the Hebrus are so numerous and important, that it becomes navigable even at Philippolis, while near its mouth it becomes really a large river. (Herod. vii. 59.) Near its mouth it divides itself into two branches, the eastern one of which forms lake Stentoris. (Herod. vii. 58; Acropolita, p. 64.) The most important among its tributaries are the Suemus, Arda, Artiscus, Tonsus, and Agrianes. About Adrianople the basin of the Hebrus is very extensive; but south of that city it becomes narrower, the mountains on both sides approaching more closely to the river. During the winter the Hebrus is sometimes frozen over. (Comp. Herod. iv. 90; Polyb. xxxiv. 13; Eurip. *Herc. Fur.* 386; Strab. vii. pp. 322, 329, xiii. p. 590; Ptol. iii. 11. § 2; Arrian, *Anab.* i. 11; Mela, ii. 2; Virg. *Ecl.* x. 65, *Georg.* iv. 463, 524; Val. Flac. ii. 515, iv. 463, viii. 228.) [L. S.]

HEBUDES, the *Hebrides* off Britain, mentioned by Pliny, Solinus, and in the Cosmography ascribed to Aethicus. The notices are as follows:—"Sunt autem xl. Orcades modicis inter se discretae spatiis. Septem Acmodae et xxx. Hebudes." (Plin. iv. 30.) "A Caledoniae promontorio Thylen petentibus, bidui navigatione perfecta, excipiunt Hebrides insulae, quinque numero, quarum incolae nesciunt fruges, piscibus tantum et lacte vivunt. Secundam a continenti stationem Orcades praebent: sed Orcades ab Hebudibus porro sunt septem dierum, totidemque noctium cursu, numero tres. Vacant homine: non habent silvas: tantum junceis herbis inhorrescunt. Ab Orcadibus Thylen usque v. dierum et noctium navigatio est." (Solin. c. 23.) The *Cosmography* merely gives the form Heboso, as applied to an island or archipelago off Britain. The difficulties raised by the text of Solinus apply to the geography of the *Orkneys*, *Shetlands*, and *Faroe* Isles, to some of which he has transferred the name Hebrides. [For this, see ORCADES.] The difficulties in the text of Pliny lie in the difference between the Acmodae and the Hebudes. It is only clear that one word means the islands west, the other, the islands east, of the Minch. Now *either* group will give us seven larger and twenty-three smaller islands, neither having so many as thirty islands of any considerable magnitude, and neither having so few as seven, if the smaller members of the group are included. Without deciding which are the Hebrides, and which the Acmodae, we may say that, on one side, we have *Lewis* (with *Harris*), *North Uist*, *Benbecula*, *South Uist*, *Barra*, &c.—on the other, *Skye*, *Rum*, *Tiree*, *Coll*, *Mull*, *Jura*, *Islay*, &c. [R. G. L.]

HECALE. [ATTICA, p. 330, b.]

HECATO'MPEDUM (Ἑκατόμπεδον, Ptol. iii. 14. § 7), a town in the interior of Chaonia in Epeirus; probably situated in the vale of the *Sukha*, above *Libókhovo*. (Leake, *Travels in Northern Greece*, vol. iv. p. 120.) [E. B. J.]

HECATO'MPYLOS (Ἑκατόμπυλος, Strab. xi. p. 514; Ptol. i. 12. § 5, viii. 21. § 16; Ἑκατόμπυλον βασίλειον, Ptol. vi. 5. § 2; Steph. B.), a town of some importance in Parthia, and one of the capitals of the Arsacidan princes. There is, however, great doubt where it was situated, the distances recorded by ancient writers not corresponding accurately with any known ruins. According to Strabo (xi. p. 514), it was 1960 stadia (about 224 miles) from the Pylae Caspiae, and, as we may infer from the passage, in the direction of India, eastward; while Ptolemy places it on the same parallel of latitude (N. 37°) as Rhodes. Again, Pliny makes the same distance to be only 133 Roman (or about 122 English) miles. It has been supposed that *Damgham* corresponds best with this place; but *Damgham* is too near the Pylae Caspiae: on the whole, it is probable that any remains of Hecatompylos ought to be sought in the neighbourhood of a place now called *Jah Jirm*. (Cf. Burne, *Travels*, vol. ii. p. 129; Frazer, *Khorassan*, Append. p. 118; Wilson, *Ariana*, p. 171.) The place itself was of

ancient date, and is stated to have been a distinguished city when Alexander marched through Parthia (Curtius, vi. 2; cf. Diod. xvii. c. 75), though it is clear that it was not, as Curtius states, founded by the Greeks. Polybius affirms that it derived its name from its position in a locality where many roads met (x. 25). Appian asserts that Hecatompylos, in common with many other cities in Asia, derived its Greek name from Seleucus. (*Syr.* c. 57.) In the second century A. D., when Isidorus of Charax wrote his Itinerary, Hecatompylos had apparently ceased to exist, or perhaps, as Mannert (v. 2. p. 76) has conjectured, had given up its Greek name. Isidore calls Sauloe the chief place of Parthia in his day; hence Mannert has suggested, though we think without much reason, that this was the native form of the Greek Hecatompylos. [V.]

HECATO'MPYLOS AFRICAE. [CAPSA.]

HECATONNE'SI (Ἑκατόννησοι: *Musconisi*), a group of islands in the bay of Adramyttium, between Lesbos and the mainland. Their name, apparently from ἕκατον, a hundred, seems only in a general way to allude to the great number of islands, which is stated by some to have been twenty, and by others forty. (Diod. Sic. xiii. 77; Steph. B. *s. v.*) According to Strabo (xiii. p. 618), however, the name Hecatonnesi signified "the islands of Apollo," from his surname Ἕκατος, "the far-darter." [L. S.]

HEDUI. [AEDUI.]

HEDY'LIUM. [BOEOTIA, p. 412, a.]

HEDYPHON (Ἡδυφών, Strab. xvi. p. 744), a river of Susiana, which flowed into the Eulaeus, on which stood a town called Seleuceia. It is probably that now called the *Djerrahi*. Pliny (vi. 27. s. 31.) speaks of a river which he calls the Hedypnus, and which is most likely the same as the Hedyphon. [V.]

HELCE'BUS (Ἕλκηβος, or Ἥλκηβος). Ptolemy (ii. 9. § 18) mentions Elcebus as one of the two towns of the Tribocci on the Rhine: the other is Brocomagus [BROCOMAGUS], which he places north of Elcebus. The Antonine Itinerary has Helvetum, on the road from Augusta Rauracorum (*Augst*) to Moguntiacum (*Mainz*); and it places Helvetum between *Augst* and Argentoratum (*Strassburg*), and 18 M.P. short of *Strassburg*. The Table places Helellum 18 M.P. from *Strassburg*, and Brocomagus north of Argentoratum, which is consistent with Ptolemy's position of Elcebus and Brocomagus; but Ptolemy has incorrectly placed Argentoratum in the country of the Vangiones instead of the Tribocci. Helcebus, Helvetum, Heleilum, seem to be *Ell*, a small place on the right bank of the river *Ill*, opposite to *Bennfeld*. It is said that Roman remains have been found there. [G.L.]

HELELLUM. [HELCEBUS.]

HE'LENA (Ἑλένη: *Eth.* Ἑλεναῖος, Ἑλενίτης, Ἑλένειος: *Makronisi*), a long narrow island, extending along the eastern coast of Attica from Thoricus to Sunium, and distant from two to four miles from the shore. It was also called MACRIS (Μάκρις), from its length. (Steph. B. *s. v.* Ἑλένη.) Strabo (ix. p. 399) describes it as 60 stadia in length; but its real length is seven geographical miles. It was uninhabited in antiquity, as it is at the present day; and it was probably only used then, as it is now, for the pasture of cattle. Both Strabo and Pausanias derive its name from Helena, the wife of Menelaus: the latter writer supposes that it was so called because Helena landed here after the capture of Troy; but Strabo identifies it with the Homeric Cranaë, to which Paris fled with Helena (*Il.* iii. 445), and supposes that its name was hence changed into Helena. There cannot, however, be any doubt that the Homeric Cranaë was opposite Gythium in Laconia. [CRANAE.] (Strab. ix. p. 399, x. p. 485; Paus. i. 35. § 1, viii. 14. § 12; Steph. B. *s. v.*; Mela, ii. 7; Plin. iv. 12. s. 20; Leake, *Demi of Attica*, p. 66; Bröndsted, *Voyage*, vol. i. p. 77; Ross, *Reisen auf den Griech. Inseln*, vol. ii. p. 8.)

HELENA. [ILLIBERRIS.]

HELGAS. [GERMANICOPOLIS.]

HELIADAE (Ἡλιάδαι), a people said to have succeeded the Telchines as inhabitants of the island of Rhodes, and to have been produced from the earth by the agency of the solar heat, whence their name, from Ἥλιος. (Strab. xiv. p. 654.) They are further said to have been skilled in all the arts, especially in astronomy, to have advanced navigation, and to have divided the year into days and hours. (Diod. Sic. v. 57.) In consequence of the Heliadae, the whole island of Rhodes was sacred to the sun, who favoured it so much that not a day passed in the whole course of a year during which the island was not warmed by his rays. (Plin. ii. 62; comp. RHODUS.) [L. S.]

HE'LICE (Ἑλίκη: *Eth.* Ἑλικώνιος, Steph. B. *s. v.*; Ἑλικεύς, Strab. viii. p. 385), a town in Achaia, and one of the 12 Achaean cities, was situated on the coast between the rivers Selinus and Cerynites, and 40 stadia E. of Aegium. It seems to have been the most ancient of all the cities in Achaia. Its foundation is ascribed to Ion, who is said to have made it his residence, and to have called it after his wife Helice, the daughter of Selinus. It possessed a celebrated temple of Poseidon, who was hence called Heliconius; and here the Ionians were accustomed to hold those periodical meetings which were continued in Asia Minor under the name of Panionia. After the conquest of the country by the Achaeans, the latter likewise made Helice the place of meeting of their League, and it continued to be their capital till the destruction of the city by an earthquake in B. C. 373, two years before the battle of Leuctra. This earthquake happened in the night. The city and a space of 12 stadia below it sank into the earth, and were covered over by the sea. All the inhabitants perished, and not a vestige of Helice remained, except a few fragments projecting from the sea. Its territory was taken possession of by Aegium. The neighbouring city of Bura was destroyed by the same earthquake. The catastrophe was attributed to the vengeance of Poseidon, whose wrath was excited because the inhabitants of Helice had refused to give their statue of Poseidon to the Ionian colonists in Asia, or even to supply them with a model. According to some authorities, the inhabitants of Helice and Bura had even murdered the Ionian deputies. (Hom. *Il.* ii. 575, viii. 203, xx. 404; Herod. i. 145, 148; Paus. vii. 1. § 3, vii. 24, 25; Strab. viii. pp. 384, seq., 387; Diod. xv. 48; Ov. *Met.* xv. 293; Plin. ii. 94, iv. 6; Steph. B. *s. v.*)

"On the 23rd of August, 1817, the same spot was again the scene of a similar disaster. The earthquake was preceded by a sudden explosion, which was compared to that of a battery of cannon. The shock which immediately succeeded was said to have lasted a minute and a half, during which the sea rose at the mouth of the Selinus, and extended so far as to inundate all the level immediately below *Vostitza* (the ancient Aegium). After its retreat not a trace was left of some magazines which had stood on the shore, and the sand which had covered

the beach was all carried away. In *Vostitza* 65 persons lost their lives, and two-thirds of the buildings were entirely ruined. Five villages in the plain were destroyed." (Leake, *Morea*, vol. iii. p. 402.)

HELICE or ILIGA (Ἑλίκη), a town in Moesia, in the corner formed by mounts Scomius and Haemus, is identified with the modern *Ikliman* or *Itchiman*. (*Itin. Ant.* 136; Senec. *Herc. Oet.* 1539; *Itin. Hier.* 567.) [L. S.]

HE'LICE, an *E'tang* or sea-lake, mentioned by Avienus (*Or. Marit.* v. 588) at the outlet of the Attagus, which is the Atax (*Aude*), the river of *Narbonne*. D'Anville assumes the Helice to be the *E'tang de Vendres*. The name Helice suggested to Walckenaer that this may show where the Helisyci of Herodotus (vii. 165) came from, who are mentioned with Ligyes, and Sardonii and Cyrnii. Hecataeus, also (Steph. B. *s. v.* Ἑλίσυκοι), mentions the Elisyci or Helisyci (for the aspirate may be doubtful) as a Ligurian tribe. As there is no place for these Helisyci within the limits of Italy, we may with some probability fix them on the Gallic shore of the Mediterranean. Niebuhr's notion that they were Volsci is very absurd. [G. L.]

HE'LICON (Ἑλικών), a mountain in Boeotia lying between lake Copais and the Corinthian gulf, and which may be regarded as a continuation of the range of Parnassus. It is celebrated as the favourite haunt of the Muses, to whom the epithet of Heliconian is frequently given by both the Greek and Roman poets (*αἱ Ἑλικώνιαι παρθένοι*, Pind. i. 7. 57; *αἱ Ἑλικωνιάδες*, Hes. *Theog.* 1; Soph. *Oed. Tyr.* 1008; Heliconiades, Lucret. iii. 1050; Heliconides, Pers. procem. 4). Its poetical celebrity is owing to the fact of its having been the seat of the earliest school of poetry in Greece Proper; for at its foot was situated Ascra, the residence of Hesiod, the most eminent poet of this school.

Helicon is a range of mountains with several summits, of which the loftiest is a round mountain now called *Paleovúni*. Helicon is described by Strabo as equal to Parnassus, both in height and circumference (ix. p. 409); but this is a mistake as far as height is concerned, since the loftiest summit of Helicon is barely 5000 feet high, while that of Parnassus is upwards of 8000 feet. Pausanias says that of all the mountains in Greece Helicon is the most fertile, and produces the greatest number of trees and shrubs, though none of a poisonous character, while several of them are useful in counteracting the bites of venomous serpents. (Paus. ix. 28.) There is, however, a considerable difference between the eastern and western sides of the mountain; for while the eastern slopes abounded in springs, groves, and fertile valleys, the western side was more rugged and less susceptible of cultivation. It was the eastern or Boeotian side of Helicon which was especially sacred to the Muses, and contained many objects connected with their worship, of which Pausanias has left us an account. On Helicon was a sacred grove of the Muses, to which Pausanias ascended from Ascra. On the left of the road, before reaching the grove of the Muses, was the celebrated fountain of Aganippe (Ἀγανίππη), which was believed to inspire those who drank of it, and from which the Muses were called Aganippides. (Paus. ix. 25. § 5; Catull. lxi. 26; Virg. *Ecl.* x. 12.)

Placing Ascra at *Pyrgáki*, there is little doubt that Aganippe is the fountain which issues from the left bank of the torrent, flowing midway between *Paleo-panaghia* and *Pyrgaki*. Around this fountain Leake observed numerous squared blocks, and in the neighbouring fields stones and remains of habitations. The position of the Grove of the Muses is fixed at *St. Nicholas* by an inscription which Leake discovered there relating to the Museia, of games of the Muses, which were celebrated there under the presidency of the Thespians. (Paus. ix. 31. § 3.) *St. Nicholas* is a church and small convent beautifully situated in a theatre-shaped hollow at the foot of Mt. *Marandáli*, which is one of the summits of Helicon. In the time of Pausanias the grove of the Muses contained a larger number of statues than any other place in Boeotia; and this writer has given an account of many of them. The statues of the Muses were removed by Constantine from this place to his new capital, where they were destroyed by fire in A.D. 404. (Euseb. *Vit. Const.* iii. 54; Sozom. ii. 5; Zosim. ii. 21, v. 24, quoted by Leake.)

Twenty stadia above the Grove of the Muses was the fountain HIPPOCRENE (Ἱπποκρήνη), which was said to have been produced by the horse Pegasus striking the ground with his feet. (Paus. ix. 31. § 3; Strab. ix. p. 410.) Hippocrene was probably at *Makariótissa*, which is noted for a fine spring of water, although, as Leake remarks, the twenty stadia of Pausanias accord better with the direct distance than with that by the road. The two fountains of Aganippe and Hippocrene supplied the streams called Olmeius and Permessus, which, after uniting their waters, flowed by Haliartus into the lake Copais. (Hes. *Theog.* 5, seq.; see BOEOTIA, p. 413, a.)

Another part of Helicon, also sacred to the Muses, bore the name of Mount LEIBETHRIUM (Λειβήθριον). It is described by Pausanias (ix. 34. § 4) as distant 40 stadia from Coroneia, and is therefore probably the mountain of *Zagará*, which is completely separated from the great heights of Helicon by an elevated valley, in which are two villages named *Zagará*, and above them, on the rugged mountain, a monastery. This is Leake's opinion; but Dodwell and Gell identify it with *Gránitza*, which is, however, more probably Laphystium. [BOEOTIA, p. 412, b.] On Mount Leibethrium there were statues of the Muses and of the Leibethrian nymphs, and two fountains called Leibethrias and Petra, resembling the breasts of a woman, and pouring forth water like milk. (Paus. ix. 34. § 4.) There was a grotto of the Leibethrian nymphs. (Strab. ix. p. 410, x. p. 471; Serv. *ad Virg. Ecl.* vii. 21.) (See Leake, *Northern Greece*, vol. ii. pp. 141, 205, 489—500, 526.)

HELICYSI. [HELICE.]

HELIO'POLIS AEGYPTI (Ἡλιούπολις, Steph. B. *s. v.*; Ptol. iv. 5. § 54; Herod. ii. 3, 7, 59; Strab. xvii. p. 805; Diod. i. 84, v. 57; Arrian, *Exp. Alex.* iii. 1; Aelian, *H. A.* vi. 58, xii. 7; Plut. *Solon.* 26, *Is. et Osir.* 33; Diog. Laert. xviii. 8. § 6; Joseph. *Ant. Jud.* xiii. 3, *C. Apion.* i. 26; Cic. *Nat. Deor.* iii. 21; Plin. v. 9. § 11; Tac. *Ann.* vi. 28; Mela, iii. 8: *Eth.* Ἡλιουπολίτης: the Semitic names BETH-SCHEMESCH and ON, *Gen.* xli. 45, *Ezech.* xxx. 17., as well as the Arabic *Ainshems* or Fountain of Light, corresponded with the Greek appellation in signifying the City of the Sun). Heliopolis was a city of Lower Egypt, 12 miles from the Egyptian Babylon (*It. Anton.* p. 169), on the verge of the eastern desert, and at the SE. point of the Delta, a little NE. of its apex at Cercasorum, lat. 30° N. It stood on the eastern side of the Pelusiac arm of the Nile, and near the right bank of the Great Canal, which, passing through the Bitter Lakes, connected the river with the Red Sea. In Roman times it

belonged to the Regio Augustamnica. Its population probably contained a considerable Arabian element. (*Plin.* vi. 34.) Heliopolis, however, the On, Rameses, or Beth-Schemesch of the Hebrew Scriptures,—for it has claims to be regarded as any one of the three,—was long anterior even to the Pharaonic portion of this canal, and was, indeed, one of the most ancient of Egyptian cities. Its obelisks were probably seen by Abraham when he first migrated from Syria to the Delta, 1600 years B. C.; and here the father-in-law of Joseph filled the office of high priest. It may be regarded as the University of the land of Misraim: its priests, from the most remote epochs, were the great depositaries of theological and historical learning; and it was of sufficient political importance to furnish ten deputies, or one-third of the whole number, to the great council which assisted the Pharaohs in the administration of justice. At Heliopolis Moses probably acquired the learning of the Egyptians, and the prophet Jeremiah wrote his Lamentations over the decline of the Hebrew people. From Ichonuphys, who was lecturing there in B. C. 308, and who numbered Eudoxus among his pupils, the Greek mathematician learned the true length of the year and month, upon which he formed his "octaeterid," or period of eight years or ninety-nine months. Solon, Thales, and Plato, were reputed each to have visited its schools,—the halls, indeed, in which the latter studied were pointed out to Strabo: while in the reign of the second Ptolemy, Manethon, the chief priest of Heliopolis, collected from its archives his history of the ancient kings of Egypt. Alexander the Great, on his march from Pelusium to Memphis, halted at this city (Arrian, iii. 1); and, according to Macrobius (*Saturn.* i. 23), Baalbek, or the Syrian City of the Sun, was a priest-colony from its Egyptian namesake.

The Heliopolite nome, of which this city was the capital, contained, after the decline and dispersion of the kingdoms of Israel and Judah, a Hebrew population almost equal in numbers to that of the native Egyptians. (Joseph. *Antiq. Jud.* xiii. 3.) But, even so early as the invasion of Cambyses, B. C. 525, Heliopolis had much declined; and in the time of Strabo, who visited it during the prefecture of Aelius Gallus, B. C. 24, its ruins had nearly vanished.

The sun, as the name of the city proves, was the principal object of worship at Heliopolis; and the legends of the Phoenix, the emblem of the solar year, centred around its temples. It was also the seat of the worship of the bull Mnevis, the rival of Apis in this region of Aegypt. In all respects, indeed, it merited the distinction ascribed to it by Diodorus of Sicily, who calls Heliopolis πόλις ἐπιφανεστάτη.

The ruins of Heliopolis occupy a quadrangular area of nearly 3 miles in extent, and were described by Abd-Allatif, an Arabian physician, who wrote his account of Egypt about the close of the 12th century A. D. He speaks of its surprising colossal figures cut in stone more than 30 cubits high, of which some were standing on pedestals and others were in sitting postures. He saw the two famous obelisks called Pharaoh's Needles, one standing and the other fallen and broken in two by its own enormous weight. The name of Osirtesen I., king of Thebes, of the xiith dynasty, who was lord of both the Upper and Lower country, was inscribed on them. The standing obelisk is still erect, and is even now studied as the earliest known specimen of Egyptian architecture. (Plin. xxxvi. 9.) Zoega (*de Obeliscis*, p. 642) supposes that the obelisk which was transported to Rome and set up in the Campus Martius, by order of Augustus, came also from Heliopolis. (Comp. Ammian, xvii. 4.) The obelisks of Osirtesen were each 60 feet high, and consisted of a quadrangular column or cone, rising out of a square base 10 feet high. The pointed top of the column was once covered with a copper cap, shaped like a funnel, and 3 cubits in length. These structures formed the most conspicuous figures in the centre of converging avenues of smaller obelisks.

The hamlet of *Matarieh*, about 6 miles NE. of Cairo, covers a portion of the ancient site of Heliopolis, and is still distinguished by its solitary obelisk of red granite, and contains—no common privilege in Egypt—a spring of sweet and fresh water. Some remains of sphinxes, with fragments of a colossal statue, indicate the ancient approaches to the Temple of the Sun. Heliopolis, from its position on the verge of the desert, must have been contiguous to, and may have overlooked, the pastures of Goshen, where the Children of Israel were allowed to settle by the priest-kings of Memphis; and earlier still, the city, if not indeed Abaris itself, was probably one of the last fortresses held by the Shepherd Kings before their final evacuation of Egypt. [W. B. D.]

HELIO'POLIS SYRIAE (Ἡλιούπολις, Strab. xvi. p. 753; Ptol. v. 15. § 22; Steph. B. *s. v.*; Malala, *Chronic.* xi. p. 119; *Chron. Paschale*, i. p. 513; Solis Oppidum, Plin. v. 18), the modern *Baalbec*, was a city of Coele-Syria, situated abou lat. 34° 1′ 30″ N. and long. 36° 11′ E. (Rennell, *Compar. Geogr. of Western Asia*, vol. i. p. 75.) Baalbec, which in the Syrian language means City of the Sun, was probably the original appellation of this celebrated place. Its Hellenic equivalent—Heliopolis—was imposed by the Seleucid sovereigns of Syria, and continued by the Romans. After the conquest of Syria by the Arabs in the seventh century A. D. the city regained its Semitic, or at least its Aramean name. (See Ammian. Marcell. xiv. 8.) Heliopolis was seated upon a gentle elevation at the NE. extremity of the plain of *Bokah* or *Bekah*, which stretches from the western slope of Anti-Libanus nearly to the shores of the Mediterranean. Three rivers—the Litanè, the Bardouni, and the Asè (Orontes?)—flow through this plain, which in the spring season is also watered by numerous rills formed by the melting of the snows of Antilibanus. Heliopolis itself is supplied with water from a fountain close to the NE. angle of its walls,—*Ras-el-Ain*, or the Spring Head. The whole region of *Bokah* was in ancient times one of singular fertility, and even now, under Mohammedan oppression, is remarkable for the number and beauty of its orchards.

At what epoch or by whom Heliopolis was founded is unknown. According to Macrobius (*Saturn.* i. 23), it was a priest-colony from Egypt, or rather from Assyria. The sun, the Osiris of the Egyptians, was in all ages the principal object of worship there: the Greeks, however, indifferently attributed its temple to Zeus and Apollo. As a sacerdotal city Heliopolis may have found room for a plurality of deities. Atergaté or Astarté, the Syrian Aphrodite, had certainly a temple there.

The city, however, was probably indebted for its greatness to the advantages it afforded as an emporium of the trade between Tyre, Palmyra, and Western India. It was 18½ geographical miles from Palmyra, and 11½ from Tyre. (Rennell, *l. c.*) It was made a Roman colonia by Julius Caesar, and veterans from the 5th and 8th Legions were esta-

blished there by Augustus, on the coins of whose reign it is entitled "COL. JULIA AUGUSTA FELIX HELIOPOLIS." In the second century A. D. its oracle was in such repute that it was consulted by the emperor Trajan previous to his second campaign with Parthia. The emperor at first tested the science of the oracle by sending a blank sheet of paper inclosed in a sealed envelope (*diploma*); and on receiving a similar blank reply, he conceived a high opinion of the prescience of the god, and again consulted him in earnest. The second time the response was symbolically conveyed by the dead twigs of an ancient vine wrapped in a cloth. The interpretation was found in the decease of Trajan, and in the transmission of his bones or remains to Rome in a coffin. From John Malala (*Chronicon, l. c.*) we learn that Antoninus Pius built, or more probably repaired and enlarged, the great temple of Zeus, which became a wonder of the world then, and of many generations of travellers afterwards (e. g. Maundrell, Pococke, Volney, Duke of Ragusa, &c.). From Septimius Severus Heliopolis received the *Jus Italicum* (Ulpian, *de Censibus*, 9), and its temple appears for the first time upon the reverse of the coins of that reign (Akerman, *Rom. Coins*, vol. i. p. 339). The moneyers of Julia Domna and Caracalla inscribe the legend Heliopolis upon their coins, and vows in honour of that emperor and his mother are still partially legible on the pedestals of the portico of the great temple. Its name occurs also on the money of Philip the Arabian, and of his wife Otacilia. The great temple contained, according to Macrobius, a golden statue of Apollo or Zeus, represented as a beardless youth, in the garb of a charioteer, holding in his right hand a scourge, and in his left thunderbolts and ears of corn. On certain annual festivals this statue was borne on the shoulders of the principal citizens of Heliopolis, who prepared themselves for such solemnities by a species of Nazarene discipline, by shaving the head, and by vows of abstinence and chastity. Macrobius compares these ceremonies with the rites practised in the worship of Diva Fortuna at Antium. At Heliopolis also were reverenced the Baetylia, or black conical stones sacred to the sun, one of which was brought to Rome by the emperor Elagabalus, and placed in a temple erected upon the Palatine Mount. (Comp. Damascius, *ap. Phot. Biblioth.* p. 342, B., ed. Bekker; and Gibbon, vol. i. ch. 6.)

Heliopolis is mentioned by the church historians Sozomen (*Hist. Eccles.* v. 10) and Theodoret (*Hist. Eccles.* iii. 7, iv. 22), but little is known of its fortunes under the Byzantine emperors, beyond the names of some Heliopolitan martyrs and bishops. Abulpharagius indeed (*Hist. Compend. Dynast.* p. 75) says that Constantine I. erected a church at Heliopolis, and abolished a custom which had obtained there of plurality of wives. According to the Chronicon Paschale (cclxxxix. p. 303, ed. Bonn), the emperor Theodosius converted the Temple of the Sun into a Christian church, at the same time that he proscribed Paganism, and destroyed the inferior chapels and shrines of the city. Under the Caliphs of the Ommiad House, *Baalbec* gradually declined, although its natural and commercial advantages long retained their influence. (D'Herbelot, *Bibliothèque Orient. s. v. Baalbec.*) Whatever may have been its origin, or the circumstances which favoured its growth, there is no doubt that Heliopolis was for many centuries the most conspicuous city in the region of Libanus, and second to Damascus and Antioch alone in the whole kingdom or province of Syria, whether under Greek or Roman sovereigns.

The walls of Heliopolis, so far as they have been traced, occupy a space of somewhat less than four miles in compass. But this circuit will hardly afford an accurate measure of the population or greatness Heliopolis. For it is probable that the greater portion of it was occupied by public edifices and gardens alone, and that the private dwellings of the city were either extemporary, or made of very light and perishable materials. Such at least was the case with many of the great Eastern emporia. At certain seasons of the year, when the caravans passed through on their route to the East, or on their return, the cities resembled a great fair, and were filled with streets and squares of booths, which were taken down as soon as the caravans moved onward. The religious structures alone were permanent, and around them were grouped the Fora, the Basilicae, and the corridors, in which, under the sultry sun of Syria, the business of the fair was carried on. The population of Heliopolis, therefore, may have varied much at different seasons of the year. In the autumn it would be filled with merchants making up their cargoes for the Eastern markets: in the spring it would again overflow with purchasers of Indian wares: in the winter and summer seasons this city was probably little more than a colony of priests with their numerous assistants in the temple-worship.

The ruins of Heliopolis favour this supposition. They consist of the great Temple; of a smaller temple, or perhaps a Basilica; and of a circular temple of singular form and style. On the highest elevation within the walls, and in the SW. portion of the city, stood a column which may possibly have served for a clepsydra or water-dial.

The great Temple consisted, so far as we can ascertain, of the Propylaea or portico; of an Hexagonal court or Forum; of an inner quadrangular court; and finally of the Shrine of the Sun itself. The courts were probably the exchange of Heliopolis: the Propylaea was its custom-house, and so to speak its wharf, where the caravans received their ladings.

No ruins of antiquity have attracted more attention than those of Heliopolis, or been more frequently or accurately measured and described. They were visited by Thevet in 1550; by Pococke in 1739–40; by Maundrell in 1745; by Wood and Dawkins in 1751; by Volney in 1785; and by many subsequent travellers, including the Duke of Ragusa, in 1834. That more recently they have attracted less notice is owing to the more important discoveries of much higher antiquity on the banks of the Nile and the Tigris. Heliopolis, indeed, so far as it has been known to modern travellers, is a Roman city, of the second century A. D. The Corinthian order of architecture — the favourite order with the Romans — prevails, with few exceptions, in its edifices. A Doric column, the supposed clepsydra, is, indeed, mentioned by Wood and Dawkins; and the Ionic style is found in the interior of the circular temple. For the particular descriptions, measurement, and plans of the structures of Heliopolis, we must refer to the works already cited, as without diagrams they would be unintelligible. The walls of Heliopolis, however, require and deserve a short notice.

As they at present exist they cannot have been the original walls of the city; and would seem to have been constructed in haste under the pressure of some danger, and, like the long-walls between Athens and its havens, to have been built of the

first materials that came to hand. They are from ten to twelve feet in height, with large square towers at certain intervals. The gate on the north side alone exhibits any beauty or magnificence, or indeed any remote antiquity. The other entrances to the city are as rude as the general texture of the walls. The latter are, indeed, a rough congeries of shapeless stones, mingled with broken columns, capitals, and reversed Greek inscriptions. One feature in Heliopolitan masonry is remarkable — the enormous bulk of some of the stones employed in the construction of the temples. Twenty of these stones have especially attracted the wonder of travellers. (See Pococke, Wood and Dawkins, &c.) They are from 24 to 37 feet in length and 9 feet thick, and these form the *second* layer of the basement of the great Temple. At the NW. angle of this building, and about 20 feet from the ground, there are three stones which alone occupy 182 feet 9 inches in length, and these are about 12 feet thick: two are 60 feet, and a third 62 feet 9 inches, in length. The Arabs, with some pretext for their belief, point to them as the work of the Jin.

The materials from which the structures of Heliopolis were built were obtained from the hills close at hand. They consist principally of white granite. The more ornamental portions of the buildings were carved out of a coarse white marble obtained from more distant quarries westward of the city. The buildings of Heliopolis have suffered greatly from violence. They have served as a stone-quarry to the Turks; and as the columns of the temples were cramped together with iron, the Pashas of Damascus have overthrown many of these pillars merely for the sake of the metallic axles contained in them. The progress of this devastation may in some measure be traced in the accounts of the travellers who at different periods have visited Heliopolis. Thus, in 1550, Thevet (*Cosmographie Universelle*, liv. 6. ch. 14) saw 27 columns in the great Temple. Pococke, Wood, &c. mention only nine; and, in 1785, Volney says that only six were standing. The Turks have also contributed to the work of ruin by converting the temples of Heliopolis into Mohammedan buildings. In 1745, they had turned the Propylaea into a fortress called, according to Maundrell, "The Castle;" and on the road to Damascus there is a Mohammedan sepulchre of octagonal form, supported by granite columns, brought apparently from the great Temple. The circular temple, mentioned above, is now a Greek church called *St. Barbe*.

Volney (*Voyage en Syrie*, vol. ii. p. 215) describes the fine groves of walnut trees which screen the approaches to Heliopolis from the west. But although the soil of the plain of *Bokah* would undoubtedly well repay cultivation, a little cotton and maize, with a few leguminous plants, are all its produce under its Mohammedan governors. The population also has rapidly declined within a century. In 1751 the number of inhabitants amounted to about 5000; in 1785 Volney estimates them at about 1200; and in 1834 they had been still further reduced. An earthquake in 1759, an oppressive government, the absence of all trade and manufactures, and frequent wars between the Turks and the mountain tribes of the region of Libanus, have each in turn contributed to the decay of the City of the Sun. (Volney, *Voyage en Syrie et Egypte*, tom. ii. pp. 215—230; Maundrell, *Journey from Aleppo to Jerusalem*, pp. 134, 139; Pococke, *Description of the East*, vol. ii. pp. 106—113.) [W. B. D.]

HELISSON (Ἑλισσών, Paus.; Ἑλισσοῦς, Diod.), a town of Arcadia in the district Maenalia, situated on Mt. Maenalus near the territory of Mantineia. The town was taken by the Lacedaemonians in one of their wars with the Arcadians, B. C. 352; but most of its inhabitants had been previously removed to Megalopolis upon the foundation of the latter city in 371. Near it rose the river Helisson, which flowed through Maenalia into the Alpheius. The site of Helisson is doubtful. Leake places it at the village *Alonistena*, from which the river takes its modern name, and near which it rises; but as there are no ancient remains at this village, Ross conjectures that its site is represented by the *Paleokastron* near the village *Piana*, lower down the mountain. (Paus. viii. 3. § 3, 27. §§ 3, 7, 30. § 1; Diod. xvi. 39; Leake, *Morea*, vol. ii. p. 54; Ross, *Reisen im Peloponnes*, vol. i. p. 117.) The Elisphasii mentioned by Polybius (xi. 11. § 6) are conjectured by some modern writers to be a corrupt form of Helissontii. For details, see MANTINEIA.

HELISSON. 1. A river in Arcadia, and a tributary of the Alpheius. [See above.]

2. A river near Sicyon. [SICYON.]

HE'LIUM O'STIUM. [MOSA.]

HELLAS, HELLENES. [GRAECIA.]

HELLENO'POLIS (Ἑλληνόπολις), a town on the coast of the Propontis, on the south side of the Sinus Atacenus, and near the little river Draco. Its original name, which it bore until the time of the emperor Constantine, was Drepanum or Drepane (Δρέπανον, Δρεπάνη; Steph. B. *s. v.* Δρεπάνη; Etym. M. *s. v.*; Amm. Marc. xxvi. 8), and it was probably a place of little note; but, as it was the birthplace of Helena, the mother of Constantine, he changed its name into Hellenopolis, and enlarged the place by inducing many people of the neighbourhood to settle in it. (Hierocl. p. 691; Niceph. Callist. vii. 49; Socrat. *Hist. Eccles.* i. 4, 18; Philostorg. *Hist. Eccles.* ii. 13.) Afterwards the emperor Justinian also did much to increase the prosperity of the town (Procop. *de Aed.* v. 2); but it became, nevertheless, so reduced that it was called in mockery ἐλεεινοῦ πόλις (Glyc. *Ann.* p. 327). In its vicinity there existed mineral springs, in consequence of which Constantine often resided there during the latter years of his reign. (Sozom. *Hist. Eccles.* ii. 34; Euseb. *Vit. Const.* iv. 61.) The modern place called *Hersek* probably occupies the same site as the ancient Hellenopolis, and the ancient mineral springs seem to be those of *Jalaikabad*. (Leake, *Asia Minor*, pp. 9, foll.) [L. S.]

HELLESPONTUS (ὁ Ἑλλήσποντος, Hom. *Il.* ii. 845, *Odyss.* xxiv. 82; ὁ Ἕλλης πόντος, -ὕδωρ, -πορθμός, Aesch. *Pers.* 722; Hellespontus, Pontus Helles, Hellespontum Pelagus, Fretum Hellesponticum: *Eth.* Ἑλλησπόντιος, Ἑλλησποντιάς, Ἑλλησποντίς, Steph. B.: *The Dardanelles; Golfo di Galippoli; Stambul Denghiz*), the strait which divides Europe from Asia and unites the Propontis with the Aegaean sea.

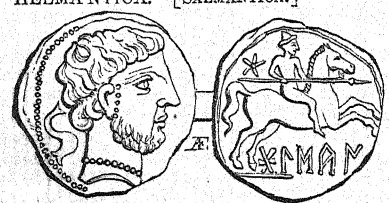
The Greeks explained the origin of the name by the well-known legend of Phryxus and Helle, and in the later poets (Ovid, *Her.* xviii. 117, 137; Prop. i. 20. 19; Lucan, v. 56; Avien. 692) frequent allusion is made to this tradition.

The "broad Hellespont" of the Homeric poems (*Il.* vii. 86)—for the interpretation of Mr. Walpole and Dr. Clarke (*Trav.* vol. iii. p. 91) of πλάτυς Ἑλλήσποντος by "salt Hellespont" is too unpicturesque to be adopted — was probably conceived to

be a wide river flowing through thickly wooded banks into the sea. (Comp. Herod. vii. 35; Walpole, *Turkey and Greece*, vol. i. p. 101; Schlichthorst, *Geogr. Homer.* p. 127.)

Herodotus (iv. 85), Strabo (xiii. p. 591), and Pliny (iv. 12, vi. 1) give 7 stadia as the breadth of the Hellespont in its narrowest part. Tournefort (vol. ii. lett. iv.) and Hobhouse (*Albania*, vol. ii. p. 805) allow about a mile. Some modern French admeasurements give the distance as much greater. The Duc de Raguse (*Voyage en Turquie*, vol. ii. p. 164) nearly coincides with Herodotus.

The bridge, or rather two separate bridges, which Xerxes threw across the Hellespont, stretched from the neighbourhood of Abydos, on the Asiatic coast, to the coast between Sestus and Madytus, on the European side; and consisted of 360 vessels in the bridge higher up the stream, and 314 in the lower one. If the breadth be estimated at a mile or 5280 feet, 360 vessels, at an average of 14⅔ feet each, would exactly fill up the space. (Grote, *Hist. of Greece*, vol. v. p. 26; comp. Rennell, *Geog. of Herod.* vol. i. p. 158; Kruse, *Uber die Schiffbrücken der Perser*, Breslau, 1820; Choiseul-Gouffier, *Voyage Pittoresque*, vol. ii. p. 449; Bähr, *ad Herod.* vii. 36.) The length of the strait was estimated by Herodotus (iv. 85) at 400 stadia. This admeasurement of course depends upon the point assigned by the ancients to the extremity of the Hellespont, a point which is discussed by Hobhouse (*Albania*, vol. ii. p. 791). In the later years of the Peloponnesian War the Hellespont was the scene of the memorable battles of CYNOSSEMA and AEGOSPOTAMI.



In B. C. 334 the Hellespont was crossed by Alexander, with an army of about 35,000 men. (Arrian, *Anab.* i. 11; Diod. Sic. xvii. 1.)

The Hellespont issues from the Propontis near *Gallipoli* [CALLIPOLIS], the road of which is the anchorage for the Ottoman fleet. A little lower, on the Asiatic side, is *Lampsaki* [LAMPSACUS], close to which the current sweeps as before, nearly SW. to the bay of Sestos, a distance of about 20 miles, with an ordinary width of from 2½ to 3 miles. At SESTOS the stream becomes narrower, and takes a SSE. direction as it passes ABYDOS, and proceeds to the town of *Charnák Kal'eh-Si;* from the last point it flows SW. for 3 miles to *Point Berber*, and from thence onward in the same direction, but rather increasing in width, for a distance of 9¾ miles to the Aegaean sea.

About 1½ miles below the W. point of the bay of MADYTUS are the famous castles of the Dardanelles, which give their name to the straits; or the old castles of *Anatóli* and *Rúm-ili: Tchannak-Ka'leh-Si*, on the Asiatic side, and *Kilidu-l-Bahr*, on the European. (Chesney, *Exped. Euphrat.* vol. i. p. 318.) [E. B. J.]

HELLI, HELLO'PIA. [DODONA; GRAECIA, p. 1011 a.]

HELMA'NTICA. [SALMANTICA.]

COIN OF HELMANTICA.

HELO'RUM, HELO'RUS, or ELO'RUS (Ἕλωρος or Ἕλωρος, Ptol., Steph. B.; Ἕλωρον, Scyl.: *Eth.* Ἑλωρῖνος, Helorinus), a city of Sicily, situated near the E. coast, about 25 miles S. of Syracuse, and on the banks of the river of the same name. (Steph. B. *s. v.*; Vib. Seq. p. 11.) We have no account of its origin, but it was probably a colony of Syracuse, of which it appears to have continued always a dependency. The name is first found in Scylax (§ 13. p. 168); for, though Thucydides repeatedly mentions "the road leading to Helorus" from Syracuse (τὴν Ἑλωρίνην ὁδόν, vi. 66, 70, vii. 80), which was that followed by the Athenians in their disastrous retreat, he never speaks of the town itself. It was one of the cities which remained under the government of Hieron II. by the treaty concluded with him by the Romans, in B. C. 263. (Diod. xxiii. Exc. H. p. 50, where the name is corruptly written Αἰλώρων): and, having during the Second Punic War declared in favour of the Carthaginians, was recovered by Marcellus in B. C. 214 (Liv. xxiv. 35). Under the Romans it appears to have been dependent on Syracuse, and had perhaps no separate municipal existence, though in a passage of Cicero (*Verr.* iii. 48) it appears to be noticed as a "civitas." Its name is again mentioned by the orator (*Ib.* v. 34) as a maritime town where the squadron fitted out by Verres was attacked by pirates: but it does not occur in Pliny's list of the towns of Sicily; though he elsewhere (xxxii. 2), mentions it as a "castellum" on the river of the same name: and Ptolemy (iii. 4. § 15) speaks of a *city* of Helorus. Its ruins were still visible in the days of Fazello; a little to the N. of the river Helorus, and about a mile from the sea-coast. The most conspicuous of them were the remains of a theatre, called by the country people *Colisseo:* but great part of the walls and other buildings could be traced. The extent of them was, however, inconsiderable. These are now said to have disappeared, but there still remains between this site and the sea a curious column or monument, built of large stones, rising on a square pedestal. This is commonly regarded as a kind of trophy, erected by the Syracusans to commemorate their victory over the Athenians. But there is no foundation for this belief: had it been so designed, it would certainly have been erected on the banks of the river Asinarus, which the Athenians never succeeded in crossing. (Fazell. iv. 2. p. 215; Cluver. *Sicil.* p. 186; Smyth, *Sicily*, p. 179; Hoare, *Classical Tour*, vol. ii. p. 136.) [E.H.B.]

HELO'RUS or ELO'RUS (Ἕλωρος or Ἕλωρος), a river in the SE. of Sicily, the most considerable which occurs between Syracuse and Cape Pachynum. It is now called the *Abisso*, but in the upper part of its course is known as the *Tellaro* or *Telloro*, evidently a corruption of Helorus. It rises in the hills near *Palazzolo* (Acrae), and flows at first to the S., then turns eastward, and enters the sea about 25 miles S. of Syracuse. Near its mouth stood the town of the same name. [HELORUM.] In the upper part of its course it is a mountain stream, flowing over a rugged and rocky bed, whence Silius Italicus calls it "undae clamosus Helorus" (xiv. 269); but near its mouth it becomes almost perfectly stagnant, and liable to frequent inundations. Hence Virgil justly speaks of "praepingue solum stagnantis Helori" (*Aen.* iii. 698). Ovid praises the beauty of the valley through which it flows, which he terms "Heloria Tempe" (*Fast.* iv. 476). Several ancient

authors mention that the stagnant pools at the mouth of the river abounded in fish, which were said to be so tame that they would eat out of the hand, in the same manner as was afterwards not uncommon in the fishponds of the Romans. (Apollodor. *ap. Steph. Byz.* v. Ἕλωρος ; Athenaeus, viii. p. 331 ; Plin. xxxii. 2. s. 7.)

It was on the banks of the Helorus, at a spot called Ἀρέας πόρος, the precise locality of which cannot be determined, that the Syracusans were defeated by Hippocrates, tyrant of Gela, in a great battle. (Herod. vii. 154 ; Pind. *Nem.* ix. 95 ; and Schol. *ad loc.*) [E.H.B.]

HELOS (τὸ Ἕλος), the name of several towns in Greece, so called from their vicinity to marshes.

1. A town of Laconia, situated east of the mouth of the Eurotas, close to the sea, in a plain which, though marshy near the coast, is described by Polybius as the most fertile part of Laconia. (Polyb. v. 19.) In the earliest times it appears to have been the chief town on the coast, as Amyclae was in the interior; for these two places are mentioned together by Homer (*Il.* ii. 584, *Hymn. in Apoll.* 410). Helos is said to have been founded by Heleius, the youngest son of Perseus. On its conquest by the Dorians its inhabitants were reduced to slavery; and, according to a common opinion in antiquity, their name became the general designation of the Spartan bondsmen, but the name of these slaves (εἵλωτες) probably signified captives, and was derived from the root of ἑλεῖν. (Paus. iii. 20. § 6; the account differs a little in Strab. viii. p. 365, and Athen. vi. p. 265, c.; but on the etymology of the word Helots, see *Dict. of Ant.* p. 591.) In the time of Strabo Helos was only a village; and when it was visited by Pausanias, it was in ruins. (Strab. viii. p. 363; Paus. iii. 22. § 3: Helos is also mentioned by Thuc. iv. 54; Xen. *Hell.* vi. 5. § 32; Steph. B. *s. v.*) Leake conjectures that Helos may have stood at *Priniko*, since this place is distant from *Trinisa*, the ancient Trinasus, about 80 stadia, which, according to Pausanias, was the distance between these two places; but we learn from the French Commission that *Priniko* contains only ruins of the middle ages, and that there are some Hellenic remains a little more to the east near *Bizani*, which is therefore probably the site of Helos. The name of Helos is still given to the plain of the lower Eurotas. (Leake, *Morea*, vol. i. p. 230; Boblaye, *Recherches*, p. 94; Curtius, *Peloponnesos*, vol. ii. p. 289.)

2. A town belonging to Nestor, mentioned by Homer, was placed by some ancient critics on the Alpheius, and by others on the Alorian marsh, where was a sanctuary dedicated by the Arcadians to Artemis; but its position is quite uncertain. (Hom. *Il.* ii. 594; Strab. viii. p. 350; Plin. iv. 5. s. 7.)

3. Near Megalopolis. [MEGALOPOLIS.]

HELVECO'NAE (Αἰλουαίωνες, Ptol. ii. 11. § 17), a tribe of the north of Germany, on the west of the Vistula, between the Rugii and Burgundiones. According to Tacitus (*Germ.* 43), the Helveconae were one of the bravest tribes of the Lygii. [L. S.]

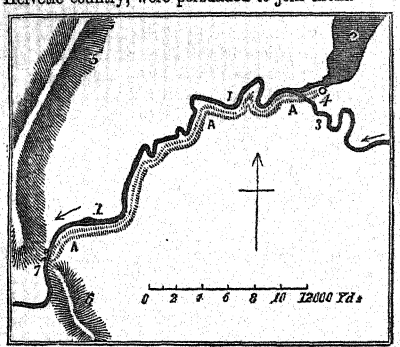
HELVE'TII (Ἑλουήττιοι, Ἑλβήττιοι), a Celtic people who in Caesar's time occupied the country between the Jura on the west, the Rhone and Leman lake on the south, and the Rhine on the east and north. Caesar (*B. G.* i. 2) gives the dimensions of their country, as they were reported to him, and probably the dimensions are not far wrong if we take the measurements in the right directions. [GALLIA, p. 951.] Cluverius and others would correct these numbers, which shows a want of judgment. Caesar says nothing, for he knew nothing, of the southern limit of the Helvetii east of the Leman lake. There is no evidence in his work that the Helvetii in his time occupied any of the mountainous part of Switzerland. They seem to have occupied hilly tracts and plains, but not mountains or high mountain valleys. Strabo (p. 292) makes the Rhaeti border on a small part of the *lake of Constanz*, and the Helvetii and the Vindelici on the larger part of it. The words are ambiguous, and may apply both to the south or Swiss side of the lake, and to the north or German side; and so some people interpret him. Strabo observes that the Helvetii and Vindelici inhabit mountain plains (ὀροπέδια), by which he means elevated levels and hilly tracts, but not mountains. The part which Strabo (p. 208) calls the Helvetian plains is the country north of the Leman lake. The Rhaeti and the Norici, he says, dwell right up to the mountain passes, and over them into Italy. There was a tradition that the Helvetii were once in Germany. Tacitus (*German.* c. 28) thinks that this is probable ; and he fixes the German residence of the Helvetii between the Hercynia Silva, the Rhine, and the Moenus (*Main*): he supposed the Boii to have occupied the parts beyond, further north and east. But it seems that the Germans had driven the Helvetii back, for in Caesar's time the Rhine was the frontier, and the two nations were continually fighting on it. If we assume that Caesar's Helvetii extended to the south side of the *lake of Constanz*, from the eastern extremity of the Leman lake, we may suppose their country not to have comprised any part south of the lakes of Thun and Luzern. This will leave room enough for them.

The Jura, which Ptolemy (ii. 9. § 5) calls Jurassus (Ἰουρασσός), and Strabo names Ἰουράσιος and Ἴόρας, separated the Helvetii from the Sequani. The Jura of Caesar extends from the north bank of the Rhone in a NE. direction, leaving on the east the basins of the Leman lake and the *lakes of Neufchâtel* and *Bienne*. That part of the Jura which is bounded on the east by the basins of the *lakes of Neufchâtel* and *Bienne*, has for its western boundary the valley of the Dubis (*Doubs*). From the neighbourhood of *Solothurn* (*Soleure*) a branch of the Jura runs into the angle between the junction of the Rhine and the *Aar*. The Jura is a mass of limestone, consisting of parallel ranges, which form longitudinal basins. The *Dôle*, north of Geneva, is about 5500 feet; and the *Reculet*, which lies further south, is still higher. Caesar (*B. G.* i. 6) knew of only one pass from the country of the Helvetii into the country of the Sequani, which pass is SW. of Geneva, where the Jura abuts on the Rhone, leaving only a narrow road between the mountains and the river. At present there are several passes over the Jura: one called the *Dôle*, leads from *Nyon* on the *lake of Geneva* to *Besançon* on the *Doubs;* the *Orbelklause* leads from *Yverdun* to *Pontarlier* in France; the pass called *La Cluzette;* the pass of the *Pierre Pertuis;* and the pass of the *Immenthal*. Ptolemy's description of the position of the Helvetii is not exact. After fixing the position of the Lingones, he says: "and after the mountain which lies next to them, which is called Jurassus, are the Helvetii along the river Rhine." The Lingones bordered on the *Vosges*.

The country of the Helvetii was divided into four districts or *Pays* (pagi), and they had twelve towns and 400 villages. (Caes. *B. G.* i. 12, 27.) Caesar has mentioned the names of two pagi, the Tigurinus

and the Verbigenus. The critics are not quite agreed whether we should write Urbigenus or Verbigenus in Caesar's text; but there is the better MS. authority for Verbigenus. (Schneid. ed. Caesar, *Bell. Gall.*) Those who write Urbigenus have identified "Urb" with the town of *Orbe*, on the river *Orbe*, SW. of *Yverdun*, a place on the site of Urba. [URBA.] But an altar was found at Salodurum (*Solothurn*), by Schoepflin, with the inscription GENIO VERBIG.; and this discovery is supposed to determine *Solothurn* to be in the pagus Verbigenus. The letters VE on this inscription are said to be joined together; but some authorities still say that the true reading is VRBIG. The inscription, however, belongs to the 3rd century of our aera, and it is no authority for the orthography of Caesar's time. Whether the name is Urbigenus or Verbigenus, we may assume that the inscription belongs to the place where it was found, and therefore we may conclude that Salodurum was a town of the Verbigenus pagus. We may also suppose that the pagus extended northward to the Rhine.; and as far as *Baden* on the *Limmat*, a branch of the *Aar*, if it be true that there is an inscription with the words Aquae Verbigenae; for these Aquae are probably the same as the Aquae Helveticae, which are proved by inscriptions to be the baths of *Baden* on the *Limmat*. One of these Baden inscriptions, in honour of M. Aurelius, contains the words RESP. AQ. *Baden* is supposed to be the place which Tacitus (*Hist.* i. 58) alludes to without mentioning the name.

An inscription has been found near *Avenches* [AVENTICUM], with the words GENIO PAGI. TIGOR.; and, so far as this evidence goes, we must place the Tigurini south of the Verbigeni. Their *Pays*, then, was bounded by the Jura on the west as far south as *Fort l'Ecluse*, and on the south by the Rhone from *Fort l'Ecluse* to the Lake, and then by the Lake. The northern boundary would be about the *lake of Morat*. We cannot determine the eastern boundary of the Tigurini. There is no authority for connecting the name of *Zürich* with the Tigurinus pagus, for an inscription which has been found there shows that the name was different: the inscription is STA, that is Statio, TVRICEN; and in the middle age documents *Zürich* is named Turicum and Turegum. D'Anville (*Notice, &c.*) states his authority for affirming that an inscription "Genio pagi Tigur," with some others, was found near *Zürich*. If this were so, it would weaken the testimony of the *Avenches* inscription, for we cannot suppose that this pagus comprehended both *Avenches* and *Zürich*. But Walckenaer solves the difficulty by affirming that such an inscription has not been found near *Zürich*. The opinion of B. Rhenanus, not quite rejected by D'Anville, that the name of the canton *Uri* may represent the name Tigurini, need only be mentioned to be rejected.



The names of the two other Helvetian Pagi are unknown; but it is a fair conjecture that one of them may have been the pagus of the Tugeni. Strabo (p. 293) mentions the Tugeni with the Tigurini, when he is giving Posidonius' opinion of the Cimbri. Posidonius says that "the Boii once inhabited the Hercynian forest; and that the Cimbri, who invaded their country, being repelled by the Boii, came down upon the Danube and the Scordisci Galatae, and then to the Teuristae and [read "or"] Taurisci, who were also Galatae: and after that they came to the Helvetii, who were rich in gold and a peaceable people; but when the Helvetii saw that the wealth got by plunder was greater than their own, they were induced, and chiefly the Tigurini and Tougeni, to join the Cimbri; but they were all defeated by the Romans, both the Cimbri and those who joined them." It seems then that there was an Helvetian people named Tugeni, and Walckenaer (*Géog., &c.* vol. i. p. 311) has no difficulty in finding a place for them. He says: "The name of the modern village of *Tugen*, at the eastern extremity of the *lake of Zürich*, and that of the valley formed by the river *Thur*, which is *Toggenburg* or *Tuggenburg*, do not permit us to doubt that the Tugeni inhabited the neighbourhood of these places; and in the time of Caesar it is probable that this people occupied the country between the *lake of Constanz*, the *Limmat*, the *lake of Wallenstadt*, and the two parts of the course of the Rhine to the west and to the east of the lake." Within the limits of the Tugeni, if this conjecture is true, we find *Zürich*, Vitodurum (*Oberwinterthur* near *Winterthur*), Arbor Felix (*Arbon*) on the *lake of Constanz*, and Vindonissa (*Windisch*).

The name of the fourth pagus is unknown; but as there was a people named Ambrones, who were with the Teutones when Marius defeated them at Aquae Sextiae, Walckenaer supposes that they may have formed the fourth canton. Strabo (p. 183), in speaking of this campaign of Marius, mentions only the Ambrones and Tugeni. Eutropius, who of course was copying some authority, says (v. 1) that "the Roman consuls Manilius and Caepio were defeated by the Cimbri and Teutones, and Tigurini and Ambrones, which were German and Gallic nations, near the Rhone." As the Cimbri and Teutones are here supposed to be Germans, and as the Tigurini were certainly Galli, it is plain that the writer, or the authority which he followed, took the Ambrones also to be Galli. The Epitome of Livy (*Ep.* 68) mentions the Teutones and Ambrones as the names of the barbarians whom Marius defeated east of the Rhone; and also Plutarch (*Mar.* c. 19), who adds that Ambrones is also a name of the Ligures. If the Ambrones were a Gallic people there is no place for them except in Switzerland: and if the position of the three other Pagi is rightly determined, the Ambrones occupied the part south of the Verbigeni and Tugeni; and they would extend from the eastern extremity of the *lake of Geneva*, in the upper valleys of the *Aar* and the *Reuss*, as far east as the course of the Rhone above the *lake of Constanz*. But all this is only a conjecture, founded on no very strong probabilities; and it is not likely that the inhabitants of the high valleys of Switzerland joined the Helvetic emigration.

The story of the migration of the four Helvetic Pagi is told by Caesar (*B. G.* i. 2). Orgetorix (B. C. 61), a rich Helvetian, persuaded the nobles to leave their country with all their people and movables; for he argued that, as they were the bravest of the Galli, it would be easy to make themselves masters of all the country. They did not, however, intend to attack either their neighbours the Sequani, or the Aedui, or the Allobroges on the south side of the Rhone; but to make terms with the Allobroges, in order to secure a free passage through their country, Orgetorix prevailed on the Helvetii to get ready as many waggons and beasts of draught as they could, and to sow largely, in order to have a stock of provisions for their journey. Two years were considered enough for preparations, and the third was to be the year of emigration. Orgetorix, in the meantime,

visited the Sequani, and persuaded Casticus, whose father Catamantaloedes had held for many years the kingly power there, to seize the place which his father once had. He also persuaded Dumnorix, the brother of Divitiacus, to do the same among the Aedui, and he gave Dumnorix his daughter to wife. He told them that they might easily do what he advised, for he was going to have the supreme power among the Helvetii, that the Helvetii were the most powerful Gallic people, and that he would help to secure their royal power with the Helvetian army. This was agreed: the three conspirators were to make themselves kings, and then they had good hopes of mastering all Gallia. This conspiracy being known to the Helvetii by some informer, Orgetorix was summoned to trial. The punishment for treason among the Helvetii was burning. The man came on the day fixed for the trial, but he had a train of 10,000 slaves and dependents about him, and there was no trial. Orgetorix was in open rebellion, and while the magistrates were getting together a force from the country to maintain the law and put him down, he died, or, as the Helvetii supposed, he put an end to himself. Though usurpation was a common thing in the Gallic states, the people were never long pleased with it, and a usurper had generally a short reign.

The Helvetii still determined to leave their country. They burnt their 12 towns, their 400 villages, and all the private buildings. They burnt also all the corn which they did not want; and they were directed by their leaders to take meal and flour enough to last three months. They persuaded the Rauraci to join them, a tribe who were situated on the Rhine about *Bâle*, but probably within the territory of the Sequani; and also Tulingi and Latobrigi, who were on the east side of the Rhine, and either a German people or a remnant of those Helvetii who once occupied the country. They also got some Boii to join them, whom Caesar describes as Boii "who had settled beyond the Rhine and had passed into the Noric territory, and had attacked Noreia." This is very obscure. The simplest explanation is, that some of the Boii who had been long settled in Germany, and who happened now to be on the eastern borders of the Helvetic country, were persuaded to join them.

MAP SHOWING THE POSITION OF CAESAR'S MURUS ON THE RHONE.

A, A. Caesar's earthwork or wall.
1. The Rhone.
2. L. Leman.
3. The Arve.
4. Geneva.
5. Mt. Jura.
6. Mt. aux Vaches
7. Fort l'Ecluse.

The Helvetii, says Caesar, could only get out of their country by two ways; an expression which implies that the direction of their route was determined, for they could certainly have got out by the north as well as by the south. One of these two ways led along the Rhone, on the right bank, to the place where the Jura abuts on the river, leaving only room for a single waggon. This is the place where *Fort l'Ecluse* stands. The other road was over the Rhone at Geneva, and through the country of the Allobroges and the Provincia. The route of the Helvetii was therefore to the south-west. At the point where the Rhone flows out of the lake of Geneva is an island, on which stood the town of Geneva, which belonged to the Allobroges. The modern town is on the island and on both sides of the Rhone. There was a bridge from Geneva to the territory of the Helvetii, and we assume that there was another bridge from the island to the south side. All the Helvetii were to meet at Geneva on the 28th of March of the unreformed calendar, expecting to prevail on the Allobroges to allow them a passage, and intending to force a passage if it was not granted. Caesar, who was now proconsul of Gallia Cisalpina and of the Provincia, was at Rome; and, hearing of this preparation, he hurried from the city and arrived at Geneva. He does not tell us where he crossed the Alps. He mustered as many men as he could in the Provincia, for he had only one legion with him, and he ordered the bridge at Geneva to be destroyed,—the bridge which connected the island with the north bank of the Rhone, if he only destroyed one bridge. The Helvetii sent to say that they intended to pass through the Provincia without doing any harm, and begged that he would give them permission. Caesar, recollecting what had happened to L. Cassius and his army, whom the Helvetii had sent under the yoke [GALLIA, p. 955], resolved not to allow them to pass through the Provincia. He told them that he would consider about it, and they must come again on the 13th of April. (B. C. 58.)

In the mean time Caesar employed his legions and the troops that he had raised in the Provincia, the number of which is not mentioned, in building a wall (murus), probably an earthen rampart, on the south side of the Rhone, from the place where it flows out of the Leman lake to the Jura. The wall was 19 Roman miles long and 16 feet high, with a ditch; which may mean that it was 16 feet high from the bottom of the ditch. The wall was manned, and at intervals there were towers (castella). When the day came for Caesar's answer, he refused to allow the Helvetii to pass through the Provincia, and told them, that if they made the attempt, he should prevent them. The Helvetii tried to break through the wall. Some crossed the river by bridges of boats and planks fastened together, and others forded the Rhone where it was shallowest: sometimes they attacked the wall by day, and sometimes by night; but the Roman troops drove them back, and they failed to break through the Roman lines. Some persons who have explained Caesar's operations before Geneva, or rather have found fault with his story, begin by supposing that his wall was made on the north side of the Rhone. If men can make such a blunder as this, there is no need to waste any words on them. The wall began on the south side of the river, close to the lake, and was made along the river to the point where the *Arve* enters the Rhone, just below Geneva; and it was continued along the Rhone to the point where the Rhone passes through the Jura. On the north

side of the river, at the base of the mountain named Credo, is now *Fort l'Ecluse*, or *Fort la Cluse*, as it is sometimes written. On the south side is the range of high land, which is a continuation of the Jura; and here the wall ended. As the Rhone cannot be forded below this point, and is indeed hardly fordable above, if Caesar kept the Helvetii from crossing between Geneva and *Fort l'Ecluse*, his enemies must go some other way. The length of Caesar's wall, measured from a point a little above Geneva along the Rhone to a point opposite to *Fort l'Ecluse*, agrees with Caesar's length; and we may suppose that the text is right as to the numbers, which has only been doubted by those editors who have supposed that his wall was made from the lake on the north side of the Rhone to the Jura, which would be a manifest absurdity, and is contrary to Caesar's narrative. Appian (*Gall. Excerpt.* xiii.) found the same length of wall, either in Caesar's text or elsewhere; for he makes it 150 stadia, which, at 8 stadia to a Roman mile, is 18¾ M.P. Another objection to Caesar's narrative is, that the Rhone below the junction of the *Arve* is not fordable now; it is rapid, and sunk in a deep bed between rocks, which circumstances would render the passage of the river either by bridges of boats, rafts, or wading impossible. But it has been maintained, even in modern times, that such a passage over the Rhone would not be impossible. Caesar says that in his time it was done; and it is certain that some change must have taken place in the bed of such a river, through which a rapid stream has been running for 2000 years.

There now only remained the other way for the Helvetii, which they could not take if the Sequani opposed them (*B. G.* i. 9)—the narrow pass between the Jura and the Rhone. Dumnorix managed this for the Helvetii, and the two peoples gave hostages to one another; the Helvetii promising to do no mischief, and the Sequani undertaking not to molest them. Now the objectors say there were many other roads that the Helvetii could have taken, and particularly the road from *Orbe* in the *Pays de Vaud* to *Pontarlier* on the *Doubs*: and General Warnery, a great authority in this matter, for he places Caesar's wall on the wrong side of the river, really believes they did go this way; to which the answer is, that Caesar says they did not. The road to *Pontarlier*, says Warnery, is the most open, easy, and practicable of all the roads through the Jura. The general should have proved that it was so in Caesar's time, and the best road for waggons early in spring; but, even if he had done that, he would not have confuted the author of the Commentarii. Caesar was told that the Helvetii intended to pass through the territory of the Sequani and the Aedui, and that their purpose was to reach the country of the Santones on the north side of the *Lower Garonne*. The route by *Pontarlier* was quite out of their way. They wanted to cross the Rhone, and pass through the territory of the Allobroges; and if they could not do this, their best road, their only road, was past *Fort l'Ecluse*. Besides, if the Sequani were willing to let the Helvetii pass through their country, they would let them pass along the southern border rather than through the middle of their lands; and, as the Allobroges had some lands north of the Rhone below *Fort l'Ecluse*, which lands the Helvetii plundered, there is a very good reason for the Sequani allowing the Helvetii to take this road, and no other, if there was at that time, and at that season of the year, another waggon-road, which cannot be proved. Caesar left Labienus to take care of his wall, while he went to North Italy for fresh troops. He raised two legions, took three more from their winter quarters about Aquileia, and again crossing the Alps came into the territory of the Vocontii, and thence crossed the Isara (*Isère*) into the country of the Allobroges. From the territory of the Allobroges he crossed the Rhone, into the territory of the Segusiani. The Segusiani, whose chief place was afterwards Lugdunum (*Lyon*), had also a part of the country in the angle between the *Saône* and the Rhone. Caesar crossed the Rhone above the junction of the Rhone and *Saône*.

Labienus had let the Helvetii move through the pass at *Fort l'Ecluse*. It was enough for him to defend his wall. When Caesar was coming up with the Helvetii, some of them were in the country of the Aedui, having crossed the Arar (*Saône*). They got across with boats and rafts, some of which they would find on the river, for it was much used at that time for navigation; but we may suppose that they would also have to make rafts to carry across so many people and so much baggage. Caesar waited till three parts of the Helvetii had got over the river, when he attacked the remaining fourth part, the Tigurini. These were the people who had defeated L. Cassius and killed L. Piso, the grandfather of Caesar's father-in-law. A great part of the Tigurini were cut to pieces, and the rest took to flight and hid themselves in the woods. Plutarch and Appian say that Labienus defeated the Tigurini, which may be true. It is not said where the Helvetii were crossing the *Saône*; and there is no authority for placing the passage at *Mâcon*, as some people will place it, though *Mâcon* cannot be much out of the way. The march of the Helvetii from *Fort l'Ecluse* to *Mâcon* could not be direct; and by the nearest road it would be about 90 or 100 miles. This was the distance that they had travelled with their women, children, carts, and baggage while Caesar went to Italy, returned, and overtook them on the *Saône*. The Helvetii, with such roads as they had, or no roads at all, and the immense number of people and waggons, would not travel at that season more than a few miles a day. The Helvetii had also some cavalry. The roads, such as they were, would be all mud, and full of ruts. Caesar made a bridge over the Arar, and followed those who had crossed the river. He got over in one day, and the Helvetii had taken twenty days to do it, a length of time not at all unreasonable, if we consider that there were about 300,000 of them and many waggons. If we add these twenty days to the time of the march from *Fort l'Ecluse* to the passage of the *Saône*, there will be plenty of time for Caesar's hasty march into Italy and back. Divico, who had commanded the Tigurini (B. C. 107) in the war against Cassius, came with other Helvetii to Caesar after he had crossed the *Saône*, to propose terms of peace; but he and the proconsul could not agree. Though Divico had commanded an army in B. C. 107, that would not prove that he was too old to be a counsellor fifty years after; as some suppose who find fault with Caesar's narrative. Caesar followed the Helvetii for about fifteen days, keeping five or six miles in their rear; easy work for his men, for the Helvetii could not move quickly. The route was up the valley of the *Saône* on the west side, but not close to the river. (*B. G.* i. 10.) Caesar's supplies were brought up the Arar in boats, and it caused

him inconvenience to be at a distance from them: but he would not leave the rear of the Helvetii. When Caesar was within 18 M. P. of Bibracte (*Autun*), he left the rear of the Helvetii, and moved towards the town to get supplies, for the Aedui had not kept their promise to send him corn. The Helvetii were of course about the same distance from the place, and probably nearly due south of *Autun*; for this position would be on their march towards the *Loire* through *Bourbon L'Anci*. They were thus on the road to the Santones.

The Helvetii, perceiving Caesar's movement, faced about and were upon his rear. This brought on a general battle. The Helvetii fought desperately: though the battle lasted from about mid-day to night-fall, no one saw an Helvetian turn his back on the Romans. The fight was continued till late in the night, at the place where the Helvetii had their baggage, for they had put their carts (carri) as a fence all round. The Romans at last got possession of the baggage and the camp, as Caesar calls it; and we know what took place, though he does not tell us. Women and children were massacred without mercy. A daughter and son of Orgetorix were taken prisoners. About 130,000 men (hominum, a term which may include women), who survived the battle, moved from the field, and without halting in the night reached the country of the Lingones. Caesar was employed for three days in burying his dead and looking after his wounded men, and could not follow immediately. But he sent a threatening message to the Lingones, if they should venture to assist his enemies; and after the third day he marched in pursuit of them. On his road he was met by a deputation of the Helvetii, who prayed for mercy. The proconsul ordered them to tell their people to stay where they were, and wait for him. On his arrival he demanded their arms, hostages, and the slaves who had run away to join them. During the night 6000 men of the Pagus Verbigenus ran away towards the Rhine and the borders of the Germans. Caesar sent an order to the people through whose territory they were moving to bring them back; and they brought them back — 6000 men with arms in their hands, but dispirited, and probably perishing of hunger. Caesar treated these men as enemies: they were all massacred. Dion Cassius (xxxviii. 33) speaks of the 6000 being destroyed, but his narrative does not quite agree with Caesar's. The rest of the Helvetii were sent home, to the places they came from, and told to rebuild their towns and villages. They had lost all their corn, and the Allobroges were required to supply them. Caesar would not allow the Helvetic territory to be unoccupied, for fear of the Germans from the other side of the Rhine coming over and seizing it, and so becoming neighbours of the Provincia and the Allobroges. But the Germans now occupy the largest part of Switzerland, and it is very probable that they did come over and occupy many of the parts which had been depopulated. It does not appear that Caesar ever went into the country to see what was going on. [BOII.]

Tablets were found in the Helvetic camp, written in Greek characters, and were brought to Caesar; in which tablets were registered the whole number of the Helvetii able to bear arms who had left their homes, and there was a separate register of children, old men, and women. The numbers were as follows: Tulingi, 36,000; Latobrigi, 14,000; Rauraci, 23,000; Boii, 32,000; Helvetii, 263,000: in all 368,000. The fighters were 92,000, about one fourth of the whole number. A census was taken of all who returned, and the number was found to be 110,000. If all the numbers are right in Caesar, we find some inconsistency here; for 130,000 escaped into the country of the Lingones, of whom 6000 were massacred: the remainder would be 124,000. Out of this number, however, many might die before they reached their home, and some might run away. We can hardly suppose that all the children and women perished in the camp near Bibracte, though it is possible they might get hard treatment from the Aedui, whose lands the Helvetii had pillaged. However, the result was that less than a third of the whole number returned home, and the number of women that perished must have been so large as to leave very few for the men who survived this calamity.

Most of the Gallic states sent to congratulate Caesar on his victory, which they affected to consider as much for their own interest as that of the Romans; for the Helvetii, they said, or so Caesar makes them say, though prosperous at home, had left their country to conquer all Gallia, to choose for their residence such part as they should like best, and to make all the states tributary. Great revolutions had taken place in Gallia before; but a whole nation, who possessed towns and villages, quitting their home to look out for a new one, must have been moved by some strong motives. The proximity to the Germans, who were troublesome neighbours, and the want or the wish for more room, are reasons for the migration which we can deduce from Caesar. The Helvetii were a warlike people, and their men wanted a wider field than a country which was shut in by natural boundaries. The restlessness of the wealthy Helvetii, and exaggerated notions among the people of a better country in the south and west of Gallia, were probably the strongest motive for the emigration. A few centuries earlier they might have taken the road to Italy, and have got there: but that country had been closed against adventurers by the Romans; and if the Helvetii did emigrate, there is no country that we can name to which they were more likely to go than that which they set out for.

Caesar does not mention the name of a single town in the Helvetian country. A few names of towns appear later, and the names seem to be Gallic: Noeodunum or Colonia Equestris [COLONIA EQUESTRIS]; Salodurum; Eburodunum; Aventicum; and Minnodunum. Augusta Rauracorum (*Augst*) was founded in the time of Augustus; the name is only Roman, and it is not within the limits of Caesar's Helvetii. Basilia (*Basle*) is also a late foundation. Vitodurum, in the east part of Switzerland, may be a Gallic name also; but Switzerland does not retain a great many names of Gallic original. It seems that the boundary between the country of the Helvetii on the east, and Rhaetia under the later empire, was not the Rhine above the *lake of Constanz*, but the boundary was west of the lake. [FINES, No. 15.] The name Helvetia belongs to a late period, though Caesar uses the expression "Helvetia Civitas."

The Romans made several roads in the Helvetian territory. That which was made over the Jura [GALLIA, p. 966] is probably the road from Orba (*Orbe*) to Ariolica [ARIOLICA]. There was a road from Orba, through Lacus Lausonius (*Lausanne*) and Equestris, to Geneva. There was a road from Vibiscum (*Vevay*), through Bromagus [BROMAGUS]

and Minnodunum, to Aventicum (*Avenches*); and thence through Salodurum to Augusta Rauracorum. There was also a road from Augusta Rauracorum eastward through Vindonissa (*Windisch*) to Ad Fines (*Pfyn*), Arbor Felix, and Brigantia (*Bregenz*) on the *lake of Constanz*.

A work by J. F. Roesch, *Commentar. über die Commentarien, &c.*, Halle, 1783, contains some good remarks on General Warnery's *Remarques sur César*. Roesch was an officer and lecturer on military science. There is a map in his book of the country between Geneva and *Fort l'Ecluse*. [G. L.]

HELVETUM. [HELCEBUS.]

HE'LVII, a people of the Provincia or Gallia Narbonensis, who bordered on the Arverni, but were within the limits of the Provincia. The Cevenna formed the boundary between the Helvii and the Arverni. (Caes. *B. G.* vii. 7, 8.) The Helvii were east of the *Cévennes*, and occupied the old French division of the *Vivarais*. When, however, Caesar speaks of the Helvii as bordering on the Arverni, he means the Arverni and their dependencies; for the Gabali, and Vellauni or Vellavi, were between the Helvii and the Arverni [GABALI], and they were dependent on the Arverni. (*B. G.* vii. 75.) The name is written Ἕλουοι in the texts of Strabo, who makes their territory commence on the east, at the bank of the Rhone, which is no doubt correct. He places them in Aquitania, which is generally supposed to be a mistake; but Augustus, who enlarged the Provincia of Aquitania, may have attached the Helvii to it. In Pliny (iii. 4) they appear in Narbonensis, and their chief town is Alba. [ALBA HELVORUM.] It is generally supposed that Ptolemy's Elycoci (Ἐλύκωκοι, ii. 10. § 18), whose chief town was Alba Augusta, are the Helvii. But Ptolemy's Elycoci are east of the Rhone, and Alba Augusta is a different name from Alba Helvorum. Pliny (xiv. 3) mentions a vine that was discovered, seven years before he was writing, at Alba Helvia in the Narbonensis, which vine flowered and lost its flower in a single day, and for that reason was the safest to plant. It was named Narbonica, and when he wrote was planted all over the Provincia. [G. L.]

HELVILLUM, a town of Umbria, on the Via Flaminia, known only from the Itineraries, which place it 27 M. P. from Forum Flaminii, or 15 M. P. from Nuceria. These distances coincide with the position of *Sigillo*, a village that still forms one of the stages on the modern road which follows the line of the Flaminian Way. (*Itin. Ant.* p. 125; *Tab. Peut.*) At the same time, the name of *Sigillo* suggests a relation with the Suillum of Pliny, who enumerates the Suillates among the towns of Umbria (iii. 14. s. 19); and it is not improbable that the Helvillum of the Itineraries is either identical with the Suillum of Pliny, or was situated in its immediate neighbourhood. [E. H. B.]

HEMEROSCO'PIUM. [DIANIUM.]

HE'NETI. [VENETI.]

HENIOCHI (Ἡνίοχοι, Dionys. 687; Arrian, *Peripl.* p. 11; Anon. *Peripl.* p. 15), a Colchian tribe, who appear in geography as early as Hellanicus (p. 91, ed. Sturz). Strabo (xi. p. 496), who derives their name from the legendary charioteers of the Dioscuri, describes them as a sea-faring, piratical race, using small boats, called καμάραι by the Greeks, and containing from twenty-five to thirty men.

From the account of the escape of Mithridates Eupator, from Pontus to the Bosporus, they appear occupying the country between the W. edge of Caucasus and the Euxine, with an area of 1000 stadia. (Strab. *l. c.*; comp. Plin. vi. 4; Scyl. p. 31; Ptol. v. 10.) [E. B. J.]

HENNA. [ENNA.]

HEPHAE'STIA. [LEMNOS.]

HEPHAE'STIA, the ancient name of the small island now called *Comino*, between Malta and Gozo. [MELITA; GAULOS.] (See Wesseling, *Itiner.* p. 518.) The island is about two miles long from NE. to SW., with a good channel on each side. It has always been, with Gozo, a dependency of Malta. To the SW. is a small rocky islet called *Cominotto*, of which the ancient name is unknown. [J. S. H.]

HEPHAE'STIADAE. [ATTICA, p. 326, b.]

HEPHAE'STIAE INSULAE. [AEOLIAE INSULAE.]

HEPHAE'STION (Ἡφαίστιον), a district near Phaselis, in the south of Lycia; it derived its name from the fact that fire constantly was issuing from the loose soil. (Ctesias, *ap. Phot. Cod.* 73, p. 146; Senec. *Ep.* 79.) According to Pliny (ii. 110) these fires appear to have arisen from springs of burning naptha. (Comp. Plin. v. 28; Solin. 39.) [L. S.]

HEPTACOME'TAE (Ἑπτακομῆται), a barbarous tribe of the Mosynoeci on the coast of Pontus, inhabiting Mount Scoedises, and living on chesnuts and game. From their houses, which are said to have resembled towers, they attacked and robbed travellers. (Strab. xii. p. 549; Steph. B.; *s. v.*; comp. MOSYNOECI.) [L. S.]

HEPTA'NOMIS (ἡ Ἑπτανομίς, Ptol. iv. 5. § 55; more properly Ἑπτὰ Νομοί or Ἑπταπολίς, Dionys. *Perieg.* 251; sometimes ἡ μεταξὺ [γῆ]), the modern *Mesr-Wostani* of the Arabian geographers, or Middle Egypt, may be described generally as the district which separates the Thebaïd from the Delta. Inasmuch, however, as the appellation of the Seven Nomes is political rather than territorial, it is not easy to define the actual boundaries of this region. The northern portion belonged to the kingdom of Lower Aegypt, of which it contained the capital, Memphis; the southern appertained to the elder kingdom of Thebes, so long at least as there continued to be two monarchies in the Nile valley. It is not possible to determine at what period, if indeed at any, the Heptanomis was regarded as an integral third of Aegypt. About the number of its nomes there can be no question; but which, at any given era, were the seven principal nomes, it is less easy to decide. They probably varied with the vicissitudes of local prosperity—war, commerce, or migration, from time to time, causing a superior nome to decline, and, on the contrary, raising an inferior nome to eminence. According to Ptolemy and Agatharchides (*de Rubr. Mar. ap. Phot. Biblioth.* p. 1339. R.), both of whom wrote long after the original divisions had been modified, the Seven Nomes were the following: (1.) Memphites. (2.) Heracleopolites. (3.) Crocodilopolites or Arsinoites. (4.) Aphroditopolites. (5.) Oxyrhynchites. (6.) Cynopolites. (7.) Hermopolites. The Greater and Lesser Oases were always reckoned portions of the Heptanomis, and hence it must apparently have sent nine, and not seven, nomarchs to the general assembly in the Labyrinth. The capitals of the Nomes, whose names are sufficiently indicated by the respective appellations of the divisions themselves—e. g. Hermopolis of the Nomos Hermopolites, &c.—were also the chief towns of the Middle Land. This district comprised the three greatest works of Egyptian art and enterprise, e. g., the Pyramids, the Labyrinth,

and the artificial district formed by the canal *Bahr-Jusuf*, the Nomos Arsinoites or the *Fyoum*. These, as well as the chief cities of the Heptanomis, are described under their separate designations. [APHRODITOPOLIS, CYNOPOLIS, &c.].

The Heptanomis extended from lat. N. 27° 4′ to 30° N.: its boundary to S. was the castle of Hermopolis (Ἑρμοπολιτάνη φυλακή); to N. the apex of the Delta and the town of Cercasorum; W. the irregular line of the Libyan Desert; and E. the hills which confine the Nile, or the sinuous outline, the recesses and projections of the Arabian mountains. Thus, near Hermopolis at the S. extremity of this region, the eastern hills approach very near the river, while those on the western or left bank recede to a considerable distance from it. Again, in lat. 29°, the Libyan hills retire from the vicinity of the Nile, bend toward NW., and sharply return to it by a curve to E., embracing the province of Arsinoë (*El-Fyoum*). Between the hills on which the Pyramids stand and the corresponding elevation of *Gebel-el-Mokattam* on the eastern bank of the river, the Heptanomis expands, until near Cercasorum it acquires almost the breadth of the subjacent Delta.

The Heptanomis is remarkable for its quarries of stone and its rock-grottoes. Besides the Alabastrites, already described, we find to N. of Antinoë the grottoes of Benihassan,—the Speos Artemidos of the Greeks. Nine miles lower down are the grottoes of *Koum-el-Ahmar*, and in the Arabian desert, on the east, quarries of the beautiful veined and white alabaster, which the Egyptians employed in their sarcophagi, and in the more delicate portions of their architecture. From the quarries of Tourah and Massarah, in the hills of *Gebel-el-Mokattam*, east of Memphis, they obtained the limestone used in casing the pyramids. The roads from these quarries may still be traced across the intervening plain.

Under the Ptolemies the Heptanomis was governed by an ἐπιστράτηγος, and by an officer of corresponding designation,—procurator,—under the Roman Caesars. We find him described in inscriptions (Orelli, *Inscr. Lat.* n. 516) as "procurator Augusti epistrategiae Septem Nomorum." Under the later Caesars in the 3rd century A. D. the five northern Nomes, Memphites, Heracleopolites, Arsinoites, Aphroditopolites, and Oxyrhyncites, together with the Nomos Leptopolites, constituted the province of Arcadia, which subsequently became a metropolitan episcopal see. The natural productions of the Heptanomis resemble those of Upper Egypt generally, and present a more tropical Fauna and Flora than those of the Delta. Its population also was less modified by Greek or Nubian admixture than that of either Lower or Upper Egypt; although, after the 4th century A. D., the Heptanomis was overrun by Arabian marauders, who considerably affected the native races. [W. B. D.]

HERACLEIA (Ἡράκλεια). I. *In Europe.*

HERACLEIA, a town or fortress of Athamania of uncertain site. (Liv. xxxviii. 2.)

HERACLEIA, an ancient place of Pisatis in Elis, but a village in the time of Pausanias, was distant 40 or 50 stadia from Olympia. It contained medicinal waters issuing from a fountain sacred to the Ionic nymphs, and flowing into the neighbouring stream called Cytherus or Cytherius, which is the brook near the modern village of *Bruma*. (Strab. viii. p. 356; Paus. vi. 22. § 7; Boblaye, *Recherches, &c.* p. 129; Curtius, *Peloponnesos*, vol. ii. p. 72.)

HERACLEIA LYNCESTIS (Ἡράκλεια, Polyb. xxviii. 11, 15, xxxiv. 12; Strab. vii. p. 319; Ptol. iii. 13. § 33; Liv. xxvi. 25, xxxi. 39; *Itin. Anton.*; *Peut. Tab.*; Ἡράκλεια Λάκκου, Hierocl.; Const. Porph. *de Them.* ii. 2), the chief town of the province of Upper Macedonia, called Lyncestis, at a distance of 46 M. P. from Lychnidus and 64 M. P. from Edessa. According to the proportional distances, Heracleia stood not far from the modern town of *Filúrina*, at about 10 geog. miles direct to the S. of *Bitolia*, nearly in the centre of the Egnatian Way.

Calvinus narrowly escaped being intercepted by the Pompeians on his rear, after having fallen back upon Heracleia, which Caesar (*B. C.* iii. 79) rightly places at the foot of the Candavian mountains, though his transcribers have interpolated the passage, and confounded it with the Heracleia Sintica of Thracian Macedonia.

The writer of a geographical fragment (ap. Hudson, *Geog. Min.* vol. iv. p. 43; comp. Joann. Cinnam. p. 127, ed. Bonn) has identified this city with Pelagonia [PELAGONIA], but incorrectly. (Leake, *Northern Greece*, vol. iii. pp. 281, 311, 318; Tafel, *de Viae Egnat. Part. Occid.* p. 39.) [E. B. J.]

HERACLEIA SI'NTICA (Ἡράκλεια Σιντική Ptol. iii. 13. § 30; Steph. B.; Const. Porph. *de Them.* ii. 2; Ἡράκλεια Στρυμόνος, Hierocles; Heraclea ex Sintiis, Liv. xiii. 51), the principal town of Sintice, a district on the right bank of the Strymon, in Thracian Macedonia. It was distant from Philippi, by the Roman road which passed round the N. side of the lake, 55 M. P., and by that which passed on the S. side, 52 M. P. (*Peut. Tab.*)

Demetrius, son of Philip V. king of Macedonia, was murdered and put to death here. (Liv. xl. 24.) It stood on the site of the modern *Zervókhori*, a small village where the peasants find in ploughing the ground great numbers of ancient coins. (Leake, *Northern Greece*, vol. iii. p. 226.) The coins of this place are very numerous. (Sestini, *Mon. Vet.* p. 37; Eckhel, vol. ii. p. 71.) [E. B. J.]

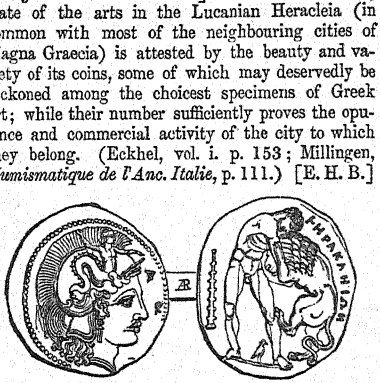
COIN OF HERACLEIA IN MACEDONIA.

HERACLEIA TRACHINIA. [TRACHIS.]

HERACLEIA (Ἡράκλεια: *Eth.* Ἡρακλήϊος, Heracliensis or Heracleensis: *Policoro*), a city of Magna Graecia, situated in Lucania on the gulf of Tarentum, but a short distance from the sea, and between the rivers Aciris and Siris. It was a Greek colony, but founded at a period considerably later than most of the other Greek cities in this part of Italy. The territory in which it was established had previously belonged to the Ionic colony of Siris, and after the fall of that city [SIRIS] seems to have become the subject of contention between the neighbouring states. The Athenians, we know, had a claim upon the territory of Siris (Herod. viii. 62), and it was probably in virtue of this that their colonists the Thurians, almost immediately after their establishment in Italy, advanced similar pretensions.

These were, however, resisted by the Tarentines, and war ensued between the two states, which was at length terminated by an arrangement that they should found a new colony in the disputed district, which, though in fact a joint settlement, should be designated as a colony of Tarentum. The few remaining inhabitants of Siris were added to the new colonists, and it would appear that the settlement was first established on the ancient site of Siris itself, but was subsequently transferred from thence, and a new city founded about 24 stadia from the former, and nearer the river Aciris, to which the name of Heracleia was given. Siris did not cease to exist, but lapsed into the subordinate condition of the port or emporium of Heracleia. (Strab. vi. p. 264.) The foundation of the new city is placed by Diodorus in B. C. 432, fourteen years after the settlement of Thurii; a statement which appears to agree well with the above narrative, cited by Strabo from Antiochus. (Antiochus, *ap. Strab. l. c.*; Diod. xii. 36; Liv. viii. 24.) Diodorus, as well as Livy, calls it simply a colony of Tarentum: Antiochus is the only writer who mentions the share taken by the Thurians in its original foundation. Pliny erroneously regards Heracleia as identical with Siris, to which it had succeeded; and it was perhaps a similar misconception that led Livy, by a strange anachronism, to include Heracleia among the cities of Magna Graecia where Pythagoras established his institutions. (Liv. i. 18; Plin. iii. 11. s. 15.) The new colony appears to have risen rapidly to power and prosperity, protected by the fostering care of the Tarentines, who were at one time engaged in war with the Messapians for its defence. (Strab. vi. p. 281.) It was probably owing to the predominant influence of Tarentum also that Heracleia was selected as the place of meeting of the general assembly (*πανήγυρις*) of the Italiot Greeks; a meeting apparently originally of a religious character, but of course easily applicable to political objects, and which for that reason Alexander, king of Epirus, sought to transfer to the Thurians for the purpose of weakening the influence of Tarentum. (Strab. vi. p. 280.)

But beyond the general fact that it enjoyed great wealth and prosperity,—advantages which it doubtless owed to the noted fertility of its territory,—we have scarcely any information concerning the history of Heracleia until we reach a period when it was already beginning to decline. We cannot doubt that it took part with the Tarentines in their wars against the Messapians and Lucanians, and it appears to have fallen gradually into a state of almost dependence upon that city, though without ever ceasing to be, in name at least, an independent state. Hence, when Alexander, king of Epirus, who had been invited to Italy by the Tarentines, subsequently became hostile to that people [TARENTUM], he avenged himself by taking Heracleia, and, as already mentioned, transferred to the Thurians the general assemblies that had previously been held there. (Liv. viii. 24; Strab. vi. p. 280.) During the war of Pyrrhus with the Romans, Heracleia was the scene of the first conflict between the two powers, the consul Laevinus being totally defeated by the Epirot king in a battle fought between the city of Heracleia and the river Siris, B. C. 280. (Plut. *Pyrrh.* 16, 17; Flor. i. 18. § 7*; Zonar. viii. 4; Oros. iv. 1.)



Heracleia was certainly at this time in alliance with the Tarentines and Lucanians against Rome; and it was doubtless with the view of detaching it from this alliance that the Romans were induced shortly afterwards (B. C. 278) to grant to the Heracleians a treaty of alliance on such favourable terms that it is called by Cicero "prope singulare foedus." (Cic. *pro Balb.* 22, *pro Arch.* 4.) Heracleia preserved this privileged condition throughout the period of the Roman republic; and hence, even when in B. C. 89 the Lex Plautia Papiria conferred upon its inhabitants, in common with the other cities of Italy, the rights of Roman citizens, they hesitated long whether they would accept the proffered boon. (Cic. *pro Balb.* 8.) We have no account of the part taken by Heracleia in the Social War; but from an incidental notice in Cicero, that all the public records of the city had been destroyed by fire at that period, it would seem to have suffered severely. (Cic. *pro Arch.* 4.) Cicero nevertheless speaks of it, in his defence of Archias (who had been adopted as a citizen of Heracleia), as still a flourishing and important town, and it appears to have been one of the few Greek cities in the S. of Italy that still preserved their consideration under the Roman dominion. (Strab. vi. p. 264; Cic. *l. c.* 4, 5; Mel. ii. 4. § 8; Plin. iii. 11. s. 15.) Its name is unaccountably omitted by Ptolemy; but its existence at a much later period is attested by the Itineraries. (*Itin. Ant.* p. 113; *Tab. Peut.*) The time and circumstances of its final extinction are wholly unknown; but the site is now desolate, and the whole neighbouring district, once celebrated as one of the most fertile in Italy, is now almost wholly uninhabited.

The position of the ancient city may nevertheless be clearly identified; and though no ruins worthy of the name are still extant, large heaps of rubbish and foundations of ancient buildings mark the site of Heracleia near a farm called *Policoro*, about three miles from the sea, and a short distance from the right bank of the Aciris or *Agri*. Numerous coins, bronzes, and other relics of antiquity have been discovered on the spot; and within a short distance of the site were found the bronze tables commonly known as the Tabulae Heracleenses, one of the most interesting monuments of antiquity still remaining. They contain a long Latin inscription relating to the municipal regulations of Heracleia, but which is in fact only a copy of a more general law, the Lex Julia Municipalis, issued in B. C. 45 for the regulation of the municipal institutions of the towns throughout Italy. This curious and important document, which is one of our chief authorities for the municipal law of ancient Italy, is engraved on two tables of bronze, at the back of which is found a long Greek inscription of much earlier date, but of very inferior interest. The Latin one has been repeatedly published (Murat. *Inscr.* vol. ii. p. 582; Haubold, *Mon. Legal.* pp. 98—133, &c.), and copiously illustrated with legal commentaries by Dirksen (8vo. Berlin, 1817—1820) and Savigny (in his *Vermischte Schriften*, vol. iii.). Both inscriptions were published, with very elaborate commentaries and disquisitions on all

* It is a striking instance of the carelessness of the Roman epitomisers, and their consequent worthlessness as geographical authorities, that Florus places this battle "apud Heracleam et *Campaniae flumen Lirim*," mistaking the river Siris for the Liris; and the same blunder occurs in Orosius, who says, "apud Heracleam *Campaniae* urbem, fluviumque Lirim"; for which last the editors substitute "Sirim," though the mistake is evidently that of the author, and not of the copyist.

points connected with Heracleia, by Mazocchi (2 vols. fol. Naples, 1754, 1755).

Heracleia is generally regarded as the native country of the celebrated painter Zeuxis, though there is much doubt to which of the numerous cities of the name that distinguished artist really owed his birth. [*Biogr. Dict.* art. ZEUXIS.] But the flourishing state of the arts in the Lucanian Heracleia (in common with most of the neighbouring cities of Magna Graecia) is attested by the beauty and variety of its coins, some of which may deservedly be reckoned among the choicest specimens of Greek art; while their number sufficiently proves the opulence and commercial activity of the city to which they belong. (Eckhel, vol. i. p. 153; Millingen, *Numismatique de l'Anc. Italie*, p. 111.) [E. H. B.]

COIN OF HERACLEIA IN LUCANIA.

HERACLEIA, surnamed MINOA (Ἡράκλεια Μίνῳα: *Eth.* Ἡρακλεώτης, Heracliensis), in Sicily, an ancient Greek city, situated on the south coast of the island, at the mouth of the river Halycus, between Agrigentum and Selinus. Its two names were connected with two separate mythological legends in regard to its origin. The first of these related that Hercules, having vanquished the local hero Eryx in a wrestling match, obtained thereby the right to the whole western portion of Sicily, which he expressly reserved for his descendants. (Diod. iv. 23; Herod. v. 43; Paus. iii. 16. § 5.) He did not, however, found a town or settlement; but, somewhat later, Minos, king of Crete, having come to Sicily in pursuit of Daedalus, landed at the mouth of the river Halycus, and founded there a city, to which he gave the name of Minoa; or, according to another version of the story, the city was first established by his followers, after the death of Minos himself. Heraclides Ponticus adds, that there was previously a native city on the spot, the name of which was Macara. (Diod. iv. 79, xvi. 9; Heracl. Pont. § 29.) The two legends are so distinct that no intimation is given by Diodorus of their relating to the same spot, and we only learn their connection from the combination in later times of the two names. The first notice of the city which we find in historical times represents it as a small town and a colony of Selinus, bearing the name of Minoa (Herod. v. 46); but we have no account of its settlement. It was in this state when Dorieus the Spartan (brother of Cleomenes I.) came to Sicily, with a large body of followers, with the express view of reclaiming the territory which had belonged to his ancestor Hercules. But having engaged in hostilities with the Carthaginians and Segestans, he was defeated and slain in a battle in which almost all his leading companions also perished. Euryleon, the only one of the chiefs who escaped, made himself master of Minoa, which now, in all probability, obtained for the first time the name of Heracleia. (Herod. v. 42—46.) This is not, indeed, expressly stated by Herodotus, who gives the preceding narrative, but is evidently implied in his statement at the beginning of it, that Dorieus set out for the purpose of founding Heracleia, combined with the fact that Diodorus represents him as having been its actual founder. (Diod. iv. 23.) Hence there seems no reason to suppose (as has been suggested) that Heracleia and Minoa were originally distinct cities, and that the name of the one was subsequently transferred to the other. From the period of this new settlement (B. C. 510) it seems to have commonly borne the name of Heracleia, though coupled with that of Minoa for the sake of distinction. (Ἡρακλείαν τὴν Μινῴαν, Pol. i. 25; "Heraclea, quam vocant Minoa," Liv. xxiv. 35.)

Diodorus tells us that the newly founded city of Heracleia rose rapidly to prosperity, but was destroyed by the Carthaginians, through jealousy of its increasing power. (Id. iv. 23.) The period at which this took place is uncertain. It was probably related by Diodorus in his 10th book, which is now lost: at least he makes no mention of any such event on occasion of the great expedition of Hamilcar, in B. C. 480, to which epoch we might otherwise have referred it; while, from the absence of all notice of Heracleia during the subsequent century, and the wars of Dionysius with the Carthaginians, it seems certain that it did not then exist, or must have been in a very reduced condition. Indeed, the next notice we find of it (under the name of Minoa), in B. C. 357, when Dion landed there, represents it as a small town in the Agrigentine territory, but at that time subject to Carthage. (Diod. xvi. 9; Plut. *Dion.* 25.) Hence it is probable that the treaty between Dionysius and the Carthaginians which had fixed the Halycus as the boundary of the latter, had left Heracleia, though on its left bank, still in their hands: and, in accordance with this, we find it stipulated by the similar treaty concluded with them by Agathocles (B. C. 314), that *Heracleia*, Selinus, and Himera should continue subject to Carthage, *as they had been before*. (Diod. xix. 71.) From this time Heracleia reappears in history, and assumes the position of an important city; though we have no explanation of the circumstances that had raised it from its previous insignificance. Thus we find it, soon after, joining in the movement originated by Xenodicus of Agrigentum, B. C. 307, and declaring itself free both from the Carthaginians and Agathocles; though it was soon recovered by the latter, on his return from Africa. (Id. xx. 56.) At the time of the expedition of Pyrrhus it was once more in the hands of the Carthaginians, and was the first city taken from them by that monarch as he advanced westward from Agrigentum. (Diod xxii. 10. Exc. H. p. 497.) In like manner, in the First Punic War, it was occupied by the Carthaginian general Hanno, when advancing to the relief of Agrigentum, at that time besieged by the Roman armies, B. C. 260. (Id. xxiii. 8. p. 502; Pol. i. 18.) Again, in B. C. 256, it was at Heracleia that the Carthaginian fleet of 350 ships was posted for the purpose of preventing the passage of the Roman fleet to Africa, and where it sustained a great defeat from the consuls Regulus and Manlius. (Pol. i. 25—28, 30; Zonar. viii. 12.) It appears, indeed, at this time to have been one of the principal naval stations of the Carthaginians in Sicily; and hence in B. C. 249 we again find their admiral, Carthalo, taking his post there to watch for the Roman fleet which was approaching to the relief of Lilybaeum. (Id. i. 53.) At the close of the war Heracleia, of course, passed, with the rest of Sicily, under the Roman dominion; but in the Second Punic

War it again fell into the hands of the Carthaginians, and was one of the last places that still held out against Marcellus, even after the fall of Syracuse. (Liv. xxiv. 35, xxv. 27, 40, 41.)

We hear but little of it under the Roman dominion; but it appears to have suffered severely in the Servile War (B. C. 134—132), and in consequence received a body of fresh colonists, who were established there by the praetor P. Rupilius; and at the same time the relations of the old and new citizens were regulated by a municipal law, which still subsisted in the time of Cicero. (Cic. *Verr.* ii. 50.) In the days of the great orator, Heracleia appears to have been still a flourishing place (Ib. v. 33); but it must soon after have fallen into decay, in common with most of the towns on the southern coast of Sicily. (Strab. vi. p. 272.) But though not noticed by Strabo among the few places still subsisting on this coast, it is one of the *three* mentioned by Mela; and its continued existence is attested by Pliny and Ptolemy. The latter author is the last who mentions the name of Heracleia: it appears to have disappeared before the age of the Itineraries. (Mel. ii. 7. § 16; Plin. iii. 8. s. 14; Ptol. iii. 4. § 6.)

The site of Heracleia is now wholly deserted, and scarcely any ruins remain to mark the spot; but the position of the ancient city may still be clearly traced. It was situated a few hundred yards to the south of the river *Platani* (the ancient Halycus), extending nearly from thence to the promontory of *Capo Bianco*. In Fazello's time the foundations of the walls could be distinctly traced, and, though no ruins remained standing, the whole site abounded with remains of pottery and brickwork. An aqueduct was then also still visible between the city and the mouth of the river; but its remains have since disappeared. The site does not appear to have been examined with care by any modern traveller. (Fazell. *de Reb. Sic.* vi. 2; Smyth's *Sicily*, p. 216; Biscari, *Viaggio in Sicilia*, p. 188.)

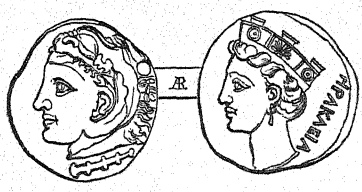
The *Capo Bianco*, a conspicuous headland in the immediate neighbourhood of Heracleia, is evidently the one called by Strabo, in his description of the coasts of Sicily, the Heracleian promontory (vi. p. 266), which he correctly reckons 20 miles distant from the port of Agrigentum. [E. H. B.]

HERACLEIA PERINTHUS. [PERINTHUS.]

HERACLEIA, in Gallia Narbonensis. Pliny (iii. 5) has preserved a tradition of a town named Heraclea, at the mouths of the Rhone; but he knew no more about it, and we can add nothing to what he knew. Ukert (*Gallien*, p. 418) has a few words on this place.

Stephanus (*s. v.* Ἡράκλεια) in his list of towns named Heracleia mentions one in Celtice. The Maritime Itin., proceeding west from Forum Julii (*Fréjus*), places "Sambracitanus Plagia" 25 M. P. from Forum Julii, and Heraclea Caccabaria 16 M.P. from the Sinus Sambracitanus. D'Anville follows Honoré Bouche in placing Heracleia at *S. Tropez;* but in order to do this he suppresses the number 25 between Forum Julii and Sinus Sambracitanus, and assumes that 16 is the whole distance between Forum Julii and Heracleia. This is a very bad way of proceeding; for, unless he can prove some error in the MSS., he ought to assume that the distances along the coast are most correctly measured in the Itinerary, as they doubtless were. Walckenaer fixes Heracleia at the *Pointe Cavalaire*. *S. Tropez* is within the Sinus Sambracitanus. A complete map of this coast is necessary for the purposes of comparative geography. This Heracleia is one of the Greek towns on the south coast of France. [G. L.]

HERACLEIA (Ἡράκλεια). II. *In Asia.*



HERACLEIA (Ἡράκλεια). 1. A town of Caria of uncertain site. (Strab. xiv. p. 658; Steph. B. *s. v.*) Ptolemy (v. 2. § 19) describes it by the addition πρὸς Ἀλάβανδῳ. (Comp. Plin. v. 29; Suid. and Eudoc. *s. v.*, where the town has the surname Ἀλάβακη.) This town should not be confounded with the following.

2. A town on the confines between Caria and Ionia, which is generally described as πρὸς Λάτμῳ, or ἡ ὑπὸ Λάτμῳ, from its situation at the western foot of mount Latmus, on the Sinus Latmicus. It was a small place in the south-east of Miletus, and south-west of Amazon, and was sometimes designated simply by the name Latmus. In its neighbourhood a cave was shown with the tomb of Endymion. (Scylax, p. 39; Strab. xiv. p. 635; Ptol. v. 2. § 9; Plin. v. 31; Polyaen. vii. 23; Paus. v. 1. § 4; Schol. *ad Apollon. Rhod.* iv. 57.) Ruins of this town still exist at the foot of mount Latmus on the borders of lake Baffi, which is probably a portion of the ancient Sinus Latmicus, formed by the deposits of the river Maeander. (Comp. Leake, *Asia Minor*, p. 239; Fellowes, *Exc. in As. Min.* p. 263, who, confounding the lake of Baffi with that of Myus, considers the ruins of Heracleia to be those of Myus.)

3. A town on the coast of Aeolis, opposite to Hecatonnesi. This town and the neighbouring Coryphantis are called villages of the Mytilenaeans. (Strab. xiii. p. 607; Plin. v. 32, who speaks only of a *Heracleotes tractus;* Steph. B. *s. v.*)

4. Surnamed *Pontica*, on the coast of Phrygia, in the country of the Mariandyni, was a colony of the Megarians, in conjunction with Tanagraeans from Boeotia. (Paus. v. 26. § 6; Justin. xvi. 3.) Strabo (xii. p. 542) erroneously calls the town a colony of Miletus. It was situated a few miles to the north of the river Lycus, and had two excellent harbours, the smaller of which was made artificially. (Xen. *Anab.* vi. 2. § 1; Diod. xiv. 31; Arrian, *Peripl.* p. 15; Memnon, p. 52.) Owing to its excellent situation, the town soon rose to a high degree of prosperity, and not only reduced the Mariandyni to subjection, but acquired the supremacy of several other Greek towns in its neighbourhood; so that, at the time of its highest prosperity, it ruled over the whole territory extending from the Sangarius in the west to the Parthenius in the east. A protracted struggle between the aristocracy and the demos (Aristot. *Polit.* v. 5) at last obliged the inhabitants to submit to a tyrannis. In the reign of Dionysius, one of these tyrants, who was married to a relation of Darius Codomannus, Heracleia reached the zenith of its prosperity. But this state of things did not last long; for the rising power of the Bithynian princes, who tried to reduce that prosperous maritime city, and the arrival of the Galatians in Asia, who were instigated by the kings of Bithynia against Heracleia, deprived the town gradually of a considerable part of its territory. Still, however, it continued to maintain a very prominent place among the Greek colonies in those parts, until, in the war of the Romans against Mithridates, it received its death blow; for Aurelius Cotta plundered and partly destroyed the town (Memnon, c. 54). It was afterwards indeed restored, but remained a town of no importance ("oppidum," Plin. vi. 1; comp. Strab. xii. p. 543; Scylax, p. 34; Ptol. v. 1. § 7; Marcian. pp. 70, 73; Schol. *ad Apollon. Rhod.* ii. 748, *ad Nicand. Alex.* 13; Eustath. *ad Dionys. Per.* 791).

Heracleia, which was the birthplace of Heraclides Ponticus and his disciple Dionysius Metathemenus, still exists under the name of *Herakie* or *Erekli*. For the history of this important colony see Justin, xvi. 3—5; Polsberw, *de Rebus Heracleae*, Brandenburg, 1833, 8vo. (Niebuhr, *Lect. on Anc. Hist.* iii. pp. 113, fol.)

COIN OF HERACLEIA IN BITHYNIA.

5. A town of uncertain site in Lydia, perhaps not far from Magnesia at the foot of mount Sipylus. From this town the magnet derived its name of *Heracleus lapis*. (Steph. B. *s. v.*; Hesych. *s. v.*; Zenob. *Prov.* ii. 22, p. 90, ed. Leutsch.) [L. S.]

HERACLEIA (Ἡράκλεια, Strab. xvi. p. 751; Plin. v. 20), a small town on the coast of N. Syria to the N. of Laodicea-ad-Mare (*Ladikiyéh*). Pococke (*Trav.* vol. ii. pt. i. p. 194) has identified it with *Meinet Borja*, the small town and half-ruined port from which salt and wheat are brought from Cyprus (comp. Chesney, *Exped. Euphrat.* vol. i. p. 453), and found, on the small flat point that makes out into the sea, several graves cut into the rock, some stone coffins, and pieces of marble pillars; to the N. he saw some remains of piers built into the sea, of foundations of walls of large hewn stones, and signs of a strong building at the end of the pier. (Ritter, *Erdkunde*, vol. xv. pt. i. p. 99.) [E. B. J.]

HERACLEIA PARTHIAE (Ἡράκλεια, Strab. xi. p. 514). Strabo mentions a town of this name, which he places, together with Apameia, in the direction of Rhagae. Nothing certain is known about it; but it has been conjectured by Forbiger that it is the same as a town of the same name mentioned by Pliny, which was founded by Alexander the Great, and subsequently, when destroyed, was named by Antiochus, Achais (vi. 16. s. 18). [V.]

HERACLEIUM (Ἡράκλειον). 1. A town on the north coast of the Chersonesus Taurica; it was situated on the coast of the Palus Maeotis, near Parthenium, but its exact site is unknown. (Strab. xi. p. 494; Ptol. iii. 6. § 4.)

2. A promontory on the east coast of the Euxine, south of cape Toretice, and 150 stadia north of the mouth of the river Achaeus. (Arrian, *Peripl.* p. 79.)

3. A cape and town on the same coast of the Euxine, 150 stadia south of the mouth of the Achaeus. (Arrian, *Peripl.* p. 78.) Pliny (vi. 5) mentions Heracleium on this coast as 70 miles distant from Sebastopolis; but, although we have no means of ascertaining whether this or the other Heracleium be meant, the distance renders it probable that Pliny is speaking of the Heracleium south of the Achaeus.

4. A promontory and river on the same coast of the Euxine, between the rivers Phasis in the north and the Bathys in the south. (Plin vi. 4.)

5. A promontory and port-town on the coast of Pontus, between Amisus and Polemonium. (Strab. xii. p. 548: Ἡράκλειος ἄκρα; Ptol. ii. 3. § 3: Ἡρακλέους ἄκρον; Arrian, *Peripl.* p. 73; Apollon. Rhod. ii. 969). The modern name is *Thermeh*.

6. The name of the arx of the town of Caunus in Caria, which was taken and destroyed by Ptolemy of Egypt in his expedition against Asia Minor. (Diod. Sic. xx. 27.)

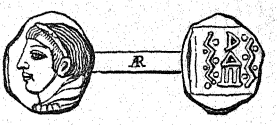
7. A small town in the district Cyrrhestica, between mount Amanus and the Euphrates; near this place the Parthian Pacorus was defeated by the Roman general Ventidius. (Strab. xvi. p. 751.) [L. S.]

HERACLEIUM (Ἡράκλειον, Ptol. iii. 17. § 6), a place in Crete, which Strabo (x. pp. 476, 484) calls the port of Cnossus, was situated, according to the anonymous coast-describer (*Stadiasm.*), at a distance of 20 stadia from that city. The name HERACLEIA (Ἡράκλεια, comp. Plin. iv. 20) is simply mentioned by Stephanus of Byzantium as the 17th of the 23 Heracleias he enumerates. Although the ecclesiastical notices make no mention of this place as a bishop's see, yet there is found among the subscriptions to the proceedings of the General Seventh Council held at Nicaea, along with other Cretan prelates, Theodoros, bishop of Heracleopolis. (Cornel. *Creta Sacr.* vol. i. p. 254.) Mr. Pashley (*Trav.* vol. i. p. 263) has fixed the site at a little rocky hill to the W. of *Kakóu-óros*. There are remains of buildings, probably of no earlier date than the Venetian conquest, but the position agrees with the indications of the ancients. [E. B. J.]

HERACLEIUS, river. [BULIS.]

HERACLEOPO'LIS MAGNA (Ἡρακλέους πόλις μεγάλη or ἡ ἄνω, Ptol. iv. 5. § 7; Steph. B. *s. v.*; Strab. xvii. pp. 789, 809, 812; Herculis Oppidum, Plin. v. 9. § 9, 11: *Eth.* Ἡρακλεοπολίτης), was the capital of the Nomos Heracleotes in Middle Egypt. It was situated at the entrance of the valley of the Fyoum (Nomos Arsinoites), on an island formed by the Nile, the *Bahr Jusuf*, and a canal. After Memphis and Heliopolis it was probably the most important city south of the Thebaïd. When in the eighth dynasty of kings Memphis apparently lost its pre-eminence, the Aegyptian monarchy passed over, in the first instance, to Heracleopolis, before it was established at Thebes. The Lists of Manetho exhibit two dynasties of Heracleopolite kings, the ixth and xth, each containing nineteen names. But we know the appellation of the founder of them alone, Achthoes, a ferocious tyrant, who went mad and was destroyed by a crocodile. Centuries afterward the ichneumon was worshipped at Heracleopolis, from which we may infer that the hostility to the crocodile was handed down. (Agatharch. *ap. Photium*, p. 1339, R.; Aelian, *Hist. An.* x. 47.) It is probable that under these dynasties commenced at least those great works which tradition connected with the name of Moeris, and that the canal and terraces of the Arsinoite nome were their works. The Heracleote nome partook, indeed, of the exuberant fertility of the Fyoum district. Under the Lower empire it formed part of the Roman prefecture of Arcadia. (*Not. Dign. Imp.*) Its ruins are inconsiderable; the modern hamlet of *Anasieh* covers a portion of them. (Ritter, *Erdkunde*, vol. i. p. 789.) [W. B. D.]

HERACLEOPO'LIS PARVA (ἡ κατὼ or Ἡρακλέους πόλις μικρά, Ptol. iv. 5. § 56; Joseph. *Bell. Jud.* iv. 11. § 5; Steph. B. *s. v.*; Heracleûs, *It. Anton.* p. 152; Heraclium, *Tab. Peut.*), is mentioned only in the later times of Egyptian history. It stood near Pelusium, in the Sethroite nome, and beyond the westernmost branch of the Delta. Hence it appears to have been sometimes denominated Sethrum (Σέθρον, Steph. B. *s. v.*), and regarded as the capital of the nome. It was about 22 miles



from Tanis. Its ruins are now covered by the lake *Menzaleh*, near whose western border it was probably situated. (Champollion, *L'Egypte*, vol. ii. p. 130; D'Anville, *Mém. sur l'Egypte*, p. 96.) [W. B. D.]

HERACLEUSTIBUS, the name of a station in the Jerusalem Itinerary, 11 M. P. from Apollonia. Tafel (*de Viae Egnat. Part. Orient.* p. 6) has conjectured that it is equivalent to Ἡρακλέους στίβος. [E. B. J.]

HERAEA (Ἡραία: *Eth.* Ἡραιεύς, Ἡραεύς, in an ancient inscription Ἡρϝαοῖος: the territory Ἡραιᾶτις), the most important Arcadian town on the Lower Alpheius, was situated near the frontiers of Elis, and on the high road from Arcadia to Olympia. It is said to have been founded by Heraeeus, a son of Lycaon, and to have been called originally Sologorgus. (Paus. viii. 26. § 1; Steph. B. *s. v.* Ἡραία.) At an early period the Heraeans concluded a treaty with the Eleians for mutual protection and support for one hundred years; the original of which treaty, engraven on a bronze tablet in the old Peloponnesian dialect, was brought from Olympia by Gell, and is now in the Payne Knight collection in the British Museum. This treaty is placed about the 50th Olympiad, or B. C. 580, since it belongs to a time when the Eleians exercised an undisputed supremacy over the dependent districts of Pisatis and Triphylia; and the Heraeans consequently were anxious to avail themselves of their support. (For a copy of the inscription see Leake, *Peloponnesiaca*, p. 1; Böckh, *Inscr.* no. 11, vol. i. p. 26.) Heraea was, at that time, the chief village among eight others which lay scattered upon the banks of the Alpheius and its tributaries the Ladon and Erymanthus; but the inhabitants of these separate villages were transferred to Heraea, and a city there was founded by the Spartan king Cleombrotus or Cleonymus. (Strab. viii. p. 337.) In consequence of their close connection with Sparta, the Heraeans incurred the hostility of the other Arcadians, who laid waste their territory in B. C. 370. (Xen. *Hell.* vi. 5. § 22.) At a later time Heraea was a member of the Achaean League; and, as Elis was one of the chief places of the Aetolian League, it is frequently mentioned in the contests between these two powers. (Polyb. ii. 54, iv. 77, seq.) It was afterwards in the hands of Philip, but it was restored to the Achaeans. (Liv. xxviii. 8, xxxii. 5, xxxiii. 34; Polyb. xviii. 25, 30.) Heraea is mentioned by Strabo (viii. p. 388) as one of the deserted cities of Arcadia; but when it was visited by Pausanias, it was still a place of some importance. The latter writer describes its temples, baths, plantations of myrtles and other trees along the banks of the Alpheius: among its temples he mentions two sacred to Dionysus, one to Pan, and another to Hera, of the latter of which only some ruins were left. (Paus. viii. 26. §§ 1, 2.)

The site of Heraea is fixed by its distance from the mouth of the Ladon, which, according to Pausanias, was 15 stadia. The same writer says that the greater part of the city lay upon a gently sloping hill, and the remainder upon the banks of the Alpheius. The remains of Heraea are visible on a hill west of the village of *Aiánni* (St. John), bounded on either side by a ravine, and sloping down towards the river. These ruins extend along the summit of the hill and the slope towards the river; but they are inconsiderable, and have for the most part been cleared away in consequence of the fertility of the land. A sweetish red wine is grown upon the spot, which Leake says has more flavour and body than almost any other he met with in the Morea. This wine was also celebrated in antiquity, and was said to make women fruitful. (Theophr. *H. Pl.* ix. 20; Athen. i. p. 31; Plin. xiv. 18. s. 22; Aelian, *V. H.* xiii. 6.)

Heraea was favourably situated in several respects. Its territory was fertile, and it was situated, as we have already said, on the high road from Olympia into the interior of Arcadia. From the north of Arcadia a road led into the valley of the Alpheius, near Heraea; and two roads led into the Hereatis, one from Megalopolis, and the other from Messene and Phigalia, which joined the former close to the town. There was a bridge over the Alpheius close to Heraea, which Philip restored in B. C. 219. (Polyb. iv. 77, 78.) The Heraeatis was separated from Pisatis by the river Erymanthus, and from the territory of Megalopolis by the river Buphagus. (Gell, *Itiner. of the Morea*, p. 113; Leake, *Morea*, vol. ii. p. 91; Boblaye, *Recherches, &c.* p. 159; Curtius *Peloponnesos*, vol. i. p. 363, seq.)

COIN OF HERAEA.

HERAEI MONTES (τὰ Ἡραῖα ὄρη), a group or range of mountains in Sicily, mentioned by Diodorus (iv. 84), who describes in glowing colours the pleasant shaded valleys in which they abounded, the rich forests with which they were covered, and the abundance of wild fruits they produced. He gives no clue to their position, and they are not mentioned by any of the geographers in their descriptions of the island: but Vibius Sequester tells us (p. 8) that the river Chrysas had its source in the Heraean mountains; and this shows that they must have formed part of the range which occupies the whole north of Sicily, from the neighbourhood of Messana to that of Panormus. The natural beauties of this mountain tract accord well with the description of Diodorus, whence the name of Cale Acte, "the beautiful shore," was given to the N. coast of Sicily, which extends along the foot of the range: and Fazello describes the fertility and pleasantness of their southern slopes in terms which fully justify the rhetorical praises of Diodorus (Fazell. ix. 4. p. 385). The great contrast presented by the whole of this range of mountains, to the dry and bare calcareous hills of the centre and south of Sicily, can indeed leave no doubt as to their being those intended by that author. It is impossible, however, to fix the precise limits within which the term was applied. The lofty mass of the *Monte Madonia*, the Mons Nebrodes of the ancients, is in fact only a portion of the same chain, while on the E. the continuation of the range, towards Messana and the promontory of Pelorus, appears to have been designated as the Mons Neptunius. The central portion of the range, between *Caronia* and *Traina*, is still covered with an immense forest, now called the *Bosco di Caronia*: the highest summit of this group, *Monte Sori*, attains an elevation of nearly 3000 feet above the sea.

It is certainly erroneous to extend the name of the Heraei Montes, as has been done by Cluver and

Parthey, not only to the mountains about Enna, but to the great calcareous hills which extend from thence to the S.E. and fill up the greater part of the *Val di Noto*. The natural characters of that part of Sicily must always have been essentially different from those of the mountainous region of the north. [E. H. B.]

HERAEUM (Ἡραῖον: *Karaudi*), a town on the Thracian coast of the Propontis, a little to the east of Bisanthe. (Herod. iv. 90; Steph. B. *s. v.*) In some of the Itineraries, the place is called *Hiereum* or *Ereon*. [L. S.]

HERAEUM. [CORINTHUS, p. 685, b.]

HERA'TEMIS (Ἡράτεμις, Arrian, *Ind.* c. 39), a canal in Persis, mentioned by Arrian as cut from a larger river at no great distance. This river was probably the Padargus mentioned in the same chapter by the Greek historian. The canal terminated at the sea; but we are not aware that any traces of it now remain, unless the *Khore-esseri* of D'Anville's map represents it, which is possible. [V.]

HERBANUM, a town of Etruria, the name of which is found only in Pliny's list of the towns in the interior of that country. (Plin. iii. 5. s. 8.) It has been generally assumed, but entirely without authority, to be the place called Urbs Vetus by Paulus Diaconus (iv. 33), a name which has been probably corrupted into that of the modern city of *Orvieto*. The Urbiventum of Procopius (Οὐρβίβεντον, *B. G.* ii. 20), which he describes as a strong fortress, very difficult of access, is probably the same place with the Urbs Vetus of Paulus. *Orvieto* certainly occupies the site of an ancient Etruscan town, as is proved by tombs and antiquities discovered there, and the name of Urbs Vetus could obviously not have been the original one; but the identification of Urbs Vetus with Herbanum is mere conjecture. (Dennis, *Etruria*, vol. i, p. 526.) [E. H. B.]

HERBESSUS. [ERBESSUS.]

HE'RBITA (Ἑρβῖτα, Steph. B., Ptol.: *Eth.* Ἑρβιταῖος, Herbitensis), a city of the interior of Sicily, in the northern part of the island, and on the southern slope of the Heraean mountains. It was a city of the Siculians, and is first mentioned about 445 B.C., when it was subject to the rule of a prince, or despot, named Archonides, who co-operated with Ducetius, chief of the Siculi, in founding his new settlement at Cale Acte. (Diod. xii. 8.) [CALACTE.] In B.C. 403, it was besieged by Dionysius of Syracuse, but without effect; and several years after we find it still maintaining its independence against that monarch. Meanwhile Archonides, who was still ruler of the city, proceeded to extend his power by founding the colony of Alaesa, on the north coast of the island. (Diod. xiv. 15, 16, 78.) Diodorus tells us that the citizens of Alaesa, having subsequently attained to great prosperity [ALAESA], disdained to acknowledge their descent from so inferior a city as Herbita; but the latter seems to have been by no means an unimportant place. Its name does not again occur in history, but Cicero calls it "honesta et copiosa civitas" (*Verr.* iii. 32); it had a fertile and extensive territory, which was cultivated with great care, and produced abundance of corn: the inhabitants were diligent and active agriculturists (summi aratores), and a quiet, frugal race. They, however, suffered severely from the exactions of Verres; so that the number of the cultivators (aratores) was reduced from 257 to 120, and their territory rendered almost desolate. (Cic. *Verr.* iii. 18, 32—34, 51.) Herbita is still mentioned among the towns of Sicily both by Pliny and Ptolemy: but after this all trace of it disappears, and the data for fixing its position are sufficiently vague. Ptolemy appears to place it between Agyrium and Leontini, but the other towns with which it is associated by Cicero and Diodorus would point to a more northerly position: and Cluverius is probably right in placing it at *Nicosia*, a town about 10 miles NW. of *S. Filippo d'Argirò* (Agyrium), or rather at a place called *Sperlinga*, about 2 miles W. of it, in a more elevated situation, and now uninhabited. (Plin. iii. 8. s. 14; Ptol. iii. 4. § 13; Cluver. *Sicil.* p. 329.) [E. H. B.]

HERCULA'NEUM (the form Herculanum appears to be erroneous: in the passage of Cicero (*ad Att.* vii. 3. § 1) generally cited in support of it, the true reading seems to be "Aeculanum:" see Orell. *ad loc.* Ἡράκλειον, Strab.; Ἡρκουλάνεον, Dion Cass.: *Eth.* Herculanensis: *Ercolano*), a town of Campania, situated on the gulf called the Crater (the *Bay of Naples*), and at the foot of Mt. Vesuvius. The circumstances attending its discovery have rendered its name far more celebrated in modern times than it ever was in antiquity, when it certainly never rose above the condition of a second-class town. It was, however, a place of great antiquity: its origin was ascribed by Greek tradition to Hercules, who was supposed to have founded a small city on the spot, to which he gave his own name. (Dionys. i. 44.) Hence it is called by Ovid "Herculea urbs" (*Met.* xv. 711). But this was doubtless a mere inference from the name itself, and we have no account of any Greek colony there in historical times, though it is probable that it must have received a considerable mixture at least of a Greek population, from the neighbouring cities of Neapolis or Cumae: and there is no doubt of the extent to which Greek influences had pervaded the manners and institutions of its inhabitants, in common with those of all this part of Campania. Strabo's account of its early history is confused; he tells us it was at first occupied (as well as its neighbour Pompeii) by Oscans, afterwards by Tyrrhenians and Pelasgians, and after this by the Samnites. (v. p. 247.) It is doubtful whether he here means by Tyrrhenians the Etruscans, or rather uses the two names of Tyrrhenians and Pelasgians as nearly synonymous: but there seems no reason to doubt the fact that Herculaneum may have been at one time a Pelasgic settlement, and that its population, previous to its conquest by the Samnites, was partly of Pelasgic and partly of Oscan extraction. Its name, and the legends which connected it with Hercules, may in this case have been originally Pelasgic, and subsequently adopted by the Greeks. It fell into the hands of the Samnites in common with the rest of Campania (Strab. *l. c.*): and this is all that we know of its history previous to its passing under the Roman dominion. Nor have we any particular account of the time at which this took place; for the Herculaneum mentioned by Livy (x. 45) as having been taken by the consul Carvilius from the Samnites in B.C. 293, must certainly be another town of the name situated in the interior of Samnium, though we have no further clue to its position. The only occasion on which it plays any part in history is during the Social War, when it took up arms against the Romans, but was besieged and taken by F. Didius, supported by a Hirpinian legion under Minatius Magius. (Vell. Pat. ii. 16.) It has been supposed that a body of Roman colonists was afterwards established there by Sulla (Zumpt, *de Col.* p. 259), but there is no proof of this. It seems, however, to have

been certainly a place of some importance at this time: it enjoyed the rights of a municipium and appears to have been well fortified, whence Strabo calls it a fortress (*φρούριον*): he describes it as enjoying a peculiarly healthy situation, an advantage which it owed to its slightly elevated position, on a projecting headland. (Strab. v. p. 246.) The historian Sisenna also, in a fragment preserved by Nonius (iii. p. 207. *s. v.* Fluvius), describes it as situated on elevated ground between two rivers. Its ports also were among the best on this line of coast. (Dionys. i. 44.) It is probable that, when the shores of the beautiful bay of Naples became so much frequented by the Romans, many of them would have settled at Herculaneum, or in its immediate neighbourhood, and its municipal opulence is sufficiently proved by the results of recent discoveries; but though its name is mentioned by Mela and Florus, as well as by Pliny, among the cities of the coast of Campania, it is evident that it never rose to a par with the more flourishing and splendid cities of that wealthy region. (Mela, ii. 4. § 9; Flor. i. 16. § 6; Plin. iii. 5. s. 9.) It is important to bear this in mind in estimating the value of the discoveries which have been made upon the site.

In the reign of Nero (A. D. 63) Herculaneum suffered severely from an earthquake, which laid great part of the city in ruins, and seriously damaged the buildings that remained standing. (Senec. *N. Qu.* vi. 1.) This was the same earthquake which nearly destroyed Pompeii, though it is referred by Tacitus to the preceding year. (*Ann.* xv. 22.) Sixteen years later, in the reign of Titus (A. D. 79), a still more serious calamity befell both cities at once, the memorable eruption of Vesuvius in that year having buried them both under the vast accumulations of ashes, cinders, and volcanic sand poured forth by that mountain. (Dion Cass. lxvi. 24.) Herculaneum, from its position at the very foot of the mountain, would naturally be the first to suffer; and this is evident from the celebrated letter of the younger Pliny describing the catastrophe, which does not however mention either Herculaneum or Pompeii by name. (Plin. *Ep.* vi. 16, 20.) But Retina, where the elder Pliny first attempted to land, but was prevented by the violence of the eruption, was in the immediate neighbourhood of the former city. Its close proximity to Vesuvius was also the cause that the bed of ejected materials under which Herculaneum was buried assumed a more compact and solid form than that which covered Pompeii, though it is a mistake to suppose, as has been stated by many writers, that the former city was overwhelmed by a stream of lava. The substance with which it is covered is only a kind of volcanic tuff, formed of accumulated sand and ashes, but partially consolidated by the agency of water, which is often poured out in large quantities during volcanic eruptions. (Daubeny *on Volcanoes*, p. 222, 2nd edit.) The destruction of the unfortunate city was so complete that no attempt could be made to restore or rebuild it: but it appears that a small population gradually settled once more upon the site where it was buried, and hence we again meet with the name of Herculaneum in the Itineraries of the 4th century. (*Tab. Peut.*) This later settlement is supposed to have been again destroyed by the eruption of Vesuvius in A. D. 472; and no trace is subsequently found of the name.

Though the position of Herculaneum was clearly fixed by the ancient authorities on the coast between Neapolis and Pompeii, and at the foot of Vesuvius, its exact site remained long unknown; it was placed by Cluverius at *Torre del Greco*, nearly two miles too far to the E. (Cluver. *Ital.* p. 1154.) But in 1738 the remains of the theatre were accidentally discovered in sinking a well, in the village of *Resina;* and excavations, being from this time systematically carried on, have brought to light a considerable portion of the ancient city, including the Forum, with two adjacent temples and a Basilica. Unfortunately, the circumstance that the ground above the site of the buried city is almost wholly occupied by the large and populous villages of *Resina* and *Portici* has thrown great difficulties in the way of these excavations, which have been carried on wholly by subterranean galleries; and even the portions thus explored have been for the most part filled up again with earth and rubbish, after they had been examined, and the portable objects found carried off. The consequence is, that while the works of art discovered here far exceed in value and interest those found at Pompeii, and the bronze statues especially form some of the choicest ornaments of the Museum at Naples, the remains of the city itself possess comparatively little interest. The only portion that remains accessible is the theatre, a noble edifice, built of solid stone, in a very massive style; it has 18 *cunei*, or rows of seats, and is calculated to have been capable of containing 8000 persons. Fragments discovered in it prove that it was adorned with equestrian statues of bronze, as well as with two chariots or bigae in gilt bronze; and several statues both in bronze and marble have been extracted from it. For this splendid edifice, as we learn from an inscription over the entrance, the citizens of Herculaneum were indebted to the munificence of a private individual, L. Annius Mammianus Rufus: the date of its erection is unknown; but it could not have been earlier than the period of the Roman empire, and the building had consequently existed but a short time previous to its destruction. From the theatre a handsome street, 36 feet in breadth, and bordered on both sides by porticoes, led to a large open space or forum, on the N. side of which stood a Basilica of a noble style of architecture. An inscription informs us that this was erected at his own cost by M. Nonius Balbus, praetor and proconsul, who at the same time rebuilt the gates and walls of the city. No part of these has as yet been discovered, and the plan and extent of the ancient city therefore remain almost unknown. Not far from the Basilica were discovered two temples, one of which, as we learn from an inscription, was dedicated to the Mother of the Gods (Mater Deum), and had been restored by Vespasian after the earthquake of A. D. 63. Another small temple, at a short distance from the theatre, apparently dedicated to Hercules, was remarkable for the number and beauty of the paintings with which the walls were adorned, and which have been from thence transported to the Museum at Naples. At some distance from these buildings, towards the W., and on the opposite side of a small ravine or watercourse, was found a villa or private house of a most sumptuous description; and it was from hence that many of the most beautiful statues which now adorn the Neapolitan Museum were extracted. Still more interest was at first excited by the discovery in one of the rooms of this villa of a small library or cabinet of MSS. on rolls of papyrus, which, though charred and blackened so as to be converted into a substance resembling charcoal, were found to be

still legible. But the hopes at first entertained that we should here recover some of the lost literary treasures of antiquity have been signally disappointed, the works discovered being principally treatises on the Epicurean philosophy of very little interest.

A full account of the early excavations and discoveries at Herculaneum will be found in Venuti (*Prime Scoverte di Ercolano*, 4to. Roma, 1748), and in the more recent work of Iorio (*Notizie sugli Scavi di Ercolano*, 8vo. Naples, 1827). The works of art and other monuments discovered on the site, are figured and described in the magnificent work of *Le Antichità di Ercolano*, in 8 vols. folio, published at Naples, from 1757 to 1792. The inscriptions are given by Mommsen (*Inscr. Regn. Neap.* pp. 122—127); and an account of the papyri will be found prefixed to the work entitled *Herculanensium Voluminum quae supersunt*, of which only two volumes have been published, in 1793 and 1809. A summary account of the general results will be found in Romanelli (*Viaggio ad Ercolano*, 8vo. Naples, 1811), and in Murray's *Handbook for Southern Italy*. It is much to be regretted that the superior facilities afforded by Pompeii have for many years caused Herculaneum to be almost wholly neglected: even the excavations previously carried on were conducted without system, and no regular plans were ever taken of the edifices and portions of the city then explored.

The modern village of *Resina*, which now covers a large part of the ruins of Herculaneum, has evidently retained the name of RETINA, a place mentioned only in the letter of Pliny describing the great eruption of Vesuvius in A. D. 79. (Plin. *Ep.* vi. 16.) It appears to have been a naval station, where a body of troops belonging to the fleet at Misenum (Classiarii) were at that time posted, who applied in great terror to Pliny to extricate them from their perilous position. Hence, it is clear that it must have been close to the sea-coast, and probably served as the port of Herculaneum. The exact position of this cannot now be traced, for the whole of this line of coast has undergone considerable alterations from volcanic action. The point of the promontory on which the ancient city was situated is said to be 95 feet within the present line of coast; and the difference at other points is much more considerable. We learn from Columella (*R. R.* x. 135) that Herculaneum possessed salt-works, which he calls "Salinae Herculeae," on the coast to the E., immediately adjoining the territory of Pompeii. The Tabula marks a station, which it calls "Oplontis," between Herculaneum and Pompeii, 6 miles from the former town; but the name, which is otherwise unknown, is probably corrupt. [E. H. B.]

HERCULEUM FRETUM. [GADITANUM FRETUM.]

HE'RCULIS ARENAE (*αἱ τοῦ Ἡρακλέους Θῖνες*), a range of sand-hills in the NW. of Cyrenaica, behind Hesperides, containing the source of the river Lathon. (Ptol. iv. 4. §§ 8, 10.) They form the N. part of the *Jebel Barkah*, its S. part being the VELPI M. of Ptolemy. [P. S.]

HE'RCULIS COLUMNAE (*αἱ Ἡρακλέους στῆλαι, αἱ Ἡράκλειοι στῆλαι*, Strab. &c.; *Ἡρακλέος στάλαι, Ἡρακλέος κίονες*, Pind.: Herculeae Columnae, Mel., Plin., &c.: Herculis Speculae, Flor. iv. 2: also simply *Στῆλαι* and Columnae: the *Pillars of Hercules*), is a name commonly understood now, as it was generally among the ancients, in one particular sense, namely, as denoting the twin rocks which guard the entrance of the Mediterranean (Mare Internum, &c.) at the E. extremity of the *Straits of Gibraltar* [GADITANUM FRETUM]; of which the one on the N. or European side was called CALPE, that on the S. or African side ABYLA. But this simple statement is far from containing a sufficient account of the meaning attached to the name by the Greeks and Romans.

Its origin goes back into the legendary period; and we are here again involved in the oft-recurring difficulty as to whether the legend was founded on a certain amount of knowledge, or whether, the legend being purely imaginary at first, a positive sense was given to it as geographical discovery advanced. It should be borne in mind that *columns*, as well as *altars*, were erected to mark the furthest points reached by conquerors and discoverers [ALEXANDRI ARAE]; and hence, in connection with the mythical expedition of Hercules to the extreme west, such memorials would be sought. In accordance with this view, we find Pillars of Hercules mentioned in other distant regions of the earth to which Hercules was supposed to have penetrated, namely, in the N. of Germany, and the W. extremity of Gaul. (Tac. *Germ.* 3, 34; Scymn. Ch. 188; Serv. *ad Virg. Aen.* xi. 262, where we have a parallel case in "the Pillars of Proteus" for the borders of Egypt.) Other examples are mentioned in the interesting discussion on this use of columns by Strabo (iii. pp. 170, 171). But there was also another reason to look for columns in those regions; for Aeschylus tells us of the "Pillar of Heaven and Earth," that is, the pillar which, resting on earth, supported the vault of heaven, and which was upborne by Atlas (*Prom.* 349, 428). That the Pillars of Hercules were identified by some with those of Atlas is proved by the fact that the former are also called the *Pillars of Kronos* and of *Briareus*, deities, like Atlas, of the Titan race. (Aristot. *ap.* Aelian, *V. H.* v. 3; Hesych. *s. v.* *Βριαρέω στῆλαι*; Eustath. *ad Dion. Per.* 561; Schol. Apoll. Rhod. i. 165: the Scholiast to Pindar, *Nem.* iii. 37, calls them the Pillars of Aegaeon, which is another name of Briareus; and elsewhere Briareus himself is called Hercules, Zenob. *Prov.* Cent. v. 48.)

But when the ancient writers began to investigate the matter more closely, they were greatly divided in opinion as to *where* the Pillars were to be sought, *what* they were, and *why* they were called by the name of Hercules.

1. The name is not found in Homer, although the manner in which he speaks of Ulysses's passage out of the sea into the ocean and back again, seems to imply that he had some knowledge of the Straits.

The earliest distinct mention of the Pillars of Hercules in Greek poetry is by Pindar, who more than once names them as the point to which the fame of his heroes reached, but beyond which no mortal could advance, whether he were wise or foolish; and in one passage he speaks of Gades in the same terms, thus evidently regarding the two positions as closely connected. (Pind. *Ol.* iii. 79, *Nem.* iii. 35, iv. 112, *Isthm.* iv. 20.) Herodotus, whose knowledge was derived from the records of Phoenician navigation, speaks of the Pillars with perfect familiarity, as of a well-known position, and the tenour of his remarks on those regions leaves little, if any doubt, that he placed them at the Straits. (Herod. iv. 42, 181, 185.) Scylax assigns to them the same position, at the mouth of the Mediterranean, and near Gades. He places them at the distance of a day's journey from one another, and distinguishes

between the *Columns in Europe* and the *Columns in Libya*, using the plural by a kind of attraction, for, when he describes them more particularly, he speaks of each in the singular. (Scylax, pp. 1, 51, ed. Hudson; pp. 1, 120, 126, ed. Gronov.) From these testimonies, as well as from the numerous allusions of other writers, it appears that the common opinion had become pretty well established from the time of Herodotus. (Comp. Polyb. iii. 35; Diod. Sic. iv. 18; Dion. Per. 64, 454, and Eustath. *ad loc.*; Palaeph. 52; Philostr. *Vit. Apollon.* v. 1, 5, &c.) The same thing is evident from numerous passages of Strabo, who, in the course of a very interesting discussion on the whole subject, accounts for the various positions assigned to the Pillars as follows (iii. pp. 169—172). An oracle had commanded the Tyrians to found a colony at the Pillars of Hercules. The settlers sent out for this purpose, on arriving at the Straits, thought they had reached the term both of the inhabited world, and of the expedition of Hercules; and, taking the rocks of Calpe and Abyla for the Pillars of which they were in search, they landed at a spot within the Straits, where stood, in Strabo's time, the city of the Exitani [SAXETANUM]; but, finding the sacrifices inauspicious, they returned. Another party, sent out some time afterwards, proceeded 1500 stadia beyond the Straits, as far as an island sacred to Hercules, opposite to the spot on the Iberian coast where the city of ONOBA afterwards stood; but, again finding the sacrifices inauspicious, these also returned home. A third attempt had for its result the foundation of GADES. Hence it came to pass that some sought the Pillars in the headlands of the Straits, others at Gades, and others at some place even beyond Gades in the Ocean. The general opinion was in favour of Calpe and Abyla; but some, among whom was Artemidorus, took the Pillars to be the small islands near each, of which one was called the *Island of Hera*, by which he seems to mean the islands off *C. Trafalgar*, the ancient Junonis Prom., which headland the authors of this opinion seem to have confounded with Calpe. (Comp. the Note to Groskurd's translation, *l. c.*) Some even transferred the celebrated rocks called Planetae and Symplegades to the Straits, and identified them with the Pillars of Hercules. Scymnus Chius, who, like Artemidorus, took the Pillars for islands, places them far within the Straits, at MAENACA, near the city of the Exitani, above mentioned. (Vv. 142—145).

2. As to *what* the pillars were believed to be, Strabo also gives some interesting information. Some took them for rocky headlands, others for islands; the former rising up from the land, the latter out of the sea, like gigantic columns. But others, regarding the custom previously referred to, or even taking the word στῆλαι literally, looked for cities, or artificial mounds, or columns, or statues, erected either by Hercules himself, to mark the term of his conquests, or dedicated by Phoenician navigators to this their tutelary deity, to record the extent of their discoveries. (Comp. Hesych. *s.v.* στήλας διστόμους.) This literal interpretation, he tells us, prevailed among the Iberians and Libyans, who denied that there was anything at the Straits resembling columns, but pointed out, as the Pillars of Hercules, the bronze columns in the temple of the god at Gades, on which the expenses of building the temple were inscribed. He adds that this opinion was held by Poseidonius, in opposition to the Greeks in general, who considered the pillars to mean *promontories*. Strabo's refutation of this opinion is an interesting effort of ancient criticism. (Comp. Strab. i. pp. 21, 32, 47, 49, 51, 52, 56, 58, 64, ii. pp. 67, 68, 71, 78, 79, 84, 86, 89, 90, 93, 101, 105, 108, &c. &c.) Not only the *nature*, but also the *number*, of the Pillars was disputed; the common opinion making them *two*, while others gave the number as *one*, or *three*, or *four*. (Hesych. *l. c.*)

3. The true *reason of the name* must be sought for in the fact that Melcarth, whom the Greeks identified with Heracles, was the tutelary god of the Phoenicians, as well as in the Greek legends respecting Hercules: how far those legends originated in the Phoenician worship, this is not the place to inquire. The view generally taken by the Greeks may be collected from the passages of Strabo just quoted. But the later writers sought for an interpretation from their physical views of the legends of Hercules. One story was that he tore asunder the rocks which had before entirely divided the Mediterranean Sea from the ocean. (Mela, i. 5. § 3, ii. 6. § 6.) Pliny assigns both reasons (iii. procem. "Abila Africae, Europae Calpe, *laborum Herculis meta:* quam ob causam indigenae columnas ejus Dei vocant, creduntque perfossas exclusa antea admisisse maria, et rerum naturae mutasse faciem.") The interesting speculations of the ancients, respecting the physical changes resulting from the supposed disruption, especially the opinion, discussed by Strabo, that the Mediterranean had previously been connected with the Red Sea, and that the *Isthmus of Suez* was formed by the lowering of the Mediterranean through its new outlet, belong rather to other places in this work [ERYTHRAEUM MARE, MARE INTERNUM]: but it may be worth while to point out here that Mela (*l. c.*) indicates just the opposite opinion, namely, that the Mediterranean was elevated by the influx of the Atlantic; and the same idea is conveyed by Pliny's phrase of "*admisisse* maria." Another legend was that Hercules forced the two rocks into temporary union to make a bridge for the safe conveyance of the herds of Geryon to Libya (Avien. *Ora Marit.* 326); and another, that he narrowed the Strait, so as to shut out the sea-monsters which had previously made their way in from the Ocean and infested the Mediterranean (Diod. Sic. iv. 18). It only remains to notice that one of the principal parallels of latitude, by which Eratosthenes and other ancient geographers divided the earth into κλίματα, was drawn through the Pillars, passing also through the Straits of Messina, Athens, Rhodes, and the Taurus, to Thinae. (Strab. ii. pp. 67, 68, 79, &c. &c.; Schwartz, *Diss. de Columnis Herculis*, Altorf, 1749, 4to; Gosselin, *Rech. sur la Geogr. Syst. des Anc.* tome iv. pp. 1—10, Paris, 1813; Humboldt, *Kritische Untersuchungen*, vol. i. pp. 451, foll.; Ukert, vol. ii. pp. 248, b. foll.) [P. S.]

HE'RCULIS INSULA. [CARTHAGO NOVA: ONOBA].

HE'RCULIS LIBURNI PORTUS [LIBURNUM.]

HE'RCULIS MONOECI PORTUS. [MONOECUS.]

HE'RCULIS PORTUS. 1. A small port on the coast of Etruria, on the S. side of the promontory of *Monte Argentaro*. [ARGENTARIUS MONS.]

2. (ὁ Ἡρακλέους λιμήν, Strab. vi. p. 256; Portus Herculis, Plin. iii. 5. s. 10), a port on the W. coast of Bruttium, placed by Pliny between Hipponium and the mouth of the Metaurus. Strabo tells us that it was between Hipponium and the Portus Herculis that the coast began to curve round towards the Sicilian Strait. Hence, it is probable that the name was

given to the port of *Tropéa*, which is close to the headland called *Capo Vaticano*, where the coast actually begins to trend to the S., and must always have been of importance as a port. The modern name of *Tropéa* seems to point to a Roman origin, but is not found in any ancient writer.

3. (Ἡρακλέους λιμήν, Ptol. iii. 3. § 3), a port on the south coast of Sardinia, between Sulci and Nora, mentioned only by Ptolemy, is, in all probability, the one now known as *Porto di Malfatano*. (De la Marmora, *Voyage en Sardaigne*, vol. ii. p. 394.) [E. H. B.]

HE'RCULIS PROMONTORIUM (τὸ Ἡράκλειον, Strab. vi. p. 259), a promontory of Bruttium, which is regarded by Strabo as the extreme S. point of that country, and consequently of all Italy. It is now called *Cape Spartivento*, and is, in fact, the SE. point of the great headland forming the extremity of Bruttium, as Cape Leucopetra (*Capo dell' Armi*) is the SW. Hence, Strabo is perfectly correct in saying that, immediately after doubling the Herculean Promontory, the course of a voyager would lie to the NE. It is, however, in just the same latitude as Leucopetra, which was more commonly regarded by the ancients as the extreme point of the Italian peninsula. [E. H. B.]

HE'RCULIS PROMONTORIUM (Ἡρακλέους ἄκρον: *C. Mogador*), a promontory on the W. coast of Mauretania, half a degree S. of the mouth of the river Phuth. (Ptol. iv. 1. § 4.) [P. S.]

HE'RCULIS SILVA, a forest of Germany, mentioned only by Tacitus (*Ann.* ii. 12) as situated on the east of the river Visurgis, whence modern writers identify it with the *Suntelgebirge*, on the west of the town of Minden. [L. S.]

HE'RCULIS TEMPLUM. [GADES.]

HERCUNIATAE or HERCUNIATES (Ἐρκουνιαταί), a tribe in Pannonia, occupying the district between the Danubius and lake Pelso. (Plin. iii. 28; Ptol. ii. 16. § 3.) Their name is believed to indicate that they were a Celtic people. [L. S.]

HERCYNA. [BOEOTIA, p. 412, b.]

HERCY'NIA SILVA (*Hercynius Saltus*, Liv. v. 34; *Hercynium jugum*, Plin. iv. 28; Ἑρκυνία ὕλη, Ἑρκύνιον ὄρος, Ἑρκύνιος δρυμός, τὰ Ἑρκύνια), a range of mountains in Germany, the extent and situation of which are described very differently by the writers of different ages. Some of the earlier authors place the Hercynian forest near the Pyrenees (Schol. *ad Dionys. Perieg.* 286), while others assign to it a place near the northern ocean (Diod. v. 21; Eustath. *ad Dion. Perieg.* 285; Senec. *Med.* 712) or in the country of the Celts (Schol. *ad Apollon. Rhod.* iv. 640). The earliest mention of it occurs in Aristotle (*Meteor.* i. 13: Ἀρκύνια ὄρη), who speaks of it generally as a range of mountains in the north of Europe; but the first author that affords any more detailed information is Julius Caesar (*B. G.* vi. 24, 25), according to whom its breadth was nine days' journey and its length sixty. It commenced on the frontiers of the Helvetii, Nemetes, and Rauraci, and extending in an eastern direction parallel to the Danube reached the country of the Daci and Anartes; it then turned northward, traversing the countries of many nations. He therefore makes the mountains commence on the east bank of the Rhine, and leaves its eastern termination undefined. On the whole, Pomponius Mela (iii. 3) and Strabo (iv. p. 292) agree with this description, according to which the Hercynia Silva would be a general name for almost all the mountains of Southern and Central Germany, that is, from the sources of the Danube to Transylvania, comprising the Schwarzwald, Odenwald, Spessart, Rhön, Thüringer Wald, the Harz mountain (which seems to have retained a trace of the ancient name), Rauhe Alp, Steigerwald, and the Fichtel-, Erz-, and Riesengebirge. At a later period, when the mountains of Germany had become better known to the Romans, the name Hercynia Silva was applied to the more limited range of mountains extending around Bohemia, and extending through Moravia into Hungary. (Tac. *Germ.* 28, 30; Plin. iv. 25, 28.) Ptolemy (ii. 11. § 7) applies the name only to the range connecting the Sudetes with the Carpathian mountains. Caesar (*B. G.* vi. 26, foll.) gives a full account of some of the more interesting animals that were found in those extensive forests. At the time when they became better known, the separate parts of the mountain chain were designated by separate names, as *Abnoba, Rauraci Montes, Alpii Montes, Bacenis Silva, Melibocus, Sudeti Montes, Gabreta Silva, Asciburgius Mons*, and *Sarmatici Montes*. The name Hercynia, which some regard as a name of Celtic origin, is probably connected with the old German *Hart, Hard*, and *Harz*, signifying a woody mountain. [L. S.]

HERDO'NEA (Ἑρδωνία, Ptol.: *Ordona*), a city of the interior of Apulia, situated on the branch of the Appian Way which led from Canusium, by Equus Tuticus, to Beneventum. It was distant 26 R. miles from Canusium and 19 from Aecae (*Troja*). (*Itin. Ant.* p. 116; *Tab. Peut.*; Strab. vi. p. 283, where the name is corruptly written in all the MSS. and old editions Κερδωνία.) Herdonea is remarkable in Roman history for having witnessed the defeat of two different Roman armies by Hannibal at an interval of only 2 years: the one in B.C. 212, under the praetor Cn. Fulvius Flaccus; the other in B.C. 210, under the proconsul Cn. Fulvius Centumalus. (Liv. xxv. 21, xxvii. 1.) After the second of these victories, Hannibal, having no confidence in the fidelity of Herdonea (which was one of the places that had joined the Carthaginians after the battle of Cannae), destroyed the city, and transferred all its inhabitants to Metapontum and Thurii. It must have been subsequently rebuilt, but appears never to have risen again into a place of importance. Silius Italicus speaks of it as an obscure and deserted place (viii. 568); and though its existence as one of the municipal towns of central Apulia is attested by the geographers and itineraries (Plin. iii. 11. s. 16; Ptol. iii. 1. § 72; Strab. *l. c.*), its name is never again mentioned in history. It appears however to have survived till the middle ages, and was finally destroyed by the Saracens.

The ruins of the ancient city, which are described as extensive and indicating a place of importance, are still visible on the summit of a slight hill, a short distance to the south of the modern *Ordona*, a mere group of houses between *Bovino* and *Cerignola*, on the high road from Naples to *Otranto*. They are described by Mola (*Peregrinaz. per la Puglia*, p. 44), and by Romanelli (vol. ii. p. 258).

The name of Herdonea is variously corrupted into Erdonias (*Itin. Ant.* p. 116), Serdonis (*Itin. Hier.* p. 610), Ardona (*Lib. Colon.* p. 260): and there is little doubt that the ARDONEAE mentioned by Livy (xxiv. 20), where Fabius established his winter quarters in B.C. 214, is only a corruption of the same name. [E. H. B.]

HE'RIUS (Ἥριος). Ptolemy (ii. 8. § 1) places the Herius on the coast of Gallia Lugdunensis, between

the Brivates Portus and the Vindana or Vidana Portus. Ptolemy's latitude of the mouth of the Herius (49½°) makes it nearly as far north as the outlet of the *Seine*. D'Anville [DURETIE] supposes the Herius to be the *Vilaine*, the first large river north of the *Loire*. He adds (*Notice, &c.*, Herius Fluv.) that the passage of the *Vilaine* between *Roche-Bernard* and the mouth of the river is now called *Treig-hier*, and that we may readily believe *Treig-hier* to be a corruption of Trajectum Herii. This may be so; or *Treig-hier* may be the old Celtic name. Some geographers assume the Herius to be the small river *Auray* north of the *Vilaine;* but this is only a guess like the other. [G. L.]

HERMAEUM PROM. (Ἑρμαῖα ἄκρα, Ptol. iii. 17. § 3), a point on the S. coast of Crete, which has been identified with *Ponta Trividi*. (Höck, *Kreta*, vol. i. p. 388.) [E. B. J.]

HERMAEUM PROM. (Ἑρμαῖα ἄκρα). 1. A headland on the coast of Marmarica, between Phoenicus and Paraetonium. (Ptol. iv. 5. § 7; *Stadiasm.* p. 437). 2. In Africa Propria. [MERCURII PROM.] [P. S.]

HERMI'NIUS MONS (τὸ ὄρος Ἑρμίνιον: *Sierra de la Estrella*), a mountain range of Lusitania, S. of the river Durius (*Douro*), a position of some importance in Caesar's campaign in Lusitania. (Dion Cass. xxxvii. 52; Hirt. *Bell. Alex.* 48; Suet. *Caes.* 54.) In the middle ages it was still called *Hermeno* and *Arminna* (Resendius, *Antiq. Lusit.* p. 58; Link, *Reise durch Portugall*, vol. ii. p. 142; Florez, *Esp. S.* vol. xiii. p. 166; Ukert, vol. ii. pt. 1. p. 277). [P. S.]

HERMIONE or HERMION (Ἑρμιόνη, Herod., Xen., Strab.; Ἕρμιών, Eurip. *Herc. Fur.* 615; Polyb. ii. 52; Ἑρμιῶ, Scylax, p. 20: *Eth.* Ἑρμιονεύς; fem. Ἑρμιονίς: *Adj.* Ἑρμιονικός, Hermioneus, Hermionius, Hermionicus: the territory Ἑρμιονίς), a town at the southern extremity of Argolis, in the wider use of this term, but an independent city during the flourishing period of Grecian history, and possessing a territory named Hermionis. The sea between the southern coast of Argolis and the island of Hydrea was called after it the HERMIONICUS SINUS (Ἑρμιονικὸς κόλπος, Strab. viii. p. 335), which was regarded as distinct from the Argolic and Saronic gulfs.

Hermione was founded by the Dryopes, who are said to have been driven out of their original abodes on Mount Oeta and its adjacent valleys by Heracles, and to have settled in the Peloponnesus, where their three chief towns were Hermione, Asine, and Eïon. (Herod. viii. 43, 47; Diod. iv. 37.) Hermione is mentioned by Homer along with its kindred city Asine. (Hom. *Il.* ii. 560.) Asine and Eïon were conquered at an early period by the Dorians, but Hermione continued to exist as an independent Dryopian state long afterwards. Hermione appears to have been the most important of the Dryopian towns, and to have been in possession at one time of a larger portion of the adjacent coast, as well as of several of the neighbouring islands. Strabo, following ancient authorities, places the promontory Scyllaeum in Hermionis (Strab. viii. p. 373), and the Hermionic gulf extended along the coast of Troezen as far as this promontory. Hermione is mentioned first among the cities of the Amphictyony, the representatives of which were accustomed to meet in the adjacent island of Calaureia (Strab. viii. p. 374), from which it has been inferred that Hermione had the presidency of the confederacy, and that the island belonged to this city. It is expressly stated that Hydreia belonged to the Hermionians, and that they surrendered this island to the Samian pirates, who gave it into the charge of the Troezenians. (Herod. iii. 59.) The Hermionians are mentioned as Dryopes at the time of the Persian wars: they sent three ships to Salamis, and 300 men to Plataea. (Herod. viii. 43, ix. 28.) Subsequently the Argives took possession of Hermione, and settled there an Argive colony. There is no account of its conquest, and Pausanias supposes that the Argives obtained peaceable possession of the town; but it probably came into their power about the same time that they subdued Mycenae and Tiryns, B.C. 464. Some of the expelled Hermionians took refuge at Halieis, where the Tirynthians had also settled; and it was perhaps at this time that the lower city was deserted. (Paus. ii. 34. § 5; Strab. viii. p. 373; comp. Steph. B. *s. v. Τίρυνς*; Müller, *Dor.* vol. i. p. 199, Engl. trans.) Hermione now became a Doric city; but the inhabitants still retained some of the ancient Dryopian customs. Thus it continued to be the chief seat of the worship of Demeter Chthonia, who appears to have been the principal deity of the Dryopians; and we learn from a remarkable inscription that the Asinaeans, who had settled in Messenia after their expulsion from Argolis, continued to send offerings to Demeter Chthonia at Hermione. (Böckh, *Inscr.* no. 1193.) Although Hermione had fallen into the hands of the Argives, it did not continue permanently subject to Argos, and it is mentioned subsequently as an independent town and an ally of Sparta. (Thuc. ii. 56, viii. 3.) After the capture of the Acrocorinthus by Aratus, the tyrant who governed Hermione voluntarily surrendered his power, and the city joined the Achaean league. (Polyb. ii. 44.) Hermione continued to exist long afterwards, as is proved by its numerous coins and inscriptions.

Pausanias describes Hermione at considerable length. The old city, which was no longer inhabited in his time, stood upon a promontory seven stadia in length, and three in breadth at its widest part; and on either side of this promontory there was a convenient harbour. There were still several temples standing on this promontory in the time of Pausanias, of which the most remarkable was one sacred to Poseidon. The later town, which Pausanias visited, stood at the distance of four stadia from this temple upon the slopes of the hill Pron. It was entirely surrounded by walls, and was in earlier times the Acropolis of the city. Among its ruins lies the modern village of *Kastrí*. Of the numerous temples mentioned by Pausanias the most important was the ancient Dryopian sanctuary of Demeter Chthonia, situated on a height of Mount Pron, said to have been founded by Chthonia, daughter of Phoroneus, and Clymenus her brother. (Eur. *Herc. Fur.* 615.) It was an inviolable sanctuary; but it was plundered by the Cilician pirates. (Phot. *Lex. s. v.* Ἑρμιόνη; Plut. *Pomp.* 24.) Opposite this temple was one sacred to Clymenus; and to the right was the Stoa of Echo, which repeated the voice three times. In the same neighbourhood there were three sacred places surrounded with stone fences; one named the sanctuary of Clymenus, the second that of Pluto, and the third that of the Acherusian lake. In the sanctuary of Clymenus there was an opening in the earth which the Hermionians believed to be the shortest road to Hades, and consequently they put no money in the mouths of their dead to pay

the ferryman of the lower world. (Paus. ii. 35; Strab. viii. p. 373.)

From Hermione a peninsula, now called *Kranidhi*, extends towards the south and west It contains two promontories, on each of which there are Hellenic remains. Pausanias names two ancient places, called Halice and Mases, on the road from Hermione to Asine, both of which must have been situated in this peninsula, but he gives no further indication of their position. It has been conjectured that the Hellenic remains near *C. Muzáki*, on the more easterly of the two promontories above mentioned, are those of Halice; and that the remains on the more westerly promontory at Port *Kheli* represent Mases: but there are good reasons for believing that the ruins near *C. Muzáki* are those of some town the name of which has not been recorded; that Halice, or, as it is also called, Halieis, stood at Port *Kheli;* and that Mases was situated more to the north, on the western coast, at Port *Kiládhia*. In the time of Pausanias, Mases served as the harbour of Hermione. [HALIEIS; MASES.] Towards the east the frontier of the Hermionis and Troezenia was marked by a temple of Demeter Thermasia, close to the sea, 80 stadia westward of Cape Scyllaeum, the name of which has been preserved in that of *Thérmisi.* (Paus. ii. 34. § 6.) Near this temple, on the road from Troezen to Hermione, was a small place called EILEI (Εἰλεοί), the name of which has been preserved in the modern *Ilio.* Westward the Hermionis seems to have extended as far as the territory of Asine. On the road from Mases to Asine, Pausanias mentions the promontory STRUTHUS (Στρυθοῦς); at the distance of 250 stadia from which, by a mountain path, were PHILANORIUM (Φιλανόριον) and BOLEI (Βολεοί), the latter being the name of a heap of stones: 20 stadia beyond Bolei was a place called Didymi [DIDYMI]. (Leake, *Morea,* vol. ii. p. 457, seq., *Peloponnesiaca,* p. 281, seq.; Boblaye, *Recherches, &c.* p. 60; Curtius, *Peloponnesos,* vol. ii. p. 454, seq.)

HERMIONES, one of the three great divisions into which, according to Tacitus (*Germ.* 2), the German nation was divided. These divisions were the *Ingaevones,* inhabiting the country near the ocean; the *Hermiones,* occupying the central parts of Germany; and the rest were called *Istaevones.* All three were said to have received their names from the three sons of Mannus; and as the one after whom the Hermiones were called, bore the name of *Hermino, Irmino,* or *Irmin,* Grimm (*Deutsche Mythol.* i. p. 320, 2nd ed.) suggests that their name should be written *Herminones,* which is actually the reading of one of the MSS. of Tacitus. Pliny (iv. 28), instead of three, mentions five great divisions of the Germans, and makes the Hermiones the fourth, adding that they included the Suevi, Hermunduri, Chatti, and Cherusci. Modern writers have hazarded numerous conjectures as to the different tribes contained in these three or five groups; but it will ever remain impossible to arrive at any satisfactory result. (See also Mela, iii. 3; Orph. *Argon.* 1134.) [L. S.]

HERMIO'NICUS SINUS. [HERMIONE.]

HERMIONIS. [HERMIONE.]

HERMISIUM (Pomp. Mela, ii. 1. § 3; Plin. iv. 12), a town on the W. coast of the Tauric Chersonesus. [E. B. J.]

HERMON. [ANTILIBANUS.]

HERMONACTIS VICUS (Ἑρμώνακτος Κώμη, Strab. vii. p. 306; Ptol. iii. 10. § 14), a place in Sarmatia Europaea, near the mouth of the Tyras, where was the tower of Neoptolemus (Strab. *l. c.*; comp. Anon. *Peripl.* p. 10), perhaps a lighthouse. In this neighbourhood, not long since, the remains of an old tower were found. (Köler, *Mém. de l'Acad. de St. Petersb.* vol. x. p. 580.) [E. B. J.]

HERMONACUM or HERMOMACUM, one of the many names of towns ending in *acum* in North Gallia, is placed by the Table between Camaracum and Bagacum (*Cambray,* and *Bavay*), and 8 from Bagacum, which is 8 Gallic leagues. D'Anville finds a place *Bermerain,* between *Cambray* and *Bavay,* which he supposes to represent Hermonacum. [G. L.]

HERMONASSA (Ἑρμώνασσα, Dionys. 552; Scymn. *Fr.* 152; Pomp. Mela, i. 19. § 5; Ptol. v. 9; Steph. B. *s. v.*), a place lying between Sindica and Phanagoria, which Rennell (*Compar. Geog.* vol. ii. p 331) fixes at the opening of the lake into which the *Kuban* river flows. [E. B. J.]

HERMONTHIS (Ἑρμωνθις, Steph. B. *s. v.*; Strab. xvii. p. 817; Aristid. *Aegyptiae,* p. 568; Herm unthis, *It. Anton.* p. 160; Plin. v. 9. § 11; Macrob. *Saturn.* i. 21), the modern *Erment,* was the chief town of the Hermonthite nome in the Thebaïd — "Thebaïs Superior" of the Itineraries. It stood about eight miles SW. of Thebes, and 24 NE. of Latopolis, in lat. 25° 10′ N. A little above Hermonthis the sandstone rocks which had confined the Nile like a wall disappear, and limestone hills succeed, leaving, especially on the western bank of the river, wider margins of cultivable land. In a plain of this expanding character, and on the left side of the Nile, stood Hermonthis. In the Pharaonic times it was celebrated for the worship of Isis, Osiris, and their son Horus. Its ruins still attest the magnificence of its buildings; but the Iseion, of which the remains are extant, was built in the reign of the last Cleopatra (B. C. 51—29), and the sculptures appear to allude to the birth of Caesarion, her son by Julius Caesar, symbolised as that of the god Harphre, the son of Mandou and Ritho. Its astronomical ceiling is probably genethliacal, referring to the aspect of the heavens at the time of Caesarion's nativity. Adjacent to the temple are the vestiges of a tank, which probably served as a Nilometer, since its sides exhibit the grooves usual in such basins. Under the later Caesars, Hermonthis was the headquarters of the Legio IIda Valentiniana. (Champollion, *L'Egypte,* vol. i. p. 195.) [W. B. D.]

HERMO'POLIS MAGNA (Ἑρμοῦ πόλις μεγάλη, Steph. B. *s. v.*; Ptol. iv. 5. § 60; Hermopolis, Ammian, ii. 16; Hermupolis, *It. Anton.* pp. 154, seq.; Mercurii Oppidum, Plin. v. 9. § 11: *Eth.* Ἑρμεοπολίτης or Ἑρμοπολίτης), the modern *Eshmoon,* was situated on the left bank of the Nile, about lat. 27° 4′ N., and was the capital of the Hermopolite nome in the Heptanomis. It is sometimes, indeed, as by Pliny, reckoned among the cities of Upper and not of Middle Egypt. Hermopolis stood on the borders of these divisions of Egypt, and, for many ages, the Thebaïd or upper country extended much further to the N. than in more recent periods. As the border town, Hermopolis was a place of great resort and opulence, ranking second to Thebes alone. A little to S. of the city was the castle of Hermopolis, at which point the river craft from the upper country paid toll (Ἑρμοπολιτάνη φυλακή, Strab. xvii. p. 813; Ptol. *l. c.*; the *Bahr Jusuf* of the Arabians). The grottos of Beni-hassan, near Antinoöpolis, upon the opposite bank of the Nile, were the common cemetery of the Hermopolitans, for, although the river divided the city from its necro-

polis, yet, from the wide curve of the western hills at this point, it was easier to ferry the dead over the water than to transport them by land to the hills. The principal deities worshipped at Hermopolis were Typhôn and Thoth. The former was represented by an hippopotamus, on which sat a hawk fighting with a serpent. (Plut. *Is. et Osir*, p. 371, D.) Thoth or Tauth, the Greek Hermes, the inventor of the pen and of letters, the Ibis-headed god, was, with his accompanying emblems, the Ibis and the Cynocephalus or ape, the most conspicuous among the sculptures upon the great portico of the temple of Hermopolis. His designation in inscriptions was "The Lord of Eshmoon." This portico was a work of the Pharaonic era; but the erections of the Ptolemies at Hermopolis were upon a scale of great extent and magnificence, and, although raised by Grecian monarchs, are essentially Egyptian in their conception and execution. The portico, the only remnant of the temple, consists of a double row of pillars, six in each row. The architraves are formed of five stones; each passes from the centre of one pillar to that of the next, according to a well-known usage with Aegyptian builders. The intercolumnation of the centre pillars is wider than that of the others; and the stone over the centre is twenty-five feet and six inches long. These columns were painted yellow, red, and blue in alternate bands, and the brilliancy of the colours is well represented in Minutoi's 14th plate. There is also a peculiarity in the pillars of the Hermopolitan portico peculiar to themselves, or, at least, discovered only again in the temple of *Gournou*. (Dénon, *L'Egypte*, plate 41.) Instead of being formed of large masses placed horizontally above each other, they are composed of irregular pieces, so artfully adjusted that it is difficult to detect the lines of junction. The bases of these columns represent the lower leaves of the lotus; next come a number of concentric rings, like the hoops of a cask; and above these the pillars appear like bunches of reeds held together by horizontal bonds. Including the capital, each column is about 40 feet in height; the greatest circumference is about 28½ feet, about five feet from the ground, for they diminish in thickness both towards the base and towards the capital. The widest part of the intercolumnation is 17 feet; the other pillars are 13 feet apart. Hermopolis comparatively escaped the frequent wars which, in the decline both of the Pharaonic and Roman eras, devastated the Heptanomis; but, on the other hand, its structures have suffered severely from the ignorance and cupidity of its Mohammedan rulers, who have burned its stones for lime or carried them away for building materials. [W. B. D.]

HERMO'POLIS PARVA (Ἑρμοῦ πόλις μικρά, Steph. B. *s. v.*; Strab. xvii. p. 802; Ptol. iv. 5. § 46; *It. Anton.* p. 154), the modern *Damanhur*, was a city of the Egyptian Delta, in the nome of Alexandria, or, as it was sometimes described, the chief town of a Deltaic Hermopolite nome. It stood in lat. 31° N. on the banks of a canal which connected the lake Mareotis with the Canopic or most westerly arm of the Nile. It was 44 miles SE. of Alexandria. (Champollion, *L'Egypte*, vol. ii. p. 249.) There were, besides, two other towns of the same name: 1. on an island near the city Butosos (Strab. xvii. p. 802); 2. another a little below Thmuis (Strab. *l. c.*; Steph. B. *s. v.*). [W. B. D.]

HERMUNDU'RI (Ἑρμουνδούροι or Ἑρμάνδοροι), a large and powerful tribe of Germany, occupying the extensive country between the mountains in the north-west of Bohemia and the Roman wall in the south-west, which formed the boundary of the Agri Decumates. On the east they bordered on the Narisci, in the north-east on the Cherusci, and in the north-west on the Chatti. The accounts of the ancients about the Hermunduri are very contradictory. They belonged no doubt to the Suevi; but respecting their earliest place of abode, and the reasons which induced them to quit their homes, nothing is known. They first appear in history at the time of Domitius Ahenobarbus, as a host expelled from their country and wandering about, until Ahenobarbus assigned to them a part of the territory of the Marcomanni, between the Main and the Danube. That district had been abandoned by the Marcomanni, and continued to be inhabited by the Hermunduri at the time of Tacitus, who describes them as friends of the Romans. (Dion Cass. *Fragm.* 32, ed. Morell.; Tac. *Germ.* 41.) Their original country was, according to some, in the north of Bohemia and the neighbouring mountains; for Tacitus places the sources of the Albis in the country of the Hermunduri, while Strabo (vii. p. 290) places them beyond the Albis. At all events, however, they were always hostile to the Marcomanni. (Tac. *Ann.* ii. 63, xii. 29, xiii. 57.) After the overthrow of Maroboduus and Catualda, which they themselves had assisted to effect (Tac. *Ann.* ii. 63), they spread in a north-eastern direction, taking possession of the north-western part of Bohemia and the country about the sources of the *Main* and *Saale*, that is, the part of Franconia as far as *Kissingen*, and the south-western part of the kingdom of Saxony. (Vell. Pat. ii. 106; Tac. *Ann.* xiii. 57.) Henceforth they continued to occupy that extensive country, and soon after we find them allied with their old enemies, the Marcomanni, in their war against the Romans. (Jul. Capitol. *M. Anton.* 22; Eutrop. viii. 13.) After this war they are no longer mentioned, but seem to be comprised under the general name of the Suevi; for Jul. Capitolinus expressly mentions the Hermunduri on the same occasion, where others, such as Eutropius and Orosius (vii. 15), speak only of Suevi. Even Ptolemy appears not to have known them, for, in ii. 11. § 24, he enumerates in their country quite different tribes, which are otherwise unknown to us. The name Hermunduri is believed by some to signify highlanders, and to be a compound of *Her* = *Ar*, that is "high," and *Mund* = Man. (Wilhelm, *Germanien*, pp. 208, fol.) [L. S.]

HERMUS. [ATTICA, p. 325, b.]

HE'RNICI (Ἕρνικοι, Strab.; Ἔρνικες, Dionys.), a people of Central Italy, whose territory was in later times included in Latium, but who appear in the early history of Rome as a separate and independent nation. They inhabited the upper valley of the Trerus or *Sacco*, together with the mountain district N. of that river; and bordered on the Aequians towards the N., and on the Volscians to the S. and E. We are told that their name was derived from an old Sabine or Marsic word "herna," signifying a rock, an appellation well suited to the character of their country, the "Hernica saxa" of Virgil. (Virg. *Aen.* vii. 684; Serv. *ad loc.*; Festus, *v. Hernici.*) This derivation would seem to point to their being a race akin to the Sabines; and Servius distinctly calls them a Sabine colony (Serv. *ad Aen. l. c.*): nor does there seem to be any reason to reject this statement, although the authority of that commentator is in itself of little weight (Niebuhr vol. i.

p. 102). An older commentator on Virgil assigns them a Marsic origin (Schol. Veron. *ad Aen. l. c.*), which comes to much the same thing, as the Marsi were certainly closely related to the Sabines. [MARSI.] On the other hand, Julius Hyginus (*ap. Macrob.* v. 18) affirmed that the Hernicans were a Pelasgic race; and Macrobius regards the description of their arm and attire given by Virgil as pointing to the same conclusion. No value can, however, be attached to this inference: and the former tradition seems to be the best attested, as well as in itself the most probable. The peculiarly close relation which we find subsisting between the Hernicans and Latins, probably arose from their common interest in opposing their formidable neighbours, the Aequians and Volscians, rather than from any community of origin.

The Hernicans first appear in Roman history in the reign of Tarquinius Superbus, when, according to Dionysius, they concluded a treaty of alliance with that monarch, who sought to unite the Hernicans and Latins into one common league with Rome. (Dionys. iv. 49.) This fact is not noticed by Livy, but is not in itself improbable; and the alliance thus concluded may have been only the forerunner of that which we know to have existed at a later period. An ancient tradition, indeed, not noticed by the historians, but preserved to us by Festus (*s. v. Septimontium*), represents the Hernican chief, Laevius Cispius of Anagnia, as conducting a body of auxiliaries to Rome at a still earlier period. But it is probable that this legend, as so often happens in the early history of Rome, is chronologically misplaced. After the expulsion of the Tarquins, the Hernicans appear for a short time on terms of hostility with Rome (Liv. ii. 22, 40; Dionys. vi. 5, 50): but this state of things was soon terminated by a treaty, which established between the two nations those relations of amicable alliance which from this time subsisted for a long period without interruption (Liv. ii. 41; Dionys. viii. 69). It is true that this treaty, which was concluded by Sp. Cassius in B. C. 486, is represented by the Roman historians as granted to the Hernicans after they had been vanquished in war; and Livy even tells us that they were deprived by it of two-thirds of their territory, but this appears wholly inconsistent with the position in which we afterwards find them: and there is every probability that Dionysius is correct in stating that the treaty with the Hernicans was a counterpart of that concluded seven years before, by the same Sp. Cassius, with the Latins. (Niebuhr, vol. ii. p. 87.) The motive for both treaties was indeed obviously the same—the necessity of combining their forces against the increasing power of the Aequians and Volscians. The latter people had already made themselves masters of the Hernican town of Ferentinum, and were threatening to drive the Hernicans from the whole valley of the Trerus. The statement of Livy already alluded to, may possibly, as suggested by Niebuhr, have arisen from a misconception of the fact that a third of all conquered lands, as well as of the booty taken in war, was thenceforth to be assigned to the Hernicans: a condition which is expressly stated by Dionysius (viii. 71, 77), and which shows that they entered into the league as an equal and independent power. From this time forth, during a period of more than a century, they continued, in pursuance of the terms of their alliance, to take part with the Romans and Latins in their long and continuous struggle against the Aequians and Volscians, and they were even, from their position, often the first to bear the brunt of hostilities. (Liv. iii. 6; Dionys. ix. 5, 67, x. 20.)

But the relations which had so long subsisted between the Hernicans and Rome, appear to have been broken up by the great Gaulish invasion; and soon after the capture of the city, in B. C. 387, we find the Hernicans as well as the Latins appearing in arms against the republic, and even lending assistance to their old enemies the Volscians. (Liv. vi. 2, 6, 8, 11, 17, &c.) From this time they appear to have been sometimes in open hostility; at others a suspension of arms at least must have taken place; but in B. C. 361, after an interval of some years, during which a precarious peace seems to have existed, the whole Hernican nation took up arms, and engaged with all their forces in the struggle with Rome. (Id. vii. 6—9.) Though at first successful, they were afterwards twice defeated by the Romans, and the strong city of Ferentinum taken; but still the war seems to have lingered on, till, in B. C. 358, we are told that the Hernicans were defeated and subdued ("devicti subactique sunt") by the consul C. Plautius. (Liv. vii. 15; Fast. Capit.) The exact force of these expressions, and the terms on which they were now reduced to submission, we are left to conjecture; but it seems certain that they were either effectually humbled, or again admitted to such favourable terms as secured them to the Roman alliance, for, even on occasion of the great outbreak of the Latins in B. C. 340, the Hernicans did not follow their example, but were steadfast to the Roman cause. At a later period they were less faithful: in B. C. 306, it was discovered that Hernican auxiliaries had fought in the ranks of the Samnites against Rome; and an investigation being ordered by the senate, the Hernicans resented this interference, and declared war against Rome. Their counsels were, however, divided; and though Anagnia, their chief city, put itself at the head of the warlike party, the three powerful cities of Alatrium, Ferentinum, and Verulae refused to take part in hostilities. The consequence was that the war was carried on with little spirit, and the consul Q. Marcius in a single campaign was able to reduce the whole people to subjection. (Liv. ix. 42, 43; Fast. Capit.) Their relations to the conquerors were now established on a permanent footing; the three cities that had taken no part in the war were allowed to retain their own laws and magistrates, with the privileges of mutual intercourse, while Anagnia, and the other towns that had taken arms against Rome, received the nominal boon of the Roman civitas, but without the right of suffrage; their magistrates were deprived of all civil jurisdiction, and they were reduced to the subordinate and degraded condition of praefecturae. (Liv. *l. c.*; Festus, *v. Praefectura.*)

From this time the Hernicans disappear from history. They must have obtained the full rights of Roman citizens by the Lex Julia in B. C. 90, and became gradually merged in that condition, in common with the Latins and Volscians. But though their territory was included in Latium, in the sense in which that term was understood in the days of Augustus, the Hernicans were still distinguishable as a separate people, and are mentioned even at a later time as retaining many characteristics of their rude and simple forefathers. (Juv. *Sat.* xiv. 180.) The exact limits of their territory

cannot be fixed with any certainty, and they probably varied at different times, as did those of the neighbouring Volscians. The only cities which we can assign to them with certainty are, ANAGNIA, the capital or chief city of the league, FERENTINUM, ALATRIUM, and VERULAE, to which may be added the small town of CAPITULUM, and probably also TREBIA. FRUSINO appears to have been a Volscian rather than a Hernican town, though it may have originally belonged to the latter people. But it is evident from a passage of Livy, in which he tells us that *all the states of the Hernicans* ("omnes Hernici nominis populi," ix. 43), besides the four above mentioned, joined in the war against Rome, that there must have been several other towns of sufficient importance to have taken part in the war, and in the assembly which preceded it, as independent states. And it is at least a plausible inference of Niebuhr's, that, of the 47 cities stated by Dionysius to have taken part in the sacrifices on the Alban Mount, 16 must have belonged to the Hernicans. It is however probable that these were for the most part merely little mountain towns, of which we are unable to point out either the names or localities. Strabo's statement (v. p. 231) that the Hernicans dwelt near to Lanuvium and Alba and Rome itself, is utterly unintelligible, and is probably nothing more than a mere mistake.

The country of the Hernicans is well characterised by Virgil in a single line, where he speaks of the "roscida rivis Hernica saxa" (*Aen.* vii. 684; Sil. Ital. iv. 226, viii. 393). The mountains on the N. of the valley of the Trerus are everywhere watered with beautiful streams, and clothed with magnificent woods of oak and chesnut, which render them one of the most beautiful regions of the Apennines. They are separated from the range of the Volscian mountains, the Montes Lepini, by the broad and fertile valley of the *Sacco*, which communicates with the plains of Latium by the pass or opening below Praeneste. Towards the interior the Hernican mountains rise in a lofty group or range which separates the valley of the *Sacco* and the upper course of the Anio from the waters of the Liris. Besides the TRERUS or *Sacco*, the only other stream in the land of the Hernici of which the ancient name is preserved to us, is the COSAS (Κόσας, Strab. v. p. 237), still called the *Cosa*, which flows beneath the walls of *Alatri* and *Frosinone*, and joins the *Sacco* about 5 miles below the latter city. [E.H.B.]

HERODEIUM. (Ἡρώδειον, Ἡρώδιον, Ἡρώδια, Suid. *s. v.*) 1. A city and fortress of Palestine, erected by Herod the Great, and situated about 60 stadia from Jerusalem, and not far from Tekoa. (Joseph. *Antiq.* xv. 9. § 4, *B. J.* i. 21. § 10, *B. J.* iv. 9. § 5.) Here on a hill of moderate height having the form of a woman's breast, and which he raised still higher, or at least fashioned by artificial means, Herod erected a fortress with rounded towers, having in it apartments of great strength and splendour. The difficult ascent was overcome by a flight of two hundred steps of hewn stone. At the foot of the mountain he built other palaces for himself and his friends, and caused water to be brought thither from a distance in large quantity and at great expense. The whole plain around was also covered with buildings, forming a large city, of which the hill and fortress constituted the acropolis. (Joseph. *l. c.*) It was to this place apparently, that the body of Herod was brought for burial, 200 stadia from Jericho, where he died. (Joseph. *Antiq.* xvii. 8. § 3, *B. J.* i. 33. § 9.) This city was so important that one of the toparchies afterwards took the same name, and Pliny ("Herodium cum oppido illustri ejusdem nominis," v. 15) mentions it as a town of great note. It does not occur either in Ptolemy or Eusebius and Jerome.

The "Frank Mountain," with which Herodium has been identified, bears in Arabic the name of *el-Fureidîs*, a diminutive of the word signifying Paradise. The mountain has not been usually ascended by travellers; among those who speak of having been upon it are, Von Troilo, Nau, Le Brun, Pococke, Irby and Mangles, and some others. Dr. Robinson (*Researches*, vol. ii. pp. 169—175), whose account has been here followed, describes it as rising steep and round, precisely like a volcanic cone, but truncated. The height above the base cannot be less than from 300 to 400 feet, and the base itself has at least an equal elevation above the bottom of *Wady Urtâs* in the SW., towards which there is a more general descent. There are traces of terraces around the foot of the mountain, but not higher up; nor is there any road to the top or fosse upon the S., as described by Pococke (*Trav.* vol. ii. pt. i. pp. 42, fol.). The top of the mountain, constituting a circle of 750 feet in circumference, is inclosed by the ruined walls of a circular fortress, built of hewn stones of a good size, with four massive round towers standing at each one of the cardinal points. Either the ruins have formed a mound round the circumference, or the middle part of the inclosure was once excavated; it is now considerably deeper than the circumference. The tower upon the E. is not so thoroughly destroyed as the rest, and in it a magazine or cistern may still be seen. The present name of the "Frank Mountain" is known only among the Franks, and is founded on a report that this post was maintained by the Crusaders for 40 years after the fall of Jerusalem; but the silence of the historians of the Crusades, and the small size of the position, lead to the conclusion that this was a legend of the fifteenth century, when, in A.D. 1483, the story first appears, in Felix Fabri (*Evagatorium: de Monte Rama et ejus Oppido fortissimo*, vol. ii. pp. 335—337), and has been repeated under different forms by subsequent travellers.

An earlier mention of this mountain than the times of Herod, or indeed any mention of it in the Scriptures, cannot be assumed with any certainty. Pococke has suggested that it may have been the Beth-Haccerem of the prophet Jeremiah (vi. 1), where the children of Benjamin were "to set up a sign of fire," while they blew the trumpets in Tekoa. Jerome (*Comm. in Jer.* vi. 1) also says that there was a village called Bethacharma, situated on a mountain between Tekoa and Jerusalem. If BETH-ACCAREM was indeed succeeded by the fortress and city of Herod, it is difficult to see why Jerome, who usually employs the Greek names by preference, should here and elsewhere make no allusion to the more important Herodium. (Reland, *Palaestina*, vol. ii. p. 820; Von Raumer, *Palästina*, pp. 220—464; Ritter, *Erdkunde*, vol. xv. pt. i. pp. 617—624; Hirt. *Ueber die Baue Herodes des Gross. Abhand der Berl. Akad.* 1816-1817, p. 5.)

2. Another fortress of the same name was built by Herod on a mountain towards the Arabian frontier (πρὸς Ἀραβίαν ὄρει: Joseph. *B. J.* i. 21. § 10), not "of Arabia," as Dr. Robinson (*Researches*, vol. ii. p. 173) says. [E. B. J.]

HEROO'POLIS (Ἡρώων πόλις or Ἡρῶ, Strab.

xvi. 759, 768, xvii. 803, 804; Arrian, *Exp. Alex.* iii. 5, vii. 20; Joseph. *Ant. Jud.* ii. 7. § 5; Plin. v. 9. § 11, vi. 32. § 33; Mela, iii. 8; Steph. B. *s. v.*; Ptol. ii. 1. § 6, iv. 15. § 54), a city east of the Delta, situated near the mouth of the Royal Canal which connected the Nile with the Red Sea. Although not immediately upon the coast, but nearly due N. of the Bitter Lakes, Heroöpolis was of sufficient importance, as a trading station, to confer its name upon the arm of the Red Sea (Ἡρωοπολίτης κόλπος, Ptol. v. 17. § 1) which runs up the Egyptian mainland as far as Arsinoë (*Suez*) (κόλπος Ἡρώων). (Theophrast. *Hist. Plant.* iii. 8.) It was the capital of the Nomos Heroöpolites or Arsinoites. (Orelli, *Inscr. Lat.* no. 516.) The ruins of Heroöpolis are still visible at *Abu-Keyscheid.* (Champollion, *L'Egypte*, vol. ii. p. 88.) [W. B. D.]

HEROOPOLI'TES SINUS. [Heroopolis; Arabicus Sinus, p. 183, a.]

HERPEDITA'NI. [Mauretania].

HERULI, ERULI, AERULI (Ἔρουλοι, Ἕρουλοι, Αἴρουλοι, also Ἔλουροι, Ἕλουροι, and Αἴλουροι; Etym. Mag. *s. v.* Ἔλουροι), a German tribe first mentioned among the Gothic nations when these latter had established themselves on the north coast of the Euxine, in the reigns of Gallienus and Claudius. (Trebell. Poll. *Gallien.* 13, *Claud.* 6, 12.) Zosimus (i. 41) calls them Scythians. Until that time the Heruli had been independent, and were only allied with the Goths; but Hermanric, the king of the Ostrogoths, after defeating them in a bloody battle, reduced them to the condition of subjects. (Jornand. *de Reb. Get.* 43.) The country on the Euxine was not the original seat of the Heruli, any more than it was the original country of the Goths; and this is manifest from the circumstance that, not long afterwards, Heruli together with Chaviones invaded the western parts of the Roman empire, and apparently settled in the neighbourhood of the Batavi; for, in the reign of Valentinian, they are mentioned together with Batavi as engaged in the service of Rome against the Alemanni. (Amm. Marc. xx. 4, xxv. 10, xxvii. 1, 8.) Afterwards we find them even fighting in Britain; and it is possible that the 700 Heruli who with their ships ravaged the coasts of Galicia and Cantabria, were adventurous descendants of the Heruli who had crossed over into Britain. (Mamert. *Paneg. Maxim.* 6, 7; Amm. Marc. xxvii. 1, 8; Sidon. Apollin. *Epist.* viii. 9.) At the time when the Huns invaded Europe from the east, the Heruli established in the north of the Euxine, in conjunction with other tribes, as the Turcilingi and Rugii, joined Attila (Paul. Diac. *Hist. Misc.* p. 97) and followed his army into Gaul: but subsequently the Heruli allied themselves with other German tribes, and assisted in breaking the power of the Huns; and, in conjunction with the Turcilingi, Sciri, and Rugii, and commanded by Odoacer, who is styled king of the Heruli, they overthrew, in A. D. 476, the Western empire. (Jornand. 46, 50; Paul. Diac. *Hist. Longob.* i. 19.) After the power of the Huns was broken, about A. D. 480, a large body of Heruli established a considerable empire on the Danube, or rather about the upper course of the *Theiss*, as the banks of the Danube were in the hands of the Rugii, Longobardi, and Gepidae. The second of these tribes, however, soon became subject to the Heruli. (*Vita S. Severini*, 24; Procop. *B. G.* ii. 14.) The great power of the Heruli in those parts is attested by the fact that Theodoric, the Ostrogoth, solicited their alliance against the Franks, declaring their king his son in arms. (Cassiod. *Var.* iii. 3, iv. 2.) But about A. D. 512 the Longobardi, impatient to bear the rule of the Heruli any longer, rose in arms against them, and almost destroyed them. The survivors, after wandering about for some time, turned southward, where some received settlements within the Roman dominions; while others, disdaining, it is said, to seek the protection of the Eastern empire, migrated northward, and established themselves in Scandinavia. (Procop. *B. G.* ii. 14, 15; Jornand. *de Reb. Get.* 12.) Those Heruli who had received settlements in lower Pannonia remained a dangerous and unruly horde, in consequence of which they were severely chastised by the emperors Anastasius and Justinian, under the latter of whom they adopted the Christian religion. About the same time they murdered their own king Ochon, and then petitioned Justinian to appoint another king, while they addressed a similar request to their brethren in Scandinavia. Justinian gave them a king Suartua, and soon after Todasius was recommended by the Scandinavian Heruli. After the expulsion of Suartua, the greater part of these Pannonian Heruli, led on by Todasius, emigrated and joined the Gepidae; but a minority remained behind and faithful to the empire, so that, in the war against the Gepidae, Heruli were arrayed against Heruli. Henceforth these fierce warriors distinguished themselves in the wars of the Eastern empire against the Ostrogoths in Italy, as well as in the wars which were carried on at that time in Asia and Africa. (Procop. *B. G.* ii. 11, 13, 22, iii. 13, iv. 26, 28, 31, *B. Pers.* i. 13, 14, ii. 24, 25, *B. Vandal.* ii. 4, 17.) During these wars the Heruli were distinguished for their boldness and bravery; but their habits and customs appear to have been of a very barbarous character, for they are said to have put to death the aged and the sick, that they might not be a burden upon the others, and to have required of every widow to make away with herself on the tomb of her husband.

In regard to the country originally inhabited by the Heruli, before they appeared in the north of the *Black Sea*, nothing satisfactory can be said. Jornandes is inclined to believe them to have come, like the Goths, from Scandinavia; while, according to Mamertinus (*Panegyr. Maxim.* 4) and Sidonius Apollinaris (*Ep.* viii. 9), it would seem that their original abodes, like those of the Goths, were on the coast of the Baltic, on the east of the Vistula. They appear to have consisted of unsettled hordes, and to have sought warlike occupations wherever they were to be found; hence they appear in the most distant parts of the Roman empire, from the mouth of the Danube to that of the Rhine: they probably did not acquire the character of a compact nation until they settled on the banks of the Danube or the *Theiss.* (Comp. Latham, *Epileg. to Tac. Germ.* pp. xciv. fol.) [L. S.]

HESBON (Ἐσεβών, LXX., Hesych.; Ἐσσεβών, Euseb. *Onom.*: *Eth.* Ἐσσεβών, Ἐσσεβωνῖτις, *Judith*, v. 15; Χασφών Χασχώρ; 1 *Macc.* v. 26, 36: *Hesbân*, *Hisbân*), a town in the territory of the Hebrews, E. of the Jordan, and parallel with Jericho, nearly midway between the rivers Jabbok and Arnon. It originally belonged to the Moabites, but had been wrested from them by their northern neighbours the Amorites a short time before the arrival of the Israelites from Aegypt. (*Numbers*, xxi. 23—26; comp. Ewald, *Gesch. des Volkes Israel*, vol. ii. p. 212.) At that time it was the capital of Sihon, the Amoritish chieftain who "reigned in Heshbon." (*Numbers*,

xxi. 26; *Deut.* ii. 9; *Josh.* iii. 10.) It belonged to the tribe of Reuben (*Numbers*, xxxii. 37; *Josh.* xiii. 17); but, as it was on the confines of Gad, is sometimes assigned to the latter tribe (*Josh.* xxi. 39; 1 *Chron.* vi. 81). When the ten tribes were carried off, Hesbon fell into the hands of the Moabites, and is mentioned by the prophets in their denunciations against that people. (*Is.* xv. 4; *Jer.* xlviii. 2, 34, 45.) Under king Alexander Jannaeus it was again reckoned as a Jewish city. (Joseph. *Ant.* xiii. 15. § 4.) Ptolemy (v. 17) mentions it under the name Esbuta (Ἐσβούτα), and the "Arabes Esbonitae" of Pliny (v. 12) must be referred to this place. Eusebius and Jerome (*Onom.*) speak of it as a place of some consequence in their day, under the name of Esbus (Ἐσβούς), at a distance of 20 M. P. from the river Jordan. There is a coin of the emperor Nero, with the epigraph HEEBA, the type a female figure with a crown and palm. (Mionnet, *Supplément*, vol. viii. p. 387.) But the best known are the coins of Caracalla, with the type a temple of Astarte, or a "Deus Lunus" with a Phrygian cap, and the epigraph ECBOT. (Eckhel, vol. iii. p. 503; Mionnet, vol. v. p. 585.) It occurs in the list of the Eparchies of Arabia under the name of Ἔσβους. (Reland, *Notit. Vet. Eccles.* p. 218), but is not mentioned by Hierocles, though a πόλις Ἐσβούντων occurs in the Acts of the Council of Chalcedon. Under the name of *Chosban* it became the metropolis of *El-Belka*. (Abú-l-fedá, *Tab. Syr.* p. 11.)

The region of the *Wady Hesbán* was first visited in modern times by Seetzen (Zach's *Monatl. Corr.* xviii. p. 431), then by Burkhardt (*Trav.* p. 365), and afterwards by Irby and Mangles (*Trav.* p. 471). These latter writers speak of the "ruins as uninteresting, and the only pool they saw too insignificant" for the "fish-ponds" famous in Hebrew poetry. (*Cant.* vii. 4.) Near the tent village of *Hüsban* are the ruins of ancient Hesbon, where there are some wells excavated in the rock, a ruined castle, and a large cistern, which only requires to be cleared of the rubbish to be still available. (Chesney, *Exped. Euphrat.* vol. i. p. 516.)

(Reland, *Palestina*, vol. ii. p. 720; Rosenmüller, *Handbuch der Bibl. Alt.* vol. ii. pt. i. p. 266; Von Raumer, *Palästina*, p. 253; Winer, *Biblisches Realwörterbuch*, *s. v.*; Ritter, *Erdkunde*, vol. xv. pp. 114, 143, 574, &c.) [E. B. J.]

HESPE'RIA. [ITALIA.]

HESPE'RIDES or HE'SPERIS (Ἑσπερίδες, Ἑσπερίς), afterwards BERENI'CE (Βερενίκη: *Ben Ghazi*, Ru.), the westernmost city of the Cyrenaic Pentapolis, stood just outside the E. extremity of the Great Syrtis, on a promontory called Pseudopenias, and near the river Lathon. It seems to have derived its name from the fancy which found the fabled Gardens of the Hesperides in the fertile terraces of Cyrenaica; and Scylax distinctly mentions the gardens and the lake of the Hesperides in this neighbourhood, where we also find a people called Hesperidae, or, as Herodotus names them, Euesperidae. Its historical importance dates from the reign of the Ptolemies and it was then named Berenice after the wife of Ptolemy III. Euergetes. It had a large population of Jews. (Strab. xvii. p. 836; Mela, i. 8; Plin. v. 5; Solin. 27, 54; Ammian. Marc. xxii. 16; Steph. B. *s. v.* Ἑσπερίς; Hierocles, p. 733, where the name is Βερονίκη; *Stadiasm.* p. 446, Βερνικίς; *Itin. Ant.* p. 67, Beronice; *Tab. Peut.*, Bernicide; Ptol. iv. 4. § 4, viii. 15. § 3.) Having been greatly reduced by that decline of commercial importance and those ravages of the barbarians which were so severely felt by all the cities of the Pentapolis [CYRENAICA], it was fortified anew by Justinian, who also adorned it with baths. (Procop. *de Aedif.* vi. 12.) Its name is sometimes as an epithet for Cyrenaica, in the form of the adjective Berenicis. (Sil. Ital. iii. 249; Lucan, ix. 524: Beechey, Della Cella, Pacho, Barth.) [P.S.]

HESPE'RIDUM HORTI. [HESPERIDES.]

HESPE'RIDUM LACUS. [HESPERIDES.]

HE'SPERIS. [HESPERIDES.]

HESPE'RIUM PROMONTORIUM. [LIBYA.]

HESSUS (Ἧσσός: *Eth.* Ἥσσιος), a town of the Locri Ozolae, upon the coast of the Corinthian gulf, and on the road to Naupactus. Its exact site is uncertain, but it is probably represented by the Hellenic remains at *Vitharí* or *Polypórtu*. (Thuc. iii. 101; Steph. B. *s. v.*; Leake, *Northern Greece*, vol. ii. p. 620.)

HETRICULUM. [BRUTTII.]

HETRU'RIA. [ETRURIA.]

HEXI. [SAXETANUM.]

HIBE'RNIA. [IERNE.]

HICE'SIA. [AEOLIAE INSULAE.]

HI'ERA (Ἱερά), the name of several islands.

1. One of the Aegates. [AEGATES, No. 1.]

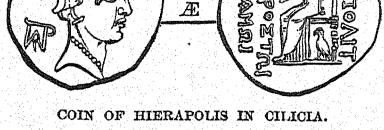
2. One of the Aeolian or Liparaean islands. [AEOLIAE INSULAE.]

3. An island close to Calaureia, to which it is now united. [CALAUREIA.]

4. A small island between Thera and Therasia [THERA.]

HIERA SYCAMINUS (Ἱερὰ Συκάμινος, Ptol. iv. 5. § 74; Συκάμινος, Philostrat. *Vit. Apoll.* vi. 2; Plin. vi. 29. s. 32; *It. Anton.* p. 162), the southern frontier town of the Regio Dodecaschoenus. [AETHIOPIA.] The island Tachompso had been the original boundary; but the Romans extended it southward to Hierasycaminos. Here Apollonius of Tyana (Philostrat. *l. c.*) found one of those African markets in which wares,—gold, linen, ivory, and gums,—are exposed for sale, while the buyers and sellers kept apart from each other until each party had deposited a satisfactory equivalent. Hiera Sycaminos is now probably represented by *Wady Maharrakah*, where the ruins of a temple are still visible. The distance between Syene, the N. boundary of this district, and *Wady Maharrakah* (720 stades = 12 schoeni = 90 miles), favours this supposition. Lat. 22° N. [W. B. D.]

HIERA'CON (*It. Anton.* p. 167) or THERACON (*Not. Imp.*), was a castle of Upper Egypt, situated on the right bank of the Nile. Here, in Roman times, was quartered the cohors prima of the Lusitanian auxiliaries. It stood nearly midway between the W. extremity of Mons Alabastrites and the city of Lycopolis, lat. 27° 15′ N. Hieracon (Ἱεράκων κώμη, Ptol. vi. 7. § 36) is to be distinguished from Hieracompolis (Ἱεράκων πόλις, Strab. xvii. p. 817), which was S. of Thebes, lat. 25° 5′ N., nearly opposite the town of Eileithuia. [W. B. D.]



HIERA'POLIS (Ἱεράπολις: *Eth.* Ἱεραπολίτης). 1. A considerable town in Phrygia, situated upon a height between the rivers Lycus and Maeander, about five miles north of Laodiceia, and on the road from Apameia to Sardis. It was probably founded by the Greeks, though we have no record of the time or circumstances of its foundation. It was celebrated for its warm springs and its Plutonium, to which two circumstances it appears to have owed its sanctity. The warm springs formed stalactites and incrustations. (Strab. xiii. p. 629; Vitruv. viii. 3.)

The Plutonium was a deep cave with a hollow opening, from which a mephitic vapour arose, which poisoned any one who inhaled it, with the exception of the Galli, who are said to have received no injury from it; but it appears to have lost its poisoning influence in the time of Ammianus. (Strab. *l. c.*; Plin. ii. 93. s. 95; Dion Cass. lxviii. 27; Amm.Marc. xxiii. 6.) The waters of Hierapolis were much used for dyeing. (Strab. xiii. p. 630.) Among the deities worshipped in Hierapolis the Great Mother of the Gods is especially named. (Plin. ii. 93. s. 95.) There was a Christian church in this town as early as the time of St. Paul. (*Coloss.* iv. 13.) At a later time it claimed the title of metropolis of Phrygia. (Hierocles, p. 665, with Wesseling's notes.) It was the birthplace of the philosopher Epictetus. The ruins of Hierapolis are situated at an uninhabited place called *Pambuk-kalessi*. They are of considerable extent, and have been visited and described by several modern travellers, who have also noticed the stalactites and incrustations mentioned by Strabo. Chandler speaks of a cliff as one entire incrustation, and describes it as "an immense frozen cascade, the surface wavy, as of water at once fixed, or in its headlong course suddenly petrified." (See the Travels of Pococke, Chandler, Arundell, Leake, Hamilton, and Fellowes.)

COIN OF HIERAPOLIS IN PHRYGIA.

2. A city of Cilicia, known only from coins, from which however we learn that it was situated upon the river Pyramus (Ἱεροπολίτων τῶν πρὸς τῷ Πυράμῳ: see below). The name of this city is always written Hieropolis, while that of Phrygia is Hierapolis. From the absence of all mention of this Cilician town by the ancient writers, Eckhel conjectures that it is a more recent name, and that it is perhaps the same place as Megarsus, since we find upon the coins of the latter Μεγαρσῶν τῶν πρὸς τῷ Πυραμῷ. (Eckhel, vol. iii. p. 57.)

COIN OF HIERAPOLIS IN CILICIA.

HIERA'POLIS (Ἱερὰ πόλις), the "Sacred City" of Cyrrhestica in Syria, situated on the high road from Antioch to Mesopotamia, 24 M. P. to the W. of the Euphrates and 36 M. P. to the SW. of Zeugma (*Peut. Tab.*), 2½ days' journey from Beroea, and 5 days' from Antioch (Zosim. iii. 12).

Hierapolis, or Hieropolis as it is called always on coins and in Stephanus of Byzantium, obtained its Hellenic name from Seleucus Nicator (Aelian, *H. A.* xii. 2), owing to the circumstance of BAMBYCE (Βαμβύκη), as it was called by the natives, being the chief seat of the worship of the "Syrian goddess" Astarte, or personification of the passive powers of Nature. (Lucian, *de Dea Syr.* c. i.)

"Bambycen quae alio nomine Hierapolis vocatur; Syris vero Magog. Ibi prodigiosa Atargatis, Graecis autem Derceto dicta, colitur," Plin. v. 19. Sillig (*ad loc.*) has in his text "Mabog," which is the correct reading, and appears in the Oriental forms "Munbedj" (Jaubert, *Géog. d'Edrisi*, vol. ii. pp. 138, 155), "Manbesja," "Manbesjum" (Schultens, *Vita Salad.*), "Menba," "Manba" (Schultens, *Index Geogr.*), "Manbegj" (Abú-l-fedá, *Tab. Syr.* p. 128), and the modern name *Karâ Bambuche*, or *Buyúk Mumbedj*. Under the Seleucidae, from its central position between Antioch and Seleuceia on the delta of the Tigris, it became a great emporium. Strabo (xvi. p. 748) has given an interesting account of the passage of the caravans from Syria to Seleuceia and Babylon; the confusion of Edessa and Hierapolis is an error probably of the transcriber (comp. Groskurd, *ad loc.*). Crassus plundered the rich temple of the goddess, who presided over the elements of nature and the productive seeds of things, and seized upon the treasures, which it took several days to weigh and examine. And it was here that an ill omen befel him. (Plut. *Crass.* 17.)

Under Constantine, Hierapolis became the capital of the new province Euphratensis. (Malal. *Chron.* xiii. p. 317.) Julian, in his Persian campaign, appointed Hierapolis as the rendezvous for the Roman troops before their passage of the Euphrates. He has given an account of his march to it, which took up five days, in a letter to Libanius (*Ep.* xxvii.), and remained there three days, at the house of Sopater, a distinguished pupil of Iamblichus. At Hierapolis one of those unlucky signs which Ammianus (xxiii. 2. § 6) has so carefully recorded, took place at his entrance into the town. (Comp. Gibbon, c. xxiv.; Le Beau, *Bas Empire*, vol. iii. p. 58.)

With the establishment of Christianity, Hierapolis recovered its ancient indigenous Syrian name, but lost its splendour and magnificence by the downfall of the old worship (A.D. 540). Buzes, who commanded during the absence of Belisarius in the East, concentrated his forces at Hierapolis, but it only escaped being pillaged by Chosroes by the payment of tribute. (Procop. *B. P.* ii. 6; Gibbon, c. xlii.; Le Beau, vol. ix. p. 12.)

A.D. 1068 it was captured by the emperor Romanus Diogenes, in his valiant efforts to resist the progress of the Turks. (Zonar. vol. ii. p. 279; Le Beau, vol. xiv. p. 472.)

It does not fall within the province of this article to trace the connection between Bambyce = "Bombycina urbs," "Bombyciis copiis gaudens," and the introduction of the silk-worm from the East; much curious information on this point will be found in Ritter (*Erdkunde*, vol. x. pp. 1056—1062).

The ruins of this city were first discovered and described by Maundrell (*Journal*, p. 204) and by Pococke (*Trav.* vol. ii. pt. i. p. 166). But it was not till the period of Colonel Chesney's Expedition that the position was accurately fixed.

At a distance of 16 miles W. by S. of the passage of *Kal'-at-en-ejm*, at about 600 feet above the Euphrates, the ruins of Hierapolis occupy the centre of a rocky plain, where, by its isolated position, the city must not only have been deprived of running water, but likewise of every advantage which was likely to create and preserve a place of importance.

Some ruined mosques and square Saracenic towers, with the remains of its surrounding walls and ditches, mark the limits of the Muslim city, within which are four large cisterns, a fine sarcophagus, and, among other ancient remains, the scattered ruins of an acropolis and two temples.

Of the smaller, the inclosure and portions of seven columns remain; but it seems to possess little interest compared with the larger, which may have been that of the Syrian "Queen of Heaven." Among the remains of the latter are some fragments of massive architecture, not unlike the Aegyptian, and 11 arches form one side of a square paved court, over which are scattered the shafts of columns and capitals displaying the lotus.

A little way to the W. of the walls there is an extensive necropolis, which contains many Turkish, with some Pagan, Seljukian, and Syriac tombs; the last having some almost illegible inscriptions in the ancient character. (Chesney, *Exped. Euphrat.* vol. i. p. 516.) Hierapolis was the ecclesiastical metropolis of the province Euphratensis. (Neale, *Hist. of East. Church*, vol. i. p. 134.)

Eckhel (vol. iii. p. 261) has noticed the fact, that the coins of Hierapolis copy the type of those of Antioch: they are Seleucid, autonomous, and imperial, ranging from Trajan to the elder and younger Philip. [E. B. J.]

HIERAPYTNA (Ἱεράπυτνα, Strab. ix. p. 440, x. pp. 472, 475; Plin. iv. 20; Ἱερὰ Πύτνα, Ptol. iii. 17. § 4, where some MSS. have Ἱερὰ Πέτρα; Steph. B.; Inscrip. *ap.* Gruter, p. 595; Ἱεράπυδνα, Dion Cass. xxxvi. 8; Hierocl. Ἱερά Πύδνα, *Stadiasm.*; Hiera, *Peut. Tab.*), a town of Crete, of which Strabo (*l. c.*) says that it stood in the narrowest part of the island, opposite Minoa. Hierapytna, according to the Coast-describer, was 180 stadia from Biennus, which agrees with the distance of 20 M. P. assigned to it by the Peutinger Table. It was a town of great antiquity, and its foundation was ascribed to the Corybantes; it bore the successive names of Cyrba, Pytna, Camirus, and Hierapytna. (Strab. p. 472; Steph. B. *s. v.*) From an inscription preserved among the Oxford marbles, it appears that the Hierapytnians were at one time allied with the neighbouring city of Priansus. (Böckh, *Corp. Inscrip. Graec.* n. 2556; Höck, *Kreta*, vol. iii. p. 472.) Traces of this city have been found at the *Kastéle* of *Hierápetra*. (Pashley, *Trav.* vol. i. p. 271.) There are both autonomous and imperial coins belonging to Hierapytna; the symbol on the former is generally a palm tree. (Eckhel, vol. ii. p. 313.) [E. B. J.]

COIN OF HIERAPYTNA.

HIERASUS FL. (Ἱέρασος, Ptol. iii. 8. § 4), a river of Dacia, which has been identified with the TIARANTUS (Τιαραντός, Herod. iv. 48; Schafarik, *Slav. Alt.* vol. i. p. 506). Perhaps the river now called *Seret*. [E. H. B.]

HIERA'TIS (Ἱέρατις, Arrian, *Ind.* c. 39), a town belonging to the province of Persis, on an island formed by a channel from a river in the neighbourhood. The whole country in its immediate neighbourhood appears to have been a peninsula, and to have borne the name in ancient times of Mesambria. It is not easy to fix its exact position; but it could not have been far from the modern *Abushir*. (Vincent, *Voy. of Nearchus*, vol. i. p. 390.) [V.]

HIERICUS. [JERICHO.]

HIEROMIAX. [JORDANES.]

HIERON ACRON (Ἱερὸν ἄκρον; Sacrum Promontorium), in Ireland, mentioned by Ptolemy (iii. 2. § 6) as the south-eastern point of the island= *Carnsore Point*. [R. G. L.]

HIERO'POLIS. [HIERAPOLIS.]

HIEROSO'LYMA. [JERUSALEM.]

HILLEVIO'NES, according to Pliny (iv. 27) the general name for all the inhabitants of Scandinavia. The name is not mentioned by Tacitus, who (*Germ.* 44, 45) divides all the inhabitants of Scandinavia into two groups, called *Suiones* and *Sitones*. The Hilleviones form one of the great groups into which all the German tribes were divided. (Comp. GERMANIA.) [L. S.]

HIMELLA, a river in the country of the Sabines, mentioned by Virgil in the same line with Casperia and Foruli. (*Aen.* vii. 714.) According to Vibius Sequester (p. 11. Oberlin), it was a river in the neighbourhood of Casperia; and if this is not a mere hasty inference from the line of Virgil, we may probably identify it with a small stream called *Aia* or *l'Aia*, which rises in the mountains to the N. of *Aspra*, and falls into the Tiber about 10 miles from that town. According to some authorities, this river is still called the *Imelle*, but this name appears to have been unknown to earlier topographers, and is perhaps merely a piece of classical learning. (Cluver. *Ital.* p. 675; Bunsen, in the *Ann. d. Inst.* vol. vi. p. 110.) [E. H. B.]

HI'MERA (Ἱμέρα: *Eth.* Ἱμεραῖος, Himerensis, but the adj. Himeraeus: near *Termini*), an important Greek city of Sicily, situated on the N. coast of the island, at the mouth of the river of the same name, between Panormus and Cephaloedium. Thucydides says it was the only Greek city on this coast of Sicily (vi. 62, vii. 58), which must however be understood with reference only to *independent* cities; Mylae, which was also on the N. coast, and certainly of Greek origin, being a dependency of Zancle or Messana. All authorities agree that Himera was a colony of Zancle, but Thucydides tells us that, with the emigrants from Zancle, who were of Chalcidic origin, were mingled a number of Syracusan exiles, the consequence of which was, that, though the institutions (*νόμιμα*) of the new city were Chalcidic, its dialect had a mixture of Doric. The foundation of Himera is placed subsequent to that of Mylae (as, from their relative position, might naturally have been expected) both by Strabo and Scymnus Chius: its date is not mentioned by Thucydides, but Diodorus tells us that it had existed 240 years at the time of its destruction by the Carthaginians, which would fix its first settlement in B.C. 648. (Thuc. vi. 5; Strab. vi. p. 272; Scymn. Ch. 289; Diod. xiii. 62; Hecat. fr. 49; Scyl. p. 4. § 13.) We have very little information as to its early history: an obscure notice in Aristotle (*Rhet.* ii. 20), from which it appears to have at one time fallen under the dominion of the tyrant Phalaris, being the only mention we find of it, until about B.C. 490, when it afforded a temporary refuge to Scythes, tyrant of Zancle, after

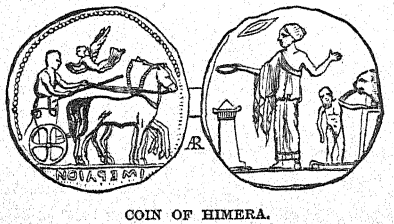
his expulsion from the latter city (Herod. vi. 24). Not long after this event, Himera fell itself under the yoke of a despot named Terillus, who sought to fortify his power by contracting a close alliance with Anaxilas, at that time ruler both of Rhegium and Zancle. But Terillus was unable to resist the power of Theron, despot of Agrigentum, and, being expelled by him from Himera, had recourse to the assistance of the Carthaginians, a circumstance which became the immediate occasion of the first great expedition of that people to Sicily, B.C. 480. (Id. vii. 165.) The magnitude of the armament sent under Hamilcar, who is said to have landed in Sicily with an army of 300,000 men, in itself sufficiently proves that the conquest of Himera was rather the pretext, than the object, of the war: but it is likely that the growing power of that city, in the immediate neighbourhood of the Carthaginian settlements of Panormus and Solus, had already given umbrage to the latter people. Hence it was against Himera that the first efforts of Hamilcar were directed: but Theron, who had thrown himself into the city with all the forces at his command, was able to maintain its defence till the arrival of Gelon of Syracuse, who, notwithstanding the numerical inferiority of his forces, defeated the vast army of the Carthaginians with such slaughter that the battle of Himera was regarded by the Greeks of Sicily as worthy of comparison with the contemporary victory of Salamis. (Herod vii. 166, 167; Diod. xi. 20—23; Pind. *Pyth.* i. 152.) The same feeling probably gave rise to the tradition or belief, that both triumphs were achieved on the very same day. (Herod. *l. c.*)

This great victory left Theron in the undisputed possession of the sovereignty of Himera, as well as of that of Agrigentum; but he appears to have bestowed his principal attention upon the latter city, and consigned the government of Himera to his son Thrasydaeus. But the young man, by his violent and oppressive rule, soon alienated the minds of the citizens, who in consequence applied for relief to Hieron of Syracuse, at that time on terms of hostility with Theron. The Syracusan despot, however, instead of lending assistance to the discontented party at Himera, betrayed their overtures to Theron, who took signal vengeance on the unfortunate Himeraeans, putting to death a large number of the disaffected citizens, and driving others into exile. (Diod. xi. 48.) Shortly after, seeing that the city had suffered greatly from these severities, and that its population was much diminished, he sought to restore its prosperity by establishing there a new body of citizens, whom he collected from various quarters. The greater part of these new colonists were of Dorian extraction; and though the two bodies of citizens were blended into one, and continued to live harmoniously together, we find that from this period Himera became a Doric city, and both adopted the institutions, and followed the policy, of the other Doric states of Sicily. (Id. xi. 49.) This settlement seems to have taken place in B.C. 476*, and Himera continued subject to Theron till his death, in 472: but Thrasydaeus retained possession of the sovereignty for a very short time after the decease of his father, and his defeat by Hieron of Syracuse was speedily followed by his expulsion both from Agrigentum and Himera. (Id. xi. 53.) In B.C. 466 we find the Himeraeans, in their turn, sending a force to assist the Syracusans in throwing off the yoke of Thrasybulus; and, in the general settlement of affairs which followed soon after, the exiles were allowed to return to Himera, where they appear to have settled quietly together with the new citizens. (Id. xi. 68, 76.) From this period Diodorus expressly tells us that Himera was fortunate enough to escape from civil dissensions (xi. 49), and this good government must have secured to it no small share of the prosperity which was enjoyed by the Sicilian cities in general during the succeeding half-century.

But though we are told in general terms that the period which elapsed from this re-settlement of Himera till its destruction by the Carthaginians (B.C. 461—408), was one of peace and prosperity, the only notices we find of the city during this interval refer to the part it took at the time of the Athenian expedition to Sicily, B.C. 415. On that occasion, the Himeraeans were among the first to promise their support to Syracuse: hence, when Nicias presented himself before their port with the Athenian fleet, they altogether refused to receive him; and, shortly after, it was at Himera that Gylippus landed, and from whence he marched across the island to Syracuse, at the head of a force composed in great part of Himeraean citizens. (Thuc. vi. 62, vii. 1, 58; Diod. xiii. 4, 12.) A few years after this the prosperity of the city was brought to a sudden and abrupt termination by the great Carthaginian expedition to Sicily, B.C. 408. Though the ostensible object of that armament, as it had been of the Athenian, was the support of the Segestans against their neighbours, the Selinuntines, yet there can be no doubt that the Carthaginians, from the first, entertained more extensive designs; and, immediately after the destruction of Selinus, Hannibal, who commanded the expedition, hastened to turn his arms against Himera. That city was ill-prepared for defence; its fortifications were of little strength, bnt the citizens made a desperate resistance, and by a vigorous sally inflicted severe loss on the Carthaginians. They were at first supported by a force of about 4000 auxiliaries from Syracuse, under the command of Diocles; but that general became seized with a panic fear for the safety of Syracuse itself, and precipitately abandoned Himera, leaving the unfortunate citizens to contend single-handed against the Carthaginian power. The result could not be doubtful, and the city was soon taken by storm: a large part of the citizens were put to the sword, and not less than 3000 of them, who had been taken prisoners, were put to death in cold blood by Hannibal, as a sacrifice to the memory of his grandfather Hamilcar. (Diod. xiii. 59—62; Xen. *Hell.* i. 1. § 37.) The city itself was utterly destroyed, its buildings razed to the ground, and even the temples themselves were not spared; the Carthaginian general being evidently desirous to obliterate all trace of a city whose name was associated with the great defeat of his countrymen.

Diodorus, who relates the total destruction of Himera, tells us expressly that it was never rebuilt, and that the site remained uninhabited down to his own times (xi. 49). It seems at first in contradic-

* There is a confusion about this date; for, though Diodorus relates the circumstances in the year of Phaedon, Ol. LXXVI. 1, which would place it in B.C. 476, he adds that the new colony subsisted 58 years, till its destruction by the Carthaginians, which would refer it to the year 466 B.C. This last date (which has been inadvertently adopted by Mr. Clinton, *F. H.* vol. i. p. 198) is clearly incompatible with the fact that Theron died in B.C. 472.



tion with this statement, that he elsewhere includes the Himeraeans, as well as the Selinuntines and Agrigentines, among the exiled citizens that were allowed by the treaty concluded with Carthage, in B. C. 405, to return to their homes, and inhabit their own cities, on condition of paying tribute to Carthage and not restoring their fortifications. (Id. xiii. 114.) And it seems clear that many of them at least availed themselves of this permission, as we find the Himeraeans subsequently mentioned among the states that declared in favour of Dionysius, at the commencement of his great war with Carthage in B. C. 397; though they quickly returned to the Carthaginian alliance in the following year. (Id. xiv. 47, 56.) The explanation of this difficulty is furnished by Cicero, who tells us that, "after the destruction of Himera, those citizens who had survived the calamity of the war established themselves at Thermae, within the confines of the same territory, and not far from their old town." (Cic. *Verr.* ii. 35.) Diodorus indeed gives us a somewhat different account of the foundation of Thermae, which he represents as established by the Carthaginians themselves before the close of the war, in B. C. 407. (Diod. xiii. 79). But it is probable that both statements are substantially correct, and that the Carthaginians founded the new town in the immediate neighbourhood of Himera, in order to prevent the old site being again occupied; while the Himeraean exiles, when they returned thither, though they settled in the new town, naturally regarded themselves as still the same people, and would continue to bear the name of Himeraeans. How completely, even at a much later period, the one city was regarded as the representative of the other, appears from the statement of Cicero, that when Scipio Africanus, after the capture of Carthage, restored to the Agrigentines and Gelenses the statues that had been carried off from their respective cities, he at the same time restored to the citizens *of Therma* those that had been taken from *Himera*. (Cic. *Verr.* ii. 35, iv. 33.) Hence we cannot be surprised to find that, not only are the Himeraeans still spoken of as an existing *people*, but even that the name of Himera itself is sometimes inadvertently used as that of their city. Thus, in B. C. 314, Diodorus tells us that, by the treaty between Agathocles and the Carthaginians, it was stipulated that Heracleia, Selinus, and *Himera* should continue subject to Carthage as they had been before. (Diod. xix. 71.) It is much more strange that we find the name of Himera reappear both in Mela and Pliny, though we know from the distinct statements of Cicero and Strabo, as well as Diodorus, that it had ceased to exist centuries before. (Strab. vi. p. 272; Mel. ii. 7. § 16; Plin. iii. 8. s. 14.)

The new town of THERMAE or THERMA, called for the sake of distinction THERMAE HIMERENSES (Θερμαὶ αἱ Ἱμεραῖαι, Pol.; Θερμαὶ Ἱμέραι, Ptol.; Θερμὰ, Θερμὰ Ἱμεραῖα, Diod.: *Eth.* Θερμίτης, Thermitanus), which thus took the place of Himera, obviously derived its name from the hot springs for which it was celebrated, and the first discovery of which was connected by legends with the wanderings of Hercules. (Diod. iv. 23, v. 3; Pind. *Ol.* xii. 28.) It appears to have early become a considerable town, though it continued, with few and brief exceptions, to be subject to the Carthaginian rule. In the First Punic War its name is repeatedly mentioned. Thus, in B. C. 260, a body of Roman troops were encamped in the neighbourhood, when they were attacked by Hamilcar, and defeated with heavy loss. (Pol. i. 24; Diod. xxiii. 9. Exc. H. p. 503.) Before the close of the war, Thermae itself was besieged and taken by the Romans. (Pol. i. 39; Diod. xxiii. 20. Exc. H. p. 506.) We have, however, no clue to the circumstances which led to the peculiar favour which this city seems to have received at the hands of its Roman conquerors. Cicero tells us that the Roman government restored to the Thermitani their city and territory, with the free use of their own laws, as a reward for their steady fidelity ("quod semper in amicitia fideque mansissent," Cic. *Verr.* ii. 37). As we see that they were on hostile terms with Rome during the First Punic War, it can only be to the subsequent period that these expressions apply; but the occasion to which they refer is unknown. In the time of Cicero, Thermae appears to have been a flourishing place, carrying on a considerable amount of trade, though the orator speaks of it as "oppidum non maximum." (Id. ii. 46, 75, iii. 42.) It seems to have received a colony in the time of Augustus, whence we find mention in inscriptions of the "Ordo et Populus splendidissimae Coloniae Augustae Himeraeorum Thermitanorum" (Castell. *Inscr. Sicil.* p. 47; Gruter. *Inscr.* p. 433, no. 6.): and there can be very little doubt that the "Thermae colonia" of Pliny in reality refers to this town, though he evidently understood it to be Thermae Selinuntiae, as he places it on the S. coast between Agrigentum and Selinus. (Plin. iii. 8. s. 14.) We have little subsequent account of Thermae; but, as its name is found in Ptolemy and the Itineraries, it appears to have continued in existence throughout the period of the Roman Empire, and probably never ceased to be inhabited, as the modern town of *Termini* retains the ancient site as well as name. (Ptol. iii. 4. § 4; *Itin. Ant.* p. 92; *Tab. Peut.*) Considerable remains of the ancient city are still visible, but all of the Roman period; among these, the most interesting are those of the ancient Thermae, which are still applied to their original purpose, and are now known as the *Bagni di S. Calogero:* their form and construction is peculiar, being probably determined by the circumstances of the locality in which they were built. Besides these, the ruins of a theatre were still extant in the days of Fazello, but have been since destroyed; some portions of an aqueduct still remain, and the ruins of a large building of Roman date, but of uncertain destination: numerous inscriptions and fragments of ancient sculpture are also preserved in the modern city, (Fazell. *de Reb. Sic.* ix. 1; Biscari, *Viaggio in Sicilia*, pp. 235—239.)

No doubt can therefore exist with regard to the site of Thermae, which would be, indeed, sufficiently marked by the hot springs themselves; but the exact position of the more ancient city of Himera is still a subject of controversy. The opinion of Cluverius, which has been followed by almost all subsequent writers, would place it on the left bank of the river which flows by *Termini* on the west, and is thence commonly known as the *Fiume di Termini*, though called in the upper part of its course *Fiume S. Lionardo*. On this supposition the inhabitants merely removed from one bank of the river to the other; and this would readily explain the passages in which Himera and Thermae appear to be regarded as identical, and where the *river* Himera (which unquestionably gave name to the older city) is represented at the same time as flowing by Thermae. (Sil. Ital. xiv. 232; Plin. iii 8. s. 14; Vib. Sequest.

p. 11.) On the other hand, there is great difficulty in supposing that the *Fiume S. Lionardo* can be the river Himera (see the following article); and all our data with regard to the latter would seem to support the view of Fazello, who identifies it with the *Fiume Grande*, the mouth of which is distant just 8 miles from *Termini*. This distance can hardly be said to be too great to be reconciled with Cicero's expression, that the new settlement was established "non longe ab oppido antiquo" (Cic. *Verr.* ii. 35); while the addition that it was in the same territory ("in ejusdem agri finibus," *l. c.*) would rather seem to imply that it was *not very near* the old site. It may be added, that, in this case, the new site would have had the recommendation in the eyes of the Carthaginians of being *nearer* to their own settlements of Solus and Panormus, and, consequently, more within their command. But Fazello's view derives a strong confirmation from the circumstance, stated by him, that the site which he indicates, marked by the *Torre di Bonfornello* on the sea-coast (on the left bank of the *Fiume Grande*, close to its mouth), though presenting no ruins, abounded in ancient relics, such as vases, bronzes, &c.; and numerous sepulchres had also been brought to light. (Fazell. ix. 2.) On the other hand, neither Cluverius nor any other writer has noticed the existence of any ancient remains on the west bank of the Himera; nor does it appear that the site so fixed is one adapted for a city of importance. The localities do not appear to have been carefully investigated by any recent traveller, though such an examination would probably set the whole question at rest. In the mean time the probabilities seem strongly in favour of the views of Fazello.

Himera was celebrated in antiquity as the birthplace of the poet Stesichorus, who appears, from an anecdote preserved by Aristotle, to have taken considerable part in the political affairs of his native city. His statue was still preserved at Thermae in the days of Cicero, and regarded with the utmost veneration. (Arist. *Rhet.* ii. 20; Cic. *Verr.* ii. 35; Sil. Ital. xiv. 232; Paus. iii. 19. § 13.; Suid. *s. v.* Στησίχορος.) Ergoteles, whose victory at the Olympic games is celebrated by Pindar, was a citizen, but not a native, of Himera. (Pind. *Ol.* xii.; Paus. vi. 4. § 11.) On the other hand, Thermae had the honour of being the birthplace of the tyrant Agathocles. (Diod. xix. 2.) The magnificence of the ancient city, and the taste of its citizens for the encouragement of art, are attested by Cicero, who calls it "in primis Siciliae clarum et ornatum;" and some evidence of it remained, even in the days of that orator, in the statues preserved by the Thermitani, to whom they had been restored by Scipio, after the conquest of Carthage; and which were valuable, not only as relics of the past, but from their high merit as works of art. (Cic. *Verr.* ii. 35.) [E. H. B.]

COIN OF HIMERA.

HI'MERA (Ἱμέρας), the name of two rivers in Sicily, the one flowing to the N. into the Tyrrhenian Sea, the other to the S. coast of the island, but which, by a strange confusion, were regarded by many ancient writers as one and the same river, which is in consequence described as rising in the centre of the island, and flowing in two different directions, so as completely to divide Sicily into two parts. It is singular that, if we may believe Vibius Sequester, this absurd notion is as old as the time of Stesichorus, who was himself a native of Himera. Mela is, however, the only one of the ancient *geographers* who adopts it. (Mel. ii. 7. § 17; Solin. v. § 17; Vib. Sequest. p. 12; Sil. Ital. xiv. 233; Antig. Caryst. 133; Vitruv. viii. 3. § 7.)

1. The southern and most important river of the name, is certainly the one now called the *Fiume Salso*, one of the most considerable streams in Sicily, which rises in the *Monti di Madonia*, the Nebrodes Mons of the ancients, and flowing nearly due S. enters the sea at *Alicata* (Phintias). In the upper part of its course it is composed of two branches, running nearly parallel with one another; the one now called the *Fiume Grande* rising near *Gangi*, the other, called the *Fiume di Petralia*, from the town of the same name: it is only after the junction of the two that it obtains the name of *Fiume Salso*. It is impossible to say which of the two branches was regarded by the ancients as the true Himera; but in either case that river has a course of above 50 miles from N. to S., and its sources are not above 15 miles from the N. coast of the island. Hence the expression of Polybius and Livy, that the Himera nearly divides the whole of Sicily into two parts, is by no means inaccurate. (Pol. vii. 4; Liv. xxiv. 6.) But it is evidently this circumstance, coupled with the fact that there was another river of the same name flowing into the Tyrrhenian Sea, which gave rise to the fable above noticed. Strabo, who does not notice the southern Himera, applies (evidently by mistake) very nearly the same words as Polybius to the northern river of the name. (Strab. vi. p. 266.) Diodorus notices the brackish quality of the waters of the Himera, which gives rise to its modern name of *Fiume Salso*: this is caused by the junction of a small stream near *Caltanisetta*, that flows from the salt mines in that vicinity. (Diod. xix. 109; Smyth's *Sicily*, p. 198.) Solinus erroneously ascribes this quality to the *northern* Himera (Solin. v. § 17); while Vitruvius rightly attributes it to the southern river only (viii. 3. § 7).

Historically, the southern Himera is remarkable for the great battle fought on its banks between Agathocles and the Carthaginians, in which the latter obtained a complete victory, B. C. 311. (Diod. xix. 107—110.) The scene of this action was a short distance from the mouth of the river, the Carthaginians occupying the hill of Ecnomus, while Agathocles was encamped on the left bank. [ECNOMUS.] At a much earlier period, B. C. 446, it witnessed a defeat of the Agrigentines by the Syracusans (Diod. xii. 8); and, again, in the Second Punic War, B. C. 212, became the scene of an action between Marcellus and the Carthaginian forces under Hanno and Epicydes of Syracuse, in which the latter were defeated and driven to take shelter within the walls of Agrigentum. (Liv. xxv. 40, 41.) By the treaty concluded with Carthage by Hieronymus of Syracuse, it was agreed to divide the whole of Sicily between the two powers, so that the river Himera should be the boundary of their respective dominions. (Polyb. vii. 4; Liv. xxiv. 6.)

But this arrangement was never actually carried into effect. Ptolemy correctly places the mouth of the southern Himera to the E. of the emporium of Agrigentum (Ptol. iii. 4. § 7): he is the only one of the geographers who mentions both rivers of the name. An inscription recorded by Torremuzza, containing a dedication ΑΣΚΛΗΠΙΩ ΚΑΙ ΙΜΕΡΑ ΠΟΤΑΜΩ, must, from its being found at *Caltanisetta*, refer to the southern Himera. (Castell. *Inscr. Sicil.* p. 4; Boeckh. *C. I.* no. 5747.)

2. The northern Himera, a much less considerable stream than the preceding, is uniformly described as flowing by the city to which it gave its name (Plin. iii. 8. s. 14; Steph. B. *s. v.* Ἀκράγας; Vib. Sequest. p. 11); and Pindar speaks of the great victory of Gelon (which we know to have been fought in the immediate vicinity of the city) as gained "upon the banks of the fair waters of the Himera" (*Pyth.* i. 153). Hence its identification is necessarily connected with the determination of the site of that city, a question still the subject of dispute. Cluverius, and those who have followed him in placing Himera itself in the immediate neighbourhood of *Termini*, and on the left bank of the river which flows by that town, have, in consequence, assumed the stream just mentioned (now called the *Fiume di Termini*, or, in the upper part of its course, the *Fiume S. Lionardo*) to be the ancient Himera. Fazello, on the contrary, identifies the latter with the river now called the *Fiume Grande*, which rises in the *Madonia* mountains near *Polizzi*, and flows into the sea about 8 miles E. of *Termini*. The arguments in favour of the latter view are certainly very strong. 1. Strabo, in giving the distances along the N. coast of Sicily, reckons 18 miles from Cephaloedium (*Cefalù*) to the mouth of the Himera, and 35 from thence to Panormus. The first distance is overstated, the true distance to the mouth of the *F. Grande* being only 15 miles; the latter just about right if we follow the windings of the coast: whereas, if we place the Himera beyond *Termini*, both distances are equally wrong. 2. Ptolemy distinctly places the mouth of the river Himera between Thermae (*Termini*) and Cephaloedium, and, therefore, to the east of the former city. (Ptol. iii. 4. § 3.) This is assumed by Cluverius to be a mistake of Ptolemy, and it must be admitted that many such mistakes occur in that author's description of Sicily; but still there is no occasion to multiply them *unnecessarily*. Lastly, if the *northern* Himera be recognised in the *Fiume Grande*, — the sources of which near *Polizzi* are in the very same group of mountains with, and a very short distance from, those of the *Fiume di Petralia*, one branch of the *southern* Himera, — the notion of these being one and the same river becomes in some degree intelligible; while it is difficult to conceive how such a notion should have arisen, if the head waters of the two were separated by an interval of many miles. The other arguments connected with the site of the *city*, are considered in that article. Theocritus more than once alludes to the river Himera as a celebrated Sicilian stream; but in such general terms as to afford no indication which of the two rivers he means: the Scholiast, however, understands him to refer to the northern Himera. (Theocr. v. 124, vii. 75; Schol. *ad. loc.*) [E. H. B.]

HINNOM. [Jerusalem.]

HI'PPANA (Ἵππανα, Pol.), a town of Sicily, mentioned by Polybius as being taken by assault by the Romans in the First Punic War, B. C. 260. (Pol. i. 24.) Diodorus, in relating the events of the same campaign, mentions the capture of a town called Sittana, for which we should in all probability read Hippana. (Diod. xxiii. 9. Exc. Hoesch. p. 503; Wesseling, *ad loc.*; Cluver. *Sicil.* p. 392.) The correctness of the name found in Polybius is confirmed by Stephanus of Byzantium (*s. v.*), who, however, writes it Ἵπανα, but cites Polybius as his authority. No other author mentions the place, which appears to have been situated in the neighbourhood of Panormus, but of which nothing further is known. According to Sillig's recent edition of Pliny, it appears that some of the best MSS. give the name of "Ipanenses" in that author's list of Sicilian towns (iii. 8. s. 14. § 91), where the older editions have "Ichanenses." If this reading be adopted, it in all probability refers to the same place as the Hippana of Polybius: but as the reading Ichanenses is also supported by the authority of Stephanus (who notices Ichana as a town of Sicily), the point must be considered doubtful. [E. H. B.]

HI'PPARIS (Ἵππαρις), a small river of Sicily, flowing by the city of Camarina, whence it is now called the *Fiume di Camarana*. It is mentioned by Pindar in connection with that city (Pind. *Ol.* v. 27), from its proximity to which it derives its celebrity. [Camarina.] Though but a small stream, and having a course of only 12 miles, it has a copious and perennial supply of clear water, a rare circumstance in Sicily: hence the expression of Silius Italicus, "pauperis alvei Hipparis," is singularly inapplicable. (Sil. Ital. xiv. 230; Vib. Sequest. p. 12; Schol. *ad Pind. l. c.*; Nonnus. *Dionys.* xiii. 317.) It is evidently the same river of which the name is erroneously written in Ptolemy, Hippōrus. (Ἵππωρος, Ptol. iii. 4. § 7.) The tutelary divinity of the stream is represented on some of the coins of Camarina, accompanied by his name, ΙΠΠΑΡΙΣ. (Eckhel, vol. i. p. 199.) [E. H. B.]

HIPPA'SII (Ἱππάσιοι, Strab. xv. p. 698), an Indian tribe who occupied the district between the Cophes and the Indus along the southern spurs of the Paropamisus. There seems good reason for supposing that they are one and the same tribe as the Aspasii or Aspii mentioned by Arrian (*Anab.* iv. 23—25). The name is derived from the Sanscrit Aspa or Aswa, "a horse," and is probably intended as a Greek translation of it. Lassen has conjectured that they are the same as the Aswasilas of ancient Hindoo geography. The name is variously written *Pasii* and *Hypasii*. (Wilson, *Ariana*, p. 187; Groskurd's *Strabo*, vol. iii. p. 119.) [V.]

HIPPEMOLGI (Ἱππημολγοί), "mare-milkers," a general name applied by the Greeks to the nomad tribes who moved about with their tents and herds over the steppes of Northern Europe and Asia. Thus Zeus, in the Iliad (xiii. 4), when he turns away his eye from Troy towards Thrace, sees, besides the Thracians and Mysians, other tribes, whose names cannot be made out; but are known as milk-eaters, and mare-milkers. The same characteristic attributes appear in Hesiod (*Fr.* 63—64, ed. Marktscheffel), connected with the Scythians. (Comp. Strab. vii. pp. 300—302; Niebuhr, *Kleine-Schrift.* vol. i. p. 365; Schafarik, *Slav. Alt.* vol. i. p. 272.) The mares' milk was made into cheese (Hippocrat. vol. i. p. 556, ed. Kühn), and, as Mr. Grote (*Hist. of Greece*, vol. iii. p. 323) remarks, probably served the same purpose of procuring the intoxicating drink called *kumiss*, as at present among the Bashkirs and the Kalmucks. [E. B. J.]

HIPPI PROM. [HIPPO REGIUS.]

HIPPICI MONTES (τὰ Ἱππικὰ ὄρη, Ptol. v. 9), the N. continuation of the Ceraunii M., a chain of mountains on the W. bank of the Rha. [E. B. J.]

HIPPO, in Spain. 1. [CARPETANI.] 2. H. NOVA. A town belonging to the province of Baetica and the conventus of Corduba, near Cisimbrum. (Plin. iii. 1. s. 3.) [P. S.]

HIPPOCORO'NIUM (Ἱπποκορώνιον), a city in Crete mentioned by Strabo (x. p. 472), which Höck has placed near Hierapytna. Mr. Pashley (*Trav.* vol. i. p. 62) considers that the modern *Apokórona* is a corruption of the ancient name. [E. B. J.]

HIPPOCRE'NE FONS. [HELICON.]

HIPPOCU'RA (Ἱππόκουρα, Ptol. vii. 1. § 6, viii. 26. § 15), a town of some importance in India intra Gangem, in the district called Ariaca. It was situated on or near the Nanaguna, and appears from another passage of Ptolemy to have been the seat of the palace of a king, whom he calls Baleocarus (vii. 1. § 83). It has been conjectured by Forbiger that it is the same as the modern *Hydrabad*, and, with less probability by Ritter, that it is represented by *Bangalore* (v. p. 487). [V.]

HIPPO DIA'RRHYTUS or ZARITUS (Ἵππων Διάρρυτος, Ptol. iv. 3. § 6; H. Zaritus, *Itin. Ant.* p. 21, *V. R.* H. Zarrhytus; Ippons Diaritus, *Tab. Peut.*; and simply Ἵππου πόλις, Scyl. p. 30: *Benizert* or *Bizerta*), a Tyrian colony in Zeugitana, close to the extreme N. headland of Africa [CANDIDUM PR.], 36 M. P. W. of Utica, and 126 M. P. E. of Hippo Regius. It stood on W. side of the entrance of a large lake which communicated with the sea, and which received the waters of another lake: the former was called HIPPONITIS PALUS (Ἱππονῖτις λίμνη), and the latter SISARA (Σίσαρα). Its situation exposed it to frequent inundations, whence, as the Greeks said, the epithet διάρρυτος. But it seems more probable that this is the remnant of some Phoenician title: the ancient writers were by no means agreed on the true form of the name, as is seen above, and of this uncertainty we have a further proof in the expression of Pliny, who is apparently attempting an etymology: "oppidum quod Hipponem *dirutum* vocant, Diarrhytum a Graecis dictum." (Plin. v. 4. s. 3.) Polybius and Appian give the forms Ἱππακριτῶν πόλις (Polyb. i. 82), and Ἱππάγρετα (Appian, viii. 110).

The city was fortified and provided with a new harbour by Agathocles (Appian, *l. c.*): under the Romans it was a free city (Plin.); and it seems to have been raised to the rank of a colony, for the younger Pliny calls it Hipponensis colonia. (*Epist.* ix. 33; comp. Strab. xvii. p. 832; Mela, i. 7. § 2; Plin. ix. 8; Barth, *Wanderungen*, *fc.* pp. 202, 211). [P. S.]

HIPPO REGIUS (Ἵππων Βασιλικός: Ru. S. of *Bonah*), a maritime city of Numidia, which received its surname from its being a residence of the Numidian kings, but is of higher fame as the see of St. Augustine. It was a colony of Tyre, and stood 5 M. P. NW. of the river UBUS, on the W. side of a large bay to which it gave its name (HIPPONENSIS SINUS: *Gulf of Bonah*), as well as to the promontory above it, forming the W. headland of the bay (HIPPI PROM., Ἵππου ἄκρα: *Ras el Hamrah*). It grew into greater importance under the Romans, by whom it was made a colony; and it continued to be one of the most flourishing cities of N. Africa, till it was destroyed by the Vandals in B. C. 430. It was during the progress of this siege that the great Augustine died. (Sall. *Jug.* 19; Hirt. *Bell. Afr.* 96; Strab. xvii. p. 832; Mela, i. 7; Plin. v. 3. s. 2; *Itin. Ant.* p. 20; *Tab. Peut.*; Diod. xx. 57; Sil. Ital. i. 3 iii. 259; Shaw, *Travels in Barbary*, p. 44; Barth, *Wanderungen*, *fc.* p. 70). [P. S.]

HI'PPOLA (Ἱππόλα: *Eth.* Ἱππολαΐτης, fem. Ἱππολαΐτις), a town of Laconia, a little north-west of the promontory of Taenarum, in ruins in the time of Pausanias. It contained a temple of Athena Hippolaitis. It stood either at *Kipúla*, which is apparently a corruption of the ancient name, or at the ruins called κάστρον τῆς ὡραίας on the highest point of the peninsula of *Kavo Grosso*. (Leake, *Morea*, vol. i. p. 287, *Peloponnesiaca*, p. 175; Boblaye, *Recherches*, *fc.* p. 91; Curtius, *Peloponnesos*, vol. ii. p. 282.)

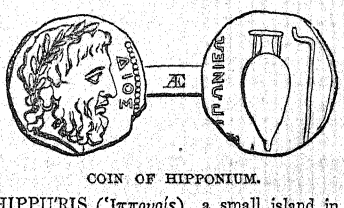
HIPPONENSIS SINUS. [HIPPO REGIUS].

HIPPONIA'TES SINUS (Ἱππωνιάτης κόλπος. Strab. vi. pp. 255, 261; Ptol. iii. 1. § 9), a gulf or bay on the W. side of the Bruttian peninsula, so called from the city of Hipponium, near its southern extremity. It was however known also by various other names: thus Thucydides calls it the Terinaean Gulf (Τεριναῖος κόλπος, Thuc. vi. 104), and Pliny also names it the SINUS TERINAEUS, though he mentions also, as if it were a *different* bay (which is certainly a mistake), the SINUS VIBONENSIS (Plin. iii. 5. s. 10). The latter name is used also by Cicero (*ad Att.* xvi. 6). But besides these, we find that it was called the SINUS NAPETINUS or NAPITINUS by Antiochus of Syracuse (ap. Strab. vi. p. 255; Dionys. i. 35), and LAMETINUS by Aristotle (*Pol.* vii. 10). The last name was evidently derived from a town named Lametium or Lametini, situated at the mouth of the river Lametus (*Lamato*), which flows into the gulf in question [LAMETUS]: and the name of Napetinus would seem to point in like manner to the existence of a town called Napetium, though we have no other authority for this fact. The gulf itself, which is now known as the *Golfo di Sta. Eufemia*, from a village of that name, deeply indents the coast of Bruttium on the W., as the *Golfo di Squillace*, or Scylleticus Sinus, does on the E.: the neck of land between them is composed only of low hills of tertiary strata, presenting a striking contrast to the lofty masses of the Apennines, which rise abruptly on the N. and S. of this isthmus. [BRUTTII.] The northern limit of the Gulf of *Sta. Eufemia* is formed by the point called *Capo Suvero*, probably the promontory called by Lycophron Lampetes [CLAMPETIA]: and its southern by the bold prejecting headland now called *Capo Vaticano;* but there is no authority for supposing this name to be ancient. [E. H. B.]

HIPPONI'TIS PALUS. [HIPPO DIARRHYTUS.]

HIPPO'NIUM (Ἱππώνιον: *Eth.* Ἱππωνιάτης, Steph. B.; but on coins, Ἱππωνιεύς, Hipponiates), or HIPPO (Mel., Plin.), called by the Romans VIBO, or VIBO VALENTIA (Οὐιβῶν Οὐαλεντία, Ptol.: *Eth.* Vibonensis: *Bivona*), an important Greek city on the west coast of Bruttium, on the shores of the bay to which it gave the name of Sinus Hipponiates, now the *Gulf of St. Euxemia*. It was undoubtedly of Greek origin, and we are told by Strabo that it was a colony from the Italian Locri, on the opposite side of the Bruttian peninsula. (Strab. vi. p. 256; Scymn. Ch. 308; Scyl. p. 4. § 12.) No mention of it is found in history, though it seems to have been a considerable town, till B. C. 389, when it was taken by Dionysius of Syracuse, who destroyed the city, removed the inhabitants to Syracuse, and gave up

its territory to the Locrians. (Diod. xiv. 107; Dionys. xix. *Fr.* p. 2359, Reiske.) But 10 years afterwards (B. C. 379) the city was restored by the Carthaginians, and the exiled inhabitants re-established there. (Id. xv. 24.) It did not long, however, continue to enjoy its independence, having fallen into the hands of the Bruttians, apparently soon after B. C. 356, the date given for the first rise of the Bruttian people. (Diod. xvi. 15; Strab. vi. p. 256.) It was wrested from the latter nation for a time by Agathocles, in B. C. 294, who appears to have regarded the place as a stronghold of importance, and constructed a port or naval station (*ἐπίνειον*) there: but after the departure of Agathocles himself the garrison he had left at Hipponium was put to the sword, and the city recovered by the Bruttians. (Diod. xxi. 8. Exc. H. p. 491: Strab. *l. c.*) It now continued in their hands until it fell with the rest of the Bruttian peninsula under the yoke of Rome; but no mention of it is again found, except that the "Vibonensis ager" was in B. C. 218 ravaged by a Carthaginian fleet (Liv. xxi. 51), until after the close of the Second Punic War: and it is remarkable that the name is not even once mentioned during the long-protracted operations of Hannibal in the Bruttian territory. But shortly after the close of the war (in B. C. 192) a Roman colony was established there, consisting of not less than 4000 settlers, including 300 knights (Liv. xxxv. 40; Vell. Pat. i. 14), which was thenceforth known by the name of Vibo Valentia. Strabo tells us that the name of Hipponium was at this time changed into Vibo Valentia, or, as he writes it, Vibona Valentia (*Οὐιβῶνα Οὐαλεντία*, Strab. vi. p. 256); but this is not quite correct: the new colony, as we learn from its coins, having assumed the name of Valentia only; while that of Vibo (which is evidently only the Bruttian or Oscan form of Hippo, and was very probably the original name of the city before it became a Greek colony at all) was retained with it in common usage, or was still employed without the addition of Valentia. Thus, Cicero twice uses the name of Vibo alone to designate the town, but in another passage calls the inhabitants "Valentini." (Cic. *in Verr.* ii. 40, v. 16, *ad Att.* xvi. 6.)



The Roman colony seems to have rapidly risen into importance, and became one of the most considerable towns in this part of Italy. Its port, constructed by Agathocles, served to export the timber from the forests of Sila; and, for the same reason, extensive dockyards for ship-building were established there. Cicero terms it a noble and illustrious municipal town (*in Verr.* v. 16), and Appian enumerates it among "the most flourishing cities of Italy" of which the possession was promised by the Triumvirs to their soldiers. (*B. C.* iv. 3). During the Civil Wars, indeed, it plays no inconsiderable part in history. In the war between Caesar and Pompey, the former made Vibo the station of a part of his fleet, which was attacked there by Cassius (Caes. *B. C.* iii. 101); and in the war of Octavian against Sextus Pompey, it became the head-quarters and chief naval station of the Triumvir (Appian, *B. C.* v. 91, 99, 103, &c.). In order to secure its attachment at that period, Octavian had been compelled to exempt Vibo from the threatened distribution of its lands among the soldiery. (Id. *B. C.* iv. 86.) It is not clear whether it subsequently received a colony, for the "ager Vivonensis" is mentioned in the Liber Coloniarum (p. 209), but in a manner which leaves it doubtful whether it was colonised or not. But it is certain, from inscriptions, that it continued under the Roman empire to be a flourishing municipal town: its name is mentioned by all the geographers, and is still found in the Itineraries of the fourth century. (Plin. iii. 5. s. 10; Ptol. iii. 1. § 74; Mel. ii. 4; *Itin. Ant.* p. 111; *Tab. Peut.*; Orell. *Inscr.* 3703; Mommsen, *Inscr. R. N.* 16, 26, &c.) It was situated on the principal high road, leading down through Bruttium to the Sicilian Strait, and is already noticed, under the name of Valentia only, in the inscription of the Via Popillia: according to that document, it was distant 57 M. P. from Consentia, and 51 from the column on the Straits. (Mommsen, *l. c.* 6276.) Its position also rendered it a convenient place to touch at for persons proceeding by sea to or from Sicily: thus, we find Cicero, in B. C. 44, proceeding from Velia to Vibo by sea, and thence to Rhegium. (Cic. *in Verr.* ii. 40, *ad Att.* xvi. 6.)

The plains near Vibo were celebrated for the variety and beauty of the flowers with which they were covered: hence the Greek colonists of Hipponium maintained it to be the place from whence Proserpine was carried off (Strab. vi. p. 256); and it would seem that that goddess had a celebrated temple here, as well as at the parent city of Locri. The ruins of this temple are said to have existed till the 11th century, when the columns were carried off by Roger, Count of Sicily, to adorn the cathedral of *Mileto*. The historian Duris also mentioned that near the city was a grove, watered with fountains, and of surpassing beauty, in which was a place called "the horn of Amalthea," which had been adorned and arranged by Gelon of Syracuse. (Duris, *ap. Athen.* xii. p. 542.)

Considerable remains of the ancient port of Hipponium are visible at a place still called *Bivona*, on the shore about 3 miles from *Monte Leone*: they are of a very massive style of construction, which has been erroneously termed Cyclopean, but are probably of Greek rather than Roman date. The city of Hipponium itself, as well as the Roman colony of Vibo Valentia, probably occupied the same site with the modern city of *Monte Leone*, on an elevation of moderate height, commanding an extensive view over the sea and adjacent plain. No ruins, however, remain on this spot, and the modern town dates only from the 13th century; but it is said that the remains of the ancient walls were formerly visible, and could be traced through an extent of several miles, communicating with those at *Bivona*. (Romanelli, vol. i. pp. 51—56; Barrius, *de Sit. Calabr.* ii. 12; Giustiniani, *Diz. Geogr.* vol. vi. pp. 88—90; K. Craven, *Travels*, p. 321.)

The poet Archestratus, cited by Athenaeus (vii. p. 302), praises the tunny-fish of Hipponium as surpassing all others in excellence; an eulogium which they are said by native writers still to merit.

[E. H. B.]

COIN OF HIPPONIUM.

HIPPU'RIS (Ἱππουρίς), a small island in the Aegaean sea, one of the Sporades, lying between

Thera and Amorgos. (Schol. *ad Apoll. Rhod.* iv. 1711; Mela, ii. 7; Plin. iv. 12. s. 23; Steph. B. *s. v.* Ἱππουριακός.)

HIPPU'RUS (Plin. vi. 22. s. 24), a haven in the southern part of India, near or perhaps opposite to the island of Ceylon, to which Annius Plocamus, a freedman of Claudius, was driven in a gale of wind from the coast of Carmania. The present representative of it is not known. [V.]

HIPPUS (Ἵππος, Steph. B. Plin. v. 15; Euseb. *Onom.*: *Eth.* Ἱππηνός), a town of the Decapolis and "Palaestina Secunda." It was situated to the E. of the sea of Galilee, 30 stadia from Tiberias (*Τῠβαρίγα*). (Joseph. *Vita*, § 65.) Augustus presented it to Herod (Joseph. *Antiq.* xv. 7. § 3). After his death it was annexed to Syria (*Antiq.* xvii. 2. § 4; comp. Marquardt, *Handbuch der Röm. Alt.* p. 201). It was sacked in the Jewish War by the Jews (*B. J.* ii. 18. § 1), but the people afterwards revolted, and slew many of the Jews (*B. J.* ii. 18. § 5).

The district HIPPENE (Ἱππηνή, *B. J.* iii. 3. § 1; comp. *Vita*, § 31) lay to the E. of Galilee. There were bishops of Hippus at the councils of Seleuceia A. D. 359, and of Jerusalem A. D. 536. Burkhardt (*Trav.* p. 278) has the merit of having discovered the site of the ancient Hippos, which he fixes at *Khurbet es-Sŭmrah*, an hour from *Semakh*. (Comp. Robinson, *Researches*, vol. iii. p. 264, note.)

(Reland, *Palaestina*, vol. ii. p. 821; Von Raumer, *Palestina*, p. 242.) [E. B. J.]

HIPPUS, a town in Caria, mentioned only by Pomponius Mela (i. 17), who places it near the mouth of the Maeander, whence some have inferred that the name is a mere mistake for Myus; it must, however, be observed that Pliny (v. 29) speaks of a people in Caria called Hippini or Halydenses, though he places them in a different part of the country. [L. S.]

HIPPUS (Ἵππος, Ptol. v. 9; Plin. vi. 4), a river of Colchis, the embouchure of which the Periplus of Arrian (p. 10) fixes at 150 stadia from that of the Tarsuras. Rennell (*Compar. Geog.* vol. ii. p. 322) has identified it with the *Ilori*. [E. B. J.]

HIRPINI (Ἱρπινοί, Pol.; Ἱρπῖνοι, Strab. App.), a people of Central Italy, of Samnite race, and who were often regarded as constituting only a portion of the Samnite people, while at other times they are treated as a distinct and independent nation. They inhabited the southern portion of Samnium, in the more extensive sense of that name, — a wild and mountainous region bordering on Lucania towards the S., on Apulia to the E., and on Campania towards the W. No marked natural boundary separated them from any one of these neighbouring nations; but they occupied the lofty masses and groups of the central Apennines, while the plains on each side, and the lower ranges that bounded them, belonged to their more fortunate neighbours. The mountain basin formed by the three tributaries of the Vulturnus, — the Tamarus (*Tamaro*), the Calor (*Calore*), and the Sabatus (*Sabbato*), which unite their waters near Beneventum, with the valleys of these rivers themselves, surrounded on all sides by lofty and rugged ranges of mountains, — may be regarded as constituting the centre and heart of their territory; while its more southern portion comprised the upper valley of the Aufidus and the lofty group of mountains in which that river takes its rise. Their name was derived, according to the statement of ancient writers, from "hirpus," the Sabine or Samnite name of a wolf; and, in accordance with this derivation, their first ancestors were represented as being guided to their new settlements by a wolf. (Strab. v. p. 250; Serv. *ad Aen.* xi. 785.) This tradition appears to indicate that the Hirpini were regarded as having migrated, like the other Sabellian races in the S. of Italy, from more northerly abodes; but we have no indication of the period, or supposed period, of this migration, and, from their position in the fastnesses of the central Apennines, it is probable that they were established from a very early time in the region which we find them occupying when they first appear in history.

The early history of the Hirpini cannot be separated from that of the Samnites in general. Indeed it is remarkable that their name does not once occur in history during the long protracted struggle between the Romans and the Samnite confederacy, though their territory was often the theatre of the war, and several of their cities, especially Maleventum, are repeatedly mentioned as bearing an important part in the military operations of both powers. Hence it is evident that the Hirpini at this time formed an integral part of the Samnite league, and were included by the Roman annalists (whose language on such points Livy follows with scrupulous fidelity) under the general name of Samnites, without attempting to distinguish between the several tribes of that people. For the same reason we are unable to fix the exact period at which their subjugation was effected; but it is evident that it must have been completed before the year 268 B. C., when the Roman colony was established at Beneventum (Liv. *Epit.* xv.; Vell. Pat. i. 14), a position that must always have been, in a military point of view, the key to the possession of their country.

In the Second Punic War, on the contrary, the Hirpini appear as an independent people, acting apart from the rest of the Samnites; Livy even expressly uses the name of Samnium in contradistinction to the land of the Hirpini. (Liv. xxii. 13, xxiii. 43.) The latter people was one of those which declared in favour of Hannibal immediately after the battle of Cannae, B. C. 216 (Id. xxii. 61, xxiii. 1); but the Roman colony of Beneventum never fell into the hands of the Carthaginian general, and as early as the following year three of the smaller towns of the Hirpini were recovered by the Roman praetor M. Valerius (Id. xxiii. 37). In B. C. 214 their territory was the scene of the operations of Hanno against Tiberius Gracchus, and again in B. C. 212 of those of the same Carthaginian general with a view to the relief of Capua. (Id. xxiv. 14—16, xxv. 13, 14.) It was not till B. C. 209, when Hannibal had lost all footing in the centre of Italy, that the Hirpini were induced to make their submission to Rome, and purchased favourable terms by betraying the Carthaginian garrisons in their towns. (Id. xxvii. 15.)

The next occasion on which the Hirpini figure in history is in the Social War (B. C. 90), when they were among the first to take up arms against Rome: but in the campaign of the following year (B. C. 89), Sulla having taken by assault Aeculanum, one of their strongest cities, the blow struck such terror into the rest as led them to make offers of submission, and they were admitted to favourable terms. (Appian, *B. C.* i. 39, 51.) Even before this there appears to have been a party in the nation favourable to Rome, as we are told that Minatius Magius (the ancestor of the historian Velleius), who was a native

of Aeculanum, was not only himself faithful to the Roman cause, but was able to raise an auxiliary legion among his countrymen, with which he supported the Roman generals in Campania. (Vell. Pat. ii. 16.) The Hirpini were undoubtedly admitted to the Roman franchise at the close of the war, and from this time their national existence was at an end. They appear to have suffered less than their neighbours the Samnites from the ravages of the war, but considerable portions of their territory were confiscated, and it would seem, from a passage in Cicero, that a large part of it had passed into the hands of wealthy Roman nobles. (Cic. *de Leg. Agr.* iii. 2; Zumpt, *de Colon.* p. 258.)

By the division of Italy under Augustus, the Hirpini were separated from the other Samnites, and placed in the 2nd Region together with Apulia and Calabria, while Samnium itself was included in the 4th Region. (Plin. iii. 11. s. 16, 12. s. 17.) The same separation was retained also in the later divisions of Italy under the Empire, according to which Samnium, in the more confined sense of the name, formed a small separate province, while Beneventum and the greater part, if not the whole, of the other towns of the Hirpini, were included in the province of Campania. The Liber Coloniarum, indeed, includes all the towns of Samnium, as well as those of the Hirpini, among the "Civitates Campaniae;" but this is probably a mistake. (*Lib. Col.* pp. 229—239; Mommsen, *ad Lib. Col.* pp. 159, 205, 206; Marquardt, *Handb. d. Röm. Alterthümer.* vol. iii pp. 62, 63.)

The national characteristics of the Hirpini cannot be separated from those of the other Samnites, which are described under the general article of SAMNIUM. Under the same head is given a more particular description of the physical geography of their country: the mountain chains and groups by which it is intersected being so closely connected with those of the more northern districts of Samnium, that it is convenient to consider them both together. Nor is it always easy to separate the limits of the Hirpini from those of the neighbouring Samnite tribes; more especially as our authorities upon this point relate almost exclusively to the Imperial times, when the original distinctions of the tribes had been in great measure obliterated. The rivers and valleys which constitute the main features of the Hirpinian territory, have been already briefly noticed. Pliny's list of the towns in the 2nd Region is more than usually obscure, and those of the Hirpini and of Apulia are mixed up together in a most perplexing manner. The towns which may be assigned with certainty to the Hirpini are: BENEVENTUM, by far the most important city in this part of Italy, and which is often referred to Samnium, but must have properly been included in the Hirpini, and is expressly called by Pliny the only Roman colony in their territory (Plin. iii. 11. s. 16); AECULANUM, also a flourishing and important town, nearly in the heart of their territory; ABELLINUM, on the confines of Campania, and near the sources of the Sabatus; COMPSA, near the head waters of the Aufidus and bordering on Lucania; AQUILONIA and ROMULEA, near the frontiers of Apulia, in the SE. portion of the Hirpinian territory; TRIVICUM and EQUUS TUTICUS, also adjoining the Apulian frontiers; and, N. of the last-mentioned city, MURGANTIA, near the sources of the Frento, which seems to have been the furthest of the Hirpinian towns towards the NE., if at least it be correctly placed at *Baselice*. In the valley of the Tamarus, N. of the territory of Beneventum, were situated the LIGURES BARBIANI ET CORNELIANI, a colony of Ligurians transplanted to the heart of these mountain regions in B. C. 180 (Liv. xl. 38, 41), and which still continued to exist as a separate community in the days of Pliny. (Plin. iii. 11. s. 16; *Lib. Col.* p. 235.) Of the minor towns of the Hirpini, three are mentioned by Livy (xxiii. 37) as retaken by the praetor M. Valerius in B. C. 215; but the names given in the MSS. (see Alschefski, *ad loc.*), "Vescellium, Vercellium, and Sicilinum," are probably corrupt: they are all otherwise unknown, except that the "Vescellani" are also found in Pliny's list of towns. (Plin. *l. c.*) Ferentinum, mentioned also by Livy (x. 17), in connection with Romulea, is also wholly unknown. Fratulum (*Φρατούλον*, Ptol. iii. 1. § 71), of which the name is found only in Ptolemy, is equally uncertain. TAURASIA, mentioned as a town only in the celebrated epitaph of Scipio Barbatus, had left its name to the Taurasini Campi not far from Beneventum, and must therefore have been itself situated in that neighbourhood. Aletrium, of which the name is found in Pliny (Aletrini, iii. 11. s. 16), has been conjectured to be *Calitri*, a village in the upper valley of the Aufidus, not far from *Conza*. Of the other obscure names given by the same author, it is impossible (as already observed) to determine which belong to the Hirpini.

The most remarkable natural curiosity in the land of the Hirpini was the valley and lake, or rather pool, of AMSANCTUS, celebrated by Virgil in a manner that shows its fame to have been widely spread through Italy. (Virg. *Aen.* vii. 563.) It is remarkable as the only trace of volcanic action remaining in the central chain of the Apennines. (Daubeny *on Volcanoes*, p. 191.)

The country of the Hirpini, notwithstanding its rugged and mountainous character, was traversed by several Roman roads, all of which may be regarded as connected with the Via Appia. The main line of that celebrated road was carried in the first instance direct from Capua to Beneventum: here it branched into two, the one leading directly by Aeculanum, Romulea, and Aquilonia, to Venusia, and thence to Tarentum: this was the proper VIA APPIA; the other known from the time of the emperor Trajan (who first rendered it practicable throughout for carriages) as the VIA TRAJANA, which proceeded from Beneventum by Forum Novum (*Buonalbergo*), and Equus Tuticus (*S. Eleuterio*), to Aecae in Apulia, and thence by Herdonea and Canusium to Brundusium. The fuller consideration of these two great lines of highway is reserved for the article VIA APPIA. Their course through the country of the Hirpini has been traced with great care by Mommsen. (*Topografia degli Irpini*, in the *Bullettino dell' Inst. Archeol.* 1848, pp 6—13.) [E. H. B.]

HIRRI, a people mentioned by Pliny (iv. 13) along with the Venedae, and who were connected with the Heruli. They appear to have come from Scandinavia, and occupied that part of the coast of *Esthonia*, which was called in the Middle Ages *Harria*, after them. Thus, it seems that the coasts of the Baltic, as far as the mouth of the Oder, were exposed to the piratical attacks of the Goths, in very early times, as in later ages other European shores were devastated by the Normans. (Comp. Schafarik, *Slav. Alt.* vol. i. p. 116.) [E. B. J.]

HIRROS, a river of Asiatic Sarmatia, with a

town of the same name, 136 M. P. from Heracleum, and 67 M. P. from Sindica (Plin. vi. 5). It is, probably, the same place as the HIBROS PORTUS of the Periplus, which Rennell (*Compar. Geog.* vol. ii. p. 325) identifies with the deep inlet or small gulf of *Sunjuk-kala* in the Russian chart. [E. B. J.]

HI'SPALIS (Ἴσπαλις: also HISPAL, Mela, ii. 6, Sil. Ital. iii. 392: *Eth.* Hispaliensis, Adj. Hispalensis: *Sevilla*), one of the chief cities of Hispania Baetica, stood on the left bank of the Baetis (*Guadalquiver*), about 500 stadia from its mouth; but still within the tidal part of the river, which was navigable for large vessels up to the city: so that it had, to a great extent, the advantages of a sea-port. It was made a colony by Julius Caesar; and although an attempt seems to have been made to exalt the neighbouring colony of Baetis above it, the very site of which is now doubtful, it ranked, in Strabo's time, among the first cities of Turdetania, next after Corduba and Gades; and afterwards even advanced in dignity: so that, in the time of Ptolemy, it had the title of μητροπόλις, and under the Vandals and Goths it ranked above Corduba, and became the capital of Southern Spain. In the Roman empire it was the seat of a *conventus juridicus*, and bore the titles of JULIA ROMULA and COLONIA ROMULENSIS. (Strab. iii. pp. 141, 142; Hirt. *Bell. Alex.* 51, 56; Dion. Cass. xliii. 39; Plin. iii. 3; *Itin. Ant.* pp. 410, 413, 416; Geog. Rav. iv. 45; Philostr. *Vit. Apoll.* v. 3, 6; Auson. *Clar. Urb.* 8; Isidor. *Etym.* xv. 1; Inscr. *ap.* Gruter, pp. 201, 257, Orelli, vol. ii. p. 396; Florez, *Esp. S.* vol. ix. pp. 89, 90; Coins *ap.* Florez, *Med. de Esp.* vol. ii. p. 543; Mionnet, vol. i. p. 24, Suppl. vol i. p. 42; Eckhel, vol. i. p. 28.) [P. S.]

HISPA'NIA (Ἱσπανία, Σπανία), and IBE'RIA (Ἰβηρία), and, with reference to its division into two parts, very frequently HISPANIAE (so also Ἰβηρίαι, Steph. B.), the ancient names of the great peninsula now divided into the countries of *Spain* and *Portugal*. In this article, for convenience, the whole peninsula will be often called simply SPAIN.

I. ANCIENT NAMES.

As in the case of other countries, which only became known to the Greeks and Romans by portions, there was at first no general name for the whole peninsula. Polybius states that the part of the land on the Mediterranean, as far as the Pillars of Hercules, was called IBERIA (Ἰβηρία), while the portion onwards from that point along the ocean had no general name, as it had not long been known, and was entirely occupied by numerous barbarian peoples. (Polyb. iii. 37).

1. The name in general use among the Greeks, during the historical period, was IBERIA, which was understood to be derived from the river IBERUS (Plin. iii. 3. s. 4; Justin. xliv. 1; Steph. B. *s. v.*; Avien. *Or. Mar.* 248): whence it was applied to the surrounding country, first vaguely, as will presently appear, and afterwards more exactly, as they gradually became acquainted with those physical features which so strikingly define its limits. (Hecat. Fr. 11—13; Herod. i. 163, vii. 165; Scyl. pp. 1, 2; Strab. iii. p. 166; Eustath. *ad Dion. Per.* 281; Hor. *Carm.* iv. 528. (comp. below on the boundaries.)

2. The other and still more familiar name, HISPANIA (Ἱσπανία, Strab. iii. p. 166; Agathem. i. 2), came into use after the Romans began to have a direct connection with the country; and has remained the prevailing appellative ever since. There is little doubt that the genuine form of the name is SPAN or SAPAN, the vowel sound being prefixed for easier pronunciation, as is common in southern as well as eastern languages when an initial *s* is followed by another consonant (of this usage examples may be seen in the Arabic and Turkish names of Greek cities): and the name is used without the prefix (Σπανία: Artemidor. *ap.* Steph. B. *s. v.* Ἰβηρίαι; Plut. *de Flum.* p. 32, Huds., vol. x. p. 774, Reiske; Paul. *Epist. ad Rom.* xv. 28, &c.) The origin of the name is not known with any certainty, nor whether it was used by the inhabitants themselves. Bochart derives it from the Phoenician and Hebrew word צָפָן (tsapan), which means a *rabbit*; and arguments are adduced in favour of this etymology from the numerous testimonies of the ancients to the abundance of these animals in the country (Strab. iii. pp. 144, 168; Aelian, *N. A.* xiii. 15; Varro, R. R. iii. 12.; Catull. xxxv. 18; Plin. viii. 58. s. 83, xi. 37. s. 76), as well as from a medal of Hadrian, on the reverse of which is seen a female figure, as the personification of Spain, with a rabbit at her feet. (Florez, *Med. de Esp.* vol. i. p. 109.) Others explain the Phoenician word to mean *concealed*, that is, the country little known; but this seems to be a mere fancy. (Maltebrun, *Précis de la Géogr.* vol. viii. p. 21.) On the other hand, W. von Humboldt, in his invaluable essay on the primitive history of Spain, maintains that it was a native name, and that its genuine form, vowel prefix and all, is preserved almost unaltered in the modern native name *España*, which he derives from the Basque *Ezpaña*, a *border*, *margin*, or *edge*, denoting that the peninsula was the margin of Europe towards the ocean. (Humboldt, *Prüfung der Untersuch. über die Urbewohner Hispaniens*, Berlin, 1821; comp. on the etymology of both names, Plut. *de Flum. l. c.*; Solin. 23; Ammian. Marc. xxiii. 6; Const. Porph. *de Admin.* Imp. ii. 23; Eustath. *ad Dion. Per.* 282; Bochart, *Chan.* i. 35, *Phaleg*, iii. 7; Oberlin, *ad Vib. Seq.* p. 397; Grot. *ad Mart. Cap.* p. 201; Wesseling, *ad Itin.* p. 268; Tzschucke, *ad Mel.* ii. 6.)

3. HESPERIA was an old Greek name, chiefly used by the poets, in connection with the notion that the world consisted of four parts, of which LIBYA was the southern, ASIA the eastern, EUROPA the northern, and HESPERIA the western: and, according to this idea, Spain was the westernmost part of Hesperia. (Niebuhr, *Lectures on Ancient Ethnography and Geography*, vol. ii. p. 279.) Hence the country is sometimes called simply Hesperia (Macrob. i. 3; Serv. ad Virg. Aen. i. 530; Isid. *Orig.* xiv. 4), and sometimes, in contradistinction to Italy, Hesperia Ultima (Horat. *Carm.* i. 36. 4; comp. Diefenbach, *Celtica* iii. 32).

4. CELTICA (ἡ Κελτική) was also a general name for the West of Europe, and was used specifically for the interior of Spain, which was originally peopled, or believed to have been peopled, by Celts. (Aristot. *de Mundo*, vol. i. p. 850, Du Val.; Scymn. 173.) Ephorus (*ap.* Strab. iv. p. 199; Marc. *ad loc.* p. 142) extended Celtica to Gades, and applied the name of Iberia only to the W. part of the peninsula. So too Eratosthenes (*ap.* Strab. ii. p. 107) extended the Galatae (i. e. Celts) to Gadeira. This usage is, however, uncommon, the name being generally confined to those parts of the peninsula in which fragments of the old Celtic population held their ground. [CELTAE: CELTICA.]

5. TARTESSIS was a name applied to the S. portion of the peninsula, and especially to the part beyond the Straits, in contradistinction to the name

Iberia, in its narrower sense, that is, the maritime district from the Straits to the Pyrenees. (Polyb. *loc. sup. cit*) : but this is a subject which needs a separate discussion under its proper head. [TARTESSUS.]

6. *Ethnic and Adjective Forms.* — (1.) From IBERIA : *Eth.* Ἴβηρ, gen. Ἴβηρος, pl. οἱ Ἴβηρες, fem. Ἰβηρίς ; Lat. Iber, Lucan. vi. 255, Hor. *Carm.* ii. 20. 20, pl. Iberes, Catull. ix. 6, also Hiber, Hiberes ; and Iberi or Hiberi, Virg. *Georg.* iii. 408, fem. Iberina, *Juv.* vi. 53 : *Adj.* Ἰβηρικός, whence ἡ Ἰβηρική for the country itself ; fem. ἡ Ἰβηρίας, -άδος ; Lat. Iberus, Ibericus, and rarely Iberiacus (Sil. Ital. xiii. 510). (2.) Connected with HISPANIA : *Eth.* and *Adj.* Ἱσπανοί, Const. Porph. *de Admin. Imp.* ii. 23 ; Zonar. iii. p. 406 ; Hitpānus, Hispani, *Adv.* Hispane ; also Spanus, Schol. *Juv.* xiv. 279 ; Ampelius 6 ; and Spanicus, Geogr. Rav. iv. sub fin. ; *Adj.* Hispaniensis (the distinction between this and the ethnic being nicely drawn in the following examples : Vell. ii. 51, *Balbus Cornelius non Hispaniensis natus, sed Hispanus*, that is, not merely *belonging to Spain*, like, for example, a Roman born in Spain, but *a true Spaniard*, and Mart. xii. Praef. : *Ne Romam, si ita decreveris, non Hispaniensem librum mittamus, sed Hispanum*), and rarely Hispanicus. (Suet. *Aug.* 82, Vitruv. vii. 3.)

II. SPAIN AS KNOWN TO THE GREEKS.

The west of Europe was to the early Greeks a land of fancy as well as mystery. Vague reports had reached them, probably through the Phoenicians, from which they at first learnt little more than the bare existence of lands, so far distant from their own country as to reach the region of the setting sun and the banks of the all-encompassing river Ocean. According to the very natural tendency which led them to place the happiest regions and the choicest productions of the earth at its extreme parts, confirmed perhaps by exaggerated accounts of the fertility and beauty which some of these regions (Andalucia, for instance) actually enjoy, they fancied them as happy plains or as enchanted islands, and peopled them with the divine nymphs, Circe and Calypso, who there detained in sweet bondage the hero whom fate had cast upon their shores, with the happy spirits of departed heroes, with the primitive and pastoral Cyclopes, and the wealthy maritime Phoenicians, or with the exiled dynasty of gods,

> "Who with Saturn old,
> Fled over Adria to the *Hesperian fields*,
> Or o'er the *Celtic* roamed the *utmost isles*."

These poetic fancies were succeeded by historical inquiries, and then came all the difficulties of reconciling meagre and conflicting testimonies with the poets and with each other ; mistakes arising from first assigning positions vaguely and variously, and then, instead of the discovery of such errors, the attempt to reconcile them by supposed migrations and other arbitrary devices : so that such names as BEBRYCES, CHALYBES, CIMMERII, and IBERES, scarcely seem associated with any exact locality, and are freely transferred backwards and forwards between the shores of the Atlantic and those of the Euxine. To this was added the polemical spirit, which we find so rampant among the old geographers (as among the African and Arctic critics now), which "by decision more embroiled the fray;" while all the time the later poets were adding to the confusion by imitating the legends of the ancients, and inventing others of their own. Amidst all these elements of uncertainty it is no wonder that we generally find no sure basis of information concerning the more distant countries of the world until the arms of Rome had cleared the way for the inquiries of the learned Greek.

But yet the neglect of this period would deprive the science of ancient geography of a great portion of its interest, and of its use, too, in throwing light on the progress of our race. And in no case is this period more attractive than in that of the remotest country towards the West, one which is invested with the double interest of having been familiar to the Phoenicians, as a principal scene of their commerce and colonisation, while the Greeks were still making it a favourite theatre for the creations of their fancy.

1. Of the purely *Mythical Period* little is to be said, and that little more properly belongs to other articles. [CIMMERII, OCEANUS ; FORTUNATAE INSULAE ; HESPERIDES, AEAEA ; HERCULIS COLUMNAE, &c. ; and the articles GERYON, HERCULES, &c. in the *Dictionary of Greek and Roman Mythology and Biography.*]

2. Advancing to the *Semi-Mythical Period of Hesiod and the Lyric Poets*, we begin to meet with names which have at least the appearance of a specific geographical significance, though still most uncertain as to their position ; such as TARTESSUS. In connection with the legends of the Hyperboreans, the Rhipaean mountains appear as a great range intersecting Europe from W. to E. The ISTER and ERIDANUS were known by name to Hesiod (*Theog.* 338, 339) as rivers of W. Europe ; and his island Erytheia, the abode of Geryon, is so described as to prepare the way for its subsequent identification with GADES.

3. The transition to the period of more real, though still most imperfect knowledge, marked by the age of the *Logographers and Tragic Poets*, is extremely gradual, for while the avowed writers of fiction are seen to invest their scenes with only an appearance of fact, the investigators of facts are found recording under that guise the strangest fictions. But yet there is no doubt that both give us what is meant to be objective knowledge ; and no reader of the *Prometheus*, for example, can doubt that Aeschylus expends all the resources of his geographical knowledge, be they less or more, on his description of the wanderings of Io. Indeed, with reference to our present subject, we have now reached a period when the maritime enterprise of the Phoecaeans had placed the Greeks in direct connection with the shores of the W. part of the Mediterranean ; and had made them acquainted with Tyrrhenia, Iberia, and Tartessus. (Herod. i. 163.) Accordingly we find the logographer Pherecydes and the poet Stesichorus not only acquainted with the name TARTESSUS ; but the latter making it a river, in such a manner as to suggest its identification with the *Guadalquivir* [BAETIS], while the former accurately represents it as a city on the straits which divide Libya from Europe [TARTESSUS]. Stesichorus mentions also the island of Erytheia, and an island Sarpedonia in the Atlantic (Strab. iii. p. 148 ; Schol. Apoll. Rhod. i. 211.) Pindar seems well acquainted with the Pillars of Hercules, as the limit of the known world [HERCULIS COLUMNAE] ; and Aeschylus, besides some other interesting allusions, too doubtful, however, to be discussed here, seeks for the sources of the Ister in the Rhipaean mountains, a fact of which the importance will be more clearly seen when the views of Herodotus have been discussed. (Schol. Apoll. Rhod. iv. 28 ; Ukert, vol. ii. pt. 1. pp. 238—243.)

From these fragmentary notices we pass on to the first writer who gives us a systematic account of any portion of the country,—namely HECATAEUS of Miletus (about B.C. 500); for we have no remains of the earlier work of Charon of Lampsacus, which contained a Periplus of the coast outside of the Pillars of Hercules. (Eudoc, *Violar.* p. 435.) The Greeks of this period seem to have been acquainted with the S. coast so far as to know the names of a number of places along it, but not so as to form any accurate idea of it as a whole. From the few extant fragments of Hecataeus, and from the passages in which Festus Avienus follows his authority, Ukert deduces the following results:—West of the Straits, which he makes scarcely 7 stadia in width, dwelt the TARTESSII (Avien. *Or. Mar.* 370), among whom was the town of ELIBYRGE (Steph. B. *s. v.* Ἐλιβυργη), which no other ancient writer names, but which the moderns have sought to identify, on account of the resemblance in the names only, with ILLIBERIS or ILLITURGIS. East of the Pillars dwelt the MASTIANI, with the capital, MASTIA; a people and city long after mentioned also by Polybius (iii. 24): they had also the cities of Syalis [SUEL], Mainobora [MAENOBA], Sixos [SAXETANUM], Molybdana, and Calathe (Steph. B. *s. vv.*). Further to the E. the country began to be called Iberia, and was inhabited by numerous peoples; among whom were the Ilaraugatae, on a river of the same name (Steph. B. *s. v.* Ἱλαραυγαταί), who seem to be the Ilurgetae or ILERGETAE of later writers; and the Misgetes (Steph. B. *s. v.* Μίσγητες). Among the cities of Iberia are mentioned Crabasia and Hyops, with a river Lesyros near the latter. (Steph. B. *s. v.* Τόψ.) Hecataeus also mentions the town of Sicane (Steph. B. *s. v.* Σικάνη), a name of much interest, as showing the existence of Sicanians in Spain, which is also asserted by Thucydides, who makes them dwell upon a river Sicanus, next the Ligyes who expelled them thence to Sicily. (Thuc. vi. 2; Strab. iii. p. 270; SICANI.) Two islands, Cromyusa and Melussa, are mentioned by Hecataeus as belonging to Iberia. (Steph. B. *s. vv.*)

5. HERODOTUS touches on the W. of Europe only incidentally, as but very distantly related to his main subject. In one passage, when speaking of the extreme regions of the earth, he plainly states that he has nothing certain to say of the western parts of Europe: and he even doubts the existence of the river Eridanus and the islands Cassiterides (iii. 115); and elsewhere he mentions the belief of the Persians that there were no countries of any great importance W. of Greece (vii. 8). His views may be summed up as follows:—Beyond the Pillars of Hercules lay Gadeira, and near it the island of Erytheia (iv. 8). Elsewhere he mentions the CYNESII or CYNETES as the westernmost people of Europe (ii. 33; iv. 49); and next to them the great nation of the Celtae, whose country is remarkable for its precious metals, and for the long life of the inhabitants (i. 163; iv. 49, 152, 192: comp. Strab. iii. pp. 150, 151; Lucian, *Macrob.* 10; Phlegon. *de Longaev.* 4; Cic. *de Senect.* 19; Plin. vii. 48; Val. Max. viii. 13). Among the Celtae were the sources of the river ISTER, in the neighbourhood of a city called PYRENE. (Herod. ii. 33; iv. 49.) It is important to remember that this statement respecting the source of the Ister is connected with a theory entertained by Herodotus,—that the two great rivers of Libya and Europe, the Nile and the Ister, followed courses right through the respective continents, from W. to E., almost exactly parallel and equal to each other: the introduction of the name Pyrene is discussed in its proper place. [PYRENAEI MONTES.] The name of Iberia is mentioned by him twice. The one passage is that already cited respecting the discoveries of the Phocaeans, where the relation in which it stands to Tyrrhenia suggests that it signifies the peninsula of Spain, *so far as it was known by maritime discovery* (i. 163). In the other passage he mentions the Iberians in the army of Hamilcar in Sicily; and he connects them with the Ligyes in such a manner as to suggest the inference, that the name was applied to the whole Mediterranean coast, from the Straits to the Gulf of Lyon (vii. 165). In the former of these passages, again, he mentions TARTESUS in close connection with Iberia, and describes the Phocaeans as holding most friendly intercourse with Arganthonius, the king of the Tartesii (i. 163); and he speaks elsewhere of the wealth and commercial importance of Tartesus [TARTESSUS]. These several views seem to have had little more connection in the mind of the historian than the passages referring to them have in his works; but, on comparing them with the actual facts, and having regard to his probable sources of information, something like a whole may be made out. On the S. coast, his knowledge, derived from Phoenician and Phocaean sources, seems to have extended as far as the SW. point of the peninsula, the SACRUM PROMONTORIUM (*Cape St. Vincent*), which long remained the westernmost limit of ancient maritime discovery; if, at least, his Chynetes are the CONII of other writers — that is, the inhabitants of the southern projection of Portugal, called CUNEUS. Justin (xliv. 43) mentions Cunetes in the mountains of the Tartessii; a confirmation of the hint given under CONII, that the name is truly ethnic, and that its resemblance to the Roman *cuneus*, which so well describes the name of the district, is merely an accidental coincidence. Next, the great colony of GADES was a subject of which he would hear much from the Phoenicians; and separate accounts respecting Tartessus and the surrounding country would be obtained from the same people, who had long traded to it under the name of Tarshish, and from the Phocaeans, as we have seen. The name Iberia seems to have been derived exclusively from the Phocaeans. Lastly, apart from these results of maritime discovery, he had obtained from the Phocaeans and other sources the impression that the great Celtic race overspread pretty well the whole interior of Western Europe; a region, however, of which he possessed scarcely one detail of accurate knowledge.

6. The historians, geographers of the century after Herodotus had obtained a larger amount of materials, but without a corresponding improvement in the accuracy of their knowledge. The wide extent of the Celtic name, and the confusion between Celts and Iberians, are found still prevalent; and the courses of the great rivers of W. Europe are very imperfectly known. Thus, EUDOXUS of Cnidus (about B. C. 380—360), of whose geographical work Aristotle made great use, mentions the mountain Pyrene in Celtica, towards the W. extremity of the equinoctial line (*πρὸς δυσμὴν ἰσημερινῆν*), as containing the sources of the rivers Ister and Tartessus, of which the latter flowed outside of the Pillars, and the former through all Europe. (Aristot. *Meteor.* i. 13.) He places Iberia S. of Celtica, and describes its shores towards the ocean as high and rocky, with promontories running far out into the sea. (Strab

iii. p. 153.) About the same time, EPHORUS, who devoted the 4th book of his work on geography to the W. of Europe, assigns a vast extent of country to the Celts, and carries them on the W. as far as Gades; while he confines the name of Iberia to the region W. of Gades, and, if we are to believe Josephus, even fell into the error of making Iberia a *city* with a comparatively small territory. He relates some absurd fables about these regions. (Strab. iii. p. 153, iv. p. 199, vii. p. 302; Joseph. *c. Apion.* i. 12; Marx, *ad Ephor. Frag.* p. 142.) The *Periplus* of SCYLAX, which also belongs to about the same period, is very vague as to the shores of Spain. He makes special mention of the commercial settlements of the Carthaginians outside the Pillars, and of the tides and shoals which characterise that sea: a great sandbank stretches across from the Sacred Promontory (*C. S. Vincent*) to the promontory of Hermaeum in Lybia. The Iberians are the first people in Europe; and there is the river Iber, and two islands called Gadeira [GADES]; and then comes the Greek city EMPORIUM. Probably there is here a gap in the text; for he passes over the whole coast from the Pillars to the Pyrenees, the voyage along which, he says, occupies 7 days and nights. (Scylax, pp. 1, 51, ed. Hudson, pp. 1—3, 123, ed. Gronov.) Next to the Iberians, he places the Ligurians (Λίγυες) and the "mixed Iberians" (Ἴβηρες μιγάδες) as far as the Rhone.

In the Pseudo-Aristotelian work *de Mirab. Ausculi.* (86), the peoples of Western Europe are mentioned in the following order, from W. to E.: Iberes, Celtoligyes, Celtae, as far as Italy. HERODORUS tells us that the Iberians, who dwell on the shores of the Straits, though belonging to one race, have various names, according to their several tribes. (Fr. *ap.* Const. Porphyr. *de Admin. Imp.* ii. 23.) Those most to the W. are called CYNETES (Steph. B. *s. v.* Κυνητικόν); N. of them are the GLETES (Steph. B. *s. v.* Γλῆτες; comp. Strab. iii. p. 166, who says that the country E. of the Iberus was formerly called after the IGLETES, a great and powerful nation, who dwelt in it); then the TARTESSII; then the ELBYSINII; then the MASTIANI and the CALPIANI, as far as the Rhone. (This enumeration, and the order of it, might be made to throw much light on the names and positions of the Spanish peoples, if the argument were not somewhat too speculative for this article).

We likewise find a vast amount of error and confusion among the geographers of this age respecting the distances and bearings of the shores of the W. Mediterranean. Eudoxus states that a person sailing through the Straits into the Inner Sea has immediately on his left hand the Sardoan, Galatian (Gallic), and Adriatic Sea, on the right the bay of the Syrtes (Arist. *de Mund.* 3); and Dicaearchus estimates the distance from the Sicilian Strait (*Straits of Messina*) to the Pillars of Hercules (*Straits of Gibraltar*) at only 7000 stadia. (Strab. ii. p. 105.)

7. *Age of Alexander and the Ptolemies.*— The reign of Alexander the Great forms an epoch in the geography of W. Europe. While his followers were adding by their own direct observations to the knowledge of the extreme East, we are told that from the opposite end of the known world his fame attracted the envoys of numerous nations, and among the rest from the Celts and the Iberians, whose dress was then for the first time seen, and their language first heard, by the Greeks and Macedonians. (Arrian, *Anab.* vii. 15.) From these and other sources, the learned men of Alexandria, under the Ptolemies, obtained the information which is recorded in the works of ERATOSTHENES, his contemporaries, and his followers. It appears that Eratosthenes was indebted for much of his knowledge to Timosthenes, the admiral of Ptolemy Philadelphus, and the author of a large geographical work; but the views of both on the W. of Europe in general, and on Iberia in particular, are severely criticised by Strabo and Marcian. (Strab. ii. pp. 92—94.)

Eratosthenes describes 3 peninsulas as running out S. from the mainland of Europe; the one that which ends with the Peloponnesus, the second the Italian, and the third the Ligurian (Λιγυστικήν); and these contain between them the Adriatic and Tyrrhenian gulfs. (Strab. vii. p. 92.) In another passage, the westernmost of these 3 peninsulas is described as that which extends to the Pillars, and to which Iberia belongs. (Strab. ii. p. 108.) Of this peninsula he assigns a large part to the Celts (Γαλαταί), whom he makes to reach as far as Gadeira. (Strab. ii. pp. 107, 108.) He places the Columns of Hercules on the Straits [HERCULIS COLUMNAE], to the W. of which he represents the peninsula as running out into several large promontories. Of these, the first is the Sacred Promontory (*C. S. Vincent*), which he placed at the greatly exaggerated distance of 5 days' voyage from Gades. (Strab. ii. p. 148.) The other chief promontory is that of CALBIUM, about which dwelt the OSTIDAMNII; and opposite to it lay several islands, of which UXISAMA, the furthest to the W., was distant 3 days' voyage from Calbium: in this part of his description he follows Pytheas. (Strab. i. p. 64.) The region adjacent to Calpe he calls Tartessis, and places there the "happy island" of Erytheia. Besides GADES, he mentions the town of TARRACO (Tarragona), and adds that it has a good roadstead, a statement contradicted by Artemidorus and Strabo. (Strab. iii. p. 159.) He makes the Pyrenees the E. boundary. [PYRENAEI.] In general, his knowledge seems not to have extended beyond the coast.

8. We are now brought down to the time of the First Punic War, and to the eve of the period when the imperfect, and often merely speculative, notions of the Greeks respecting Spain were superseded by the direct information which the Romans gained by their military operations in the country. But before passing on to the Roman period, a few words are necessary on the *extent of Iberia, as understood by the Greek geographers.*

While, as we have already seen, many of them gave the greater part of the peninsula to the Celts, and confined the Iberians either to the part W. of the Straits, or to the Mediterranean shore; others extend the name of Iberia as far E. as the Rhone, and even as far N.E. as the Rhine, and so as to include the peoples on both sides of the Alps. Thus Aeschylus, if we are to believe Pliny, took the Eridanus to be another name for the Rhodanus, which he placed in Iberia. (Plin. xxxvii. 2. s. 11.) Nonnus applies the epithet *Iberian* to the Rhine. (Dionys. xxiii. p. 397, xliii. p. 747.) Plutarch places Iberian tribes in the Alps. (*Marcell.* 3.) In fine, Strabo sums up these opinions as follows:— "The name of Iberia, as used by the earlier writers, includes all the country beyond the Rhone and the Isthmus which is confined between the Gallic Gulfs (i. e. the *Bay of Biscay*, and the *Gulf of Lyon*): but those of the present age assign M. Pyrene as its boundary, and called it indifferently Iberia and His-

pania, [whereas by those of old the name of Iberia] was applied only to the part within the Iberus. (Strab. iii. p. 166; the words within brackets are supplied as the most probable restoration of a gap in the text.)

It must be observed that such statements as these express something more than a confusion in the minds of the Greek writers between the territories of the Celts and of the Iberians: they express the fact in ethnography, that the Iberian race extended beyond the boundaries of Spain as defined by the Pyrenees, and that they were to a great extent intermixed with the Celts in W. Europe. (See below, on the earliest inhabitants of Spain: No. VII.)

III. Spain as known to the Carthaginians and the Romans.

1. *Down to the End of the First Punic War.*— The internal state of the peninsula, down to the period at which we have now arrived, will be spoken of below; but, in order to estimate the knowledge of the country possessed by the Romans, we must first glance at its relations to the other great power of the Mediterranean. From the earliest known period of antiquity the Phoenicians had held commercial intercourse with Spain; and there is more than a probability that Tyre had established a sort of dominion over the part adjacent to the S. coast, the Tarshish of Scripture, and the Tartessis of the Greeks. (*Isaiah*, xxiii. 10, where the prophet compares the liberty of Tarshish, consequent on the fall of Tyre, to the free course of a river, — such, for example, as her own *Guadalquivir*, — when a mighty obstacle is removed.) The phrase "ships of Tarshish" appears to have been as familiar in the mercantile marine of Tyre as "Indiamen" in our own (2 *Chron.* ix. 21, xx. 36, 37; *Ps.* xlviii. 7; *Is.* lx. 9; *Ezek.* xxvii. 25); and the products of the Spanish mines, "silver, iron, tin, and lead," are mentioned by Ezekiel as among "the multitude of all kind of riches, by reason of which Tarshish was her merchant." (*Ezek.* xxvii. 12.) Phoenician settlements were numerous on the S. coast of the peninsula, within the Straits, and beyond them there was the great commercial colony of Gades, the emporium for the traffic of Tyre with the shores of the Atlantic. But this was not all. From the very physical nature of the country, it was scarcely possible that the Phoenicians should have abstained from extending their power up the navigable stream of the Baetis, of which Gades may be regarded as the port, over the fertile plains of Baetica (*Andalucia*), as far N. as the *Sierra Morena*, which at once contained the mineral wealth in quest of which they came, and formed a barrier against the natives of the centre. Be this as it may, we know for certain that in the narrower tract between the sea-shore and the *Sierra Nevada* [Ilipula] the people were a mixed race of Iberian and Phoenician blood, called Μιξοφοίνικες (Strab. iii. p. 149: Bastuli). The power which the Carthaginians obtained during this period over the natives cannot be positively defined; but they received many of them into their armies by voluntary enlistment.

2. *The Viceroyalty of the House of Barca.*— Such were the relations of Spain to Carthage; and as to Rome, she had had as yet nothing to do with the peninsula, when the First Punic War was brought to an end, B. C. 241. Carthage seemed to have expended all her resources in the vain effort to secure Sicily; and, when the revolt of her African mercenaries gave Rome an opportunity of filching away from her her oldest provinces, Sardinia and Corsica (B. C. 236), the contest might well be thought to have concluded. "I believe," says Niebuhr, "that there were fellows at Carthage, such as Hanno, who, partly from envy of Hamilcar, and partly from their own stupidity, would not or could not see that, after the loss of Sicily and Sardinia, there were yet other quarters from which the republic might derive great benefits. When, after the American War, it was thought that the ignominious peace of Paris had put an end to the greatness of England, Pitt undertook with double courage the restoration of his country, and displayed his extraordinary powers. It was in the same spirit that Hamilcar acted: he turned his eyes to Spain: . . . . he formed the plan of making Spain a province, which should compensate for the loss of Sicily and Sardinia. The latter island was then and is still very unhealthy, and its interior was almost inaccessible. Sicily had an effeminate and unwarlike population, and, rich as it was, it might indeed have increased the maritime power of Carthage, but it would not have given her any additional military strength. The weakness of Carthage consisted in her having no armies; and it was a grand conception of Hamilcar's to transform Spain into a Carthaginian country, from which national armies might be obtained. His object, therefore, was, on the one hand, to subdue the Spaniards, and on the other to win their sympathy, and to change them into a Punic nation under the dominion of Carthage. (Polyb. ii. 1; Diod. Fr. Lib. xxv.; Eclog. ii. p. 510.) The conduct of the Romans towards their subjects was haughty, and always made them feel that they were despised. The highly refined Greeks, who were themselves wont to look with contempt on all foreigners, must have felt that haughtiness very keenly. The Spaniards and Celts were of course less respected. Common soldiers in the Roman armies not unfrequently, especially in the times of the emperors, married native women of the countries in which they were stationed. Such marriages were regarded as concubinage, and from them sprang a class of men who were very dangerous to the Romans. The Carthaginians acted more wisely, by making no restrictions in regard to such marriages. Hannibal himself married a Spanish woman of Castulo (Liv. xxiv. 41: comp. Diod. Fr. Lib. xxv.; Eclog. ii. p. 510, foll.), and the practice must have been very common among the Carthaginians. This was an excellent way to gain the good will of the natives. The whole of the southern coast of Spain had resources of no ordinary kind; it furnished all the productions of Sicily and Sardinia, and in addition to them it had very rich silver mines, the working of which has been revived in our own days. Hamilcar was the first who introduced there a regular and systematic mode of mining, and this led him, or his son-in-law, to build the town of New Carthage (*Carthagena*). While the Carthaginians thus gained the sympathy of the nation, they acquired a population of millions which relieved them from the necessity of hiring faithless mercenaries, as they had been obliged to do in the First Punic War; they were enabled to raise armies in Spain just as if it had been their own country. The Romans no doubt observed these proceedings with feelings of jealousy, but could not prevent them, as long as the Cisalpine Gauls stood on their frontiers, ready to avenge the defeats of the Senones and Boians." (Niebuhr, *Lectures on Roman History*,

vol. ii. p. 69.) It was in the year B. C. 237 that Hamilcar commenced this mighty work, not without an ultimate design, unless he is grossly misrepresented by Polybius and Livy, of founding for his house an empire in Spain, in case the Anti-Barcine faction should prevail at Carthage. [CARTHAGO NOVA.] For eight years he carried on his plan with great success, and he appears to have extended the Carthaginian empire as far N. as the *Sierra Morena*, so that it included the whole of *Andalucia*, and pretty well all *Murcia*. On his death, B. C. 229, he left his power and his schemes as an inheritance to Hasdrubal, his son-in-law, who carried on the plan for nearly nine years, till he was cut off by an assassin, B. C. 221, and left its fulfilment to the mighty genius of Hannibal. Meanwhile the Romans, occupied with the war in Cisalpine Gaul, had no power to interfere. Just, however, before that war began, they had done the best they could by making a separate treaty, not with Carthage, but with Hasdrubal himself (as a sort of supplement to the existing treaty with Carthage), by which the river Iberus (*Ebro*) was fixed as a limit beyond which the Carthaginians were not to extend their conquests (as Polybius states), or (according to Livy) as the boundary between the two states, B. C. 228. (Polyb. iii. 27; Liv. xxi. 2; xxxiv. 13). That the latter expression, even if used in the treaty (which seems from Polybius to be more than doubtful) does not imply that the Roman arms had actually extended to the Iberus, is shown by Livy himself in the second passage quoted, where he says that Spain was then in the hands of the Carthaginians, held by their generals and armies, while Rome had not a single general nor any soldiers in the country. The previous treaty itself, made at the close of the First Punic War, had provided that the allies of each state should be safe from molestation by the other; and now, if we are to believe Livy (Polybius being silent on the point), an express stipulation to the same effect was introduced on behalf of Saguntum, a city lying within the portion assigned to the Carthaginians, but in alliance with the Romans. [SAGUNTUM.] The dispute upon this question, and its bearing upon the rights of the two parties in the Second Punic War, are of little consequence here, except as throwing light on the connection of the Romans with the peninsula. Thus much is certain, that Saguntum was in alliance with Rome when Hannibal laid siege to it, and it is also probable that the Romans had some footing in TARRACO.

3. *The Second Punic War.*—When Hannibal, on his march to Italy, had effected the passage of the Rhone, and turned the flank of Scipio, B. C. 218, the bold resolution, by which that general sent the bulk of his army into Spain under his brother Cneius, to oppose Hasdrubal, while it perhaps determined, however remotely, the issue of the war, began a struggle, first with the Carthaginians, and then with the Spaniards themselves, which lasted almost 200 years, and only ended with the subjugation of the northern mountaineers, the CANTABRI and ASTURES, by Augustus, B. C. 25. It is needless to dwell on those details, which are familiar to every reader as a part of the Second Punic War: the successes of Cn. and P. Scipio, and their unfortunate end, B. C. 218—212; the almost romantic expedition of young P. Scipio, 211, his capture of New Carthage, 210 [CARTHAGO NOVA], and the final expulsion of the Carthaginians from Spain, B. C. 206, which was followed by its erection into a Roman province. From this time the Romans had to deal with the natives, a people always willing to make use of foreigners against each other, but never ready to yield them obedience.

4. *Conquest of the country by the Romans.*—Neither the dominion of Hannibal, nor that acquired by the Romans in the Second Punic War, extended over so much as one half of the peninsula. The part which they had entirely subdued, seems to have comprehended *Catalonia*, *Valencia*, *Murcia*, and *Andalucia*, or the country between the sea and the great chain which runs parallel to the E. coast, and on the S. the country between the *Sierra Morena* and the sea. The province (its division will be spoken of presently) was governed by praetors; there being sometimes one, and sometimes two; and two legions were kept stationary in Spain. This arrangement, besides its effects on the Roman constitution, with which we are not here concerned, had a most important influence on Spain. "The legions remained there for a number of years, married Spanish women, and became estranged from Italy. When, therefore, such legions were disbanded, many soldiers would remain in Spain, unwilling to return to a country to which they had become strangers." (Niebuhr, *Lectures on Roman History*, vol. ii. p. 208.)

The central tribes, forming the great Celtiberian nation, retained their own government, which seems to have been of a republican form, in nominal alliance with the Romans, to whom the independent tribes of the N. and W. were as yet scarcely known by name. (Liv. xxiii. 21, xxix. 3; Flor. ii. 17.) The Roman settlements were continually exposed to the attacks which the natives, as provocation was given or opportunity offered, made upon them from their strongholds in the mountains. (Liv. xxviii. 4.) To abate the evil Cato the Elder, when consul, undertook an expedition against the Celtiberians and some smaller tribes, whom he induced, by a stratagem, to demolish the defences of their towns, and so to place themselves in his power, which, it must be added, he used with such justice and moderation as to win their hearts, B. C. 184. (Appian, *Hisp.* 41; Liv. xxxiv. 17; Plutarch, *Cat.* 10; Flor. ii. 17.) Indeed, as Niebuhr has more than once observed in his *Lectures*, the wars of Rome in Spain give constant illustrations of that point which (like most others) is still conspicuous in the national character, their great susceptibility of *personal influence*, which often proved a corrective to their bitter jealousy of foreigners. "It is indeed surprising" (he says, vol. ii. p. 209) "to see how a Roman general with humane feelings was always able to win the affections and confidence of those tribes [in central Spain], and to establish the authority of Rome for a time, until fresh acts of injustice provoked their resentment." Of this we have another striking example in the success of Tib. Sempronius Gracchus, the father of the celebrated brothers, who concluded a fierce war, in which the Romans had been for some time engaged with the Celtiberians, by an honourable peace, which at once secured the Roman supremacy and won the hearts of the natives. By this peace the Roman power became established in *Catalonia*, *Valencia*, *Arragon*, and the E. part of Castile, and the tribes who were parties to it bound themselves to build no more towns, B. C. 179. (Polyb. *ap Strab.* iii. pp. 111, 170; Liv. xl. 49, et seq., xli. 3; Appian,

Hisp. 43; Flor. *l. c.* CELTIBERI.) From this time it becomes difficult, from the paucity of materials, to give a consecutive account of the progress of the Roman arms; nor would the details be very interesting. The war seems to have been more or less constant, in the valleys of the Tagus and the Durius, with various tribes, among which the most conspicuous are the VACCAEI and the LUSITANI; what was gained by the skill and wisdom of one general being generally put to hazard by the cupidity and oppressions of another. On the whole it seems probable that, before the epoch of the Macedonian War (B. C. 171), the domination of Rome had been extended over the whole peninsula, except the mountainous regions of the north, and the mountain fastnesses of the centre. In B. C. 153, some new provocation, the exact nature of which is obscure [CELTIBERIA], drove the Celtiberians into open revolt, and the consul Q. Fulvius Nobilior made an unsuccessful campaign against them. (Liv. *Epit.* lib. xlvii; Appian, *Hisp.* 44—47.) The consul of the next year, the celebrated M. Claudius Marcellus, concluded an armistice with them on very fair terms, and turned his arms against the Lusitanians. But his moderation was alike distasteful to the Senate, who demanded an unconditional submission, and to his successor in the consulship, L. Licinius Lucullus (B. C. 151), who renewed the war with much cruelty and avarice, but with little success, against a part of the Celtiberians; but he gained some advantages against the VACCAEI and CANTABRI, and other peoples as yet unknown to the Romans. (Polyb. xxxv. 3, 4; Liv. *Epit.* xlviii; Appian, *Hisp.* 51—55.) After the war had lasted for four years, B. C. 153—149 (a period which is therefore sometimes called "the First Celtiberian War," to distinguish it from the war of NUMANTIA, which was, in fact, but its continuation), it appears to have been suspended, partly because the attention of Rome was now occupied with the Third Punic War (B. C. 149), but still more on account of the more serious occupation which the cruelty and treachery of Lucullus and the praetor Galba had made for the two armies of Spain in the great war against the Lusitanians and Viriathus, which was only finished by the consul D. Junius Brutus, in B. C. 138. [LUSITANIA.] Brutus, remaining in his province of Further Spain as proconsul, devoted the next year to the completion of the conquest of Lusitania, and then marched across the river Durius (*Douro*) into the country of the Callaici Bracarii, into which no Roman army had ever before penetrated, and advanced as far as the Minius (*Minho*), though his conquests can hardly have been permanent. [GALLAECIA.]

Meanwhile the state of affairs in the other province, Hither Spain, had become critical; and the Celtiberians, long known as the bravest and most noble-minded of the Spaniards, were engaged in that final struggle which was only quelled by the skill and the stern resolution of the younger Scipio Africanus. In B. C. 143 Q. Caecilius Metellus Macedonicus had entered his province of Hither Spain with the resolution to confirm, by its final conquest, the fame he had already acquired in Macedonia; and he gained great successes against the Celtiberians. (Liv. *Epit.* liii.; Val. Max. ix. 3. § 7, vii. 4. § 5, iii. 2. § 21; Appian, *Hisp.* 76; Eutrop. iv. 16.) The reverses of his successor Q. Pompeius, the varied fortunes of the war, and its conclusion by Scipio, belong to the history of NUMANTIA, whose fall and destruction established the Roman dominion in Central Spain, B. C. 133; and left nothing to be done except the subjection of the CANTABRI and ASTURES, which was effected by Augustus in B. C. 25. (See the articles: the Wars of Sertorius and those of Caesar belong to the internal history of Rome; and only deserve notice here on account of their effect in still further consolidating the Roman power in the peninsula.)

The Romans had thus been long quietly established in the south and east; and in the centre the constant presence of Roman armies, and the settlements of Roman veterans, had necessarily exerted a great influence on the language and manners of the natives, besides infusing into the population no small share of Roman blood. And, during the whole period of two centuries, no other foreign influence had been brought to bear upon the people: we hear only of one invasion by barbarians, that of the CIMBRI, who, after their great victory over Manlius and Caepio (B. C. 105), turned off into Spain, which they ravaged in the most fearful manner for the greater part of two years (B. C. 104, 103), until the desperate resistance of the Celtiberians induced them to give up the hope of a permanent conquest, and to retire from the peninsula. (Niebuhr, *Lect. on Rom. Hist.* vol. ii. p. 330.)

Under Augustus the Romanising process was carried on by the foundation of many and very considerable colonies, as, for example, CAESAR AUGUSTA (*Zaragoza*), EMERITA AUGUSTA (*Merida*), PAX JULIA (*Beja*), PAX AUGUSTA (*Badajoz*), LEGIO VII. GEMINA (*Leon*), and others. These cities were adorned with some of the finest productions of Roman architecture, of many of which magnificent ruins still remain.

The system of internal communication also, which had been commenced as early as B. C. 124 (Polyb. iii. 39; Freinsheim, *Suppl. Liv.* lxi. 72), and further developed by Pompey's military roads over the Pyrenees (Sallust, *Frag. Hist.* iii. p. 820, Cort.), was made tolerably complete by Augustus. Thus the peninsula, with all its natural advantages, was laid open to travellers and settlers, who flocked over the Pyrenees to all quarters of the land; so that, by the time of Strabo, the Turdetani in the S., and the people about the Baetis in general, had been entirely converted to Roman manners (τελέως εἰς τὸν Ῥωμαίων μεταβέβληνται τρόπον), and they had even forgotten their own language. Most of them had obtained the *civitas Latina*, and had received Roman settlers; so that little was wanting of their being all Romans. The Iberians who were in this condition were called Togati; and among these were included even the Celtiberians, who had been regarded as the wildest (θηριωδέστατοι) of all (Strab. iii. p. 151); that is, of all the tribes in the S. and centre of the peninsula, for of them only is Strabo here speaking. The tribes of the northern mountains long after retained those fierce rugged manners which led Juvenal to write (*Sat.* viii. 119) "Horrida vitanda est Hispania."

Having thus become more thoroughly Roman than any other province out of Italy, Spain furnished many names distinguished in the history and literature of Rome, such as the poet Lucan, the two Senecas, Columella, Pomponius Mela, Quintilian, Martial, and many others.

IV. POLITICAL DIVISIONS AND CONSTITUTION UNDER THE ROMANS.

1. *The two provinces of Hither and Further Spain.*—The provincial constitution dates from

the year after the expulsion of the Carthaginians, B. C. 205; and at the same time the division of the peninsula into two parts, which appears already to have been used as a geographical distinction, was made a part of the political constitution; so that the peninsula formed, from the first down to the time of Augustus, *two** provinces, the eastern, called HISPANIA CITERIOR (ἡ ἐντὸς Ἱσπανία or Ἰβηρία), and the western called HISPANIA ULTERIOR (ἡ ἐκτὸς or ἔξω I.), the words ἐντός and ἐκτός having reference to the river IBERUS (*Ebro*) which was at first adopted as the natural boundary. (Strab. iii. p. 166; Caes. *B. C.* iii. 73; Cic. *pro Leg. Manil.* 12; *pro Font.* 56. 3; Liv. xxviii. 18, xxx. 30, xxxii. 27, 28, xlv. 16; Plin. iii. 1. s. 2; Tac. *Ann.* iv. 13; Flor. iv. 2.) The boundary, however, was drawn differently at different times; so that we find, in Caesar (*B. C.* i. 38), Hispania Citerior extending as far as the SALTUS CASTULONENSIS, on the NE. margin of the valley of the BAETIS (*Guadalquivir*); and afterwards the boundary was drawn from this range, or from the sources of the Baetis to New Carthage, and later still to the town of URCI (*Almeria*), a little W. of the SE. point of the peninsula (CHARIDEMI PR.; *C. de Gata*), or even to MURGIS, a little further to the W. (Artemid. *ap.* Steph. B. *s. v.* Ἰβηρία; Strab. *l. c.*; Plin. iii. 3. s. 4; Const. Porph. *de Admin. Imp.* ii. 23.) Polybius, having probably in his mind the old Greek distinction between the country of the Celts and that of the Iberians, calls the eastern province Celtiberia and the western Iberia, and makes the boundary near Saguntum; but by this he probably refers to the *Ebro* as the boundary, for he fell into the common mistake about the position of Saguntum (Polyb. iii. 17; comp. SAGUNTUM; see also Artemid. *ap.* Steph. B. *s. v.* Ἡμεροσκοπεῖον; Strab. iii. p. 148; Plut. *Sertor.* 3). Other writers use Celtiberia as a synonym for Hither Spain (Plin. iv. 36; Solin. 23). Lastly, some late writers used the terms *Great* and *Little Spain* (Ἱσπανία μεγάλη and μικρά) as equivalent respectively to Hither and Further Spain (Charax, ad Const. Porph. *de Admin. Imp.* ii. 23; comp. Steph. B. *s. v.* Ἱσπανίαι). Even after the division into three provinces, we still find the phrases Hispania Citerior and Ulterior, the latter including Baetica and Lusitania.

2. *Administration before Augustus.*—The two provinces were governed, at first, by proconsuls elected *extra ordinem* (Liv. xxviii. 38; xxix. 13, xxxi. 20), and afterwards by two praetors, who were usually invested with the power of proconsuls and the insignia of the 12 fasces. (Liv. xxxii. 28, xxxiii. 26; Duker. *ad* Liv. xxxvii. 46, xxxix. 29; Drakenborch. *ad* Liv. xl. 39.) At the time of the Macedonian war, the provinces were united under one governor; but only as a temporary arrangement, and the double government was restored in B.C. 167 (Liv. xliv. 17, xlv. 16). As already observed, there were two armies stationary in Spain; two legions in each province (comp. Caes. *B. C.* i. 38). The seat of government for Hither Spain was at first TARRACO, and afterwards also CARTHAGO NOVA; that of the Further Province seems generally to have been at CORDUBA, and sometimes at GADES.

3. *The Three Provinces of Tarraconensis, Baetica, and Lusitania.*—Already in the time of Julius Caesar we find a distinction made between the part of Further Spain which lay SE. of the Anas (*Guadiana*), and the country of the Lusitani and Vettones to the W. and N. of that river. He represents the country as divided between the three legati of Pompeius, of whom Afranius held Hispania Citerior, with three legions; Petreius, the country from the Saltus Castulonensis to the Anas, with two legions; and Varro, the territory of the Vettones and Lusitani, on from the Anas, with two legions. (*B. C.* i. 38.) This distinction was adopted in the settlement of the provinces by Augustus; Hispania Ulterior being divided into the two provinces of BAETICA and LUSITANIA, while Hispania Citerior* was called by the new name of HISPANIA TARRACONENSIS, after its old capital TARACO. (Appian, *Hisp.* 3, 102; Strab. iii. p. 166; Mela, ii. 6; Plin. iii. 2; Dion Cass. liii. 12; Const. Porph. *de Admin. Imp.* ii. 23: the phrase *tres Hispaniae* is found in an inscription, *ap.* Marini, ii. p. 785: respecting the boundaries of the three provinces, see the several articles.)

4. *Imperial Administration.*—Baetica was a senatorial province; the other two were *provinciae Caesaris* (Strab. xvii. p. 840; Suet. *Aug.* 27; Dion Cass. liii. 12): all three were governed by praetors, of whom the praetor of Tarraconensis had consular power; and under him were three *legati* and three legions. His residence was generally at Tarraco, but sometimes also at New Carthage: that of the praetor of Baetica at Corduba; that of the propraetor of Lusitania usually at Augusta Emerita. The finances were administered, in Baetica, by a quaestor, in the two other provinces by *procuratores Caesaris*.

5. *Conventus Juridici.*—For judicial purposes, the whole country was divided into districts, called *conventus juridici*, in each of which the courts were held at a chief city, to which the *conventus* was considered to belong. There were, according to Pliny, who makes this division the basis of his description, 14 *conventus* in all; of which Tarraconenses had 7, Baetica 4, and Lusitania 3; as follows (Plin. iii. 3. s. 4, iv. 20. s. 24, 21. s. 35):—

(1). The 7 conventus of TARRACONENSIS were those of CARTHAGO NOVA, TARRACO, CAESARAUGUSTA, CLUNIA, LUCUS AUGUSTI, BRACARA AUGUSTA, and probably ASTURICA AUGUSTA; besides the Balearic islands. [BALEARES INSULAE.] These 7 conventus contained 472 towns and villages, of which 293 were reckoned as belonging to the other (*contributas aliis*) 179, which were made up as follows: 12 *coloniae*, 13 *oppida civium Romanorum* (i. e. with the full Roman citizenship), 18 *Latinorum veterum* (i. e. with the *jus Latii*), 1 *foederatorum* (allied, but without the civitas), and 135 *stipendiaria* (i. e. tributary, Plin. iii. 3. s. 4).

(2). The 4 conventus of BAETICA had their seats at GADES, CORDUBA, ASTIGI, and HISPALIS, and contained 175 towns; namely, 9 *coloniae*, 8 *muni-*

* Hence, as already observed, the names *Hispaniae* and Ἰβηρίαι; and also *duae Hispaniae*, Cic. *ll. sup. cit.*

* The name *H. Citerior* still continued to be used; and so, though less commonly, was that of *H. Ulterior*, sometimes in its old sense (Plin. iii. 3. s. 4), and sometimes for Baetica alone. (Plin. iii. 1. s. 2, where both senses occur at once: "Ulterior appellata, eadem Baetica .... Ulterior in duas, per longitudinem, provincias dividitur." Perhaps, however, the first words only mean that the first land of Europe *begins with* H. Ulterior or H. Baetica, without positively implying the full *equivalence* of the names.)

cipia, 29 with the Latin franchise (*Latio antiquitus donata*), 6 free (*libertate donata*), 7 allied (*foedere donata*), 120 *stipendiaria*. (Plin. iii. 1. s. 3).

(3). LUSITANIA had for the head-quarters of its 3 conventus, the cities of EMERITA AUGUSTA, PAX JULIA, and SCALABIS; at which justice was administered to the peoples of 46 towns, including 5 *coloniae*, 1 *municipium civium Romanorum*, 3 with the Latin franchise (*Latii antiqui*), and 36 *stipendiaria*. (Plin. xxi. s. 35.)

Further particulars, including the names of the chief of the towns here counted up, are given under BAETICA, LUSITANIA, and TARRACONENSIS.

6. *Changes after Augustus.* — Vespasian rewarded the Spaniards for the readiness with which they espoused his cause by conferring the *Jus Latii* on all the cities of the peninsula. (Tac. *Hist.* iii. 53, 70; Plin. iii. 3. s. 4; coins of Vespasian, with the epigraph HISPANIA, ap. Eckhel, vol. vi. p. 338.)

Long before the new arrangement of the provinces under Constantine, the subdivision of Tarraconensis had begun by the erection of GALLAECIA and ASTURIA into a *Provincia Caesaris* under the Antonines, perhaps even under Hadrian. (Orelli, *Inscr.* No. 77.) Under Constantine, Spain, with its islands, and with the part of Africa which included the ancient Mauretania, now reckoned to Spain, was divided into the 7 provinces of BAETICA, LUSITANIA, GALLAECIA, TARRACONENSIS, CARTHAGINIENSIS, INSULAE BALEARES, and TINGITANA, which had for their respective capitals, HISPALIS, EMERITA, BRACARA, CAESARAUGUSTA, CARTHAGO NOVA, PALMA, and TINGIS. Of these 7 provinces the first 3 were governed by *Consules*, the other 4 by *Praesides*; and all were subject to the *Vicarius Hispaniarum*, as the deputy of the *Praefectus Praetorio Galliae*. (S. Rufus, *Brev.* 5; *Not. Dig. Occ.* c. 20; Böcking, *Annot. ad N. D.* vol. ii. p. 458, where much interesting matter is collected; Zosim. ii. 32, 33; Cod. Theod. L. v. et lxi.) Entirely independent of the Vicarius Hispaniae were 3 military governors (*comites*, Cod. Theod. L. iv. L. iii. &c.).

7. To complete this summary of the political geography of Spain, we subjoin a tabular list, from Ukert (vol. ii. pt. 1. p. 322), of the *Peoples and Districts of the Several Provinces*, as enumerated by the principal ancient authorities: —

[See next page.]

V. DESCRIPTIVE GEOGRAPHY FOR THE TIME OF THE ROMAN EMPIRE.

1. *Position and general form.* — In the period which has passed under our review, it has been seen that two leading facts respecting Spain had been established from the earliest period of historical research; namely, that it was the western-most country of Europe*, and that it was not (as some of the poets seem to have fancied) an island, but had its Mediterranean shore continuous with that of LIGURIA. Of its actual separation from Libya there never was a doubt, even among the poets, though they look back in imagination to a time when the separation was effected by superhuman power. [HERCULIS COLUMNAE.] The early knowledge of the Straits led necessarily to some knowledge of the ocean which lies beyond them [ATLANTICUM MARE]; and we have seen that, at a very early period, the Greeks were acquainted with the Atlantic coast as far as the Sacred Cape (*C. S. Vincent*). The campaigns in Lusitania gave them a general idea of the W. coast; and the Cantabrian War, in which the fleet of Augustus, for the first time, sailed along the N. coast, united its evidence with the knowledge already obtained of the S. of Gaul, to complete the true notion of the *general form* of the country, as it is well described by Arnold: — "The Spanish *peninsula*, joined to the main body of Europe by the isthmus of the Pyrenees, may be likened to one of the round bastion towers which stand out from the walls of an old fortified town, lofty at once and massy." (Arnold, *History of Rome*, vol. iii. p. 391.) This passage is quoted for the sake of the striking form in which it puts the general idea of the object; but we may venture to improve the details, by observing, that a modern *polygonal* bastion might be a better image, and that the *isthmus* of the peninsula is more accurately described by an ancient geographer than by the modern historian, as "the isthmus" — not *of the Pyrenees* — but, with reference to its narrowest part, "*hemmed* in between the two Gallic gulfs" (Strabo, as already quoted*); and it is *within* this isthmus that the Pyrenees rise, like gigantic lines of fortification, to cover the whole peninsula which lies beyond them. (Comp. Strab. ii. p. 127; Agathem. ii. p. 36.)

These *general* views were held by the geographers under the Roman empire, but with some interesting differences as to details. They all describe the country as narrowest at the Pyrenees, and gradually widening out from thence. Mela makes its width at the Pyrenees half as much as at the W. coast; Strabo, in the proportion of 3 to 5. Strabo compares it to the hide of a beast, having the neck turned towards the E., and by it joined on to Gaul (Κελτική: Strab. ii. p. 127, iii. pp. 137, 138, comp. ii. pp. 119, 120; Dion. Per. 287; Eusth. *ad Dion. Per.* 285; Mela, ii. 6, iii. 1; Plin. iii. 3. s. 4). It should be borne in mind that Strabo regarded the peninsula as a four-sided figure, of which the E. side was formed by the Pyrenees, which he believed to lie N. and S. parallel to the Rhine; from their extremities the N. coast ran out to the PR. NERIUM (*C. Finisterre*), and the S. coast

* This involved its being the W.-most country of the known world, according to the views of the ancient historians and geographers, from Herodotus down to Ptolemy, all of whom believed the W. coast of Africa to fall off to the SE. either at once from the Straits, or from a point opposite to the Sacred Promontory. [LIBYA.] Of course, we speak here of the mainland, excepting the FORTUNATAE INSULAE and the semi-fabulous ATLANTIS.

* This correction may appear trifling to some: but, apart from the general requirement of minute accuracy in descriptive geography, the point is really an important one. The chain of the Pyrenees is *not*, as people often think, perfectly continuous from sea to sea. Beginning, on the E., at *C. de Creus*, above the *gulf of Rosas*, it maintains an unbroken line, penetrable only by difficult mountain passes, till it ALMOST touches the bay of Biscay; but, instead of *actually* reaching the sea, the main chain continues its westward course, parallel to the N. coast, only throwing off lateral spurs to the coast, and thus leaving a pass which has proved in all ages the vulnerable point in the line. Indeed, if the *actual chain* were to be insisted on as the N. boundary of Spain, the whole line of coast, including *Guipuzcoa*, *Biscay*, *Santander*, the *Asturias*, and part of *Gallicia*, would belong *physically* to France. to the PR. SACRUM*, and the fourth side by the W. coast, extending N. and S., between the two headlands named, *parallel to the Pyrenees*. (Strab. iii. p. 137; comp. Justin. xliv. 1.) When others call it triangular they probably reckon the whole N. side, along the Pyrenees and N. coast, as one, which is more accurate. (Oros. i. 2; Aeth. Ister. *Cosmog.* p. 43, ed. Simler.) Its true form may be regarded, by a rough process of estimation, as a trapezium contained by lines drawn from the *C. Creus* to *C. Finisterre*, on the N.; from *C. Finisterre* to *C. S. Vincent*, on the W.; from *C. S. Vincent* to *C. de Gata*, on the S.; and from *C. de Gata* to *C. Creus*, on the E.: but, by drawing intermediate lines from headland to headland, the number of sides might be considerably varied.

2. *Boundaries.* — No country which is not insular has its boundaries so well defined as Spain: namely, on the E. and part of the S. side (the S. side of Strabo and other ancient writers), the *Mediterranean* [MARE INTERNUM]; on the rest of the S., the W., and part of the N. sides, the *Atlantic* [ATLANTICUM MARE]; and on the remainder of the N.side (the E. side of Strabo and other ancient writers), the *Pyrenees* [PYRENAEI M.]. Different names were applied to the seas which washed the coasts (the *bays* will be mentioned presently), as follows: the part of the Mediterranean on the S. coast was called BALEARICUM MARE and IBERICUM MARE; the part along the S. coast, INTERNUM MARE specifically; then came the Straits of Gades or Hercules [GADITANUM FRETUM]; the part of the ocean along the S. side was called GADITANUS OCEANUS, and that along the N. coast CANTABRICUM MARE.

3. *Size.*—The Spanish peninsula lies between 36° 1′ and 43° 45′ N. lat., and between long. 3° 20′ E. and 9° 21′ W. Its greatest length from N. to S. is about 460 miles, and its greatest breadth from E. to W. about 570 miles; its surface, including the Balearic isles, about 171,300 square miles. As might naturally be expected, the numbers given by the ancients vary greatly from these figures and from one another.† Eratosthenes made the distance from the Gades to the Sacred Cape 5 days' sail (Strab. iii. p. 148), and otherwise, from the Sacred Cape to the Pillars, 3000, and thence to the Pyrenees 3000 stadia; and therefore the greatest length 9000 stadia (Strab. i. p. 64, ii. p. 106). Artemidorus reckoned 1700 stadia from the Sacred Cape to the Pillars. (Strab. iii. p. 148.) Polybius gives the distance from the Pillars to the Pyrenees as somewhat less than 8000 stadia, as follows: from the Pillars to New Carthage, 3000 stadia; thence to the Iberus, 2600 stadia; thence to Emporium, 1600 stadia (*Polyb.* iii. 39; Strab. ii. p. 106): the remaining distance, to the Pyrenees, he does not specify, but it is manifestly so much too great that, for this and other reasons, Ukert proposes to change the last-mentioned number from 1600 to 2000, or 2200, which would make the total from the Pillars to Emporium 7800 stadia (Ukert, vol. ii. pt. 1. p. 256 b. If this emendation be sound, we may account for the error as made by a copyist to agree with the 1600 stadia given by Strabo from the Ebro to the Pyrenees). Strabo makes the length from the Pyrenees to the W. coast, *in a straight line*, 6000 stadia, and he also calls this expressly the *greatest length:* elsewhere he assigns the same length to that part of the S. coast which lay within the Straits as follows: from Calpe to New Carthage, 2200 stadia; thence to the Iberus, about the same; thence to the Pyrenees, 1600: the greatest breadth, namely, along the W. coast, he makes 5000 stadia; the least, namely along the Pyrenees, 3000 stadia. (Strab. ii. pp. 106, 127, 128, iii. pp. 137, 156.)

Pliny quotes various statements, according to which the length varied from 1200 to 1500 M. P., the breadth from 900 to 1100, and the whole circuit of the coast from 2600 to 3000 M. P. (Plin. iii. 1. s. 2, 3. s. 4; iv. 21. s. 35). Ptolemy places Hispania between 3° and 9° long. and 36° and 46° lat. (ii. 4). In all these statements, it is important to observe that the geographers founded their estimates of the distances almost entirely on the itinerary measurements.

4. *Outline of the Coast, Promontories, and Bays.* — A glance at the map of Spain will show at once *twelve* salient points in the outline of the coast, besides some others of secondary importance. The first, beginning at the N. end of the E. coast, is that formed by the E. extremity of the Pyrenees, PYRENES PROM. (τὸ τῆς Πυρήνης ἄκρον) or VENERIS PROM. or PYRENAEA VENUS (τὸ Ἀφροδίσιον, ἱερὸν τῆς Πυρηναίας Ἀφροδίτης), a mountainous headland, projecting far into the sea, and dividing the gulf of CERVARIA (*Cervera*) or PORTUS VENERIS on the N. from that of RHODA and EMPORIAE (*Bay of Rosas*) on the S.; its name being obtained from a temple of Venus which stood upon it. (Liv. xxvi. 19; Strab. iv. pp. 178, 181; Mela, ii. 5. § 8; Plin. iii. 3. s. 4.) From the S. side of the *Bay of Rosas* the coast preserves a pretty even direction, about SW. to a little S. of BARCINO (*Barcelona*), whence it forms a very large bay, which is terminated on the S. by the headland of DIANIUM (*C. S. Martin*), running far out to the east. In the upper part of this large bay are TARRACO and the delta of the IBERUS; its lower part, from about 40° N. lat., forms the SUCRONENSIS SINUS (*G. of Valencia*), facing the east. To the SSW. of the Dianium Pr. and E. of Carthago Nova lies the almost equally conspicuous headland of SATURNI PR. (*C. de Palos*); and the bay between them was called ILLICITANUS SINUS (*B. of Alicante*). Proceeding SW. from the Saturni Pr. we come to the CHARIDEMI PR. (*C. de Gata*), running out far to the S. and forming the turning point from the E. to the S. coast: between this and the former lay the MASSIENUS SINUS, which has no specific modern name. These are the four great headlands and the three large bays of the E. coast.

Doubling the Charidemi Pr. and passing by the comparatively small URCITANUS SINUS (*G. of Almeria*), upon which the boundary between Tarraconensis and Baetica comes down to the coast, the coast pursues almost a straight line to MALAGA (*Malaga*), which forms the E. extremity (as the M. of the Baetis forms the western) of the base of the great triangular projection of the S. coast which runs out to meet a similar projection of the African coast, leaving between them only the narrow passage called the GADITANUM or HERCULEUM FRETUM (*Straits of Gibraltar*). The E. end of the Strait is guarded by the two rocky headlands called the Pillars of Hercules [HERCULIS COLUMNAE], of which the one on the European side, so celebrated under the names of CALPE and *Gibraltar*, forms

* Elsewhere, however (ii. p. 128), he makes the S. coast end at CALPE, Gibraltar.

† N. B. 10 stadia = 1 geog. mile.

the termination of the Mediterranean coast of Spain.* The W. entrance of the Straits is formed by a headland, named, like most of those which have been mentioned, after a temple which stood upon it, JUNONIS PR., doubtless an object of deep reverence from the time of the Phoenicians downwards; its ancient sanctity has been long forgotten, but, even in a work like this, a tribute must be paid to the glories of *Cape Trafalgar*. Proceeding NW. past the island and city of Gades, we come to one of the minor headlands, that which lies outside of the mouth of the BAETIS (*Guadalquivir*), marked by the CAEPIONIS TURRIS (*Chipiona*). Hence the coast sweeps round a bay which has no name, NW. and W. to the mouth of the ANAS (*Guadiana*), where the coast of BAETICA terminates, and that of LUSITANIA begins. The first object on the S. coast of Lusitania is the projection called CUNEUS (*C. de S. Maria*); and about $1\frac{1}{4}^\circ$ W. of this, the S. side of the peninsula terminates at the frequently mentioned SACRUM PR. (*C. S. Vincent*), where, as at *Trafalgar*, ancient sanctity is eclipsed by modern glory.

The W. coast of LUSITANIA is so straight as to form no large bays, and it has only three headlands worth mentioning; namely, the long and sharp promontory S. of the estuary of the TAGUS, named BARBARIUM PR.† of Strabo (*C. Espichel*); then the W. point both of the estuary of the Tagus and of the whole coast, the MAGNUM PR.* of Mela and Pliny (*C. da Roca*); and lastly, about 40′ N. of this, the LUNAE or LUNARIUM PR. of Ptolemy (*C. Carvoeiro:* but see note just above).

At the mouth of the DURIUS (*Douro*) the coast of Lusitania ends, and that of GALLAECIA begins. It preserves the same character of straightness as far N. as the MINIUS (*Minho*), beyond which it is broken into a series of estuaries of river (enumerated under GALLAECIA), the points of land between which require no specific notice, till we come to the extreme NW. corner of the peninsula. Here the W. coast terminates at the headland called CELTICUM or NERIUM (*C. de Finisterre*), which lies almost at the intersection of two lines, each of which may be taken as a "datum line" for the W. and N. sides of the peninsula. These lines are the meridian of 9° W. long. and the parallel of 43° N. lat. The former runs through the W. side of the Sacred Cape (*C. S. Vincent*), just *outside* of the W. coast, except for the portion which projects westward about the mouth of the Tagus: while the latter keeps from about 50 to about 20 miles *within* (i. e. S. of) the N. coast, and coincides very nearly with the chain of mountains which form the W. continuation of the Pyrenees.‡ The greatest rise of the N. coast above the datum line of 43° N. lat. is made at once from the Pr. Nerium, whence the coast runs NE. up to the CORU or TRILEUCUM PR. (*C. Ortegal*), which forms the extreme N. point of the whole peninsula. Hence the N. coast proceeds nearly straight to the E., but with a gradual declination to the S., having no large bays, and no promontories worth naming till we reach that of OEASO (*C. del Higuer*), at its E. extremity, which is formed by a spur of the Pyrenees.

In this outline, the statements of Strabo, Mela, Pliny, Ptolemy, and other ancient writers have been arranged in their several places, according to the true figure of the coast: further details are given under the respective articles. One matter which requires especial notice, namely, Pliny's great error in making the W. coast end, and the N. coast begin, *immediately above the estuary of the Tagus*, is more fully referred to under ARTABRI.

Before proceeding to the interior, it should be mentioned that, besides the lesser islands near the coast, the great group now known as the Balearic Islands, E. of *C. S. Martin* (Pr. Dianium), were always considered to belong to Hispania. [BALEARES, PITYUSAE.]

5. *The Interior, with its Mountains and Rivers.* —Few maps present to the eye a more striking picture than that of Spain; and yet, clearly as the physical features stand forth, an unpractised eye may easily misunderstand them. A single glance suffices to show that the country is intersected, through the greatest portion of its breadth, by five great chains of mountains, the two outermost of which fall off at once, on the N. and S. respectively, to the bay of Biscay and the Mediterranean, while between them and the other three there are inclosed four great valleys, forming the river-basins of the Douro, Tagus, Guadiana, and Guadalquivir; and that another chain, though less regular, running across, and, to some extent uniting, the E. extremities of these five, divides the sources of the rivers just named from another great river-basin, that of the *Ebro;* and, lastly, that, on the E. side of this basin, a great branch of the Pyrenees, running to the S., forms on its E. declivity another maritime border along the entire NE. coast of the peninsula. All this is very obvious; but it is quite insufficient for a clear outline of the structure of the peninsula. There is another element: one not quite so obvious on the map; but one which makes Spain so entirely unlike every other country of Europe, and which has so materially influenced its climate, its population, the foreign settlements in its several parts, the commerce of other nations with it the campaigns carried on within its boundaries by contending empires, and its own intestine struggles, both in ancient and in modern times, that a right knowledge of it is of the first consequence to the whole study of the history of the country. This peculiar feature of the peninsula is well described by Arnold:—"Spain rises from the Atlantic on one side, and the Mediterranean on the other, not into one or two thin lines of mountains divided by vast tracts of valleys or low plains, but into a huge tower of table-land, from which the mountains themselves rise again, like the battlements on the summit. The plains of Castile are mountain plains, raised nearly 2000 feet above the level of the sea, and the elevation of the city of Madrid is nearly double that of

* The *Cape of Tarifa*, in the middle of the Straits, deserves notice as the southernmost point of the peninsula, though it has no specific name in ancient geography.

† Possibly these two names may be meant to denote one and the same headland, viz. the *C. Espichel;* and the next, PR. LUNAE, may be the *C. da Roca.*

‡ For the sake of those who find such modes of reference useful, another pair of co-ordinate axes may be given for the peninsula in general. Taking TOLETUM (*Toledo*), as a centre, it will be found that the meridian of 1° W. long. and the parallel of 40° N. lat. intersect a very little N. of it, dividing the peninsula into four quarters, the lengths and breadths of which along the axes (though not their areas) are nearly equal.

the top of Arthur's Seat, the hill or mountain which overhangs Edinburgh." (*History of Rome*, vol. iii. p. 391.) The elevation of this central table-land is, in fact, higher than that of any other table-land in Europe, while its extent is so great as to comprehend nearly one-half of the area of the peninsula. Its limits correspond pretty nearly to that of the quadrangle formed by the parallels of 38° and 43° N. lat. and the meridians of 1° and 8° W. long. Its boundaries on the N. and S. are strikingly defined by the continuous and lofty chains of mountains called respectively the *Mountains of Asturias* [VASCONUM SALTUS, and VINDIUS M.] and the *Sierra Morena*. On the E. its separation from the basin of the *Ebro* and the E. maritime district is effected by a less perfectly continuous series of high lands and mountain ridges, called by the ancients IDUBEDA in the N. part, and OROSPEDA in the S.; and on the W. it subsides to the Atlantic by means of the extreme portions of the mountains which traverse it from E. to W., with a declination more or less to the S.*, becoming more decided towards the extremities, till at last their W. slopes fall down to the Atlantic, forming the valleys and terraces of Portugal. [Comp. LUSITANIA.] Of the ranges which thus traverse the table-land the most important is that which runs SW. almost through its centre, and terminates in *C. da Roca* (Magnum Pr.), W. of the mouth of the Tagus (where it was called HERMINIUS M.: no specific names are given to the other portions of the chain), dividing the region into two nearly equal parts. Of these divisions the northern contains the river basin of the *Douro* [DURIUS], and is now known as the table-land of *Old Castile* and *Leon*; the southern, or table-land of *New Castile* and *Estremadura*, is much more mountainous, and is subdivided by another range, which has no specific ancient name, into the river-basins of the *Tagus* [TAGUS] and the *Guadiana* [ANAS].

Of the lower districts by which this table-land is inclosed on all sides, like a platform surrounded with ascents of various slopes, that on the W. coast is so closely connected with the valleys of the table-land itself, that (however distinct from it in *modern* geography and history) the former may be considered by the student of ancient history as an appendage to the latter. The N. maritime district forms the narrow strip along the *bay of Biscay*, which was peopled by tribes as rugged as itself. [ASTURES, CANTABRI, GALLAECIA.] The districts E. and S. of the central table-land are of the utmost importance in history. Lying open to the Mediterranean, with a vast sea-board, and abounding in valuable productions, they early came to be more closely connected with the civilised states around the Inner Sea than with the wild regions in the interior of the peninsula. The E. portion consists properly of two parts; the river basin of the *Ebro* [IBERUS], which lies much lower than the central table-land, but still considerably higher than the sea; and the E. maritime region, extending from the Pyrenees to New Carthage: but the two parts are so closely connected in ancient history that they may be regarded as one division. Thus viewed, the E. district is of a triangular form, having the Pyrenees for its base, and its vertex at New Carthage and the *C. de Palos*, its E. side formed by the Mediterranean shore, and its W. side by the ranges which divide it from the central table-land; and answering to the provinces of *Catalonia*, *Arragon*, with the S. part of *Navarre*, *Valencia*, and parts of *New Castile* and *Murcia*.

The S. district is of still far greater importance, and may be regarded as forming, to a great degree, a country by itself, distinct from all the rest of the peninsula; as, indeed, it has been politically and historically a separate country during some of the most important periods of Spanish history. This country—the TARTESSIS and BAETICA of the ancients, the *Andalucia* of modern geography—is severed from the rest of Spain by the great chain of the *Sierra Morena* [MARIANUS MONS], on the S. of which lies the valley of the *Guadalquivir* [BAETIS], open entirely to the W. shore, but inclosed on the S. by another chain of lofty mountains, named, from their snowy summits, the *Sierra Nevada* [ILIPULA], which sink down to the S. coast by the intermediate chain of the *Alpujarras*, and form on the N. the plain of *Granada*. On the E. side, the valley of the Baetis is entirely shut in by ranges which run NE. and SW., linking the *Sierra Nevada* and the *Sierra Morena* to one another and to the chain of OROSPEDA on the W. border of the eastern district. Of these cross chains, the chief are those called the CASTULONENSIS SALTUS and the ARGENTARIUS MONS.

While thus separated by mountains from the rest of Spain, *Andalucia* lies perfectly open to Africa and the Mediterranean,—a fact of the utmost importance in relation to its ancient ethnography as well as its modern history. No one who rightly appreciates this fact will wonder that it was a Phoenician dependency while all the rest of Spain was still barbarian, nor that it was united to *Marocco* under the later Roman empire, under the Vandals, and under the Arabs, nor that the kingdom of Granada should have so long survived the expulsion of the Moors from the rest of Spain.

To sum up this description. For the purposes of ancient history and geography the peninsula of Spain is divisible into four main parts:—(1.) The central table-land, with the W. coast, containing the river basins of the Douro, Tagus, and Guadiana [ANAS]: (2.) The mountainous N. coast, comprising the ancient GALLAECIA, ASTURIA, and CANTABRIA: (3.) The valley of the IBERUS, and the E. coast: (4.) BAETICA, or *Andalucia*.

The details respecting the mountains and rivers which have been mentioned, as well as the lists of many others, not important enough to be included in this general outline, are given under the several articles bearing their names, and under those describing the three provinces and the smaller districts of the peninsula.

VI. CLIMATE AND PRODUCTIONS.

The diversities in the surface of the peninsula are attended with a corresponding variety of climate; so that Spain, though the southernmost country of Europe, has, in different parts, the climates of nearly all the rest of the continent. This is well set forth by Niebuhr:—"Andalucia, the southernmost part, is almost identical with ancient Baetica, and, as is observed even by Strabo, is a country quite different from the rest of Spain. ... While Valencia is flat and well watered, but wanting in energy, Andalucia and Granada are countries matured by the sun in the highest degree; they are scarcely European, but almost like tropical countries. The eastern division,

* The northernmost range does not come exactly under this description: its course is almost due W. until it throws off a number of branches, by which it subsides to the Atlantic, forming the mountain region of *Gallicia*.

or the country of the Iberus, if we examine its northern parts, Aragon and Catalonia, already greatly resembles a northern country. Valencia stands in the middle between them. The whole country of the Tagus is throughout a table-land, very high at its commencement, piercingly cold and unhealthy as far as the frontier of Portugal..... Between the Sierra Morena and the Douro we have the large plain of Estremadura, which is fertile but unhealthy, and perfectly flat. The plain of Leon is scarcely inhabitable on account of its drought and barrenness. The southern parts of Castile are productive, and the continuation of the valley into Portugal changes its character so much as to become extremely rich: it still contains large plains, but the greater part is a beautiful hilly country." (*Lectures on Ancient Ethnography and Geography*, vol. ii. pp. 282, 283.) Arnold also has a brief passage on the subject, well worth quoting: — "The centre of Spain, notwithstanding its genial latitude, only partially enjoys the temperature of a southern climate; while some of the valleys of Andalucia, which lie near the sea, present the vegetation of the tropics, the palm-tree, the banana, and the sugar-cane. Thus, the southern coast seemed to invite an early civilisation; while the interior, with its bleak and arid plains, was fitted to remain for centuries the stronghold of barbarism." (*History of Rome*, vol. iii. pp. 391, 392.)

With these descriptions the statements of the ancient writers agree tolerably well. It would be tedious to refer at length to the passages of Polybius, Strabo, Pliny, Justin, and other writers, which are collected by Ukert (vol. i. pt. 1. pp. 323, 324).

Its fertility is generally celebrated by the ancients, who mention among its products, corn, wine, oil, fruits, pasturage, metals of all kinds, and precious stones. Baetica was famed for its abundant harvests; Lusitania, for its numerous flocks; Turdetania, for its timber; the fields of Carthago Nova and other plains, for the *spartum*, from which cordage was made. But the great attraction of the peninsula to civilised nations, from the earliest times, was found in its mines of the precious metals, especially the silver mines in the mountains of the south. It also yielded gold, iron, quicksilver, cinnabar, rock-salt, and other valuable minerals. (See the authorities *ap.* Ukert, *l. c.*: comp. BAETICA, CARTHAGO, CARTHAGO NOVA.)

VII. POPULATION.

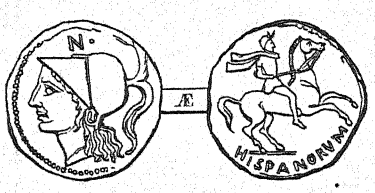
The ethnography of the Spanish peninsula is a very difficult subject. It is certain that, in the historical period, the chief stock of the population was the race called Iberian, with a considerable intermixture of Celts, and, in the S., of Phoenicians also. But as to the precise position of the Iberians in the human family, and as to the questions, whence they came into the peninsula, in what exact relation they stood to the Celtic population, and what has become of them in the subsequent movements of races, which have swept like mighty tide-waves backwards and forwards over the face of the peninsula: — these are problems of which we cannot yet be said to have obtained a very satisfactory solution.

The prevailing opinion among the ancients, and the one most in favour with modern scholars, represents the Iberians as an aboriginal people, in addition to whom the peninsula received an immigration of Celts from beyond the Pyrenees, who overpowered the Iberians The two peoples coalesced to a great extent, forming the great nation of the CELTIBERI; but pure Iberian and pure Celtic tribes were still to be found in various parts of the peninsula. (Herod. ii. 33; Diod. Sic. v. 33, 35; Strab. i. p. 33, iii. pp. 148, 151, 153, 157, 158, 162; Polyb. ii. 31; Appian, *Hisp.* 2; Plin. iii. 1. s. 3; Lucan, iv. 9; Sil. iii. 140.) The Celtiberians occupied chiefly the centre of the country, as well as parts of Lusitania and of the N. coast. [CELTIBERI.] The pure Iberians dwelt chiefly in the Pyrenees and on all round the coast, and the pure Celts on both sides of the river Anas, and in the extreme NW. of the peninsula, about the promontory Nerium. [CELTICA.] Lastly, there was a large admixture of Phoenicians in Baetica; and on other points of the S. and E. coasts colonies were established by the Phoenicians and Carthaginians, and by various Greek states, as the Phocaeans, Rhodians, Zacynthians, Samians, and Massaliots (Herod. i. 163; Strab. iii. pp. 151, 157, 159; Mela, iii. 6; Plin. v. 19. s. 17); besides the great influx of Romans at a later period.

But, as regards the first inhabitants, a directly opposite opinion has been held by not a few eminent scholars, and is supported by the high authority of Niebuhr, who expounds it as follows: — "Spain is destined by nature almost more than Italy, to form one compact state: no one can have a doubt about this, when looking at the three seas by which it is surrounded. Nevertheless, however, it did not become united as one whole till a late period, though this happened before the time of which we have written records; for there can be no doubt that previously it was divided into two distinct countries. On the one side, the Pyrenees formed its natural boundary towards Gaul (in the course of time, however, they were crossed, and the Iberians ruled over the country from the *Garonne* to the Rhone); but at an earlier period another natural boundary line was formed by the Sierra Morena, an extensive range of mountains, which, for a couple of centuries, formed the boundary between the Christian and Mahommedan parts of Spain. These same mountains, no doubt, also separated the Iberians from the Celts. The heights in the north of Spain, whence the Tagus, Durius, and Minius flow towards the sea, and whence, on the other side, smaller rivers carry their waters towards the *Ebro*, were inhabited by Celts, who were also called Celtiberians. Other Celts bearing the name Celtici dwelt in *Algarbia* and the Portuguese *Estremadura*, and others again inhabited the province *Entre Douro e Minho* in the north of Portugal. These three Celtic nations were quite isolated in Spain. The Celtiberians were not pure Celts, but, as even their name indicates, a mixture of Celts and Iberians; but the Celts in Portugal are expressly stated to have been pure Celts. The latter attracted the attention even of the ancients, especially of the excellent Posidonius, who made so many correct observations, but allowed himself in this instance to be misled. He is of opinion that the Celts had immigrated into Spain, for he reasoned thus: as the Celts could migrate into Italy and across the *Danube* as far as the *Dnieper* it was far less difficult for them to enter the neighbouring country of Spain. But such isolated parts of a nation cannot have arrived in a country by immigration; on the contrary, the Iberians appear extending themselves and in possession of *Aquitania* and *Languedoc* at a very early period; how then could the Celts, not being able to maintain the Pyrenees, have spread over the whole peninsula?

It is probable, nay almost evident, that it was the Iberians that migrated and extended themselves; and this opinion agrees with the most ancient traditions of the Celts in Ammianus Marcellinus, according to which they were once masters of all the west of Europe, but were expelled from many parts. If we suppose that the Celts dwelt as far as the Sierra Morena, and that the Iberians, perhaps reinforced by their kinsmen from Africa, pressed them forward, this supposition would account for some Celtic ruins which are still extant; and the Celts may have capitulated in a similar manner to that described in the book of Joshua. As one part of England was occupied by Germans so completely as to destroy every trace of the ancient inhabitants, while elsewhere, as e. g. in *Devonshire*, the Britons, in large numbers, lived among the Germans and became mixed with them, so the Iberians expelled the ancient Celtic population, wherever the nature of the country did not protect it; but the Celts maintained themselves in the mountains between the *Tagus* and the *Iberus*, and the Iberians only subdued them, and then settled among them. In course of time the two nations became amalgamated, and thus formed the Celtiberians, whose character, however, is essentially Iberian." (*Lectures on Ancient Ethnography and Geography*, vol. ii. pp. 280, 281.)

In further support of these views, we have the fact already mentioned, that Spain lies quite open to immigration from the East by way of the Mediterranean and the Straits; the now established fact that N. Africa, with which Spain is thus connected, was peopled from the East; and traditions of settlements from that side, of no great value certainly by themselves, but of some interest as agreeing with the results of other investigations. (Sall. *Jug.* 18; Strab. xv. p. 687; Joseph. *Ant.* x. 11. § 1.) The decision of the question, if it is to be decided at all, requires a more profound examination than has yet been made of the remnants of the old Iberian language as preserved in inscriptions, in geographical names, and in the dialects of the Basques, who are now admitted on all hands to be the lineal descendants of the old Iberians. The foundations of such an investigation have been laid by the late W. von Humboldt, in his work already mentioned. (*Prüfung der Untersuchungen über die Urbewohner Hispaniens vermittelst der Baskischen Sprache*, Berlin, 1821: comp. Freret, *Mém. de l'Acad. des Inscr.* vol. xviii. p. 78; Hoffmann, *die Iberer ina Western und Osten*, Leipz. 1838.)



Thus much is certain that, in the whole period of ancient history, the great bulk of the population was Iberian; and, through all subsequent infusions, large as they have been, of Roman, Gothic, and Arab blood, the great mass of the nation still retains the leading characteristics which are ascribed to the Iberians in general and to the Celtiberians in particular, by Strabo and other ancient writers, and which are summed up by Arnold in the following words:—"The grave dress (Strab. iii. p. 145), the temperance and sobriety, the unyielding spirit, the extreme indolence, the perseverance in guerilla warfare, and the remarkable absence of the highest military qualities, ascribed by the Greek and Roman writers to the ancient Iberians, are all more or less characteristic of the Spaniards of modern times. The courtesy and gallantry of the Spaniard to women has also come down to him from his Iberian ancestors: in the eyes of the Greeks, it was an argument of an imperfect civilisation, that among the Iberians the bridegroom gave, instead of receiving, a dowry; that daughters sometimes inherited, to the exclusion of sons, and, thus becoming the heads of the family, gave portions to their brothers, that they might be provided with suitable wives. (Strab. iii. p. 165.) In another point, the great difference between the people of the south of Europe, and those of the Teutonic stock, was remarked also in Iberia: the Iberians were ignorant, but not simple-hearted; on the contrary, they were cunning and mischievous, with habits of robbery almost indomitable—fond of brigandage, though incapable of the great combinations of war. (Strab. iii. p. 154.) These, in some degree, are qualities common to almost all barbarians; but they offer a strong contrast to the character of the Germans, whose words spoke what was in their hearts, and of whose most powerful tribe it is recorded that their ascendancy was maintained by no other arms than those of justice." (*Hist. of Rome*, vol. iii. pp. 396, 397.)

The different tribes, however, were distinguished by very different degrees of character. The Cantabrians, and the peoples of the N. coast in general, were the wildest and rudest: the Celtiberians, though scarcely more civilised, were of a very noble disposition: the Vaccaei were (under the Romans, at least) highly civilised, and only inferior to the Turdetani of Baetica, who cultivated science and had a literature of their own. [TURDETANIA.]

There remain two very striking points in which the ancient Iberians and the modern Spaniards bear the closest resemblance to each other. The one is, not merely the disunion, but the alienation and exasperation, which the several nations have ever displayed towards each other, and which has made them the almost helpless victims, or the still more helpless dependents, of foreign foes or friends, whom they have afterwards requited with internecine hatred or bitter ingratitude. The other point referred to is the obstinate endurance with which they have fought behind walls, as attested, among other instances, by the sieges of SAGUNTUM and NUMANTIA, *Gerona* and *Zaragoza*; a quality, in both cases, strangely contrasted with their inability to stand the shock of armies on the open field of battle. "In Condé's History of the Arabs, a general, in his despatch to the Caliph, says of the Spaniards: On horseback they are eagles; in the defence of their towns, lions; but in the field they are women." (Niebuhr, *Lectures on Anc. Eth., &c.* vol. ii. p. 286: the whole Lecture, as well as the passage on Spain in Arnold's *History*, to both of which such frequent reference has been made in this article, deserve the most attentive perusal: the half-volume devoted to Hispania in Ukert's *Geographie der Griechen und Römer* is a masterly production, and contains a collection of references to nearly all the materials required for the study; but the reader of Ukert must be constantly on his guard against false references. Forbiger, *Handbuch der alten Geographie*, vol. iii. pp. 4—109, follows close in Ukert's steps, correcting many of his false references, but introducing others of his own; he adds, however, some valuable notices of the modern literature of the subject. Among the works of the ancient writers, Strabo's third book stands pre-eminent for its fulness and general accuracy. The conquest of the peninsula by the barbarians, and the transition to its medieval history, form too large a subject to be entered on here: all that is necessary for the pur-

pose of this work will be found in the articles on the Alans, Goths, and Vandals.)

The annexed coin, with the Roman legend HISPANORUM, is generally considered as belonging to the Hispanians in general: but there is much reason to believe that it does not really belong to Spain at all, but was struck *in Sicily* by a colony of Spanish auxiliaries settled in that country. [P. S.]

COIN ASCRIBED TO HISPANIA.

HISPA'NUM MARE or HISPA'NUS OCEANUS, also called MARE IBERICUM and BALEARICUM (*πόντος Ἰβηρικός, τὸ Ἰβηρικὸν πέλαγος, τὸ Βαλλιαρικὸν πέλαγος*), the specific name of the W. part of the MARE INTERNUM (*Mediterranean*), about the Balearic islands, and along the E. coast, and also, according to some of the ancients, the S. coast of Hispania. Thus Agathemerus makes it extend from the Pillars of Hercules to the Pyrenees. (Strab. ii. p. 122; Dion. Per. 69; Agathem. i. 3, ii. 14; Flor. iii. 6, 9; Plin. iii. 5. s. 10; Solin. 23; Priscian. Perieg. 75; Claudian. xxiii. 8.) [P. S.]

HISPELLUM (Εἰσπέλλον, Strab.; Ἴσπελλον, Ptol.: *Eth.* Hispellas,-ātis: *Spello*), a town of Umbria, at the foot of the Apennines, and on the left of the Flaminian Way, about 4 miles from Fulginium (*Foligno*) and 6 from Mevania (*Bevagna*). It is noticed by several writers among the more considerable towns of this part of Umbria. (Strab. v. p. 227; Ptol. iii. 1. § 54; Sil. Ital. viii. 458; Orell. *Inscr.* 98.) Pliny terms it a colony, and we find it bearing in inscriptions the titles of "Colonia Julia Hispelli" and "Colonia Urbana Flavia," whence it appears that it must have received two successive colonies, the one under Augustus, the other under Vespasian. (Plin. iii. 14. s. 19; Orell. *Inscr.* 2170, 3885; Hygin. *de Limit.* p. 179.) Augustus, indeed, seems to have shown it especial favour, and bestowed on Hispellum the grove and temple of Clitumnus, though these were more than 12 miles distant from the town, and separated by the intervening territories of Mevania and Fulginium. (Plin. *Ep.* viii. 8.) We learn from the Liber Coloniarum that it received a fresh accession of colonists under Hadrian. (*Lib. Colon.* p. 224; Zumpt, *de Col.* p. 409.) Inscriptions, as well as extant remains, testify to its flourishing condition under the Roman empire: besides considerable ruins of its amphitheatre in the plain below the modern town, there exists one of the Roman gates, called Porta Veneris, in good preservation, some remains of a triumphal arch in a street thence called the *Via dell'Arco*, and considerable portions of the ancient walls. The inhabitants profess to show the house and tomb of the poet Propertius, for which there is certainly no authority: but many critics consider Hispellum as having a better claim than Mevania to be regarded as his birthplace. [MEVANIA.] Hispellum was an episcopal see till the sixth century, when it was taken and destroyed by the Lombards, and the see transferred to *Foligno;* but the modern town of *Spello* is still a considerable place. (Rampoldi, *Corogr. d'Italia*, vol. iv. p. 1066.) [E. H. B.]

HISTIAEA (Ἱστίαια). 1. A town in the north of Euboea, better known under its later name Oreus. [OREUS.]

2. In Attica. [ATHENAE, p. 294.]

HISTIAEOTIS (Ἱστιαιῶτις, also Ἑστιαιῶτις). 1. A district in the north-west of Thessaly. [THESSALIA.]

2. A district in the north of Euboea, of which the chief town was Histiaea, afterwards called Oreus. [OREUS.]

HISTO'NIUM (Ἱστόνιον: *Eth.* Histoniensis: *Il Vasto* or *Vasto d'Ammone*), one of the chief towns of the Frentani, situated on the coast of the Adriatic, about five miles S. of the promontory called *Punta della Penna.* No mention of it is found in history, but the name is noticed by all the geographers among the towns of the Frentani, and we learn from the Liber Coloniarum that it received a colony, apparently under Caesar. (Mel. ii. 4. § 9; Plin. iii. 12. s. 17; Ptol. iii. 1. § 18; Lib. *Colon.* p. 260; Zumpt, *de Colon.* p. 307.) It did not, however, obtain the rank of a colonia, but continued to bear the title of a municipium, as we learn from inscriptions. (Orell. *Inscr.* 2603, 4052; Zumpt, *l. c.*) The same authorities prove that it must have been under the Roman empire a flourishing and opulent municipal town; and this is further attested by existing remains, which include the vestiges of a theatre, baths, and other public edifices, besides numerous mosaics, statues, and columns of granite or marble. Hence there seems no doubt that it was at this period the chief city of the Frentani. (Romanelli, vol. iii. p. 32.) Among the numerous inscriptions which have been found there, one of the most curious records the fact of a youth named L. Valerius Pudens having at thirteen years of age borne away the prize of Latin poetry in the contests held at Rome in the temple of Jupiter Capitolinus. (Romanelli, *l. c.* p. 34; Orell. *Inscr.* 2603; Mommsen, *I. R. N.* 5252.) The name of Histonium is still found in the Itineraries of the fourth century (*Itin. Ant.* p. 314; *Tab. Peut.*), and it probably never ceased to exist on its present site, though ravaged successively by the Goths, the Lombards, and the Arabs. Some local writers have referred to Histonium the strange passage of Strabo (vi. p. 242), in which he speaks of a place called Ortonium (as the name stands in the MSS.) as the resort of pirates of a very wild and uncivilised character. The passage is equally inapplicable to Histonium and to Ortona, both of which names naturally suggest themselves; and Kramer is disposed to reject it altogether as spurious. (Kramer, *ad loc.*)

Histonium has no natural port, but a mere roadstead; and it is not improbable that in the days of its prosperity it had a dependent port at the *Punta della Penna*, where there is good anchorage, and where Roman remains have also been found, which have been regarded, but probably erroneously, as those of Buca. [BUCA.] The inscriptions published by a local antiquarian, as found on the same spot, are in all probability spurious. (See Mommsen, *Inscr. Regn. Neap.* p. 274, *App.* p. 30; who has collected and published all the genuine inscriptions found at Histonium.) [E. H. B.]

HISTRIA. [ISTRIA.]

HITTITES (Χετταῖοι, LXX.), one of the tribes of the Canaanites, whom the Israelites found in Palestine. (*Gen.* xv. 20; *Exod.* iii. 8, xxiii. 23.) They

dwelt in the district of Hebron, and in the neighbourhood of the Amorites. (*Gen.* xxiii. 7, seq.; *Numb.* xiii. 29.) Solomon compelled them to pay tribute along with the other Canaanitish tribes (1 *Kings*, ix. 20, seq.); but we find them at a later period (in the time of Joram, king of Israel) governed by kings of their own (2 *Kings*, vii. 6). The Hittites are also mentioned after the return of the Jews from captivity (*Ezra*, ix. 1); but after this time their name does not occur again.

HIVITES (Εὐαῖοι, LXX.), one of the tribes of the Canaanites, whom the Israelites found in Palestine. (*Gen.* x. 17; *Exod.* iii. 8, 17, xxiii. 23; *Josh.* iii. 10.) They dwelt in the north of the country, at the oot of Mount Hermon (*Judg.* iii. 3), and appear to have been driven by the Israelites to the north-west, as we find them mentioned in the time of David together with Tyre and Sidon. (2 *Sam.* xxiv. 7.) The remnant of the nation was reduced to subjection by Solomon (1 *Kings*, ix 20), after which they disappear from history.

HOLMI (Ὅλμοι: *Eth.* Ὁλμεύς), a town on the coast of Cilicia Tracheia, a little to the south-west of Seleucia; during the period after Alexander its inhabitants were transferred to form the population of the neighbouring Seleuceia. (Strab. xiv. p. 670; Scylax, p. 40; Steph. B. *s. v.*; Plin. v. 22, who calls the place *Holmia*.) Leake (*Asia Minor*, p. 205) thinks the modern town of *Aghaliman* occupies the site of the ancient Holmi, which Scylax describes as deserted even in his time.

Another town of the same name existed in Phrygia, on the road from Apameia to Iconium, at the entrance into a pass of Mount Taurus. (Strab. xiv. p. 663.) It is probable that it may have been the same place as the fort Myriocephalon, by which the emperor Manuel Comnenus passed in A. D. 1172, before the battle of Iconium. (Nicet. Chonat. p. 115.) [L. S.]

HOLMO'NES. [OLMONES.]

HOLOPHYXUS. [OLOPHYXUS].

HOMANA, mentioned by Pliny (v. 23) as a town in Pisidia, is no doubt the same as Οὐμανάδα in Hierocles (p. 675). It was, probably, situated at the southern extremity of lake Caralitis, and was the capital of the Homanades on the frontier of Isauria, who, besides Homana, are said to have possessed 44 forts (comp. Tac. *Ann.* iii. 48), a statement opposed to the remarks of Strabo (xii. pp. 569, 668, 679), according to which the Homanades (Ὁμαναδεῖς), the most barbarous of all Pisidian tribes, dwelt on the northern slope of the highest mountains without any towns or villages, living only in caves. In the reign of Augustus, the consul Quirinius compelled this little tribe, by famine, to surrender, and distributed 4000 of them as colonists among the neighbouring towns. [L. S.]

HOMANADES. [HOMANA.]

HOMERI'TAE (Ὁμηρῖται, *Peripl.* p. 13; Marcian, p. 13; Plin. vi. 28; Ptol. vi. 7), a people of Arabia Felix who occupied its S. promontory (*Yémen*). The Arabs of *Yémen*, who are well known in Oriental history under the name of *Himyarí*, and to the Greeks by the name of Homeritae, were a civilised people in very remote ages. They possessed a rich and fertile territory, very advantageously situated for commerce. The Himyaritic dynasty of the *Tobbáï* (from the Arabic *Tabbáïah*, which had a general signification like that of Emperor, Khán, Pharaoh, Caesar, &c.; D'Herbelot, *Bibliothèque Orientale s. v. Tobbá*) is referred to a very early period, and their power appears to have been very extended, as monumental traces of the *Himyarí* have been found not only in *Yémen*, but in distant countries both to the E. and W. There is a considerable affinity between the *Himyari* character and the well-known and most ancient *Dévanágari Sanscrit*. The earliest writing was probably the Himyaritic, even anterior to the Cuneiform characters.

The independence of the Homeritae was first violated by an Aethiopian conqueror. (Procop. *B. P.* i. 19, 20.) Those who wish to study the very obscure question of the Jewish and Abyssinian kingdoms in Homeritis will find much valuable information in Dean Milman's notes upon the 42nd chapter of Gibbon, and the authorities there quoted, especially the very able notes of Saint Martin upon Le Beau (*Bas Empire*, vol. viii. pp. 46—67, 153—158), to which may be added Ritter, *Erdkunde*, vol. xiv. p. 38; Ewald, *Gesch. des Volkes Israel*, vol. i. p. 383, 2nd edit. 1851; Humboldt, *Cosmos*, vol. ii. p. 206, trans.; and the 2nd volume of Colonel Chesney's *Expedition to the Euphrates*. It may be sufficient here to quote the words of Gibbon:—

"If a Christian power had been maintained in Arabia, Mahomet must have been crushed in his cradle, and Abyssinia would have prevented a revolution which has changed the civil and religious state of the world." [E. B. J.]

HO'MOLE or HOMO'LIUM (Ὁμόλη, Strab. ix. p. 443; Ὁμόλιον, Strab. *l. c.*, Liv. xlii. 38; Plin. iv. 9. s. 16), a town of Thessaly, situated at the foot of Mt. Homole, and near the edge of the vale of Tempe. Mt. Homole was the part of the chain of Ossa lying between Tempe and the modern village of *Karitzu*. Mt. Homole is sometimes used as synonymous with Ossa. It was celebrated as a favourite haunt of Pan, and as the abode of the Centaurs and the Lapithae. Pausanias describes it as the most fertile mountain in Thessaly, and well supplied with fountains. (Paus. ix. 8. § 6; Eurip. *Herc. Fur.* 371; Theocr. *Idyll.* vii. 104; Virg. *Aen.* vii. 675; Steph. B. *s. v.* Ὁμόλη.) The exact site of the town is uncertain. Both Scylax and Strabo seem to place it on the right bank of the Peneius near the exit of the vale of Tempe, and consequently at some distance from the sea (Scylax, p. 12; Strab. ix. p. 445); but in Apollonius Rhodius and in the Orphic poems Homole is described as situated near the sea-shore, and in Apollonius even another town, Eurymenae, is placed between Homole and Tempe. (Apoll. Rhod. i. 594; Orpheus, *Argon.* 460.) Eurymenae, however, stood upon the coast more to the south. [EURYMENAE.] Leake conjectures that the celebrated convent of St. Demetrius, situated upon the lower part of Mt. *Kissavo*, stands on the site of Homolium. (Leake, *Northern Greece*, vol. iii. p. 402, vol. iv. p. 415.)

HONO'RIAS (Ὀνωριάς), the name given by Theodosius II., in honour of his uncle Honorius, to the town of Claudicpolis in Bithynia, which at a still earlier time had been called Heracleia. (Malala, *Chron.* ii. 14; Hierocl, p. 694.) [L. S.]

HOPLI'TES. [BOEOTIA, p. 413, a.]

HOR. [IDUMAEA.]

HORCA. [ORCA.]

HOREB. [SINAI.]

HORESTI, in North Britain, mentioned by Tacitus (*Agric.* 38). After the battle of the Grampians Agricola moved into their country=*Stirling*, or the north part of *Lanark*. [R. G. L.]

HORITES. [IDUMAEA.]

HORMA. [ALMOPIA.]

HORMANUS. [OMANITAE.]

HO'RREA, AD, a place in Gallia Narbonensis, which signifies a depôt for corn and perhaps other merchandise. Such names of places occur occasionally. Beaufort (*Karamania*, p. 27) describes one of these Horrea, or Roman granaries, near the ruins of Myra, which bears a perfect inscription beginning HORREA IMP., &c. The Antonine Itinerary places Ad Horrea on the road from the *Var* to Forum Julii (*Fréjus*), and between Antipolis (*Antibes*) and *Fréjus*. From Antipolis to Ad Horrea is 12 M.P.; and from Ad Horrea to Forum Julii it is 17 M.P. The Table gives the same distances. The geographers differ wonderfully about the site of Ad Horrea. Some place it at *Grasse*, NW. of *Antibes*, according to which the road must have made a great bend between Antipolis and Forum Julii. Others would have it to be *Napoul*, which is much too near *Fréjus* to agree with the distance. D'Anville places it at *Cannes*, in favour of which there are two things:—*Cannes* is on the coast, where grain might be landed, for in the days of the Romans the Provincia imported corn, as it does now, from Africa; and it is probably on the old road. But it is too near to Antipolis; which difficulty D'Anville removes by a common device of his,—he reads vii. for xii. Others fix Ad Horrea at a place called *Horibel* or *Auribeau*, at the mouth of the stream of *Viviers*. [G. L.]

HORREA COELIA. [HADRUMETUM.]

HO'RREUM, a town of Molossis in Epirus, of uncertain site. (Liv. xlv. 26.)

HORREUM MARGI (*Morawa Hissar*), a town in Moesia, on the river Margus, where, according to the Ant. Itinerary (219), the Legio XIV Gemina, and according to the Not. Imperii (30) the Legio XIII Gemina, was stationed. (Comp. *Itin. Ant.* 134; Geogr. Rav. iv. 7; *It. Hieros.* 565, where the name is *Oromagus*; Hierocl. p. 657, Ὀρθέμαρχος; and Ptol. iii. 9. § 5, Ὀρρέα. [L. S.]

HORTA or HORTANUM (*Orte*), an ancient town of Etruria, situated on the right bank of the Tiber, nearly opposite to its confluence with the Nar (*Nera*). Its name is mentioned only by Pliny, who calls it Hortanum (probably an adjective form), and by P. Diaconus, who writes it Horta, and mentions it with Sutrium, Polimartium, Ameria, and other towns on the two sides of the Tiber. (Plin. iii. 5. s. 8; P. Diac. iv. 8.) There can, therefore, be no doubt that it is the place still called *Orte*, where, besides some relics of Roman times, numerous Etruscan sepulchres have been discovered, and objects of considerable interest brought to light. (Dennis, *Etruria*, vol. i. pp. 162—167.) It probably derived its name from the Etruscan goddess Horta, who is mentioned by Plutarch. (*Quaest. Rom.* 46; Müller, *Etrusker*. vol. ii. p. 62.) The celebrated Lacus Vadimonis, the scene of two of the most decisive defeats of the Etruscans by the Romans, was situated about 4 miles above Horta, close to the banks of the Tiber. [VADIMONIS LACUS.] The Via Amerina, which led from Falerii to Ameria [AMERIA], crossed the Tiber just below Horta, where the remains of a Roman bridge are still visible. (Dennis, *l. c.* p. 167.)

The "Hortinae classes" mentioned by Virgil (*Aen.* vii. 715) must probably be connected with this city, though he places them on the left bank of the Tiber, among the Sabines, and the adjective formed from Horta would naturally be Hortanus, and not Hortinus. [E. H. B.]

HORTONA. [ORTONA.]

HO'SSII, O'SSII (Ὄσσιοι, Ptol. iii. 5. § 22), a people of Sarmatia Europaea, who occupied the E. coasts of the Baltic—*Esthonia* and the island of *Oesel*, and belonged to the Finnish stock. (Schafarik. *Slav. Alt.* vol. i. pp. 298, 302.) [E. B. J.]

HOSTI'LIA, a small town of Cisalpine Gaul, situated on the N. bank of the Padus, about 10 miles below the confluence of the Mincius: it is still called *Ostiglia*. Pliny (xxi. 12. s. 43) calls it only a village (vicus); and we learn from Tacitus that it was dependent on Verona ("vicus Veronensium," *Hist.* iii. 9). But in the civil war between Vitellius and Vespasian it was occupied by Caecina, the lieutenant of the former, as a military post of importance, commanding the passage of the Padus, and secured on its flank by the extensive marshes of the Tartarus. (Id. *Hist.* ii. 100, iii. 9, 14, 21, 40.) It is again mentioned by Cassiodorus in the 6th century (*Var.* ii. 31), and was probably a considerable place in ancient as well as modern times, though it did not enjoy municipal privileges. The Itinerary correctly places it 30 M. P. from Verona on the road to Bononia (*Itin. Ant.* p. 282), while the Table gives 33 (*Tab. Peut.*). [E. H. B.]

HOSUERBAS, a Mutatio, or place, in the Jerusalem Itinerary, on the road from *Bordeaux* to *Narbonne*. It is the next place to *Narbonne*, and 15 Roman miles from it. The Table has it Usuerna or Usuerva, and 16 M.P. from *Narbonne*. It is supposed to be a place at the ford of the torrent *Jourre* or *Jourve*. [G. L.]

HUNGUNUERRO, one of the places called Mutationes in the Jerusalem Itinerary, on the road from *Bordeaux* to *Narbonne*. From Civitas Auscius (*Auch*) to Mutatio ad Sextum is 6 Gallic leagues; and from Mutatio ad Sextum to Hungunuerro is 7 Gallic leagues. The road is direct from *Auch* as far as *Toulouse*; and if anybody can get a good map of that part, he will be able to guess where the place is, for it is on the straight road between *Auch* and *Toulouse*. D'Anville guesses *Gircaro*; Walckenaer guesses "*Hundu de devant* et *Menjoulet*." [G. L.]

HUNNI or CHUNI (Οὖννοι, Χοῦνοι). Observe the absence of the *aspirate* in Οὖννοι.

So early a writer as Ptolemy has the following passage:—μεταξὺ Βασταρνῶν καὶ Ῥωξαλάνων Χοῦνοι (iii. 5. § 25). The full value of the notice will appear in the sequel.

AUTHORITIES.—The two best authorities are Ammianus Marcellinus and Priscus, each contemporary with the actions he describes, but Priscus the better of the two. Sidonius Apollonaris notices their invasion of Gaul; and that as a contemporary. The other authorities are all of later date, *i. e.* referable to the sixth century or later, *e. g.* Jornandes, Procopius, Agathias, Gregory of Tours. Cassiodorus, the best authority of Jornandes, wrote under the reign of Theodoric, 40 years after Attila's death. The whole history of Jornandes is written in a spirit eminently hostile to the Huns; the spirit of a *Goth* as opposed to his conqueror, the *Hun*.

HUNS OF AMMIANUS.—The earliest of the two really trustworthy writers who speak with authority concerning the Huns is Ammianus Marcellinus (xxxi. 1, et seq.). But his evidence is by no means of equal value throughout. He describes their appearance, partly after what he may have read in older authors respecting the *Scythians*, and partly after what he may have learned from those who had seen him. At any rate he draws

a distinction between them and the closely allied *Alani*. The Alani were tall and good-looking ("proceri, pulcri") with yellow hair—"Hunnisque per omnia suppares, verum victu mitiores et cultu" (§ 21). The Huns were "imberbes"—"spadonibus similes—pandi ut bipedes existimes bestias" (2). When Ammianus wrote, the geographical relations of the Huns to the populations around them seem to have been as follows. The Alans occupied the present government of Caucasus, and the frontier of Circassia. Due north and west of the Alans came the Huns themselves, concerning whom Ammianus tells us that "monumentis veteribus leviter nota, ultra paludes Maoticas Glacialem Oceanum accolens, omnem modum feritatis excedit." He tells us this; but we must remark the loose character of his geography in respect to the *Icy Ocean*, and also the likelihood of his views concerning their original migrations being mere inferences from the phenomena of their sudden appearance. The western part of the government of Caucasus, Taurida, and Cherson formed the area of the Huns of Ammianus at the time before us, viz. A. D. 375, in the joint reigns of Valens, Gratian, and Valentinian II.

It is just in the midst of these notices that the necessity for criticism upon the text of Ammianus is so necessary. Between his notice of the Huns and his notice of the Alans, in each of which he speaks in his own proper person, as a contemporary inquirer with sufficient means of information, he brings in the account from Herodotus of the Neuri, Geloni, Agathyrsi, Melanchlaeni, Anthropophagi, and Amazones. This archaic and semi-fabulous part must be separated from the rest.

However, next come the Grutungi, conterminous with the Alani of the Don. How near the Grutungi came to the Tanais is uncertain. They spread, at least, to the valley of the Dniester. Here was the "vallis Gruthungorum." The Thervings lay between the Dniester and the Danube; and besides the Thervings, the Thaifalæ on the R. Gerasus (the *Sereth*). The ethnological connection seems to have been between the Huns and Alans on the one side, and the Thervings and Grutungs on the other—the Thaifalae being uncertain. The political alliances *generally* coincided with the ethnological.

The Huns drove the Grutungs and Thervings (the Goths, as they are mostly called) across the Danube—from Dacia into Moesia and Thrace, from the modern *Moldavia* or *Bessarabia* into *Bulgaria* and *Rumelia*. This is the first great event in their usual history; for the conquests and migrations previous to their appearance on the Dneister are unauthenticated. The quarrels between the Goths of Moesia and the Romans begin, and the Huns and Alans—no longer enemies but allies—*side* with the former. So at least it appears from the loose and unsatisfactory notices which apply to the period between the history of the Huns of Ammianus and that of the

HUNS OF PRISCUS.—A clear light is thrown over the reign of Attila, the son of Mundzak. He began to reign A.D. 433, and, over and above the notices of his battles, we find in Priscus references to as many as five embassies, viz. in A.D. 433 (just after Ruas' death), 441, 448, 449, 450,—this last being abortive and incomplete. In the one A.D. 448 Priscus took a part. Gibbon has abridged the account of it. A.D. 448 was the time, and the royal camp or court of Attila, between the Theiss and the Danube, the place. In A.D. 453 Attila died.

What were his acts, and what his power? Both have been much exaggerated,—by Gibbon as much as by any one. He overran Italy, Greece, Thrace, the countries on the Lower Danube, and penetrated as far into Gaul as Châlons. He claimed either a subsidy or a tribute from the Romans of the Eastern Empire. He seems to have entertained the plan of an incursion into Persia,—at least, the practicability of making one was one of the topics which Priscus heard discussed during the embassy. He spread his negotiations as far as Africa; and so got the co-operation of Genseric.

In these we have the measure of his operations. They were undoubtedly great; though not greater than those of Alaric, and Genseric, and other conquerors of the time.

His method was that of a politician quite as much as that of a soldier. We hear of more embassies than campaigns during the reign of Attila.

The nations that fought under his banner were numerous; but some (if not several) fought as allies, not as subjects. These allies and subjects—collectively—fall into 2 divisions.

1st. The particular population to which *Hun* was given as a generic name, *i. e.* the *Huns* themselves in detail.

2nd. The populations other than Hun, i. e. Gothic, Alan, &c.

The latter will be noticed first; the former will find a place hereafter.

Sidonius Apollinaris writes:—

Barbaries toties in te transfuderat Arctos
Gallia, pugnacem Rugum, comitante Gelono;
Gepida trux sequitur, Suevum Burgundio cogit:
Chunus, Bellonotus, Neurus, Basterna, Toringus,
Bructerus ulvosa vel quem Nicer abluit unda
Prorumpit Francus."—vii. 320.

This applies to the invasion of Gaul.

From Jornandes we get the additional names of Sarmatae, "Cemandri, Marcomanni, Suevi, Quadi, Heruli, Turcilingi."

These lists give Attila an inordinately large, or a moderate-sized kingdom, according to the interpretation we give to each name, and according to the character of the dominion over the populations which bore them, which we attribute to the invader of Gaul. He might have ruled them as an absolute master; he might have availed himself of their arms as simple confederates; he might have taken up some portion of some of them in passing through their country.

Another point may be collected in its full details from Gibbon,—viz. the relations between the Roman general Aëtius and Attila. Aëtius was by blood a Scythian, and it is possible that the language of his childhood was a dialect of the Hun. Until the last year of his life, he was the friend and guest of the Hun kings—Rugelas (Ruas), Bleda and Attila. In the affair of the usurper John, he intrigued with the Huns. He settled a colony of Alans in Gaul; and the Alans and Huns only differed in their politics, not in their language and ethnological affinities. The chief mercenaries of Aëtius were Huns. With these he effected some of his chief conquests, and to these he made over several considerable districts. Hence, when we hear of certain Hun conquests, we hear of the conquests of Aëtius as well; and when we read of such or such areas being occupied, and such or such enemies being reduced, by Aëtius and the Huns, we are in doubt

as to the true sovereignty. Was it Roman, or Hun? due to the arms of Aëtius, or due to the arms of Attila? If everything be Hun that was conquered by Aëtius and his Huns, the empire of Attila enlarges: if everything be Roman, it decreases.

Pannonia was Hun—probably in the very widest sense that can be given to the term.

Dacia was Hun; but not altogether. This we learn from Priscus. When he visited the royal village of Attila, one of the Hun magnates, by name Onegesius, was absent, and had to be waited for. This was because he was settling the affairs of the Acatziri, who had just come under the dominion of Attila.

Now, if the Acatziri be placed (see below) in the more mountainous parts of Transylvania, a certain portion of that province must be subtracted from even the Dacia of Huns. Be it observed, that neither of the authors just quoted mentions these Ἀκάτζιοι.

The Neuri.—If these were Hun *subjects*, rather than *confederates*, and if, as is probable [NEURI], they lay around the marshes at the head-waters of the *Dniester*, we must make the northern extension of the Hun area very irregular in outline, since it was narrow in the direction of the Acatziri, but broad in that of the Neuri. Perhaps the boundary of the Hun territory in the present parts of Southern Russia followed the line of the rivers. If so, it comprised Bessarabia, Cherson, Taurida, and something more.

The Alani who fought under their king Sangiban at Châlons were the Alani of the Aëtian settlements in Gaul, rather than those of the Circassian frontier.

Turning westwards, and changing the direction, we come to some important areas, which must not be too lightly and gratuitously given over to the Huns; viz. the lands of the Thuringians, Burgundians, Suevi, Alemanni, with parts of Rhaetia and Vindelicia. The districts are large, the occupants powerful, the reign of Attila short.

For this period we cannot expect to find absolute evidence of the independence of these several countries. We find them, however, generally speaking, independent and powerful, both before and afterwards. When Attila died his kingdom broke up; and one of the measures of the magnitude of Attila's dominion, is the magnitude of the kingdoms that grew out of it. Three of these were more important than the rest; *a.* that of Theodoric the Ostrogoth; *b.* that of the Gepidae; *c.* the Lombards. Suppose these to have been carved out of the Hun monarchy in all their integrity, and we suppose a vast Hun area. But this was not the case. Theodoric's kingdom was large, because Italy was added to it. At Attila's death it was limited to a portion of Pannonia, and that a moderate-sized portion. The Italian addition was subsequent. The Gepidae are the obscurest of all the populations of Daco-Pannonia; the exact ethnological relations being unknown, though the evidence of Procopius and Jornandes makes them Goths. It is more important to remember that their empire was by no accounts a large one. In the reign of Justinian it was destroyed by the Lombards. The Lombard power, although generally spoken of as if it grew out of the wreck of Huns, really arose out of that of the Gepidae, and was later in date than the immediate dissolution of Attila's dominion. It only became formidable in the reign of Justinian. Odoacer, like Theodoric, was remarkable for what he effected against Rome, rather than for the magnitude of his kingdom.

But whatever may have been the importance of these kingdoms, it is a matter of history that the area out of which they grew was limited to Pannonia, Western Dacia, Eastern Rhaetia, and Northern Moesia. Hence no inordinate magnitude need be given to the dominion of Attila in order to account for the kingdoms that grew out of its decay.

On the south of the Danube, a belt of country, five days' journey across, from the Save to Novi in Thrace, was ceded by the Romans to the Huns.

It is submitted that the sovereign sway of Attila was bounded by the eastern frontier of Bohemia on the west, and by the Maeotis (there or thereabouts) on the east. There was also the strip of land to the south of the Danube. The northern boundary was uncertain. It probably reached to Minsk in one part, and no further than the northern part of Transylvania on the other. This is by no means a small area. It is less, however, than the one usually suggested by the name of Attila.

TRADITIONARY VIEW OF ATTILA'S POWER AND CHARACTER.—In thus curtailing the historical dimensions of Attila, the writer has not forgotten his subsequent reputation, and the space he has filled in the minds of his after-comers. He has not forgotten the terrible term, *Scourge of God*. He has recognised the place that *Etzel* takes in the fictions of Germany, and *Atla* in those of Scandinavia—sharing the Nibelungen-lied and the Edda with Sigfrid and Theodoric; not less in mythic reputation than Arthur or Charlemagne. And not in prose and verse only. The *tumuli* of Northern Germany are called the *Hünengräbe* (=*Graves of the Huns*); and the *Hundsruck* Mountain has, erroneously, been looked upon as the *Hill of the Huns*. More than this—it is admitted that the subsequent reputation is, to some degree, *primâ facie* evidence of a real historical basis. Why should the Attila of men's imagination be so much greater than the corresponding Alarics and Genserics, if there was not some difference in their original magnitudes? Such a remark is legitimate as criticism. *Valeat quantum*. There *are* reasons why Attila and the Huns should become exaggerated—reasons which influenced our early, reasons which have influenced our modern, authorities.

The halo of fiction around Attila is not of Italian origin, nor yet of Greek. It is *German*, and Germano-Gallic; German, essentially and originally. It has already been stated, that the chief source is Jornandes; in many respects the Geoffroy of Monmouth to Germany and Scandinavia.

Tradition (it is believed), tradition and error have engendered exaggerated notions of Attila's power, and distorted ideas of his personal character and actions. Whence come the overstatements? The size of a king's dominions may be magnified without the king being made a monster; and, *vice versâ*, a hideous picture may be drawn of a king without magnifying the size of his dominions. Whence come the overstatements? The historian is a Goth. The more nations the Huns conquered, the less the shame to the Goths. Here lay a bounty upon exaggeration—exaggeration which was easy for two reasons: 1. The joint conquests of Aëtius might be credited to the Huns exclusively; 2. Any kingdom of which the king was worsted might be dealt with as absolutely conquered, and reduced in its full integrity. Let us apply this to one man's dominion only—Hermanric's, *according to Jornandes*. The Huns conquer Hermanric. What had Hermanric conquered? First comes a list of names difficult to make out—

"habebat" (Hermanric) "siquidem quos domuerat Golthes, Etta, Thividos, Inaxungis, Vasinas, Brovoneas, Merens, Mordens, Remniscans, Rogans, Tadgans, Athaul, Navego, Bubegenas, Coldas" (c. 23). The little that can be made out of this may be seen in Zeuss (v. *Ostfinnen*). *Mordens* is the most satisfactory identification, and then *Merens* = the Mordwa (Mordiuns) of Nestor, and the Mirri of Adam of Bremen (Merja of Nestor). The Mordiun country is in the governments of Simbirsk and Saratov.

The sequel in Jornandes tells us something more, viz. that the Heruli, Veneti, Antes, Sclavi, and Haesti were reduced; a list that gives Hermanric all the country between the Vistula and the *Sea of Azov;* since the Haesti are the Aestyii of Tacitus, or the occupants of amber country, East Prussian.

Now, allow all this to Hermanric, and then transfer it to the Huns, and any amount of area will be the result. But was it so transferred? The Huns that conquered the Goths of Hermanric are said to have moved from the Maeotis to the Danube as quickly as they could. Who believes that they consolidated such dependencies as Courland, Livonia, East Prussia, Poland, &c. *en route?* But our reasonable doubts go further still. The magnitude of Hermanric's empire is problematical. Ammianus (his contemporary), besides giving an account of his death different from that of Jornandes, merely writes that when the Alans and Huns had coalesced, "confidentius Ermenrici, late patentes et uberes pagos *repentino impetu* perruperunt, bellicosissimi regis, et per multa variaque fortiter facta vicimus nationibus formidati" (xxxi. 3. § 1). It is submitted that the words *late patentes* by no means denote *vast dominions.* Take the geography of the countries into consideration, and they mean the wide open plains of the Ukraine. Gibbon clearly saw this discrepancy; but, nevertheless, he preferred Jornandes, whose "concise account of the reign and conquest of Hermanric seems to be one of the valuable fragments which Jornandes borrowed from the Gothic histories of Cassiodorus and Ablavius." (Chap. xxv. 5. note j.) The text of Jornandes indicates the contrary of this. Ablavius is quoted specially and by name for one particular fact, viz. the origin of the Heruli; the inference from which is, that the other parts are not from him. We have seen how they differ from Ammianus.

The indefinitude of the term Scythia gave other exaggeration: and the king of the Huns was often called the king of Scythia. So he was—but only of *European* Scythia.

For further elements of confusion, see SCYTHIA. One, in addition, however, still stands over. When the *Danes* of *Denmärk* took their place in history, they had not long been known under that name, before they were attributed to Attila; and Scandinavia became a part of Hundom. Why? Because the *Daci* were more or less Hun; and because, as early as the time of Procopius, we find them called *Dani*, the *Dani* (in after-times) being called *Daci*. The Heruli were undoubtedly Hun, in politics if not in blood. Now, both Jornandes and Procopius bring the Heruli and Dani (not Daci) in contact. There was a confusion here. How it arose is a complex question. Its effect was to carry Attila's power beyond all reasonable limits northwards.

Jornandes and Procopius give us the chief elements of those errors in ethnology and geography, which carry the Hun power unduly *north*wards. How they got carried unduly *east*wards may be seen in Gibbon (chap. 26). Gibbon (chap. 20) has thus been tempted to connect an invasion of France with movements in the north of China, the battle of Chalons with the history of the Sienpi; De Guignes having suggested and worked out the connection. Thus—

Many centuries before our era there were Huns on the north-western frontier of China—conquerors. About B. C. 100 one of the more warlike Chinese emperors subdued them. They fled westwards. A tribe of Sibeia or Central Asia, named Sienpi, harassed them. They divided into 3 portions. One amalgamated with the Sienpi; one settled in Charismia, and became the White Huns (see below) of the Persian frontier; the third, pressed forward by the Sienpi, pressed forward the Goths. "Whilst Italy rejoiced in her deliverance from the Goths, a furious tempest was excited amongst the nations of Germany, who yielded to the irresistible impulse that appears to have been gradually communicated from the eastern extremity of Asia. The Chinese annals, as they have been interpreted by the learned industry of the present age, may be usefully applied to reveal the secret and remote causes of the fall of the Roman empire" (chap. 30). The details are, that the Sienpi grew in strength, called themselves *Topa* (masters of the earth), conquered China, and threw off an offset called Geougen, who were robbers; and the descendants of Moko, a slave of Toulun, one of Moko's descendants, achieved the independence of these Geougen, and effected conquests from the Corea to the Irtish, and beyond. To the north of the Caspian he conquered the Huns. These, of course, moved westwards, but the Huns, who conquered the Alans, and the Thervings, and who are mentioned by Ammianus, had already occupied the parts between the Don and Danube,—"the countries towards the Euxine were already" (A. D. 405 is the date for *this* migration) "occupied by these kindred tribes; and their hasty flight, which they soon converted into a bold attack, would more naturally be directed towards the rich and level plains through which the Vistula gently flows into the Baltic Sea. The north must *again* have been alarmed and agitated by the invasion of the Huns,—the inhabitants might embrace the resolution of discharging their superfluous numbers on the provinces of the Roman empire. About 4 years after the victorious Toulen had assumed the title of Khan of the Geougen, the haughty Rhodogast, or Radagaisus, marched from the northern extremity of Germany almost to the gates of Rome," &c. In a note it is remarked that "Procopius (*de Bell. Vand.* i. 3) has observed an emigration from the Palus Maeotis to the north of Germany, which he ascribes to famine. But his views of ancient history are strangely darkened by ignorance and error." The criticism of this extension of the Hun power in the direction of China, will be found in the notice of the *Cidante* Huns, towards the end of this article.

It is on the authority of Jornandes that the murder of his brother is attributed to Attila: Gibbon follows it; the Comte de Buat demurs to it. Probably it must stand as we find it, subject only to being invalidated by the slightest amount of opposing evidence, in case the care and criticism of future inquirers elicit any.

As a conqueror, Attila seems to have been stronger as the head of a confederation than as a sovereign. He acted, too, more as a politican than a warrior.

Bloody as is his memory, history gives us but three campaigns,—one in Thrace, Illyricum, and Greece; one in Gaul; one (during which he died) in Italy. With Aëtius he intrigued long and steadily; so he did with Genseric (in Africa); so he did with Theodoric, king of the Franks. Add to this, the five embassies from Constantinople, and the one (probably more) from Rome, and we know the so-called *Scourge of God* better in the council than in the field. The steady object of his enmity was the Gothic name. Rome was only an ordinary and occasional foe. His alliances and intrigues coincide remarkably with the diffusion of the Alani, who, either as allies or mercenaries, had penetrated the western parts of Europe before him. Spain was conquered by Alani (the proposed correction, *Alemanni*, is gratuitous), Suevi, and Vandali; and when Genseric led his Vandals into Africa, some of the Alani accompanied him. Now Genseric and Attila were mutual coadjutors. There were Alani in France, and the Frank king intrigued with Attila. The Scythian (*Alan* or *Hun*) extraction of Aëtius has been mentioned.

POPULATIONS AKIN TO THE HUNS UNDER OTHER NAMES.—When Attila died, his kingdom broke up; but as we are not so much writing the history of *a name*, but that of *a people*, we may ask whether the Hun history be not continued under other denominations? The answer is in the affirmative. The erudition and comprehensiveness of the closest investigator of the widest field in all history —the unrivalled historian of the decline and fall of the Roman empire—makes any exception that may be taken to his great work distasteful. Nevertheless, it may truly be said that few pages of Gibbon are more objectionable than those which deal with the ethnology of the Bulgarians. (See chap. lv.) After remarking that "Theodoric, the Ostrogoth, had trampled on the arms of the Bulgarians;" that "after this defeat the name was lost during a century and a half,"—he suggests that "the same or a similar appellation was revived by strange colonies from the Borysthenes, the Tanais, or the Volga." He further adds, that "the unquestionable evidence of language attests the descent of the Bulgarians from the original stock of the Slavonian race." He also speaks of "the Servians, Bosnians, Rascians, Croatians, *Wallachians*, &c.," being "kindred bands." The italics are the present writer's, who remarks that, in the case before us the evidence of language, always exceptionable (though strong *primâ facie*) evidence, is eminently exceptionable here, and also that it is inconsistently applied. The language of the Wallachians is not Slavonic, but Romanyo, i. e. Roman, even as French and Spanish are Roman. In respect to the Bulgarians, the present language is Slavonic, —but Slavonic of a very exceptional character.

But to return to Gibbon. His note states that "Chalcondyles, a competent judge, affirms the identity of the language of the Dalmatians, Bosnians, Servians, *Bulgarians*" (the italics are Gibbon's), "Poles, and—Bohemians." Now, granting Chalcondyles to be a competent judge, he is so only for his own times, the 13th century. Between, however, his time and that of the Bulgarian predominance, the Slavonian king Sviatoslav (A.D. 955 —973) conquered Bulgaria. This accounts for the change of language. It should be added, that neither the Tanais nor the Volga, in the 7th century, could supply a Slavonic population; and that the evidence in favour of the more distant river of the two having been the home of the Bulgarians is unexceptionable, —unexceptionable, and scarcely excepted to by Gibbon himself. "Theophanes places the old Bulgaria on the banks of the Atel, or Volga; but he deprives himself of all geographical credit by discharging that river into the Euxine" (note).

On the other hand, one of the most valuable articles in Zeuss (*Deutsche und seine Nachbarstämme*) is the one on *Bulgari:* wherein he proves, as clearly as matters of the kind can be proved, that the Bulgarians were Huns under another name (or *vice versâ*); or, at least, that the Bulgarians were part of the Hun confederation. Ennodius is the first author who mentions them, and he does so in his Panegyric on Theodoric, their conqueror—their conqueror already alluded to. Ennodius writes: "Stat ante oculos meos *Bulgarum* ductor—dextera tua—prostratus.—Haec est natio cujus ante te fuit omne quod voluit.—His ante mundus pervius esse credebatur." Zeuss rightly remarks that, though this is the first mention of the *Bulgarians*, it is not the first mention of a nation very like them, if not the same. They eat horse-flesh, like the Huns and other Scythians,—"Credunt esse satis ad delicias equini pecoris lac potare. Quis ferat adversarium, qui pernicis jumenti beneficio currit et pascitur?"

Again—Procopius mentions no Bulgarians; only Huns: but certain deeds that Jornandes and others attribute to the former he gives to the latter.

A third passage, that, admitting some distinction to have existed between the Huns and Bulgarians suggests the likelihood of its having been but slight, is from Fredegarius (c. 72): "Eo anno, in Avarorum, cognomenti Chunorum, regno in Pannonia surrexit vehemens intentio, eo quod de regno certarent, cui deberetur ad succedendum, unus ex *Avaris* et alius ex *Bulgaris*."

Fourthly. We must remember that both *Hun* and *Bulgarian* are collective names. Having done this, we have two divisions. The exact names are difficult to ascertain; but names sufficiently like to pass for denominations of the same tribe are found in one author amongst the Huns, in another amongst the Bulgarians—ἐν τούτῳ τῷ χρόνῳ τὸ τῶν Βουλγάρων ἔθνος ἐπῆλθεν τῇ Θράκῃ· ἀναγκαῖον δὲ εἰπεῖν καὶ περὶ τῆς ἀρχαιότητος τῶν Ὀνογουνδούρων Βουλγάρων καὶ Κοτριάγων. (Theophan. ed. Par. p. 296.) The place, however, the Huns is more usual; and here the names are Ὀνογοῦροι (*Hunigari*) and Κουτιγοῦροι (*Kutziagiri.*)

Such is the evidence of Zeuss as opposed to that of the passage of Gibbon that preceded it. But Gibbon himself, in another part of his great work (ch. xlii.), identifies the Bulgarians with the Huns. "I adopt the appellation of Bulgarians from Ennodius, Jornandes, Theophanes, and the Chronicles of Cassiodorus and Marcellinus. The name of Huns is too vague: the tribes of the Cutturgurians and Utturgurians are too minute and harsh." Again: "the same year...was marked by an invasion of the Huns or Bulgarians." The Cutigurians are the Κουτιγουροι, or Cutziagiri, of the last extract. Their name will reoccur.

The next population akin to the Huns (the proofs of this will be seen in the sequel and in AVARES) is that of the Avars. The reign of Justinian gives the first, that of Charlemagne the last, of this name. For further details, see AVARES.

The fourth great name is that of the Khazars; who are unequivocally mentioned under that designation as early as A. D. 626, though not by a contemporary historian. The evidence, however, of

their power is sufficient. The emperor Leo IV., son of Constantine Copronymus, was the son of the Irene, daughter of the Khan of the Khazars. He reigned from A. D. 775 to A. D. 780. Their *time* ranges from the seventh century to the tenth; the power being at its *maximum* about A. D. 850. In *space* they spread from the Caspian to the Dnieper: from the Caspian, inasmuch as the Arab name of that lake was the *Sea of the Khazars;* to Dnieper, because they are mentioned under the name *Chwalisy* by the earliest Russian historian—Nestor.

Much in the same way as the name Hun is succeeded by that of Bulgarian, the name Khazar is succeeded by that of *Patzinaks, Petshinegues* (*Pizenace, Pecenatici, Pincenates, Pecinei, Petinei, Postinagi,* Πατζινακῖται, *Peczengezi* (Russian name), *Besseni, Bessi* (Hungarian names). The *Kanghar* are a section of the *Petshinegues.* Time from A. D. 900 (there or thereabouts) to A. D. 1050. Place—the parts between the Lower Danube and the Lower Don = Bessarabia, Cherson, and part of Taurida. Like the Khazars, they attack Russia; pressing northwards and westwards.

The *Uzi* (*Guss,* Arabic name) replace—or appear to replace—the Petshenegi; time, the 11th century.

Lastly, come the Cumani, scarcely distinguishable from the Uzi. Of all the tribes akin to the Huns, the Cumani seem to have pressed furthest westwards. Probably, they occupied Volhynia—certainly a part of Hungary. The last individual who spoke a language allied to that of the Huns—a language of Asiatic origin—the last of the Cumanians—Varro, an old man of Karizag—died A. D. 1770. With him closes the history of the populations allied to Hun, who at one and the same time dwelt north of the Balkan, and retained their language. The *blood* of the population is still abundant—in some cases predominant; in Bulgaria, Hungary, the Danubian Principalities, Volhynia, Podolia, Cherson, Taurida, and the Crimea.

It may be said that the evidence of the *Hun succession* is deficient; that the *Catena Attiliariorum* (so to say) is broken. Upon this, the writer remarks that the absolute identity of the preceding populations with the Hun is not predicated. They are only said to belong to the same family with the Huns to Attila, and to illustrate the same *general* historical phenomenon; viz. *the intrusion into Eastern Europe of certain frontier populations from Western Asia,* a phenomenon which is seen in its truer light when seen as a whole, than when seen in fragments.

But what are the proofs that these nations are all in *reality,* though not all in *name,* Hun? And in what sense are they so? They are *not* so politically at any rate. They are so ethnologically, and they are so geographically. They are so *geographically;* inasmuch as they can all be deduced from some portion of the area which lay between the most western occupancies of the Pannonian Huns, and the most northern occupancies of the Avar Huns.

THE HUNS ETHNOLOGICALLY MEMBERS OF THE TURK FAMILY.—They are so ethnologically, as can be shown by the following train of reasoning:—

a. That the Cumani and Petshinegi spoke the same language is expressly stated by Anna Comnena, a contemporary testimony.

b. There is the evidence of the early Arab geographers, that the Khazars and Bulgarians spoke the same language.

c. There are the reasons already given for connecting

α. The Bulgarians and Huns;

β. The Avars and Huns.

d. There is a specimen of the Cumanian, and there are glosses from the Khazar, Avar, Bulgarian, all referable to one and the same language.

e. That language is the Turk of Independent Tartary.

It is submitted that this evidence is sufficient; sufficient when we consider that no material facts traverse it, and that the *à priori* probabilities are in its favour. What country so likely to have discharged a population upon South-eastern Russia, the Danubian Principalities, Bulgaria, and Hungary, as Independent Tartary and Caucasus (i. e. the *government* so called)? At the same time, the fact of the evidence of the *Huns* of Attila being of a more indirect kind than we might *à priori* expect, is by no means kept back. We only find what they are by what the Avars were.

EARLY EUROPEAN HISTORY OF THE POPULATIONS AKIN TO THE HUNS.—1. *Details of the name.*—Hitherto, the history of the populations akin to the Hun has been the history of certain populations connected with the decline of the Roman empire: indeed, it has been treated as if it began during the reign of Valens, with the attack upon the Goths and the subsequent passage of the Danube. This has been the first fact recognised—the first fact supported by competent testimony. At the same time, a great deal of the *Asiatic* history has been objected to; a small part only admitted. Now, this leaves the early history of the Hun name untouched. If they did not come from the wall of China, whence came they? The name *Hun* is new; but we have seen that there is a long and late history of the Hun population under other names. May there not also be a long *early* one as well? May not the line run backwards as well as forwards? This question is best treated after a preliminary notice of what may be called the details of the Hun name. If the name *Hun* (and indeed the names *Bulgarian, Khazari*) are *general and collective,* what are the *specific* designations? That such details exist has already been suggested by the remark of Gibbon, that the names *Kutiguri,* &c., were too specific and limited. We have, then, the following names:—

1. *Amilzuri* of Priscus; *Alpilzuri* of Jornandes. 2. *Itimari,* Priscus and Jornandes. 3. *Alcidzuri,* Jornandes. 4. *Tonosures* of Priscus; *Tuncarsi* of Jornandes. 5. *Boisci,* Priscus and Jornandes. 6. *Sorosgi,* Priscus. 7. *Kuturguri* (*Kotriguri* in Agathias), Procopius. *Cutziagiri,* Jornandes. 8. *Uturguri* of Agathias. 9. *Ultizuri* of Agathias. *Ultzinzures* of Jornandes. 10. *Angisciri,* Jornandes. 11. *Bitugures,* Jornandes. 12. *Satages,* Jornandes; probably same as Satagarii. 13. *Sabiri,* Procopius. 14. *Urugi.* 15. *Onoguri,* belonging to the country called Onoguria, Geogr. Ravenn. 16. *Zali,* Menander. 17. *Saraguri.* The list can probably be increased. It is considered, however, sufficient to show that the statement that the term *Hun* was a generic and collective name, was based upon a sufficient list of species. The evidence as to the Hun affinities of the preceding tribes is not uniform. It is stronger in some cases than in others. In all, however, it seems sufficient. For further information see Zeuss, *vv. Hunni, Alani, Bulgari, Avares.*

THE ACATZIRI.—One name of greater importance

than the rest has been reserved, *Acatziri*. What Priscus found, on his visit to Attila's court or camp, respecting these *Acatziri*, has been already noticed. We must remember where they lay, viz. in the mountain districts of the parts about Hungary, (say) in Transylvania. Contrast this locality with that of the Avars, who, in their original locality, seem to have been the most northern of Huns; and who (we must remember) are distinctly designated by that name. So are the *Acatziri*. Now, between these limits lay the Scythia of Herodotus. That the Scythians of Herodotus belonged to the great Turk family is, in the present article, a postulate; but evidence will be given of this fact in the articles SCYTHAE, SCYTHIA. And the Huns, with their allied populations, were Turk also. Neither, however, were indigenous to Europe: but, on the contrary, each intrusive, each originally Asiatic; each, under an *à priori* view of their probable origin, from the north-western parts of Independent Tartary. Now, whatever may be the actual facts of the Hun history, there is no need of any migrations later than that of the Scythae (Skoloti) to bring them into Europe, *and there is no evidence of such*. And, whatever may have been the actual facts in the history of the Scythae, there is *no evidence of their having either been ejected from their European occupancies, or extinguished as populations*. The only definite fact is a change of the names by which the populations of a certain portion of Europe are known. It is suggested, then, that the history of the populations akin to the Hun, from the 5th century forwards, is, in the *main*, a continuance of the history of the Scythae of the 4th century B. C. But is there any evidence of such continuity? It is submitted that there is *some*. The Καπίαροι of Herodotus are, probably, the *Cutiguri* of later writers. The Huns of Attila are not only called Scythae, but more specifically *Royal Scythae*. (Priscus, *de Legat.* 8. 1.) Lastly, comes the notice of the Χοῦνοι (*vid. sup.*) by Ptolem.

But what if the *Acatziri*=*Agathyrsi*? Mr. Newman, in a paper on the *Scythia of Herodotus*, places them in Transylvania. So much for the coincidence of place and place. What as to name and name? There is a certain amount of difference we must expect *à priori*. The two words have come to us through different routes, and at different times. *Agathyrsi* is Greek—early, classical Greek; as (as Greek) Roman also. It was taken by our early Greek authorities at second-hand; perhaps even less directly than that. This means, that it was not taken from the *Agathyrsi* themselves, but that it passed through an intermediate language, becoming thereby liable to change.

But the Greeks of the time of Priscus got it either first-hand, or through the Goths, and *their* forms are, Ἀκάτιροι and Ἀκατζίροι, *Acatziri* (in certain MSS., *Acazziri*). It would be strange if the words were liker than they are. There has been a difference of medium, and a difference of form is the natural result. The present writer makes no secret of laying great stress on these words, *Acatziri* and *Agathyrsi*, even at the risk of being accused of indulging in etymologies. He will, ere long, strengthen it by another; submitting that the two combined are more than twice as strong as one standing alone: they confirm each other. At present he sums up with the inference, that if the Acatziri were Huns, and the Agathyrsi Scythae, and each occupied the same locality at times so distant as the ages of Herodotus and Priscus, *some* member of the Hun name, at least, was *in situ* in Transylvania six centuries before Attila's time,—*some* Scythians coincided with *some* Huns.

It is now suggested that the history of these parts be read backwards. For the parts between the Aluta and the Dniester, it was the Romans of Trajan who displaced the descendants of the Scythae of Herodotus, fragments of whom remained in Transylvania as *Acatziri* in the time of Attila. And why not the Huns of Attila be what the Acatziri were? *No evidence brings them from any point east of the Aluta.* All that evidence does is to say that certain Huns fought against certain Alans on the Maeotis; that certain Huns ejected certain Thervings from Bessarabia; that certain Huns occupied the country between the Aluta and Theiss. All beyond is *inference;* and the inference of the present writer is, that the Huns of Attila were no new comers in Hungary. Where was Attila's court or camp? Not in Roman Dacia, nor yet in Roman Pannonia: but just in that part between the two that was never Romanised; a likely spot for the remains of such independence as the Scythian portion of Dacia might preserve, but not a likely spot for a new invader from the Don or Volga. Part, then, of Dacia was Scythian or Turk? Certainly. No man can say how much. And the subjects of Decebalus may have been Scythian or Turk, descendants of the Agathyrsi, ancestors of the Acatziri, close kinsmen of the Huns of Attila. Such is the inference. If soldiers, why not captains? why not Decebalus himself? There are those who may think that the notion of Decebalus being a Turk supplies a *reductio ad absurdum*. Yet it is only our preconceived notions that are shocked. No facts are against it. Why should not the Agathyrsi of Dacia have supplied a leader as well as any other? Decebalus is a word strange to Gothic, strange to Slavonic, *not strange to Turk history*. When the proper and specific Turks first appear in the field of history, as they do in the reign of Justinian, the name of the first Turk khan is that of the last Dacian king—Disbul, in Gibbon; Διζαβούλος, in Menander (p. 301).

The true historical character of Attila will, perhaps, never be recognised; but, if we must have extremes, the doctrine that he was the reconstructor of an impaired nationality, and the analogue of Pelagius in Spain rather than of Tamerlane in Asia, is as little removed from the probable truth as the notion that he was the Scourge of God and the symbol of barbarism. The ejection of the Goths seems to have a simple detail in the history of Dacia,—possibly the first great event in the reconstruction of a Scythic (or Scytho-Sarmatian) kingdom as opposed to a Romano-Germanic one. At any rate, it is much more certain that the Goths were the intruders than it is that the Huns were.

WHITE HUNS (Οὖννοι λευκοί), CIDARITAE, NEPTHALITAE, EPHTHALITAE.—Cidriate is the name in Priscus; *white*, the epithet of Procopius. Their locality was the south-western part of Turkestan: their affinities, probably Turk; the present Turcomans being their likeliest descendants. They appear in history as being engaged in a war against Pirozes, king of Persia, in the sixth century. (Procop. *B. P.* i. 3.) They are distinctly stated by Procopius to have agreed with the Huns chiefly in name; to have been designated by the epithet *white*, because their complexion was fair, to have been comparatively civilised, settled, and agricultural.

CHIONITAE.—Neumann considered that a popu-

lation named by Ammianus Marcellinus *Chionitae*, are Huns — name for name. Their king Grumbates, along with the king of the Caucasian Albania, was an ally of Sapor in the war against Julian (xviii. 6. § 22). Populations akin to the Huns in Northern Armenia, or along the Georgian frontier, are by no means improbable.

RELATIONS OF THE HUNNI TO THE HUN-JO OF CHINESE HISTORY.—The criticism upon the connection (real or supposed) of the Huns with a population that came in contact with the Chinese, has been deferred until the present occasion. It comes best after a notice of the White Huns. Gibbon's account is that of De Guignes. Neumann has adopted, and in some degree sanctioned, the views of the French and English historians. As Neumann is well versed in Chinese literature, his opinion is important. The criticism of the present writer is based upon no pretence of anything of the sort. He only takes the evidence as he finds it. Let us see what is stated, and then compare it with what is proved. A writer (Sse-ma-tsien) whose date is fixed about B. C. 100, but whose writings have not come down to us, and who is only known from being quoted by Ma-tu-an-lin (a writer of the eighth century A. D.), is said to have stated that, between B. C. 2357 and B. C. 2205, there lived on the Upper Hoangho a tribe called by the Chinese Shan-jang (*armed mountaineers*). Between B. C. 2205 and B. C. 1766, the name for the population of these localities is Hun-jo. That the Shan-jang are the Hun-jo under a Chinese, and the Hun-jo the Shan-jang under a native name, is stated by Neumann; but it *is an inference of his own*, unsupported (so far as his text goes) by anything Chinese. Hence, admitting the Hun-jo to be Huns, the evidence of their being Shan-jang is incomplete. This subtracts something from their antiquity. The history proceeds with the statement that — about B. C. 300 there was a great Tanjou (sovereign) of the Hun-jo named Teúman, and that he came 1000 years after an individual named Shun-wei; nothing being known for the interval. This subtracts again from the historical antiquity of the Hun-jo. About B. C. 207 Maotun conquers great part of China, and about A. D. 90 his descendants are themselves conquered and ejected. This we get from the Chinese. We also get the statement that these broken and ejected Hun-jo moved westwards. They are now getting towards a time and place where European history takes cognisance of them. The Hun-jo are pressed by the Chinese, press upon the Alans, and come out as the Huns of the time of Valens.

It may narrow the question if we criticise this last fact in the history of the Hun-jo only; leaving out the earlier ones, as being but remotely connected with that of the Huns. Can the fugitive from China, A. D. 90, be connected with the invaders of South Russia in the time of Valens? The best attention which the writer of this article has been able to give to the modern writers on this subject, has left him with the conviction that the connection is one of their own making. No western writer carries the Huns east of the Volga; no Chinese one, west of the latitude of Lake Baikal. Neumann's references lead us to believe that the Alans are mentioned by the Chinese historians. The context shows that they are not. The link, then, is hypothetical and unsatisfactory.

It may have struck some that the whole of the Chinese evidence for these early times is unsatisfactory, — unsatisfactory even as a general view. But there are suspicious details as well. Teúman, the first Tanjou of the Huns, reappears some centuries later as the first Khan of the Turks. Neumann himself argues that the word Gan-tsai (or Antsai) in the Chinese books means Asia, word for word; and that it was a name taken from the western world. If this, why not more? Why not the name Hun-jo? The facts that are found in the writers who have dealt with the Hun-jo history, as taken from the Chinese, are suspiciously like the facts of the Byzantine historians. The name *Dita-pul* is given as being a Chinese form for Διζάβουλος, a king certainly connected with Byzantine, not so certainly with Chinese, history. tI is by no means certain that the whole history of the Hun-jo is older than the influence of those Syrian Christians in China and Mongolia, who gave the Mongolians their alphabet, and with it (perhaps) a sufficient inkling of the history of Western Asia to be adapted to the antiquities of their own country.

But, granting this view to be untenable, and that the Chinese history is authentic, we must remember that the Huns of Attila were one thing, the White Huns of Turkestan another; and it may be added that, if some Huns or other must be brought in contact with China, the case is the stronger for those of Turkestan. At the present moment, the Turk populations of Yarkend and Khoten belong to what is called *Chinese Tartary*; whereas, between the Northern Turks (Tartary) and China, the vast tract of Mongolia intervenes.

Such is a sketch of the reasons for disconnecting the Huns of Attila and the Hun-jo of Chinese authors. (Gibbon, *Decline and Fall*, &c.; Creasy, *Decisive Battles of the World* (Chalons): De Guignes, *Histoire des Huns;* Neumann, *Die Völker des Südlichen Russlands.*) [R. G. L.]

HUNNUM, in Britain, the fifth station along the line of the Vallum, beginning at Segedunum (*Wallsend*), where the Notitia places the Ala Sabiniana — a body of troops probably named after Hadrian's empress, Sabina. It coincides with the present locality of *Halton*, where Roman remains are abundant, and where, in A.D. 1600, Camden found a monumental slab erected to the memory of a soldier of the Ala Sabiniana. For a notice of the excavation made at Hunnum and its results, as well as for that of Roman road, and a bridge made out an older Roman one, see Bruce's *Roman Wall*, pp. 126—141. [R. G. L.]

HYAEA. [HYLE, No. 2.]

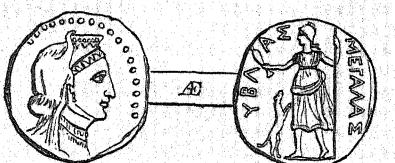
HYAMPEIA. [DELPHI, p. 764, a.]

HYA'MPOLIS (Ὑάμπολις: *Eth.* Ὑαμπολίτης), an ancient town of Phocis, mentioned by Homer (*Il.* ii. 521), and said to have been founded by the Hyantes after they had been expelled from Boeotia by the Cadmeians. (Paus. ix. 35. § 5; Strab. ix. p. 424.) It was situated on the road leading from Orchomenus to Opus (Paus. *l. c.*), and, as it stood at the entrance of a valley which formed a convenient passage from Locris into Phocis and Boeotia, its name frequently occurs in history. It was at the entrance of this pass that the Phocians gained a victory over the Thessalians. (Herod. viii. 28.) Hyampolis was afterwards destroyed, along with the other Phocian towns, by the army of Xerxes. (Herod. viii. 33.) In B. C. 371 Jason, in his march through Phocis, when he was returning from Boeotia after the battle of Leuctra, is said to have taken Ὑαμπο-

λιτῶν τὸ προάστειον (Xen. *Hell.* vi. 4. § 27), which is supposed by some to be the same place as Cleonae, a village belonging to Hyampolis. (Plut. *de Virt. Mul.* p. 244; Valcken. *ad Herod.* viii. 28.) In B. C. 347 a battle was fought near Hyampolis between the Boeotians and Phocians. (Diod. xvi. 56.) The city is said to have been destroyed by Philip; but, as Pausanias states that the ancient agora, senate-house, and theatre were still remaining in his time, it must have been chiefly the fortifications which were destroyed by Philip. At all events it continued to be an inhabited city, and is mentioned in the Roman wars in Greece. (Liv. xxxii. 18.) It was embellished by Hadrian with a Stoa. Pausanias mentions also a temple of Artemis, who was the deity chiefly worshipped in the city. (Paus. x. 35. §§ 6, 7.) Pliny (iv. 7. s. 12) and Ptolemy (iii. 15. § 20) erroneously describe Hyampolis as a city of Boeotia.

The ruins of Hyampolis may be seen upon a height about five minutes northward of the village of *Vogdháni*. "The entire circuit of the fortifications is traceable, but they are most complete on the western side. The masonry is of the third order, nearly approaching to the most regular kind. The circumference is about three-quarters of a mile. The direct distance to this ruin from the summit of Abae is not more than a mile and a half in a north-west direction. Below *Vogdháni*, on the side of a steep bank which falls to the valley of *Khúbavo*, a fountain issuing from the rock is discharged through two spouts into a stone reservoir of ancient construction, which stands probably in its original place." (Leake, *Northern Greece*, vol. ii. pp. 167, seq.)

Strabo relates (*l. c.*) that there was another town, named Hyampolis, in Phocis, situated on Parnassus.



HYANTES (Ὕαντες), are mentioned among the aboriginal inhabitants of Boeotia, who were driven out of this country by the Cadmeians, whereupon they founded the town of Hyampolis in Phocis. (Paus. ix. 5. § 1, ix. 35. § 5; Strab. vii. p. 321, ix. pp. 401, 424, x. p. 464.)

HYBLA (Ὕβλα: *Eth.* Ὑβλαῖος, Hyblensis, but the adjective form is Hyblaeus), is the name of no less than three cities of Sicily, which are often confounded with each other, and which it is sometimes very difficult to distinguish.

1. The largest and most considerable of the three, thence called for distinction's sake *Hybla Major* or *Magna* (Ὕβλα ἡ μείζων, Steph. B.; Paus. v. 23. § 6: on coins Ὕβλα Μεγάλη: Eckhel, vol. i. p. 216), was situated on the southern slope of Mount Aetna, not far from the river Symaethus. Hence it is described by Pausanias (in whose time it had ceased to be an independent city) as situated in the territory of Catana (ἐν τῇ Καταναίᾳ, *l. c.*). In like manner, we find it noticed by Thucydides as a place between Catana and Centuripa, so that the Athenians, on their return from an expedition to the latter city, ravaged the corn fields of the Inessaeans and Hyblaeans. (Thuc. vi. 96). It was clearly a Sicilian city; and hence, at an earlier period, it is mentioned among the other towns of that people in the interior of the island which Ducetius sought to unite into a common league, a measure to which the Hyblaeans alone refused to accede. (Diod. xi. 88). It is quite clear that, in all the above passages, the *Aetnaean* Hybla is the one meant: and it seems probable that the city of Hybla, which was attacked by the Athenians soon after their landing in Sicily (Thuc. vi. 62), but without success, was no other, though Thucydides calls it Hybla Geleatis (Ὕβλα ἡ Γελεᾶτις), an epithet which has been generally supposed to belong to the second city of the name. (See No. 2.)

During the Second Punic War, Livy mentions Hybla as one of the towns that were induced to revolt to the Carthaginians in B. C. 211, but were quickly recovered by the Roman praetor M. Cornelius. (Liv. xxvi. 21.) In the time of Cicero the Hyblenses (evidently the people of the Aetnaean city) appear as a considerable municipal community, with a territory fertile in corn (Cic. *Verr.* iii. 43): and Hybla is one of the few places in the interior of Sicily which Pomponius Mela thinks worthy of mention. Its name is also found both in Pliny, who reckons it among the "populi stipendiarii" of the island, and in Ptolemy. Hence it is strange that Pausanias appears to speak of it as in his time utterly desolate. The passage, however, is altogether so confused that it is very difficult to say of *which* Hybla he is there speaking. (Mel. ii. 7. § 16; Plin. iii. 8. s. 14; Ptol. iii. 4. § 14; Paus. v. 23. § 6.) We find no later notice of it, though an inscription of Christian times found at Catana appears to refer to Hybla as still existing under its ancient name. (Castell. *Inscr. Sicil.* p. 253, no. 42.)

The site cannot be fixed with certainty: but the position suggested by Cluverius, at *Paternò* (about 12 miles from *Catania*), is probable enough, and derives strong confirmation from the discovery in that city of an altar dedicated "Veneri Victrici Hyblensi." (Cluver. *Sicil.* p. 235; Castell. *Num. Vet. Sicil.* p. 36.) The difficulty of its determination arises from our uncertainty as to the site of the neighbouring city of Aetna. [AETNA.]

COIN OF HYBLA MAJOR.

2. Hybla, called by Stephanus "the Little" (ἡ μικρὰ), and by Pausanias Hybla Gereatis (ἡ Γερεάτις, Paus. v. 23. § 6), was intimately connected, if not identical, with the Greek colony of MEGARA, which thence derived the name of MEGARA HYBLAEA. There is considerable discrepancy between the different accounts of the foundation of that colony [MEGARA], but all agree that it was founded in the territory, if not exactly on the site, of the Siculian town of Hybla. (Thuc. vi. 4; Strab. vi. p. 267; Scymn. Ch. 277; Serv. *ad Virg. Ecl.* i. 55.) Megara was destroyed by Gelon of Syracuse after it had subsisted 245 years, and its inhabitants expelled or removed elsewhere. (Thuc. *l. c.*) Its territory was naturally incorporated with that of Syracuse, and the site of the city itself appears to have remained desolate till the Athenian expedition to Sicily, B. C. 415, when we find Lamachus judiciously proposing to occupy it as the naval station of the Athenian fleet. (Thuc. vi. 49.) But this advice was overruled, and the next spring the Syracusans erected a fort for the protection of the site, which the Athenians repeatedly attacked, but with-

out success. (Id. vi. 75, 94.) After this we hear nothing more either of Megara or Hybla until the Second Punic War, when the former is mentioned as a small town which was occupied by the Syracusans during their hostile operations against Marcellus, and was in consequence taken by assault, plundered, and destroyed by that general, B. C. 214. (Liv. xxiv. 30, 35.) A small town seems, however, to have again grown up upon the site: Cicero notices it under the name of Megaris, but calls it only "a place" near Syracuse, without indicating that it was a town; but both Mela and Pliny distinctly call it such. (Cic. *Verr.* v. 25; Plin. iii. 8. s. 14; Mel. ii. 7. § 16.) Strabo, on the other hand, says that the city of Megara no longer existed, but the name of Hybla still remained: and Pausanias speaks of the latter as a village in the territory of Catana. (Strab. vi. p. 267; Paus. v. 23. § 6.) The inference which we may probably draw from these contradictory statements is, that there was a small place on the spot which was sometimes known as Megara, sometimes as Hybla. The latter name, as Strabo tells us, still retained some celebrity from the fame of the Hyblaean honey, which was produced on the neighbouring hills, and the praises of which are sung by the Latin poets. (Strab. *l. c.*; Virg. *Ecl.* i. 35, vii. 37; Ovid, *Trist.* v. 13. 22, *Ex. Pont.* iv. 15. 10; Sil. Ital. xiv. 199.)

Pausanias appears to apply to this Hybla the epithet of Gereātis (Γερεᾶτις), which must certainly be the same word with the Γελεᾶτις of Thucydides (vi. 62), though (as already observed) the latter author seems to give the name to the Aetnaean Hybla: the circumstances of the campaign rendering it highly improbable that the Megaraean Hybla can be there meant, even if there was any such place then in existence. But Stephanus also gives the name of Galeotae to the citizens of Megara Hyblaea (Ὕβλα ἡ μικρὰ, ἧς οἱ πολῖται Ὑβλαῖοι Γαλεῶται Μεγαρεῖς, Steph. B. *v.* Ὕβλα): and these Galeotae are noticed by Cicero, on the authority of Philistus, as celebrated for their skill in the interpretation of dreams (Cic. *de Divin.* i. 20), a quality which Pausanias expressly ascribes, on the *same* authority, to the inhabitants of Hybla Gereatis. (Paus. v. 23. § 6.) We seem, therefore, compelled to admit that these Galeotae were the native or Siculian inhabitants of the territory in which Megara was founded: and it seems at least highly probable that there always existed a Siculian town of Hybla, distinct from the Greek city of Megara, though of course dependent upon the latter in the days of its power. But the passage of Pausanias as it stands, is so confused (if not corrupt) that it is difficult to rely on it: and he himself admits the confusion that frequently existed between the two cities of the name, and which prevented him from pronouncing positively *which* of them it was that had dedicated offerings at Olympia. (Paus. *l. c.*)

The site of the Megaraean Hybla appears to be clearly fixed near the mouth of the little river *Cantaro*, the ancient Alabus, a small stream flowing into the Sinus Megarensis: a short distance from its right bank, Fazello describes the ruins of a considerable town as visible in his day, but in D'Orville's time there remained only very slight and uncertain vestiges. (Fazell. *de Reb. Sic.* iii. 4. p. 159; D'Orville, *Sicula*, p. 172.) Cluverius follows Fazello in regarding these as the remains of the Greek colony of Megara, but there seems much reason to suppose that that city was situated nearer to the modern *Agosta*. [MEGARA.] The neighbouring village of *Melilli* is supposed by local writers to have derived its name from the honey of the Hyblaean hills, in the midst of which it is situated.

3. The third city of the name, called by Stephanus "the Less" (Ὕβλα ἡ ἐλάττων), and surnamed HERA or HERAEA (Ὕβλα, Ἡραία), is much the least known of the three. No allusion to it is found in Pausanias, where he is distinguishing the other two cities of the name, nor in any of the geographers: but we find in the Itineraries a town of Hybla, placed on the line of road from Syracuse to Agrigentum, which is certainly distinct from both the preceding, and can therefore be no other than the *third* Hybla of Stephanus. It was situated, according to the Itineraries, 18 miles from Acrae (*Palazzolo*), on the road to Agrigentum, but its precise site has not been identified. (*Itin. Ant.* p. 89; *Tab. Peut.*). A passage in which Cicero speaks of a town called Hera, in Sicily (*ad Att.* ii. 1. § 5), has been thought to refer to this town; but the reading is very doubtful.

The circumstance that there were so many towns called Hybla in Sicily probably arose from the fact mentioned by Pausanias, that there was a local divinity of the name. (Paus. v. 23. § 6.) [E.H.B.]

HY'CCARA or HY'CARA (Ὕκκαρα, Thuc.; Υ̓́καρα, Diod., Steph. B.: *Eth.* Ὑκάρεις, Id.), a small town on the N. coast of Sicily between Panormus and the port of Segesta. Thucydides tells us it was a Sicanian town; and it appears to have been independent of, and on hostile terms with, the neighbouring city of Segesta. Hence, during the Athenian expedition to Sicily, B. C. 415, Nicias, as he was proceeding with the fleet along the N. coast of the island, landed at Hyccara, which he took and plundered, and afterwards made it over to the Segestans. (Thuc. vi. 62; Diod. xiii. 6.) The Athenians are said to have realised 100 talents by the booty thus acquired: among the captives taken on this occasion was the celebrated courtesan Laïs, then a mere child, who was carried to Corinth and there sold as a slave. (Plut. *Nic.* 15, *Alcib.* 39; Athen. xiii. p. 589; Paus. ii. 2. § 5; Steph. B. *s. v.* Υ̓́καρα; Schol. *in Aristoph. Plut.* 179.) No subsequent notice of Hyccara is found in history: it probably continued to be but a small place, and a mere dependency of Segesta or Panormus: but it did not cease to exist, for its name reappears in the Itinerary of Antoninus (pp. 91, 97), which places it M. P. from Panormus, proceeding along the coast to the westward. This distance coincides with a place called *Muro di Carini*, where, according to Fazello, the ruins of an ancient town were still visible in his time. The modern town of *Carini* (the name of which is probably derived from that of Hyccara) has been removed to a distance of three miles inland. (Fazell. *de Reb. Sic.* vii. 6; Cluver. *Sicil.* p. 272.) [E. H. B.]

HYDASPES (Ὑδάσπης, Strab. xv. p. 686; Plin. vi. 20. s. 23; Mela, iii. 7. 6; Curt. iv. 5; Dion. Perieg. v. 1139), one of the principal rivers of that part of India called the *Panjáb*. It rises in the north-western *Himáleh* mountains in *Kashmir*, and, after flowing nearly S., falls into the Acesines or *Chenáb*. Its Sanscrit name was *Vitastá*, which is probably preserved in that of one of its modern titles, of the river of *Behut*. Its present most usual name is *Jelum*. It was on the banks of this river that Alexander built his fleet of timber which he procured from the Montes Emodi (western *Himáleh*) (Strab.

xv. p. 698), and fought the great battle with Porus, founding, after its successful termination, two cities in commemoration of it,—Nicaea (now *Behut ?*) and Bucephala. (Arrian, *Anab.* v. 19.) Arrian remarks that the Hydaspes, on flowing into the Acesines, lost its name; but that the Acesines, after receiving the Hydraotes, preserved its title unchanged (vi. 14; Curt. ix. 4). The river seems to have been considered one of great size by the historians of Alexander's invasion, as it is stated that Alexander saw crocodiles on its banks. (Strab. xv. p. 696.) Many wonderful stories seem to have been related about it by the poets, whence Horace speaks of "fabulosus Hydaspes" (*Carm.* i. 22. 8). Virgil calls it "Medus Hydaspes" (*Georg.* iv. 211), using Medus in the general sense of eastern. Ptolemy calls it Bidaspes (Βιδάσπης, vii. 1. 26), which is nearer to its native name than the more common Greek appellation. [V.]

HY'DATA (Ὕδατα, Ptol. iii. 8. § 9), a town in Dacia, which has been identified with *Kurte Ardschisch* in *Wallachia*. (Köppen, *Nachr. von einigen in Ungarn, Siebenbürgen, befindlichen Alt.*, Wien, 1823, p. 19.) [E. B. J.]

HYDE, a town of uncertain site, on the frontier between Cappadocia and Galatia. (Plin. v. 25; Hierocl. p. 675: Concil. Chalced. p. 526.) [L. S.]

HYDISSA (Ὕδισσα), a small town in Caria, respecting the site of which nothing is known, except that it was situated on the east of Mylassa. (Ptol. v. 2. § 20; Steph. B. *s. v.* Ὕδισσος; Plin. v 29.) [L. S.]

HYDRA (Ὕδρα), a promontory on the south of the gulf of Elaea in Aeolis, forming the south-western corner of the bay, and now called *Cape Fokia*. (Strab. xiii. p. 622; Ptol. v. 2. § 6.) [L. S.]

HYDRA. [AETOLIA, p. 64, a.]

HYDRAMUM (Ὕδραμον, *Stadiasm.*; Ὑδραμία, Steph. B.: *Eth.* Ὑδραμιεῖς), a city of Crete, which the Maritime Itinerary places at 100 stadia to the E. of Amphimatrium. There can be no doubt but that it is represented by the modern Sfakian village of *Dhrámia*, situated in the fertile little plain running between the mountains and the shore along the bay of Amphimalla. (Pashley, *Trav.* vol. i. p. 72; Höck, *Kreta*, vol. i. pp. 395, 434.) [E. B. J.]

HYDRAO'TES (Ὑδραώτης, Arrian, *Anab.* vi. 8, 13, 14, *Ind.* c. 3), a river of the *Panjáb*, which flows nearly SW. from the lower chain of the western *Himáleh* mountains till it joins the Acesines (*Chenáb*). Its Sanscrit name is *Iravati*, which has been slightly modified into its present appellation of the *Ravi*. According to Arrian, the river joined the Acesines in the territory of the Cambistholi, after having already received as tributaries the Hyphasis (now *Vépása*), the Saranges, and the Neudrus. (*Ind.* c. 4.) This is not strictly correct, as the Hyphasis falls into the Acesines somewhat below the *Hydraotes*. Strabo calls this river Hyarotis (Ὑαρῶτις, xv. pp. 694—697), which is perhaps the nearest to the form of the native name. Curtius, on the other hand, writes Hydraotes (ix. 1. § 13). Ptolemy speaks of a river he calls the Adris or Ruadris, which is probably the same stream (vii. 1. §§ 26, 27). [V.]

HY'DREA (Ὕδρέα: *Eth.* Ὑδρεάτης: *Hydra*), a small island off the coast of Hermionis and Troezenia. It originally belonged to the inhabitants of Hermione, who gave the island to the Samian exiles instead of money, and the latter pawned it to the Troezenians. (Hecat *ap. Steph. B. s. v.*; Herod. iii. 59; Paus. ii. 34. § 9.) Hydrea, which is rarely mentioned in antiquity, became in modern times the head-quarters of Grecian commerce and the cradle of modern Grecian freedom. Although *Hydra* is only a few miles in circumference, so rocky as scarcely to yield the common vegetables, and with no water except what is collected in cisterns, it attained by its commerce an extraordinary degree of prosperity. Before the Greek revolution it had a wealthy population of more than 25,000 souls, and upwards of 300 trading vessels. But the losses which the Hydriotes experienced gave a blow to their prosperity from which they have never recovered. (Holland, *Travels*, vol. ii. p. 202, 2nd ed.; Boblaye, *Recherches, &c.* p. 63; Leake, *Peloponnesiaca*, p. 284, seq.; Curtius, *Peloponnesos*, vol. ii. p. 456.)

HYDRE'LA (Ὕδρηλα), a town in Caria, said to have been founded by Hydrelus, one of three brothers who emigrated from Sparta. (Strab. xiv. p. 650; Steph. B. *s. v.*; Liv. xxxvii. 56.) The *Hydrelitae*, no doubt the people of Hydrela (Plin. v. 29), belonged to the conventus of Cibyra. [L. S.]

HYDRIACUS (Ὑδριακός), a small stream which ran into the sea along the coast of Gedrosia, which is mentioned by name by Marcian (p. 22) and Ptolemy (vi. 8. § 8). [V.]

HYDRUNTUM, called in Greek and sometimes also in Latin HYDRUS (Ὑδροῦς: *Eth.* Ὑδρούντιος; Hydruntinus, but an inscription has Hudrentinus: *Otranto*), a city of Calabria, on the coast of the Adriatic, and a port of considerable importance, for which it was indebted to the circumstance of its being the nearest point of Italy to the coast of Greece, the passage being shorter even than that from Brundusium. (Cic. *ad Att.* xv. 21.) We have very little information as to its early history; but it seems probable that it was a Greek city, or at least had received a Greek colony, though the tradition related by Stephanus of Byzantium (*s. v.* Βίεννος), which represented it as founded by Cretans, is probably connected with the legends which ascribed a Cretan origin to the Sallentines and Messapians, rather than to any *historical* Greek colony. But Scylax distinctly notices "the port of Hydrus," in a passage where he is speaking only of Greek towns (Scyl. p. 5. § 14); and though he there seems to imply that it was not an independent city like Metapontum or Tarentum, he elsewhere (p. 11. § 27) calls it πόλις ἐν τῇ Ἰαπυγίᾳ: hence it seems highly probable that it was at that time merely a dependency of Tarentum. Nor do we hear anything of Hydruntum for some time after it had fallen, with the rest of the Messapian peninsula, under the Roman yoke; the establishment of the Roman colony at Brundusium and the increasing importance of that port having, doubtless, tended to throw Hydruntum into the shade. But as early as B. C. 191 we find that it was a customary place of landing in Italy, for those who came from Greece and crossed over from Corcyra (Liv. xxxvi. 21); and this probably continued to be a route much frequented, while Brundusium was the point of communication with Apollonia and the coast of Epirus. Cicero, however, recognises the fact, that the shortest passage from Italy to the opposite coast was from Hydruntum, which for that reason he himself seems to have preferred to Brundusium; though Pliny tells us that the latter route, though longer, was the safer of the two. (Cic. *ad Att.* xv. 21, xvi. 6, *ad Fam.* xvi. 9; Plin. iii. 11. s. 16.) All the ancient geographers mention Hydruntum as situated

at the mouth or entrance of the Adriatic: Pliny states the width of the strait which separated it from the opposite coast near Apollonia at 50 M. P., which is just about the truth; and this accords also with Strabo's statement, that it was 400 stadia (50 M. P.) from Hydruntum to the island of Sason near the Acroceraunian Promontory. Pliny adds a strange story, that Pyrrhus had at one time formed the project of closing up the passage with a bridge of boats, and that the same idea had been taken up at a later time by M. Varro, in the war against the pirates. (Plin. iii. 11. s. 16; Strab. vi. p. 281; Mel. ii. 4. § 7; Ptol. iii. 1. § 14.) Strabo speaks of Hydruntum as in his time but a small place (*πολίχνη, l. c.*); but it seems to have risen into a considerable municipal town under the Roman empire (Orell. *Inscr.* 2570; *Lib. Col.* p. 262), and increased gradually in importance as Brundusium declined. [BRUNDUSIUM.] In the fourth century it appears to have become the usual place of passage, not only to Greece, but to Apollonia, Dyrrhachium, and thence to Constantinople; so that the Itineraries all give the routes of communication between Italy and the East upon this supposition. (*Itin. Ant.* pp. 115, 323, 329; *Itin. Marit.* p. 489; *Itin. Hier.* p. 609.) The same state of things continued also after the fall of the Western Empire: hence, during the wars of the Goths with Belisarius and Narses, Hydruntum assumes an importance very different from what it possessed in Roman times. (Procop. *B. V.* i. 1, *B. G.* iii. 30, &c., where the name is corruptly written Δρυοῦς.) It was one of the last cities in the S. of Italy which remained in the hands of the Greek emperors, from whom it was not finally wrested till the 11th century. The modern town of *Otranto* is a poor decayed place, though still the see of a bishop: it was taken and plundered in 1480 by the Turks; a calamity which it has never recovered. Galateo, a local historian, who saw it previous to that event, describes it as then a flourishing and populous place, though, like *Taranto*, occupying only the citadel or arx of the ancient city: the circuit of the ancient walls could be distinctly traced, inclosing a space of 11 stadia, and fortified with towers; but, he adds, "all this is now levelled with the ground." Recent travellers have found no vestiges of antiquity but the pavement of the Via Trajana, and some marble columns and mosaic pavements in the present cathedral. A ruined church of St. Nicholas is supposed to occupy the site of an ancient temple. (Galateo, *de Situ Iapygiae*, pp. 47—50; Romanelli, vol. ii. pp. 110, 111; Craven, *Travels*, pp. 142—144.) Though in such a decayed condition, *Otranto* still gives name to the province, which is known as the *Terra di Otranto*, and includes the whole of the Iapygian or Calabrian peninsula.

The little river *Idro*, the sluggish waters of which enter the harbour of *Otranto*, is evidently the stream called in ancient times the Hydrus, whose name has been preserved to us in a line of Lucan (v. 375). [E. H. B.]

HYDRUSSA (Ὑδροῦσσα), an island off the western coast of Attica, now called *Prasonisi*. (Strab. ix. p. 398; Leake, *Demi of Attica*, p. 56.)

HYELE. [VELIA.]

HYETTUS (Ὑηττός: *Eth.* Ὑήττιος), a village of Boeotia, said to have been founded by the Argive Hyettus, contained in the time of Pausanias a temple of Asclepius, frequented by the sick for the cure of their diseases, where the deity continued to be worshipped in the form of a rude stone. Pausanias says that Olmones was situated 12 stadia to the left of Copae, and Hyettus 7 stadia from Olmones. Forchhammer places Olmones on the small island of *Trelo-Yani* in the lake Copais, and Hyettus at *Struviki* to the west of this island, where some ancient ruins are found on a small hill jutting out into the lake. (Paus. ix. 24. § 3, ix. 36. § 6; Steph. B. *s. v.*; Forchhammer, *Hellenika*, p. 178.)

HYGRES (Ὑγρεῖς, Ptol. iii. 5. § 13), a place on the N. coast of the Palus Maeotis between the rivers Lycus and Porites. [E. B. J.]

HYLA, a port at the head of the bay of Schoenus, in Caria. (Pomp. Mela, i. 16; Plin. v. 29, where some read *Hyda*.) [L. S.]

HYLAEA (Ὑλαία, Ὑλέη, Steph. B.), the peninsula which lies to the NW. of Taurica, formed by the lower part of the Borysthenes, the Euxine, the gulf of Carcinitis, and the river Hypacyris, which flows through it. According to Herodotus (iv. 9, 18, 54, 76), it is a woody region lying to the E. of the Borysthenes (*Dnieper*), of which Pliny makes mention: "Inde silvestris regio. Hylaeum mare, quo alluitur, cognominavit" (iv. 12). It would seem to be indicated by Pomponius Mela: "Hypacaris per Nomadas evolvitur, Silvae deinde sunt, quas maximas hae terrae ferunt" (ii. 1. § 45: comp. Scymn. *Fr.* 105; *Anon. Peripl.* p. 3).

It is uncertain whether there remain any traces of this woodland. Some old maps present the name of the Black Forest in the very same place; and this may have had a much wider extent in earlier times. From the communications of several travellers, however, it appears that there is no wood now, although the fact of its having once existed is preserved in the popular traditions of the country; nor does the woody country occur till the banks of the river *Don* are reached. (Heeren, *Ideen*, vol. i. pt. 2. p. 272; trans. vol. ii. p. 8.) It has been identified with the great plain of *Janboylouk* in the steppe of the *Nogai*. (Rennell, *Geog. of Herod.* vol. i. p. 83; Potocki, *Voyage dans les Steps d'Astrakhan*, vol. i. p. 179; Köler, *Mém. de l'Acad. de St. Petersb.* vol. x. p. 655; Kohl, *Süd Russland*, vol. i. p. 75.) [E.B.J.]

HYLAETHUS or HYLAETUS (Ὕλαιθος or Ὕλαιτος), a river in Locris Ozolis, flowing through Locris near the eastern frontier of Aetolia into the Corinthian gulf. Leake supposes it to be the modern *Mornó*, and to have derived its name from Hyle, a town in Phocis mentioned by Stephanus B. (Dicaearch. 67; Steph. B. *s. v.* Ὕλη; Leake, *Northern Greece*, vol. ii. p. 619.) [HYLE, No. 2.]

HYLE (Ὕλη: *Eth.* Ὑλαῖος). 1. An ancient town in Boeotia, situated upon the lake Hylica, which derived its name from this place. (Hom. *Il.* ii. 500, v. 708, vii. 221; Strab. ix. pp. 407, 408; Nonn. *Dionys.* xiii. 66; Plin. iv. 7. s. 12; Steph. B. *s. v.*) Moschus, who calls the town Hylae, speaks of it as if he seemed to believe that it was the native place of Pindar (*Πινδαρον οὐ ποθέοντι τόσον Βοιωτίδες* Ὕλαι, Mosch. iii. 89); but this is in opposition to all other ancient authorities. The site of Hyle is uncertain, and is variously placed by modern authorities. Leake supposes it to be represented by the *Paleókastro* on the height between the northern end of the lake and the foot of Mount *Paleá*. Ulrichs places it at the southern end of the lake, near the mouth of the river Ismenus. (Leake, *Northern Greece*, vol. ii. p. 313; Ulrichs, *Reisen in Griechenland*, p. 257.)

2. A town in Locris Ozolis, mentioned by Stephanus B. (*s. v.* Ὕλη), from which the river Hylaethus perhaps derived its name. Thucydides (iii. 101) speaks of a Locrian people named HYAEI (Ὑαῖοι), which name Leake supposes to be a corruption of Hylaei; but the objection to this hypothesis is that Stephanus, who mentions Hyle as a Locrian town, also speaks of Hyaea as a Locrian town, giving Hyaeus as their ethnic name, whence we may infer that he distinguished between the two towns. (Steph. B. *s. v.* Ὑαία; comp. Leake, *Northern Greece*, vol. ii. p. 615.)

HYLE (Ὕλη), a town of Cyprus whence Apollo was called Hyletes. (Steph. B. *s. v.*)

HYLIAS (Ὑλίας), a river on the E. coast of Bruttium, mentioned only by Thucydides (vii. 35), from whom we learn that it was situated between Thurii and Crotona, and apparently formed the northern boundary of the territory of the latter city. It is supposed by Swinburne to be the *Acquanile*, while Romanelli would identify it with the *Calonato*, little more than a mile further W.: the *Fiumenicà*, a more considerable stream, about 10 miles nearer Crotona, has perhaps a better claim than either. (Swinburne, *Trav.* vol. i. p. 309; Romanelli, vol. i. p. 221.) [E. H. B.]

HY'LICA LACUS. [BOEOTIA, p. 413, b.]

HY'LICUS. [TROEZEN.]

HYLLI, HYLLINI. [ILLYRICUM.]

HYLLUS (Ὕλλος), a tributary of the river Hermus, in Lydia, flowing into it from the north. (Hom. *Il.* xx. 392; Herod. i. 80; Plin. v. 31.) In the time of Strabo (xiii. p. 626) this river was called *Phrygius*. [L. S.]

HYLO'PHAGI (Ὑλοφάγοι, Diod. iii. 24; Arrian, *Peripl. Mar. Eryth.* p. 2), were one of the numerous and obscure tribes of Aethiopians who derived their appellations, with the Greeks at least, from their modes of living and diet. The Hylophagi, or eaters of beech-mast, or perhaps dates and fruit generally, dwelt on either bank of the Astaboras or White Nile. The Shangallas occupy these districts at the present day, and are scarcely less uncivilised. The account of the Hylophagi in Diodorus (*l. c.*) is, however, hardly credible, and seems to be founded upon rumours of the ourang-outan. According to him, the Hylophagi fed in the summer upon fruits, in winter upon the long rank grasses of the river-meadows, sprang from tree to tree like birds or apes, went perfectly naked, were armed with clubs, and had their females in common. The most curious fact in his story is the liability of the Hylophagi to cataract (γλαυκώματα) on their eyes, which, by preventing them from climbing, caused the majority of the race to die of hunger. [W. B. D.]

HYMETTUS. [ATTICA, p. 322, b.]

HYPACYRIS FL. [CARCINA.]

HYPAEA. [STOECHADES.]

HYPAEPA (τὰ Ὕπαιπα), a small town in Lydia, on the southern slope of Mount Tmolus, according to the Tab. Peut., 42 miles from Ephesus. There, as in some other towns of Asia Minor, the Persian worship of fire was introduced during the time when the country was under Persian supremacy. (Strab. xiii. p. 627; Ptol. v. 2. § 16; Ov. *Met.* vi. 13, xi. 150; Plin. v. 31; Paus. v. 27. § 5; Tac. *Ann.* iv. 55.) The town appears to have continued to exist till a late period of the empire, as we possess coins of it as late as the time of Gordian. Leake (*Asia Minor*, p. 256) believes that the remains at *Berékí* belong to Hypaepa. [L. S.]

HYPANA (Ὕπανα: *Eth.* Ὑπανεύς), a town in the interior of Triphylia in Elis, which surrendered to Philip V. in the Social War. Its inhabitants had been transferred to Elis when Strabo wrote. Hypana is mentioned along with Typaneae. Both these towns must have been situated in the mountains of Triphylia, but their site is uncertain. Leake places Hypana at *A'lvena* in the heights above the maritime plain of Lepreum; but Boblaye more to the north, at *Mundritza*, in the hills above Samicum. (Strab. viii. p. 343; Polyb. iv. 77, 79; Steph. B. *s. v.*; Ptol. iii. 16. § 18, who calls it Τράνεια; Leake, *Morea*, vol. ii. p. 85; Boblaye, *Recherches, &c.* p. 133; Curtius, *Peloponnesos*, vol. ii. p. 89.)

HY'PANIS FL. (ὁ Ὕπανις, Herod. ii. 102, iv. 17, 47, 51, 81, 178, v. 89; Strab. ii. p. 107, vii. p. 306, xi. p. 494; Ptol. iii. 5. § 6; Dion. Chrys. *Or.* xxxi. p. 75; Athen. p. 42; Pomp. Mela, ii. 1. § 6; Plin. iv. 12; Propert. i. 12. 4; Ov. *ex Pont.* iv. 10, 47; Τάνης, Arist. *H. A.* v. 19: *Bog*), a river of Sarmatia Europaea, which sprung from a large lake (Herod. iv. 42; comp. Potocki, *Voyage*, vol. i. p. 158), though according to Ptolemy (*l. c.*) it took its rise in the Amadoci Montes. It flowed parallel with the Borysthenes (Strab. pp. 306, 494). The water in the upper part of the course was sweet, but after receiving the bitter waters of EXAMPAEUS became brackish (Paus. iv. 35. § 6; Ov. *Met.* xv. 285; Vitruv. viii. 3. § 11; Eustath. *ad Dionys. Per.* 1143), and discharged itself into the Euxine at the town of Olbia. It received its present name in the sixth century; in Jornandes (*de Get.* 5) and the Geographer of Ravenna it appears under the form Bagossola = Bagos river (*Sola*, in old German, meaning water). Constantine Porphyrogeneta (*de adm. Imp.* 42) called it Bogu.

It is difficult to determine the original meaning of the name; but as the Slavonians paid divine honours to their rivers, it may be connected with the Slavonic word *Bog*, "God." The Greek name Hypanis is traceable to the Indo-European *pani*, "water." (Schafarik, *Slav. Alt.* vol. i. p. 505.) (Kohl, *Reisen in Süd-Russland*, vol. i. p. 34; Köler, *Mém. de l'Acad. de St. Petersb.* vol. x. p. 126; Eichwald, *Geographie d. Kasp. Meer*, p. 295.) [E. B. J.]

HYPANIS. [HYPHASIS.]

HY'PATA (ἡ Ὑπάτη, τὰ Ὕπατα: *Eth.* Ὑπαταῖος, Hypataeus; Liv.; also Ὑπατεύς, Steph. B. *s. v.*), the chief town of the Aenianes, in the valley of the Spercheius, and at the foot of Mt. Oeta. In the Roman wars in Greece it belonged to the Aetolian league. (Polyb. xx. 9, 11, xxi. 2, 3; Liv. xxxvi. 14, 26.) The women of Hypata, as of many other Thessalian towns, were noted for their skill in magic; and it was here that Lucius, in the story of Lucian, was metamorphosed into an ass. (Lucian, *Asin.* 1, seq.; comp. Apul. *Metam.* i. p. 104; Theophr. *H. Plant.* ix. 2.) The town is mentioned by Hierocles in the 6th century. (Hierocl. p. 642, ed. Wess.; comp. Ptol. iii. 13. § 45.) It occupied the site of the modern *Neópatra*, where inscriptions have been discovered containing the name of Hypata. The town appears to have been called Neae Patrae in the middle ages, and is mentioned in the 12th century as a strongly fortified place. (Niceph. Gregor. iv. 9. p. 112, ed. Bonn.) There are still considerable remains of the ancient town. Leake observed many large quadrangular blocks of stones and foundations of ancient walls on the heights of *Neópatra*, as well as in the buildings of the town. In the

metropolitan church he noticed a handsome shaft of white marble, and on the outside of the wall an inscription in small characters of the best times. He also discovered an inscription on a broken block of white marble, lying under a plane-tree near a fountain in the Jewish burying-ground. (Leake, *Northern Greece*, vol. ii. p. 14, seq.)

HYPATUS MONS. [BOEOTIA, p. 414, a.; GLISAS.]

HYPELAEUS (Ὑπέλαιος), a fountain in the neighbourhood of Ephesus. (Strab. xiv. pp. 634, 640; Athen. viii. p. 361.) This spring was still seen by Mr. Hamilton during his excursion in Asia Minor. (*Researches*, ii. p. 25.) [L. S.]

HYPERBOREI (Ὑπερβόρειοι). The legendary race of the Hyperboreans, though mentioned neither in the Iliad nor Odyssey, are spoken of in the poem of the Epigoni and in Hesiod (Herod. iv. 32), and occur in the traditions connected with the temples of Tempe, Delphi, and Delos. (Comp. Müller, *Dor.* vol. i. p. 284, trans.)

The situation assigned to this sacred nation was, as the name indicates, in the remote regions of the North. They were said to dwell beyond Boreas (Βορέας), the mountain wind, which came from the Rhipaean mountains, the name of which was derived from hurricanes (ῥιπαί), issuing from a cavern, which they warded off from the Hyperboreans, and sent to more southern nations; so that they never felt the cold north wind, but had their lot fixed in some happy climate, where, like an Alpine summit rising above the storms, they were surrounded by an atmosphere of calm and undisturbed serenity. "Here," says Von Humboldt (*Asie Centrale*, vol. i. p. 403), "are the first views of a natural science which explains the distribution of heat and the difference of climates by local causes,—by the direction of the winds,—the proximity of the sun, and the action of a moist or saline principle." And thus the "meteorological myth," which placed the Hyperboreans in the North at the sources of the Ister, as conceived by Pindar (*Olymp.* iii. 14, viii. 47, *Pyth.* x. 31, *Isthm.* v. 22), and Aeschylus in the Prometheus Unbound (*ap. Schol. ad Apoll. Rhod.* iv. 284), was, when the Ister was supposed to be a river running through all Europe from its western extremity, transferred to the regions of the West. In consequence of this we find, in later writers, a confusion of this happy land with that of Italy and other western countries, as well as of the Rhipaeans with the Alps and Pyrenees. But whatever arbitrary license was assumed by the poets and geographers who wished to mould these creations of the fancy into the form of a real people, as to their local habitation, the religious idea always remained the same. They were represented as a pious nation, abstaining from the flesh of animals, and living in perpetual serenity in the service of their God for a thousand years. (Hellanic. *ap. Clem. Alex. Strom.* vol. i. p. 305; Simonides, Pindar. *ap. Strab.* xv. p. 711.) "The muse is no stranger to their manners. The dances of girls, and the sweet melody of the lyre and pipe, resound on every side, and twining their hair with the glittering bay they feast joyously. There is no doom of sickness or disease for this sacred race; but they live apart from toil and battles, undisturbed by exacting Nemesis." (Pind. *Pyth.* x. 56.) But at length, tired out with this easy life, betwixt the sun and shade, they leapt, crowned with garlands, from a rock into the sea. (Plin. iv. 26; Pomp. Mela, iii. 1. § 5.) We are conducted almost involuntarily to the ARGIPPAEI, ISSEDONES, and the "ancient kingdom of the Griffin," to which Aristeas of Proconessus, and, two hundred years after him, Herodotus, have given such celebrity.

East of the Kalmuck Argippaei were the Issedones, but to the N. of both, nothing was known (Herod. iv. 25), since high mountains presented an impassable barrier. In descending the chain of *Ural* to the E., towards the steppes of *Obol* and *Ichim*, another lofty range of mountains, forming the W. extremity of the *Altaï*, does in fact appear. The commercial route crossed the first chain (*Ural*) from W. to E., which indicates a "meridian" chain with its main axis running from S. to N. In marking off the second chain, Herodotus clearly distinguishes that which is to the E. of the Argippaei (the country of the Issedones) from that which lies beyond the huge mountains towards the N.,—where the men sleep half the year, and the air is filled with feathers,—where the Arimaspi live who steal the gold from the "Griffins." This distinction seems to establish the existence of a chain running from W. to E. The region of the "Griffins" and the Hyperboreans commences beyond the N. slope of the "chain of the Aegipodes" (the *Altaï*). The position of the Issedones to the N. of the Jaxartes (Araxes) appears justified by the account of the campaign of Cyrus against the Massagetae, who occupied the plain to the S. of the Issedones.

The most precious mineral riches are stored up in the extremities of the earth, and it is in the N. of Europe that the greatest abundance of gold is found. (Herod. iii. 116.) Now the N. of Europe, in the geography of Herodotus, comprehends the N. of Asia, and we are irresistibly reminded of the gold-washings to the S. of the *Ural*, among the mountains of *Kousnetsk*, and the ravines of the Lowlands of S. Siberia. The locality of the gold trade of NW. Asia may be placed between the 53rd and 55th degrees of latitude.

An ingenious hypothesis has been started (Erman, *Reise*, vol. i. p. 712), which refers the mythus of the "Griffins," guardians of the gold of the Arimaspi, to the phenomenon of the frequent occurrence of the fossil bones of the great pachydermatous animals found in the alluvium of N. Siberia;—bones which to this day the native tribes of wild hunters believe to be the claws, beak, and head of some gigantic bird. Von Humboldt (*Asie Centrale*, vol. i. pp. 389—411), to whose interesting discussion on this subject reference has been made, justly enough condemns this confusion between ancient and modern fable; and shows that the symbolic image of the "Griffins," as a poetic fiction and representation in the arts, did precede, among the Greeks, the time when relations were formed among the colonists of Pontus and the Arimaspi. The "Griffin" was known to the Samians, who figured it upon the vase which commemorated the good fortune of their first expedition to Tartessus. (Herod. iv. 152.) This mysterious symbol of an animal acting as guardian over gold, seems to have been the growth of India and of Persia (Aelian, *N. A.* iv. 26; Ctesias, *Ind.* § 12; comp. Bähr, *Excurs. V. ad Herod.* iii. 116); and the commerce of Miletus contributed to spread it in Greece along with the tapestries of Babylon. The region of auriferous sand, of which the Daradas (Dardars, or Derders, mentioned in the *Mahábhárata*, and in the fragments of Megasthenes) gave intelligence to travellers, and with which the often-repeated fable of the ants became connected, owing

to the accidental double meaning of a name, belongs to a more S. latitude, 35° or 37°. (*Cosmos*, vol. ii. p. 142, trans.) [E. B. J.]

HYPERBOREI MONTES. [RHIPAEI MONTES.]

HYPERBOREUS OCEANUS. [SEPTENTRIONALIS OCEANUS.]

HYPERE'SIA. [AEGEIRA.]

HYPERIS (Plin. vi. 23. s. 26), a small stream mentioned only by Pliny, which falls, according to him, into the middle of the Persian gulf. Forbiger has conjectured that it may be the same as that now called the *Djayrah*. [V.]

HYPERTELEATUM (Ὑπερτελέατον), a place in the territory of the Laconian Asopus, at the distance of 50 stadia from the latter town, containing a temple of Asclepius. The French Commission discovered on the coast below the village of *Demónia* some remains of the inclosure of this temple on a rock artificially cut, with many tombs excavated in the rock, and at 500 steps from the temple, nearer *Demónia*, a fine source of water. (Paus. iii. 22. § 10; Boblaye, *Recherches*, *&c.* p. 98; Leake, *Peloponnesiaca*, p. 168; Curtius, *Peloponnesos*, vol. ii. p. 294.)

HYPHANTEIUM. [BOEOTIA, p. 412, a.]

HYPHASIS (Ὕφασις, Arrian, *Anab.* vi. 8, *Ind.* c. 2, 3, 4), the most eastern and the most important of the five rivers which water the *Panjáb*. Rising in the western *Himáleh*, it flows in two principal branches in a course nearly SW. (under the names respectively of *Vipása* and *Sátadru*), till, at their junction, it takes the one name of *Sátadru*, which it retains till it falls into the Indus at *Mittunkote*. It is best known, however, by its modern name of *Sutledge*, which is perhaps a corruption of the Sanscrit Sátadru. It bore in ancient as in modern times various appellations, probably according to the different parts of its course to which the writers referred. Thus in Arrian (*l. c.*) and Diodorus (xvii. 93) it appears under the form of Hyphasis; in Pliny (vii. 17, 21) and Curtius (ix. 1) under that of Hypasis; while Ptolemy calls it Bibasis (*Βιβάσις*, vii. 1. §§ 26, 27); all these being evidently derived from the native name of the western of its two principal arms, the *Vipása*. On the other hand, in Strabo (xv. pp. 686, 691, 701), in Diodorus (ii. 37), in Solinus (c. 52), and in Dion. Perieg. (v. 1145), it bears the title of Hypanis. There can be no doubt that all these writers refer to one and the same river: for Strabo (xv. p. 700) and Arrian (*Ind.* c. 2) both speak of it as the last of the rivers, that is, in reference to the advance of Alexander the Great into the East; while Pliny directly states that the Hypasis was the limit of Alexander's march (vi 17. s. 21). The Sanscrit name for the main stream after the junction of the two principal feeders, namely, the *Sátadru*, seems not to have been wholly unknown to the ancients; for Ptolemy makes the Zaradrus, one of the tributaries of the Hyphasis (*l. c.*), and Pliny notes a river which he calls the Sydrus or Hesidrus, which is probably the same (*l. c.*). A little way before the *Sutledge* falls into the Indus it receives the *Chenáb*, and with it the waters of all the other rivers of the *Panjáb*. [V.]

HYPIUS (Ὕπιος: *Karasu*), a river of Bithynia, not far westward from the Sangarius. The river itself is very small; but at its mouth it is so broad that the greater part of the fleet of Mithridates was enabled to take up its winter quarters in it. (Apollon. Rhod. ii. 795; Scylax, p. 34; Marcian. Heracl. p. 70; Steph. B. *s. v.*; Arrian, *Peripl.* p. 13, who calls it Hyppius; Memnon, *ap. Phot. Cod.* 44.) According to Scylax, this river formed the boundary between the territories of the Bithyni and the Mariandyni. [L. S.]

HYPSALTAE, one of the tribes of Thrace mentioned by Pliny (iv. 18), but apparently the same as the Ὑψηλῖται spoken of by Steph. B. (*s. v.* Ὑψηλις). [L. S.]

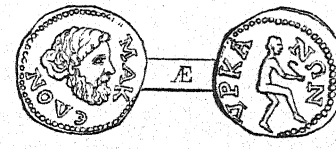
HYPSAS (Ὕψας), is the name of two rivers in Sicily, both in the southern part of the island. 1. The larger of the two, which may be called the Selinuntine Hypsas, from its flowing through the territory of that city, is the river now known as the *Belici*, a large stream which enters the sea about 4 miles E. of the ruins of Selinus. (Cluver. *Sicil.* p. 230; D'Orville, *Sicula*, p. 78.) It rises near *Corleone*, and has a course of above 30 miles from thence to the sea. No mention occurs of the Hypsas in history, but its name is noticed by Silius Italicus, as well as by Ptolemy and Pliny. (Sil. Ital. xiv. 227; Plin. iii. 8. s. 14; Ptol. iii. 4. § 6; Vib. Sequest. p. 12.) The importance of this river to the Selinuntines is attested by the coins of Selinus, on some of which the river-god Hypsas (ΗΥΨΑΣ in Archaic characters) is represented as sacrificing at an altar; apparently referring to the river having been restrained from inundations which proved injurious to the salubrity of the city and its neighbourhood. (Eckhel, vol. i. p. 239; *Mus. Hunt.* pl. 48. fig. 25.)

2. A second river of the same name flowed beneath the walls of Agrigentum on their W. flank, and joined the Acragas just below the city. [AGRIGENTUM.] It is now called the *Drago*, and is a small stream, though flowing through a deep valley, till immediately below the walls of Agrigentum. Considerable confusion exists among some modern writers with regard to the two rivers of Agrigentum: but the point is fully cleared up by Siefert (*Akragas u. sein Gebiet.* pp. 20—22). [AGRIGENTUM.] Polybius (ix. 27) is the only author who mentions the Agrigentine Hypsas by name, and he states distinctly that it was the river flowing at the foot of the hill of Agrigentum on the W. and SW. [E.H.B.]

HYPSE'LA (Ὑψήλη, Ptol. iv. 5. § 64; Ὕψηλις, Steph. B. *s. v.*; Ὑψηλοπολιτῶν πόλις, Socrat. *H. E.* i. 32: *Eth.* Ὑψηλίτης), the capital of the Nomon Hypselites in Upper Egypt. (Lat. 27° N.) It stood on the western side of the Nile, nearly opposite Astaeopolis. [W. B. D.]

HYPSI (Ὕψοι), a place in Laconia, containing temples of Asclepius and Artemis Daphnaea, situate 30 stadia from the Carneium on Mt. Chacadium. Leake places Hypsi at *Vathý*, on the coast, but it was probably in the mountains in the interior. (Leake, *Morea*, vol. i. p. 276; Curtius, *Peloponnesos*, vol. ii. p. 275.)

HYPSU'S (Ὑψοῦς, *-οῦντος*), a town of Arcadia, in the district Cynuria, situated upon a mountain of the same name, said to have been founded by Hypsus, a son of Lycaon. It is placed by the French Commission at *Stemnítza*. (Paus. viii. 3. § 3, 35. § 7; Steph. B. *s. v.*: Boblaye, *Recherches*, *&c.* p. 161; Leake, *Peloponnesiaca*, p. 240.)



HYRCANIA (ἡ Ὑρκανία: *Eth.* Ὑρκανός, Ὑρκάνιος, Hyrcanius), a province of Asia, which was bounded on the north by the Caspian, sometimes called from it the Hyrcanian sea; on the east by the Oxus (the *Jihon* or *Amu-Darja*), which separates it from Margiana; on the S. by the northern spurs of the Montes Sariphi (now *Hazari*), which separate

it from Ariana and Parthia; and on the W. by the M. Coronus and the river Charindas, which formed its limits in the direction of Media. Its boundaries at different periods of history were, however, various; and it is probable that in later times it comprehended the greater part of the districts now known by the names of *Mazanderán*, *Khorassán*, *Dabistán*, and *Dahistán*. More strictly, it would have included only *Mazanderán*. According to Arrian, the district was situated on the left of the road which led to Bactra, and was intersected by high and steep mountains, but with, however, a champaign country extending along the sea (iii. 25). This would correspond with the present state of *Mazanderán*. According to Strabo, it extended along the Caspian sea, which was very marshy along its shores, and was watered by both the Ochus and the Oxus on their way into that sea; he states also that it was separated from the desert by the river Sarneius (xi. pp. 508—511). Professor Wilson has remarked that this view would give far too great an extent to this province, the name of which is undoubtedly preserved in the modern *Gurkan* or *Jorjan*, a town to the E. of Asterabad. (*Ariana*, p. 142.) The principal rivers of Hyrcania were the Sarneius (now the *Atrek*), the Socanaa, the Syderis, the Maxera, and the Charindas. Its chief city appears to have borne at different times various appellations; but it is most probable that the TAPE of Strabo (xi. p. 508), the Zadracarta of Arrian (iii. 23, 25), and the CARTA of Strabo (*l. c.*) were, as the chief residence of the rulers of the land, one and the same place. Besides this, was TALABROCA (Strab. *l. c.*), probably the same as the TAMBRAX of Polybius (x. 31); HYRCANIA or HYRCANA; and SAMARIANA. Some part of Hyrcania, especially that near the sea, is stated to have been very fertile, especially in wine and fruits (Strab. xi. p. 508): corn, however, was not sown there (Strab. *l. c.*), and the mountain land was covered with dense woods (Diod. xvii. 75), which were full of wild bees (Strab. *l. c.*). The land also contained many wild beasts, as the tiger. (Mela, iii. 5; Amm. Marc. xxiii. 6.) The people of the land bore the generic name of Hyrcani; but the country itself was divided into several smaller districts, such as Astabene, Siracene, and Arsitis.

Of the Hyrcani, as distinct from the nations in their neighbourhood, the ancient writers say little; but Xenophon states that they were subdued by the Assyrians (*Cyrop.* i. 5), and Curtius that 6000 of them were in the army of Dareius when he was preparing to resist the invasion of Alexander (iii. 2). They probably partook of the character of the wild tribes adjoining them; and the statement of Strabo, that no corn was sown in Hyrcania, would lead to the inference that the bulk of the population was an unsettled one. On their NE. frontier we know that many Scythian tribes were settled, as the Daae. [V.]

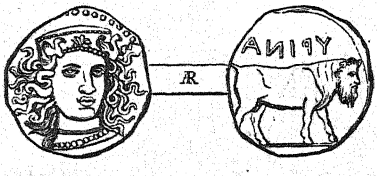
HYRCA'NIA (*Ὑρκανία μητρόπολις*, Ptol. vi. 9. § 7, viii. 23. § 3; Hyrcana, Amm. Marc. xxiii. 6), a town placed by Ptolemy to the east of the river Maxera in Hyrcania (probably the modern *Tedjin*). It is most likely represented by the modern *Gurkan* or *Jorjan*, a place to the NE. of Asterabad. [V.]

HYRCA'NIA (*Ὑρκανία*: *Eth.* *Ὑρκανός*), the name of a town in Lydia, situated in the Hyrcanian plain (*τὸ Ὑρκάνιον πεδίον*), which is said to have derived its name from a colony of Hyrcanians being settled here by the Persians. (Strab. xiii. p. 629; comp. Steph. B. *s. v.*) They were afterwards mingled with some Macedonians, who also settled in this district, whence they are called by Pliny and Tacitus "Macedones Hyrcani." (Plin. v. 29. s. 31; Tac. *Ann.* ii. 47.). There were two towns in this plain: one called Hyrcania, and the other Mosteni. (Tac. *l. c.*; Ptol. v. 2. § 16.)

COIN OF HYRCANIA IN LYDIA.

HYRCA'NIUM MARE. [CASPIUM MARE.]

HY'RIA, HY'RIUM, or U'RIA, is the name of several ancient towns in Italy, which is very variously written, and often corrupted, in our extant MSS.; but all these forms appear to be originally the same.



1. (*Ὑρίη*, Herod.; *Ὑρία*, App.; *Οὐρία*, Strab.: *Eth.* Uritanus: *Oria*), an inland city of Calabria, situated nearly in the heart of that country, on the Appian Way, about midway between Brundusium and Tarentum. (*Tab. Peut.*) Strabo correctly describes it as situated in the midst of the isthmus, as he terms it, between the two seas. (Strab. vi. p. 282.) He tells us that a palace of one of the ancient native kings was still shown there: and Herodotus represents it as the metropolis of the Messapians, founded by a colony of Cretans on their return from Sicily. According to this statement, it was the most ancient of the Messapian cities, from whence all the others were founded. (Herod. vii. 170.) But though it thus appears to have been in early times a place of importance, we hear very little of it afterwards, though its name again appears in Appian during the civil war between Octavian and Antony, while the latter was besieging Brundusium. (Appian, *B. C.* v. 58.) The people of Hyria must also be understood by the "Urites" of Livy, whom he enumerates among the allied cities that furnished ships to the praetor C. Lucretius in B. C. 171 (Liv. xlii. 48), if the reading be correct: but it is difficult to understand how an inland town like Hyria could be one of those bound to furnish a naval contingent. The "Uritanus ager" is mentioned in the Liber Coloniarum (p. 262) among the "Civitates Provinciae Calabriae," and it therefore appears to have held the rank of an ordinary provincial town under the Roman Empire: and there is little doubt that in Pliny (iii. 11. s. 16. § 100) we should read Uria for Varia. In Ptolemy also (iii. 1. § 77) we should probably substitute *Οὔριον* for *Οὔρητον*, as Veretum (*Οὐέρητον*) had been already mentioned just before. The modern town, which still retains the name of *Oria*, is a considerable place situated on a hill of moderate elevation, but commanding an extensive view over all the country round. There are no ancient remains, but inscriptions have been found there in the Messapian dialect, and numerous coins, bearing the name of Orra, which, though written in Roman characters, was probably the native name of the city. (Millingen, *Numism. de l'Anc. Italie*, p. 281.)

2. (Uria, Plin.; *Οὔριον*, Strab.: *Οὔριον*, Ptol.; *Υ̓́ριον*, Dionys. P.: *Eth.* *Ὑριατῖνος*, Urias or Urianus: *Rodi*), a city of Apulia, situated on the coast of the Adriatic N. of the promontory of Garganus. It gave to the extensive bay formed by that projecting headland with the coast of Apulia on the N., the name of URIAS SINUS. (Mel. ii. 4. § 7.) Its name is

mentioned both by Pliny and Ptolemy among the cities of the Daunian or Northern Apulians: the former, indeed, appears to place it S. of the promontory of Garganus, but this is probably only an apparent inaccuracy arising from the order of enumeration. But he afterwards notices the Hyrini (by which it is impossible that he can mean the Hyria in Calabria) in his general list of towns in the *interior* of the Second Region. There is no mode of explaining this, except by supposing it to be a simple mistake. (Plin. iii. 11. s. 16; Ptol. iii. 1. § 17.) Dionysius Periegetes also mentions Hyrium as a maritime city at the entrance of the Adriatic Sea (which he probably regarded as commencing at the promontory of Garganus), and the limit of Iapyg a towards the N. (Dionys. Per. 380): hence, it is clearly of the Apulian city that he is speaking. No mention of it is found in history: and the best clue to its position is derived from Strabo, who tells us it was the first city which occurred on the N side of Mt. Garganus, after doubling the promontory of that name. Hence, we may place it, approximately at least, on the site of *Rodi*, a small town on a projecting point or headland, about 20 miles W. of *Viesti*, and near the entrance of a salt-water lake, or lagoon, called *Lago di Varano*, a name which is very probably only a corruption of Lacus Urianus. (Romanelli, vol. ii. p. 283.)

To this city may probably be ascribed the coins with the legend ΥΡΙΑΤΙΝΩΝ, which were assigned by Millingen (*Num. de l'Italie*, p. 119) to Veretum in Calabria.

3. (*Eth.* Ὑριναῖος). The existence of a third city of the name in Campania, though resting only on numismatic evidence, may be considered as well established. The coins in question, which are of silver and very numerous, have not only types peculiar to Campania, but are always found in that country, and frequently together with coins of Nola, which they so closely resemble that some numismatists are of opinion that Hyrium or Hyrina was a native name of that city. It is more probable that it was situated in its immediate neighbourhood; perhaps standing in the same relation to it that Palaeopolis did to Neapolis: but, in either case, the absence of all notice of the name in any ancient writer is very remarkable. (Millingen, *Num. de l'Anc. Ital.* p. 138; Cavedoni, *Num. Ital. Vet.* p. 31; Friedländer, *Oskische Münzen*, pp. 37, 38.) The legend ΥΡΙΝΑ is abbreviated from ΥΡΙΝΑΙΟΣ or ΥΡΙΝΑΙΩΝ: others, however, have (though much more rarely) ΥΡΙΑΝΟΣ and ΥΡΙΕΤΗΣ. [E. H. B.]

COIN OF HYRIA IN CAMPANIA.

HY'RIA (Ὑρία: *Eth.* Ὑριάτης), a Boeotian town, mentioned by Homer along with Aulis. (Hom. *Il.* ii. 496.) Hence it was placed near Aulis; but its position was quite uncertain, and some of the ancient critics identified it, though without sufficient reason, with Hysiae. Strabo placed it in the territory of Tanagra. (Strab. ix. pp. 404, 408; Steph. B. *s. v.*; Plin. iv. 7. s. 12.)

HY'RIE, a lake in Aetolia. [AETOLIA, p. 64, a.]

HYRMI'NE (Ὑρμίνη), a town of Elis, upon the coast, mentioned by Homer as one of the towns of the Epeii. It appears to have been regarded as one of the most ancient of the Epeian towns, since it is said to have been founded by Actor, the son of Hyrmine, who was a daughter of Epeius. In the time of Strabo the town had disappeared, but its site was marked by a rocky promontory near Cyllene, called Hormina or Hyrmina. Leake supposes that the town occupied the position of *Kastro Tornése*, on the peninsula of *Klemítzi*; but both Boblaye and Curtius, with more probability, place it further north, at the modern harbour of *Kunupéli*, where, on a projecting point of land, are some ancient ruins. (Hom. *Il.* ii. 616; Strab. viii. p. 341; Paus. v. 1. §§ 6, 11; Steph. B. *s. v.*; Plin. iv. 5. s. 6; Leake, *Morea*, vol. ii. p. 176; Boblaye, *Recherches, &c.* p. 120; Curtius, *Peloponnesos*, vol. ii. p. 33.)

HYRTACI'NA (Ὑρτακίνα: Ὑρσακίνα, Scyl. p. 18; Ἀρτάκινα, Ptol. iii. 17. § 10: *Eth.* Ὑρτακος, Ὑρτακῖνος, Steph. B.), a city of Crete, which, little as we learn of its position from Ptolemy and Stephanus of Byzantium, yet we may safely infer from the former's words that it was situated to the SE. of Polyrrhenia, and to the W. of Lappa. Scylax (*l. c.*) teaches us more respecting its site; he places it on the S. of the island, and to the S. of the Dictynnean temple of Artemis and the Pergamian district. These indications agree well with the situation of the ruins discovered by Mr. Pashley (*Trav.* vol. ii. p. 111) on a hill near the village of *Teménia*.

Numerous vestiges of polygonal masonry on the N. and W. sides, and measuring little more than half a mile in length, are still existing. On the other sides the city was precipitous. It is curious to observe the care taken by the inhabitants in defending the gateways of their city. Not only do walls project without the gate, but flanking walls are executed within, forming passages through which the enemy would have to pass before he could set foot within the city.

The coins of Hyrtacina present types similar to those of Elyros, with the retrograde epigraph ΑΤΨΤ and ΤΡΤΑΚΙΝΙΩΝ. (Rasche, vol. ii. pt. i. p. 600; Mionnet, *Descr. des Méd.* vol. ii p. 277; Mionnet, *Supplément*, vol. iv. p. 324.) [E. B. J.]

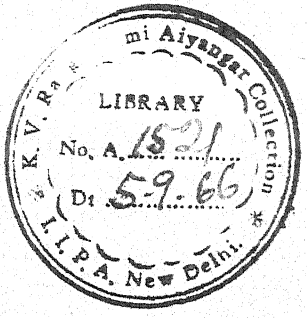
COIN OF HYRTACINA.

HY'SIAE (Ὑσιαί, Ὑσία, Steph. B. *s. v.*). 1. (*Eth.* Ὑσιεύς), a town of Boeotia, in the Parasopia, at the northern foot of Mt. Cithaeron, and on the high road from Thebes to Athens. It was said to have been a colony from Hyria, and to have been founded by Nycteus, father of Antiope. (Strab. ix. p. 404.) Herodotus says that both Hysiae and Oenoë were Attic demi when they were taken by the Boeotians in B. C. 507. (Herod. v. 74.) It probably, however, belonged to Plataea. (Comp. Herod. vi. 108.) Oenoë was recovered by the Athenians; but, as Mt. Cithaeron was the natural boundary between Attica and Boeotia, Hysiae continued to be a Boeotian town. Hysiae is mentioned in the operations which preceded the battle of Plataea. (Herod. ix 15, 25.) [PLATAEA.] Hysiae was in ruins in the time of Pau-

sanias, who noticed there an unfinished temple of Apollo and a sacred well. (Paus. ix. 2. § 1.) Leake observed "a little beyond the great road at the foot of the mountain, a great quantity of loose stones in the fields, together with some traces of ancient walls, and the mouth of a well or cistern, of Hellenic construction, now filled up." This we may conclude to be the site of Hysiae. (Leake, *Northern Greece*, vol. ii. p. 327.) Hysiae is mentioned also in the following passages: Eurip. *Bacch.* 751; Thuc. iii. 24, v. 83.

2. (*Eth.* Τσιάτης), a town in the Argeia, on the road from Argos to Tegea, and at the foot of Mt. Parthenium. (Paus. ii. 24. § 7, viii. 6. § 4, 54. § 7; Strab. viii. p. 376.) It appears to have been destroyed by the Argives, along with Tiryns, Mycenae, and the other towns in the Argeia, after the Persian wars (Paus. viii. 27. § 1); but it was afterwards restored, and was occupied by the Argives in the Peloponnesian War as a frontier-fortress, till it was taken and destroyed a second time by the Lacedaemonians in B. C. 417. (Thuc. v. 83; Diod. xii. 81.) The defeat of the Lacedaemonians by the Argives, near Hysiae, of which Pausanias (ii. 24. § 7) speaks, is placed in B. C. 669.

The ruins of Hysiae stand on an isolated hill above the plain of *Achladokampos* (Αχλαδόκαμπος, from ἀχράς, ἀχλάς, "a wild pear-tree," and κάμπος, "a plain"). They consist of the remains of the acropolis, which escaped the notice of Leake. (Leake, *Morea*, vol. ii. p. 334; Boblaye, *Recherches*, &c. p. 48; Ross, *Reisen im Peloponnes*, p. 147.)



HYSPIRATIS. [CAMBALA.]

HYSSUS (Ὕσσος), a small river in the east of Pontus, 180 stadia to the east of Trapezus. (Arrian, *Peripl.* p. 6.) There can be little doubt that this river is the modern *Sourmun;* for the port-town at its mouth, which bore the name *Hyssus* or *Hyssi portus*, was afterwards called Σουσάρμα (Anonym. *Peripl.* p. 13), and, according to (*B. G.* iv. 2), Σουσούρμανα. This port-t tioned, by Arrian (*l. c.*) and by the Anonym. 14), is called in the Tab. Peut. *Hyssilime*, seems to have been a place of some importance; for it was fortified, and had the "cohors Apule civium Romanorum" for its garrison (*Notit. Imp. Oriert.* 27). [L. S.]

HYSTOË, a town of Crete, which the Scholiast on Aratus (*Phaen.* vol. ii. p. 40, ed. Buhle) connects with the Idaean nymph Cynosura, one of the nurses of Zeus. (Höck, *Kreta*, vol. i. p. 434.) [E. B. J.]

HYTANIS or HYCTANIS, a river of Carmania mentioned by Pliny (vi. 23. s. 26), and which he says washed down gold. Strabo, on the authority of Onesicritus, speaks of a similar river, but does not give its name (xv. p. 726). [V.]
